"I saw an advertisement in one of the magazines a few days ago telling how I could make money in my spare time by addressing music circulars at home. I answered the ad and they agreed to pay me 10 cents per copy for all music that I addressed and wanted me to send $2 for a working outfit. Well I sent the $2 and they sent me 80 copies of music to sell. Isn't this obtaining money under false pretenses? I wonder if you can do anything about it. At least you can probably keep some of our subscribers from getting stung. I am enclosing the two letters. Thanking you for anything that you can do."

YES, friend, this scheme has all the earmarks to us of getting money under false pretenses, but it has been worked so long we presume the post office department has passed upon it as being not fraudulent. Otherwise they would have been put out of business long ago.

All we can do is to reprint the warning which your letter gives in the hope that we can make a knowledge of this scheme so common that none of our readers at least will ever be taken in by it.

GERMAN MARKS FOR EASY MARKS!

I would like to get your opinion about the German money that is being peddled around this country. Of course we all know that it isn't worth anything now, absolutely nothing, but if the German republic stands won't that money be redeemed sometime at some price. They are also selling a bond on the City of Breman, a 4½ per cent bond to be redeemed in ten years. Which would you consider to be the best gamble, the bond or the marks? If the German republic falls would not the bond some day have a value at some price?

YOU can buy German paper money for the price of waste paper. Some New York brokers have had offices papered with it, and there are millions of loyal citizens in all parts of the world who have lost probably more than the entire amount of the German reparations! To buy either German money or German bonds at this time with the idea of ever profiting by their purchase, would be the heighth of speculation in our opinion.

SEWING GLOVES AT HOME

ARE any of my readers employing their spare time and using their own sewing machines to make gloves for any concern? I have been asked about a company with headquarters at Avon-by-the-Sea, New Jersey, which sounds like an attractive enough place to spend the summer, but does not impress me especially as a glove-manufacturing or distributing center. There are lots of idle hands and more idle sewing machines in Michigan and if it is practical to make canvass gloves at home, I would like to know more about it.

THE WAYS OF WOMEN!

"As you are trying to expose all the different frauds that are advertised in the different papers, I will send you the outline of one. A friend of mine saw advertised, "Busts Developed." I think it was in the "Hearth and Home." There was a picture of a woman with a large bust, and it said, "send $10 for a ten days' free treatment, and your bust will develope quite a lot in that time.' So my friend sent the $10 and received some tablets to take inwardly, also some salve to rub on her bust. She followed the directions for two days and was taken so sick she had to call a doctor. It had poisoned her kidneys and she could not pass urine for almost 24 hours. She was so weak she had to go to bed, and there she stayed for three weeks and a half, and then was hardly able to creep around the house. During the time she had to live on nothing but milk and water. That was two months ago, and she is still sick, and the doctor says he does not know as she will ever be well again. And he says it is nothing that caused it, but the medicine. The medicine was analyzed, and it contained two deadly poisons. One kind was to make your flesh swell up and by rubbing the salve on your bosom it was supposed to swell the most there.

"Please do not sign my name, as my friend does not want anyone but the two doctors that attended her to know what caused her sickness.

"We like your paper just fine and always intend to take it. We get so much good from it.

"Oh! yes, can my friend collect any damages from this firm for selling her medicine that poisoned her. She is a poor widow. with several children to support. And she is very hard up. Please do not describe her in your paper, as quite a few of our friends take your paper and my friend is ashamed to let them know what made her sick.

"Thanking you for all your past, and future kindness, as you have helped us so many times, by your advise, and also by making the college in Ohio settle for the typewriter they sent me that was no good."—L. H.

ONE might smile at the above recital of one woman's attempt to recast herself in the mold of Venus, were it not for the pitiful picture which her condition today presents. When, O, when, will some women learn that the qualities which the right kind of men admire are not to be found in drug-stores or contained in bottles or jars! There is nothing to be added to the moral which this letter reprinted here will, I hope, carry to my readers.

MICHIGAN DAIRY AND FARM PRODUCE COMPANY

SEVERAL recent inquiries regarding the above company led us to an investigation, which disclosed the following facts as submitted by Gideon T. Bryce, its president. Mr. Bryce, formerly a resident of Romeo, Macomb county, operated a large dairy farm and enjoyed, we believe an excellent reputation in his community, he says:

'This company was chartered under the laws of the state of Michigan, with an authorized capital of $500,000.00, and on June of the present year the Michigan Securitites Commission authorized us to sell stock to the extent of $200,000 for our first issue.

"The shares are in the sum of $10 each, fully paid, and it may interest you to learn that we already have subscriptions to the extent of approximately $80,000 represented by nearly 1,000 stockholders of which 90% are farmers, resident within an area of ninety miles of Detroit.

"Three months ago we purchased as a going concern, the business, good-will and plant of the Birmingham Creamery & Ice Mfg. Company, and this constitutes the first unit in our plans to establish ourselves in certain areas, so that we can take care of the milk of our farmer stockholders.

"In addition we purchased as a going concern the business of the Birmingham Dairy, Birmingham.

"During the summer of 1924 it is the intention of the directors to open a chain of "Cash and Carry" stores in Detroit through which we shall distribute not only milk, but all other farm produce. Our stockholders will be considered first in our purchases."—Gideon T. Bryce, President.

First Mortgage Real Estate Gold Bonds

Each month sees an increasing number of farmers choosing Federal first mortgage bonds for their surplus funds.

The Farm Home
A Department for the Women

Edited by MRS. ANNIE TAYLOR

DEAR FOLKS:—This last month has been a full one for most of us and I am sure you will all agree with me when I say that it has been for me. I want so badly to give you all the new ideas and holiday suggestions that it has crowed out our personal column and recipes that you readers have so kindly sent in. I am keeping every one and hope that you will soon see them on the pages of our Women's Department.

In the last two or three issues have been home-made ideas and designs for making the work easier and also more attractive. Remember that if you have thought up some clever idea, it is very lovely of you to share it with the rest of our readers. Draw up your object and give us the measurements and maybe someone among us will be waiting for just that very article. Can you imagine the happiness that you will have given.

I received so many letters asking for the "Hot Lunch Bulletin" that I soon finished my supply and am expecting more every day. I will send them just as soon as they arrive. I expect your cooperation on this very important subject. Do not hesitate to write. Our department is one of service.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

WHO IS SANTA CLAUS?

WHO is Santa Claus? The mystery
Seems to have no clue;
But I'll tell you how to solve it.
Santa might be you.

If you found some lonely children
With no Christmas tree,
And gave them one, or shared your own,
You Santa Claus would be.

Some poor children have no Christmas!
It is sad, but true;
So remember! Who is santa?
Well, he might be you!

CHRISTMAS FOR OUR CITY RELATIONS

IT must be a problem to think up something useful and attractive for our city relations. We feel as if it is impossible to buy the desired gift within our means.

I wonder if you have ever though of sending a lovely box of foodstuff done up in a pretty package. You know a nice fat chicken or goose is one of the finest gifts to a city family.

The old law of compensation is always with us whether we recognize it or not and we who live on a farm the twelve months out of our year can hardly realize the wonderful things and sights we see every day compared to the family of like circumstances in the city. It is next to impossible to purchase the lovely fresh foods that you folks enjoy every day and just take it for granted that all the people in town have the same by just buying. This is not true at all.

There are a great many boys and girls away at school who cannot get home because of distance and expense. Can you imagine the real joy of opening a box from Mother with a lovely fruit cake and some homemade jam or jelly? Maybe a cooked chicken and a box of their favorite homemade candy. I feel sure that such a gift would be most highly prized when opened so far away from home. What could be more intimate or better loved?

A good strong box and each article wrapped in bright Christmas paper and ribbon would be a very attractive and most appreciated gift. There isn't a boy or girl, or sister or brother, whose mind would not wander back to the farm home and its spacious kitchen, with Mother walking to and fro preparing the dainties for them.

It was only a few weeks ago I had a birthday and the package came just the day before, timed just right so I would receive it on the right day. A pair of pillowslips with lace crocheted on the edge by Mother's own hands. It meant so much to me to know of the many times her hands went in and out making the lace and the pillowslips more beautiful. I knew of the effort it must have been for her, and the care she took to have them just right. The box was just a plain one, but Mother must have found a large colored rose in some magazine and pasted it on the cover to make it look more attractive.

It is always the little extra effort and way you wrap your gifts that help them count for so much because of your efforts in making them more attractive. Let us all try this year and wrap our packages up with more thought and care as to their appearance.

The bright red tissue paper is very popular and is giving the white tissue a race for first place. The five-and-ten-cent stores all carry the bright ribbons and cord and seals to make the gifts attractive.

BOOKS FOR THE HOME

BOOKS for the home ought to be choosen with a view to preparation for a life of American citizenship and a clean wholesome mind. Christmas should bring its share of good reading for every member in the family. This would include religion, government and what is termed general literature. A supply should be at hand, not only as a source of study to furnish knowledge and information, but for amusement and entertainment in hours of relaxation.

Every member of the household should have some special reading that he or she is fond of. Nothing outside of study, can improve our minds or broaden our vocabulary more than good wholesome reading.

The first that I would suggest for the family would be to have some good farm magazine coming regular. Of course we think THE BUSINESS FARMER is the best, but after all this is a matter of personal opinion. They all are trying to give you the best they have, and so it is good reading for any live farmer.

Then there should be something just for mother—for she is the center of the home. Something for her individual use, for unless she is able to enter into the real spirit of reading books, it is unlikely that she will ever be able to impart that taste to her children, and guide them in that field with sympathy and discretion.

We should probably find that the mothers of most of our great men of recent times have been devoted readers of the Bible. If it is possble that we have a home without one, be sure that this year will be the last. When it comes to certain household problems, like nourishment, which is so important for the bodily welfare of all, and the management of children, it is apparent that instruction on these subjects ought always to be available: "The Care and Feeding of Children," by Doctor Holt, is one of the best books out on this subject, and should be in every home where children are living. "The Book of Good Manners" is another very fine book to have in every home. There are bound to be times when the most refined and thoughtful of us will have to use it for reference.

Then there is that splendid book "What a Young Girl Ought to Know" full of chapters telling you how to answer the most delicate questions any little inquisitive girl might ask. "Truth O'Women" with last words from long vanished ladies, is a book of short poems in which women of all sorts, of all ages, speak from their graves—much the same manner of "The Spoon River Authology."

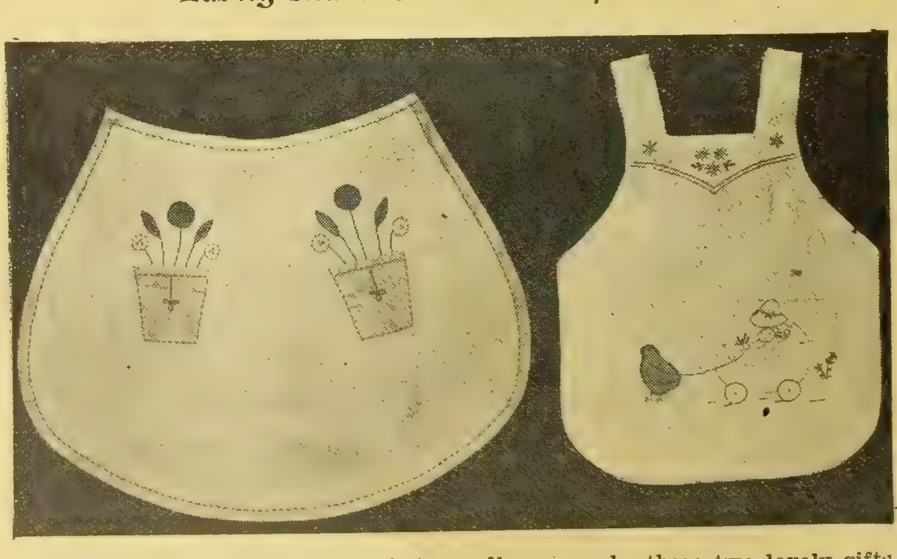
Books on travel are always fine reading for those of us who can travel no other way than thu the pages of books. It is a great school of learning and very fascinating past time for some of our winter evenings. Some good fiction for Dad would be "Dr. Nye." It is a splendid story of a man's life in a small town and most of the characters can be found among our own personal acquaintences. "The Mine with the Iron Door," is another dealing with romance and adventure, laid in the Catilina Mountains of Arizona. The description of this part of our country is beautiful in this book. "The Real Robert Burns" is a splendid book telling about this famous character in our literary world. His poems are known the world over. "Gardening Under" is a good practical book, inviting the pleasures of outdoors by taking your gardens inside under glass. "Rimrock Trail" is another regular "he-man" tale of adventure.

Don't deny the youngfolks the many tales that are written for them in book-form to stir their imagination for the bigger and better things in life. For our boys I have thought of "Lefty O' The Bush," "The Go-Ahead Boys on Smuggler's Island," "The Boy Scout Fire Fighters," "George Washington" and famous Americans for young readers. For our girls: "The Corner House Girls," "Polly's First Year at Boarding School," and for our wee folks: the kneetime Animal Stories, "Squinty, the Comical Pig." Maybe you have a daughter teaching and "School Plays for all occasions" is very fine for a reference book.

These are only a few of the many books to be had for Christmas. You will find there are always the old masters like Dickens, Shakespeare, Holmes, and Longfellow. In our Book Review, you will find the publisher's name, address, and prices.

Let this be a Christmas of Knowledge and good reading.

Easily Made Gifts For Chrisimas



ANYONE that is handy with their needle can make these two lovely gifts in very little time. They are beautiful and I am sure would be very much liked by any lady or child that could be the proud possessor of them. Can you imagine any little girl not liking this darling apron with its outlined design of the chick pulling the little girl! The ladies' apron with its cunning flower-pot design with pretty ribbon ties makes an adorable gift.

No. 407—Child's Combination Apron or Dress. This is a very attractive number and comes stamped with patches included for a child two to four years. Price 50c.

No. 408—Ladies' Apron. Stamped on Unbleached Muslin. Full size tea apron. Applique patches included. Price 50c.

MOTHER'S PROBLEMS

WHEN PLANNING CLOTHES

WHEN planning and making the children's clothes, who decides what the colors and styles and materials shall be? Is it you, you, Mother, entirely? Or do you and the children talk details over and come to a mutual decision?

There is no better training for a girl than the training she can receive from her mother in the planning of her clothes. "Decisions" are hard to make. Some people reach manhood and womanhood without ever having learned how to make them. In the matter of clothes, they never know just what they want, they buy hap hazardly, and they never are wholly satisfied with their purchases.

A child does not have to be very old to have opinions of his own. Don't thwart those opinions every time they conflict with yours. Perhaps he has as good a right to them as you have to yours. Perhaps his ideas are wrong; sometimes the easiest way to show him how wrong his ideas are is to let him suffer a bit by following his wishes instead of your own.

I have known many mothers who make clothes for their children without asking for their opinions at all, and then, when the children object to the style or color of the dresses or blouses, reply: "Well, that's what I made. Wear it, or go without!"

That attitude is not fair to the child. It likewise tends to make them careless of their clothes. Many a child has deliberately torn or soiled a dress she dislikes so as not to have to wear it again.

There is infiinite joy in planning daughter's dresses with the little daughter offering suggestions. With a little tact, Mother can usually sway her away from decisions. But if her heart is set on a color you know is unbecoming, let her have it. She will likely hear an unfavorable comment some time which will teach her that she has made a mistake.

Work together! That is the keynote of happy Mothers and children. Working with you, the children will learn things they are not conscious they are being taught!

—if you are well bred!

Never speak harshly to a child. Never use disrespectful names. Never use profane or vulgar words in the presence of a child. Do not be so cold and austere as to drive your child from you. Never misrepresent. If you falsify, the child will soon learn to decieve also. Never withhold praise when the child deserves it. Commendation is one of the sweetest pleasures of childhood.

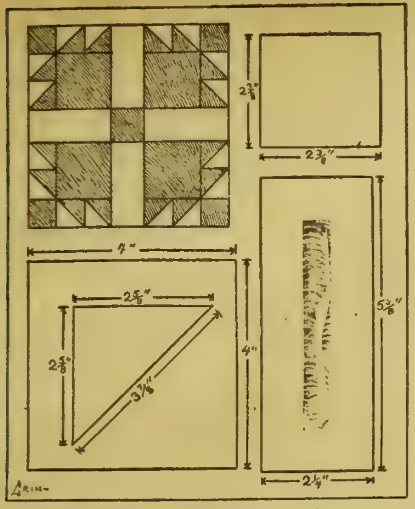
Personal Column

Play the Game.—I would like very much to know if the story "Play the Game," by Ruth Comforth Mitchell, in the August, September and October, 1920 numbers of "Woman's Home Companion", can be obtained in book form and where. If not, would like to exchange other magazines for those numbers.—V. E. Smith, Vanderbilt, Michigan.

—Maybe some kind reader has these magazines; if not, you can purchase it thru the Appleton Publishing Company, 29-35 W. 32nd St., New York City, at $1.75.

Some Hints to Relieve Work.—I have read so many suggestions in the Michigan Business Farmer that have been a help to me. I have one that I want to pass along. Purchase three yards of white table oil-cloth and use instead of table linen that has to be washed and ironed. Then it can simply be washed and put away, by rolling around a stick. Then when silo filling time comes and bean threshers, you will have it all ready for use again. This has been such a help to me for I am an invalid and not able to do but very little work. Hoping this may help someone else, I am—Mrs. L.

"DOVE AT WINDOW" QUILT BLOCK



Quilt Pattern—Take pieces of any two colors that you have or that harmonize and set together, following pattern showing you which pieces to join. It is a good idea to have one of the colors plain material and the other figured. This makes a very attractive design for block quilting.

CHRISTMAS DINNER 1923

I will try and give you a Christmas menu that will help make the holiday this year a better one by good things to eat and still not drain the family purse.

In the November 10th issue was the turkey roasted and stuffed three different ways. I think a Christmas goose is as fine a dish for our second holiday that can be had. Chicken is always good and sure to be liked, but those of us who can have goose will be in keeping with the day. The following is a full dinner and may be too much for some of us, and so I would suggest that you pick out of it the courses that you think right for your particular needs and family taste.

Tomato Soup
Roast Goose Apple or Potato Stuffing
Giblet Gravy
Mashed Potatoes Buttered Onions
Celery Apple Sauce
Lettuce and Pear Salad
Mince Pie or Plum Pudding
Nuts—Candy
Coffee

Potato Stuffing.—Two cups hot mashed potatoes, one and one-fourth cups soft stale bread crumbs; one-fourth cup finely chopped fat salt pork; one finely chopped onion; one-third cup butter; one egg; one and one-half teaspoons salt; one teaspoon sage. Add to potatoes, bread crumbs, butter, egg, salt and sage; then add pork and onion.

Apple Stuffing.—To plain bread stuffing add one cup chopped apple, not too fine and season well.

Salad Dressing.—One cup sugar; two eggs, two-thirds cup vinegar and one-third cup water; one teaspoon mustard; two heaping teaspoons flour; one teaspoon butter; one teaspoon salt. Mix ingredients in the order given. Mix mustard and flour and a little water, enough to make a smooth paste and add. Cook in double boiler until it thickens. Add whipped cream enough to make it nice and light. This is splendid for fruit or any salad that you like with a sweet dressing.

Chocolate Caramels.—Two and one-half tablespoons butter; two cups of molasses; one cup brown sugar; one-half cup milk; three squares of unsweetened chocolate, one teaspoon vanilla. Put butter into kettle; when melted add the molasses, sugar, and milk. Stir until sugar is dissolved, and when boiling point is reached, add chocolate, stirring constantly until chocolate is melted. Boil until, when tried in cold water a firm ball may be formed in the fingers. Add vanilla just after taking from fire. Turn into a buttered pan, cool, and mark in squares.

Peanut Nougat.—One pound sugar, one quart of peanuts. Shell, remove skins, and finely chop peanuts. Sprinkle with one-fourth teaspoon salt. Put sugar in a perfectly smooth granite sauce pan, place on range, and stir constantly until melted to a syrup, taking care to keep sugar from sides of pan. Add nut meats, pour at once into a warm buttered tin, and mark in squares. If sugar is not removed from range as soon as melted it will quickly caramelize.

English Fruit Cake.—One pound butter, one pound light brown sugar, 9 eggs, one pound flour, two teaspoons mace, two teaspoons cinnamon, one teaspoon soda, two tablespoons milk, three pounds currants, two pounds raisins, seeded and finely chopped, one-half pound almonds, blanched and shredded, one pound citron, thinly slice and cut in strips.

Cream the butter, add sugar gradually, and beat thoroughly. Separate yolks from whites of eggs; beat yolks until thick, and lemon color, whites until stiff and dry, and add to first mixture. Then add milk, fruit, nuts, and flour mixed and sifted with mace, cinnamon, and soda. Put in buttered deep pans, cover with buttered paper, steam three hours, and

(Continued on page 17.)

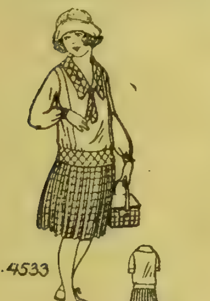
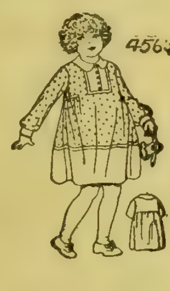
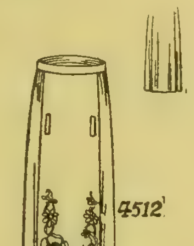
AIDS TO GOOD DRESSING

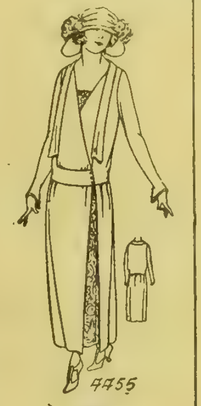
SEND IN YOUR SIZE

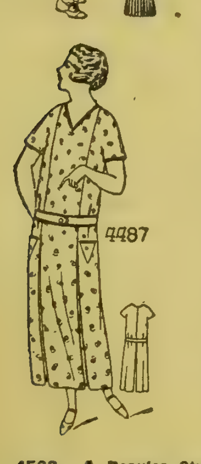
Lately some of you ladies have been sending for patterns without giving size. This means expense and delay for both of us. I hope you all realize the importance of sending in your size when asking for patterns.

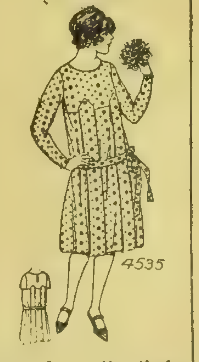












4455. A Unique and Stylish Gown.—This is a splendid model for taffeta for Canton crepe or satin. It is also good for combinations of figured and plain silk or jersey weaves, or twill with braid or braiding for decoration. The Pattern is cut in 7 Sizes: 34, 36, 38, 40 42, 44 and 46 inches bust measure. A 38 inch size requires 5⅝ yards of 40 inch material. For panel and insert of contrasting material ¼ yard of material (cut crosswise) is required. The width of the skirt at the foot is 2¼ yards.

4487. A Pretty "Cover All" Apron.—Here is a fine "protecting" apron with plait extensions at the side front seams. In unbleached muslin with a finish of bias binding in a contrasting color, this model will be inexpensive and very serviceable. Gingham, or sateen, chintz or chambrey are also suitable, and in damask in blue and white or silver gray, it will be attractive. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A Medium size requires 5⅛ yards of 32 or 36 inch material.

4512. "A New Panel Skirt"—Here is a model good for twill, broad cloth or serge. It is also nice for linen and other wash fabrics. The pockets may be omitted. This Pattern is cut in 7 Sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. A 29 inch size requires 3⅛ yards of 40 inch material. The width at the foot with plaits extended is 2 yards.

4533. A Popular Style for the Growing Girl.—Wool rep and plaid suiting are here attractively combined. The blouse slips over the head. The skirt is separate and may be joined to an underbody or finished with a band. The Pattern is cut in 4 Sizes: 6, 8, 10, and 12 years. A 10 year size requires 4⅛ yards of 36 inch material. To make waist and sleeves of contrasting material, requires 1⅜ yards.

4565. A Simple Frock for a Small Girl.—Figured crepe and plain crepe are here combined. This style is also attractive in voile, batiste or silk, or, one may use wool crepe with braid trimming or embroidery. The Pattern is cut in 4 Sizes: 2, 4, 6, and 8 years. A 4 year size requires 2⅜ yards of 27 inch material. To make facing, collar, cuffs and vent of contrasting material requires 1 yard.

4535. A Smart Dress Style for the Growing Girl.—Darted foulard is here shown. The model is one that lends itself well to wash materials, to wool rep and jersey weaves. Woolen crepe would also be nice for this style. The Pattern is cut in 4 Sizes: 8, 10, 12, and 14 years. A 12 year size requires 4 yards of 32 inch material.

ALL PATTERNS 12c EACH—3 FOR 30c POST-PAID

Order from the above or former issues of The Business Farmer, giving number and sign your name and address plainly.

ADD 10c FOR FALL AND WINTER FASHION BOOK

Address all orders for patterns to

SAVE A LIFE
FOR
CHRISTMAS

WHILE you are giving, give health. There are thousands of sufferers of tuberculosis, forgotten by all the world except the Tuberculosis Association. It needs your support to carry on its life-saving work. You help when you buy Christmas Seals—the Liberty Bonds in the war upon consumption.

Buy Christmas Seals! Buy as many as you can. The Great White Plague can be stamped out entirely. Christmas Seals are saving many lives. Buy Christmas Seals, and save a life for Christmas.

Merry Christmas 1923

Stamp out Tuberculosis with Christmas Seals

The Children's Hour

JUST BEFORE CHRISTMAS

JUST before Christmas,
  Is the meanest time of all!
You have to be so pesky good,
  There ain't no fun at all.

For if you're up to any tricks,
  There's someone sure to say:
"You best be careful, Johnny!
  Santa may be round today."

Now if Santa likes a feller,
  As his presents seem to show,
What makes him bother me so long?
  That's what I want to know.

This year I just wrote a letter,
  Just before Thanksgiving Day,
Directed it to "Santa, North Pole,"
  And sent it on its way.

And this is what my letter said:
  "Oh, Santa, be a dear,
And please don't come a-snooping round
  A-watching me this year."

THE JUST CALIPH

ONCE, in Bagdad, a Caliph built a magnificent palace, but, in order that its main entrance should be imposing it was necessary to pull down a small laborer's hovel. The vizer was ready to destroy it, but the Caliph ordered that the poor old man who dwelt there should be paid for his hovel.

"I will not sell," said the poor man. "My forefathers lived and died here, I wish to die here. Tell the Caliph I said so. He is just."

The Caliph considered long when this answer was brought him, and then he answered,

"Let the hovel stay. There is no gate so splendid, that I could raise to my palace. If people saw a gate blazing with gems they would say only 'The Caliph is rich,' but if they should see the hovel, they would cry, 'The Caliph is just'."

Justice is greater than riches.

OUR BOYS AND GIRLS

Address all letters to the Children's Hour as follows:

UNCLE NED,
The Business Farmer,
Mt. Clemens, Mich.

Dear Uncle Ned:—Here's wishing you the happiest birthdays, and hoping you will have many more as happy. Although I did not send you anything last year, I thought of you, and that does just as well, I think, don't you? But I am not going to let this one slip into the past without showing you that I remember it. That is why I'm writing to you now. You may call this your birthday letter. I am enclosing in this letter a poem I wrote. I want to know what you think of it. Now I will tell you what I received for my birthday. My sister gave me a book and so did my mother. Our school teacher gave me a book also. My father and mother together bought me a dozen blue Amberol records. A friend sent me a tablet and 4 Narcissus bulbs. So you see I was well remembered. Well I guess I'd better close or you won't want me to write again, so good-bye Uncle Ned. From your invalid Nephew,—Orville H. Trueblood, Pewamo, Michigan.

Dear Uncle Ned:—As this is my first letter will look for it to go in the waste paper basket. I have been studying at my friend's and reading the M. B. F. and ilke the children's stories very well. Well, I had better describe myself. I have light brown hair, blue eyes, baby doll bobbed hair, and am five feet one inch tall. I am twelve years of age and in the eighth grade at school. I weigh 89 pounds. My birthday is July 12th. I have two sisters and two brothers and I am the oldest. We all go to school but baby, who is four. My father trucks from home to Detroit and all along the line. We live in town. It is small, only has seven stores and one bank. Our home and lawn covers a quarter of an acre. Our home is all modern with electric plant and water and gas and all bathroom furnishings. Well, I will close my letter with a riddle. Upon a hill there is a mill and by the mill there is a walk and in the well there is a key, and if you don't answer this riddle you will have to kiss me. Round as an apple and deep as a cup, all the king's horses can't pull it up. Will some of my cousins please write to me. I will gladly answer. Write to—Kathleen Frost, Hale, Michigan.

Dear Uncle Ned:—I have been a silent reader of the Children's Hour ever since we have taken the M. B. F. but now I thought that I would be one no longer. I am a girl fifteen years, weight about eighty pounds, five feet in height and have dark brown hair (bobbed) and dark blue eyes. I am a junior at Ionia High School. My birthday is on August fourteenth. Have I a twin? I ride back and forth to school every day. It is about a fifteen minute drive. I am taking up a business course and find it very interesting. I have no brothers or sisters so I would be very glad if some of the boys and girls would write to me. I surely will answer all letters I receive. At school I belong to a Girls' Literary club and a parlimentary club. In both clubs we are going to have a play for Thanksgiving. In American history class we have a new teacher from Grand Rapids. She came last week, to stay until the beginning of the next semester. I like her very well as she gives us all E's. She is very sociable, and told us all about her family. She said that one of her five brothers was a doctor. One day a lady came into his office, who said that she felt bad all over. By what she told him he didn't know what ailed her so he mixed her up some salt, soda, and red coloring and gave it to her and told her to come back in a week. When the week was up she came back and said that the medicine had done her so much good that she wanted some more just like it. By that time he had forgotten what color he had put in the former medicine so he put brown in this. The lady told him of the mistake, so he mixed up some more with the red coloring. As that lady imagined the medicine was good. Please imagine this letter is good enough to print. Your niece,—Olive Groves, R. 1, Ionia, Michigan.

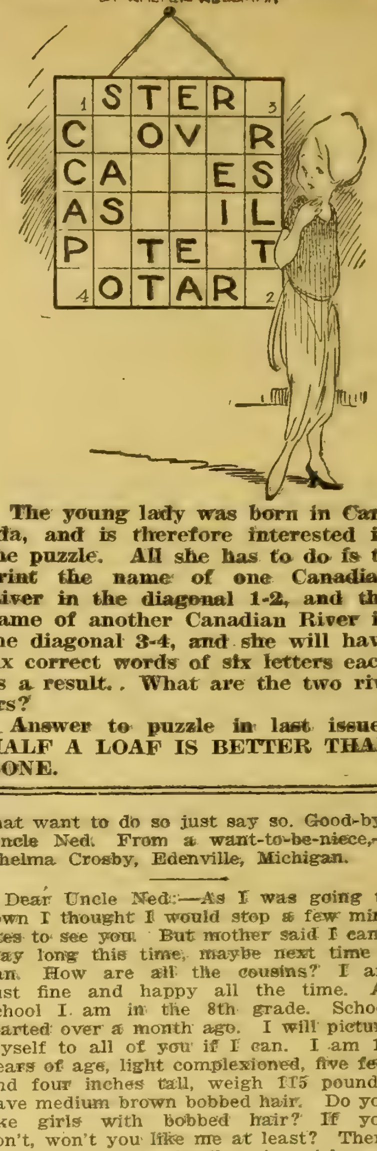
Dear Uncle Ned:—I have never written to you before. My father takes the M. B. F. and I like to read the Children's Hour. I am a farmer girl and live on quite a large farm. I go to high school and like it very much. I have a brother and two sisters going too. My brother graduates this year. Has any of the other cousins got "The Song of The Dying Cowboy?" If they have I wish they would please send me the words. Well, I will have to describe myself. I am five feet tall, have light brown hair, but don't wear it bobbed. I want it bobbed though. I am dark complexioned and am fifteen years of age. My birthday is the 1st of September. There is no use asking if I have a twin because I have. Well, I will have to close for this time. Your niece, Fay Houtz, R. 3, Montgomery, Michigan.

Dear Uncle Ned:—I have never written to you before, but have been very much interested in the boys' and girls' department so thought I would like to join too. My grandfather takes the M. B. F. and likes it very much. I am 16 years old and my birthday is January 12th. Have I a twin? And will she please write to me? I passed the 8th grade this spring. I will tell what Birch Run looks like. It has a population of about 600. There are four or five stores, oil station, bakery, etc. We live near the Dixie Highway. Many people go north of here, for fishing and camping. I have one brother, he is 10 years old. He is in the 4th grade. Will some of the cousins please write to me as I like to write letters. I remain your niece.—Kathering Spensberger, Birch Run, Mich.

Dear Uncle Ned:—My how lovely it must be, to have so many nice nieces and nephews. I think guessing games are very interesting, don't you? I have noticed previously that most every person has been writing riddles. So I am going to make my letter one of mystery. My age is between 7 and 16. The first letter of my surname is P. Don't you love to wander out in the woods in the fall of the year and just study the beautiful trees, and their many colors. I will close with three riddles (a) What most resembles a half cheese? (b) Which is the best way to raise strawberries? (c) What two letters are the desting of all earthly things? Now every one must remember that the person who can tell me the following answers (my surname, my exact age, and answer two of the three riddles correctly) will receive a letter from me composed of 25 pages. Best regards to all, I remain,—Miss P. Stroupe, R. 7, Pontiac, Michigan.

CANADIAN RIVERS

BY WALTER WELLMAN



The young lady was born in Canada, and is therefore interested in the puzzle. All she has to do is to print the name of one Canadian River in the diagonal 1-2, and the name of another Canadian River in the diagonal 3-4, and she will have six correct words of six letters each as a result. What are the two rivers?

Answer to puzzle in last issue: HALF A LOAF IS BETTER THAN NONE.

Dear Uncle Ned:—I wrote to you once before Uncle Ned but Mr. Waste Paper Basket knew that my letter wasn't worth while reading, so he gobbled him up. Isn't that so? Well, how do you like this weather Uncle Ned? We had a little snow today. I will be glad when it gets cold, so we can go skating. Do you like to skate? I love to skate. How many of the cousins like to skate? I described myself in my other letter, Uncle, but no one knows that but Mr. Waste Basket, and so I will have to do it all over again. I am a girl 5 feet 1 inch tall, weigh 102 pounds. I am 13 years old. I have brown eyes and hair, and for a great wonder my hair isn't bobbed. My birthday is in October. Will all of the cousins that have a birthday in October write to me? I will answer all letters I receive. Uncle Ned, I would like to have a contest and all of the cousins draw a picture of Mr. Waste Basket. All that want to do so just say so. Good-bye Uncle Ned. From a want-to-be-niece,—Thelma Crosby, Edenville, Michigan.

Dear Uncle Ned:—As I was going to town I thought I would stop a few minutes to see you. But mother said I can't stay long this time, maybe next time I can. How are all the cousins? I am just fine and happy all the time. At school I am in the 8th grade. School started over a month ago. I will picture myself to all of you if I can. I am 14 years of age, light complexioned, five feet and four inches tall, weigh 115 pounds, have medium brown bobbed hair. Do you like girls with bobbed hair? If you don't, won't you like me at least? There are twelve in our family, nine girls and three boys. I was in Saginaw Saturday, came home Sunday afternoon with sister. There are some boys and girls from our town who wrote and I thought I would write. Hope you will print my letter for this is the first time I have written. If it doesn't hit the waste paper basket I will be lucky—I'll try to keep away from it. I will close with a joke. If a man has seventy patches on his pants what time is it? Guess it. Will some of the cousins write to me. I will close with lots of joy, from your unknown friend, "Bobbie"—Helen S. Janetski, R. 5, Freeland, Michigan.

Dear Uncle Ned:—I received your most welcome letter today and was very glad to hear from you. Thank you so much for sending me the pencils and pencil box. I sure will make life miserable for the pencils, for I am going to school every day, and will make good use of them. The weather is getting terribly cold out here. I will be glad when winter begins, for then I can go to skating parties. I just love to skate on ice skates, don't you, Uncle Ned? The fact is, I love all outdoor and indoor sports. My friend and I went horse back riding Sunday and had absolutely a swell time. I am simply crazy about riding horseback, that is what I call enjoying life. Don't you, Uncle Ned? My age is between 15 and 17. Whoever guesses my age will receive a long letter from me. Won't the boys and girls please write to me? I will try and answer all letters received. At times I am so terribly lonesome that I would just love to receive some nice long letters from the girls and boys. As my letter is getting long I will close with love, your niece,—Miss Margaret Jackowiak, Sherwood, Mich.

NEW LAMP BURNS
94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, A. R. Johnson, 609 W. Lake St., Chicago, Ill., is offering to send a lamp on a 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him to-day for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month. (Adv.)

LOANS FOR FARMERS' MARKETING ASSOCIATIONS

(Continued from Page 6)

way transact a business very similar to the business transacted by the War Finance Corporation. The purpose of these banks is to provide seasonable credit facilities for agriculture and to place the farming business on a parity with manufacturing, transportation and commerce.

The Federal Reserve Banks in times of necessity issue notes against the short time loans they hold and Intermediate Banks issue debentures or bonds. The term of agricultural paper is long and the probability of renewal too great to use such paper for a basis for notes such as are issued by the Federal Reserve Banks. Under ordinary conditions and in time of ordinary demand for money the local bank can take care of short time needs of farmers for money either by their own funds or through their city correspondents. In times of very heavy demand, however, or where the paper is for a longer period than the local bank can carry, these banks can use the facilities available through the Federal Reserve Banks and the Intermediate Credit Banks. This gives country banks a very valuable service as a bank of deposit cannot afford to tie up its deposits in loans of an indefinite maturity or paper which must be renewed over a period of years. This type of paper is ordinarily called frozen assets and may raise havoc and has raised havoc with agriculture in the last few years. Our present system of financing loans for agricultural purposes lays the foundation for the solution of one of the greatest problems facing agriculture—namely the marketing of farm products. Without the proper system of marketing farm products farming can never come into the place to which it is entitled.

The saleability of farm lands and the profits of the farm are dependent upon what the farmer can get for what he sells. This is not the problem of politics or sentiment but of a right system and the introduction into farming of the same business principles and methods of financing as applied to other businesses. The trouble with farming in the past has been that a large percentage of the production of any one crop has been dumped on the market within a very short period, every farmer jumping against the other and striking his own bargain. This is always the result of individual selling. The only solution is group production, group marketing and group financing. Unless we know what everybody is producing and also the buying power of our market we are groping in the dark and this principle must be applied to farming before we will have definite results. The supply and demand we know controls prices. It is necessary, however, to control the flow and the supply. It is necessary to have the supply where needed and also when needed.— This is a simple question of storage and financing.

The Federal Intermediate Credit Act gives us the credit facilities for properly financing products in storage. Properly managed and properly organized cooperative marketing organizations are having no trouble to finance themselves at the present time. They have had no trouble for some time, not any more than have other businesses. The fact, however, remains that the cooperative marketing of farm products is in its infancy and that the foundation for proper financing had to be laid before it could be expected to have the cooperative marketing of farm products successful in a large degree. Where we have the right type of a cooperative marketing association we do not hear of any movements amongst farmers for a farmers' cooperative bank. They are not needed.

The farmer must learn to run his own business and then he will forget about running the other fellow's business. The farmer will be satisfied to run his own business and will not listen to the fellows who cannot run themselves but are trying to run everything else including the Government. As soon as the farmers will sell their products at the point of consumption instead of the point of production, as is now the case, the price to the consumer will not increase but the price to the producer will increase. In the past when the farmers generally got a report that there was an over-production of any one crop they got scared and thought that somebody would get stuck and tried to sell their products first and thereby broke the market. Nobody but the farmer was to blame for this.

Properly organized and properly managed cooperative marketing organizations will accomplish a great deal of good. One small marketing organization thrusting its wares against many other small organizations will never get results. This has been tried for the last fifty years. It is necessary that each commodity be organized and then sold. The farmer has not always listened to sound advice; would-be leaders have often sold him on such things as guaranteed prices and other legislative remedies, which, if adopted, would make the farming conditions many times worse than they ever have been. As soon as farming is organized along business lines the farmer will be satisfied to run his own business and will run it successfully instead of having somebody run down to Washington every time something happens. Nearly everybody is with the farmer on this proposition. I believe the farmer is willing to be led along the right lines if he has the right leader, and the success of this movement is dependent upon leadership and management. The farmer cannot afford to fool with amateurs in this matter. Credit facilities have been made available to the farmer and now it is up to him to use these facilities. Financing and marketing are so closely allied that they cannot be separated. The principal value of the Intermediate Credit Act lies in the facilities which it offers for the marketing of farm products.

RECIPES

(Continued from page 15.)

bake one and one-half hours in a slow oven, or bake four hours, in a slow oven. Rich fruit cake is always more satisfactory when done if the cooking is accomplished by steaming. This is a splendid Christmas cake and you need not feel it is hard to make.

Sugared Popped Corn.—Two quarts of popped corn; two tablespoons butter; two cups brown sugar; one-half cup of water. Put butter in sauce pan, and when melted, add sugar and water. Bring to boiling-point, and let boil sixteen minutes. Pour over corn, and stir until every kernel is well coated with sugar.

The Runner's Bible

(Copyright by Houghton-Mifflin Co.)

I in them, and thou in me, that they may be perfected in one.—John 17:23. (E. R. V.)

Christ is in and about us always, but we make Him appear to the spiritually blind, only when we do a Christlike act. Whoso gives us a better understanding of life, brings us glad tidings, or even speaks an encouraging word, is for that moment the Christ to us—"the Word made flesh"—the most greatly to be desired accomplishment of mankind. We should look for Him in every one we meet, even in the most depraved. He is there, and encouragement will help to bring Him forth—the Divine Light—that is to guide us.

OUR BOOK REVIEW

(Books reviewed under this heading may be secured through The Michigan Business Farmer, and will be promptly shipped by parcel post on receipt of publisher's price stated.)

The books listed below are very suitable for Christmas gifts and can be purchased through The Book Review, Business Farmer, Mt. Clemens, Michigan.

DEWITT CLINTON

Crowds greeting the Service-Progress Special en route

Working with the farmer—

MORE THAN 775,000 people have visited the Service-Progress Special demonstration train sent out over the New York Central Lines by the Agricultural Relations Department.

The exhibits on this train, showing the wonderful advance in steam transportation in the United States, and particularly the interdependence of the railroad and the farmer, have served to bring closer together the New York Central and its agricultural patrons.

The New York Central Lines serve some of the richest farming sections of Illinois, Indiana, Ohio, Michigan, New York and Pennsylvania, and they haul more than a million carloads a year of farm products.

Working with the farmer, to promote better and more profitable farming, the Agricultural Relations Department has grown to be one of the most useful in the New York Central organization.

10% More Milk Will Double The Profit from Your Cows

You do not expect bumper crops from your fields without fertilizing and extensive cultivation. Why, then, expect a maximum milk yield from your cows unless you keep their milk-making organs in top-notch health? The hard-worked milk-producing functions of the cow need frequent aid to keep up a full flow and retain the stamina to resist disease.

Kow-Kare has such positive action on the digestive and genital organs that its benefit is soon shown in the milk yield. Thousands of successful dairymen are now using it regularly about one week in each month for every cow. Especially during the winter months it aids in keeping up a full yield from dry rough feeds.

Dairy authorities say that the average dairy can double the net profit if measures can be found to increase the milk 10%. Kow-Kare is a regular part of the feeding course in thousands of dairies where surprising increases in milk yield are being accomplished.

Kow-Kare, of course, is primarily a cow medicine. It increases milk flow only because it builds up the same set of organs that must be reached when cow diseases are being treated. Such troubles as Barrenness, Abortion, Retained Afterbirth, Scours, Bunches, Milk Fever, Lost Appetite can be successfully eliminated by Kow-Kare because it restores health to the genital and digestive organs.

There is a definite profit advantage for every user of Kow-Kare. Cow health and big milk yields are inseparable. Our free book, "The Home Cow Doctor," is yours for the asking. It tells the various uses of Kow-Kare, with which every cow owner should be familiar.

Feed dealers, general stores and druggists sell Kow-Kare, $1.25 and 65c sizes. If dealer is not supplied, order direct. We pay postage.

DAIRY and LIVESTOCK

FARMERS DISTRIBUTE MILK AT IRONTON

HERE'S a tip to the milkman—and judging from the trouble in which he seems to be constantly involved as a result of his "sliding scale," he needs it.

The farmers of Ironwood and Erwin townships, Gogebic county, in the Upper Peninsula of Michigan—and of Hurley, Wisconsin, organized the Ironwood Milk Distributors' Association, early in October. The association will endeavor to place the industry on a higher business basis, and to insure to its members and patrons a square deal.

It will endeavor, also, to work towards the production and marketing of a first class article for which a reasonable, uniform, price will be charged, in accordance with the average cost of production and marketing. The association, moreover, will aim to protect its members against loss, resulting from removal of customers from the city, who fail to pay their bills; and to require of its members, that the milk ordinance of the city of Ironwood be observed in every particular, in regard to the t. b. testing of cattle, cleanliness of operation, cleanliness of production, and bottling of milk and cream, as well as methods of distribution.

The city health officer of Ironwood is instructed by the association to report all members or other parties suspected of non-compliance with the milk ordinance. They will be dealt with accordingly.

C. E. Gunderson, Gogebic county agricultural agent, commenting upon the plan says: "Milk, properly produced and handled, is the nation's best food, and will become even more liberally used when its high food value at low cost is commonly understood. But the consuming public wishes to know that it is the good, wholesome, clean pure food that nature meant it to be. That is the purpose of the new organization.

The officers of the Association are:

President, Julius E. Johnson; Vice President, C. E. Johnson; Secretary and Treasurer, Luther Olson.

ONTONAGON COUNTY COMPLETES T. B. TEST

ON November 21, the work of tuberculin testing all the cattle in Ontonagon county, Upper Peninsula, was completed. Approximately 9,700 head were tested. 120 animals reacted to the test. This would give an average of 1.25 per cent reacters. This is a very low ratio of reacters. Other portions of the state have sometimes shown as high as 10 per cent reactors, and the average for all cattle tested in the state is 2.2 per cent. Ontonagon county cows are healthy.

The taxpayers of the county have reason to be pleased with the financial report covering the cost of the tuberculin test. A year ago Ontonagon county appropoiated $3,000 to cover the county's share of making the test. The census figures of 1920 showed 5,800 head of cattle in the county. The estimate of expense was based on this number of cattle. Instead of this number the veterinarians found 9,700 head of cattle; and the total expense to the county, for the county's share of making the test, is less than $2,000.

The increase in the number of cattle in the county, from 5,800 in 1920 to 9,700 in 1923, shows that the farmers of Ontonagon county are rapidly developing the dairy business. This is a wise step for the farmers to take, for dairy farming is the safest, surest, and most profitable type of farming for Ontonagon county. Having all the cattle of the county free of tuberculosis will go a long way towards increasing the value of, and profits from, the cattle. This helps the farmer. The man in town is also benefited by having a healthy and safe milk supply, and even the butter and cheese manufactured in the county will be better for the fact the tuberculin test has been made. Likewise we can all have a more comfortable feeling about eating meat from cattle that have been slaughtered locally.

It is probable that some sort of retest will be made next year. At least all the herds where reactors were found will be tested again. The decision in this matter rests with the State Department of Agriculture.—W. N. Clark, County Agricultural Agent.

BREEDS OF DAIRY CATTLE

No. 4—Brown Swiss

THE Brown Swiss breed originated in the Canton of Schwyz, in eastern central Switzerland. The cattle are called variously Brown Switzer, Brown Schwyzer, and Brown Swiss, the last name being the one commonly used in the United States. Conditions in Switerland are such that a strong animal capable not only of milk production but of service as a draft animal is desired, and the large frame is evidence of fitness for these requirements.

The first importation into the United States was made in 1869, and although other importations have been made since, comparatively few animals have been brought to this country. Quarantine regulations in the United States against contagious animal diseases on the Continent of Europe probably have hindered the introduction of large numbers of these animals. The distribution in the United States is not widespread, the cattle being found principally in the States of New York and Wisconsin. The present popularity of the Brown Swiss has been gained entirely by the merits of the animals, as they have not been much advertised.

Characteristics

In color the cattle vary from a light-gray, mouse color, or brownish dun to dark brown. A medium shade of brown shading into a light gray or almost white strip along the backbone and on the belly is preferred. The udder is usually white, switch of tail and hoofs black. A black muzzle with a creamy or mealy ring around it is characteristic. The horns, of medium size, are white at the base and black at the tip. In disposition the cattle are mild and docile and for their size are very active; they are excellent grazers, especially on rough land.

The cows when mature weigh from 1,100 to 1,600 pounds (average about 1,250 pounds); bulls range from 1,500 to 2,500 pounds. The cattle are compact, smoothly fleshed over all parts, and when dry rapidly put on flesh, which is milked off well after freshening. Straightness of hind legs is a typical characteristic of the breed.

The breed has been criticized because certain animals have shown lack of regularity in type of udder and have had exceptionally large teats. As the breeders pay more attention to these points great improvement is observed.

Calves at birth are large and vigorous and weigh from 65 to 90 pounds. As a rule, animals of the breed are somewhat slower in maturing than those of other dairy breeds.

In milk production this breed ranks well, with a moderate percentage of fat. The average of the 228 cows that have completed yearly records of production to January 1, 1918, is 10,931.1 pounds of milk testing 3.998 per cent, amounting to 437.02 pounds of butter-fat.

Families of Brown Swiss have not been developed to any great extent in this country.

TATTOO MARKS

Would like to ask if any of your readers have ever used any of these tattoo ear markers for marking sheep. If so, is it a success, and permanent, or will it grow dim after while?—B. S., Ionia, Mich.

—The tattoo marks, using black or blue ink, may be used satisfactorily with those breeds of sheep having a white face and ear. I have never known of tattoo marks being used with the black eared sheep, although I can see no reason why it could not be so used if one could obtain a red ink.—Geo. A. Brown, Professor of Animal Husbandry, Michigan Agricultural College.

CATTLE BLOAT ON ALFALFA

I have a field of alfalfa one year old and would like to pasture cows in it but I am told they would bloat. Could you give me any information about pasturing cattle and horses with safety?—E. M. I., New Baltimore, Mich.

—There is considerable danger of bloat when pasturing cattle on alfalfa, especially when it has any moisture on it, such as comes from a rain or heavy dew, also when the alfalfa is real green and growing rapidly.

We have not made a practice of pasturing our alfalfa fields here until they are three or four years old and considerable of June grass has come in. Horses and hogs are not as subject to bloat as are cattle and sheep and there is very little danger of injury to horses or hogs providing they are started on the alfalfa when it is dry.

I would not advise the pasturing of an alfalfa field only one year old, as there would be considerable danger of its being pastured too close and injuring the stand. It would be much better to see it go into the winter with a good top to hold the snow and give it protection from the cold this winter.—Geo. A. Brown, Professor of Animal Husbandry, M. A. C.

PLANS FOR BUILDING BEEF-CATTLE BARNS

BREEDERS and feeders of beef cattle will find in a new Farmers' Bulletin, Beef-Cattle Barns, just published by the United States Department of Agriculture, suggestions of value regarding the right types of barns for various conditions, the location, arrangement, ventilation and construction. Several plans and alternate plans are given for general-purpose barns, feeding barns, sheds, and barns for housing breeding herds. Consideration is given to the requirements in severe climates and in regions where less protection is needed from the elements. The bulletin contains 16 drawing showing elevations, floor plans, and cross sections.

Copies of the bulletin, which is No. 1350, may be obtained by writing to the Department of Agriculture, Washington, D. C., as long as the supply lasts.

VETERINARY DEPARTMENT

COW POX

We have a cow that has scores on her bag and teats. They first make their appearance in a lump. This breaks open and then a large scab forms. We do not use the milk as we thought it might not be good. These scores have been coming on for about 4 weeks. Sometimes they all go away and other times they number 3 and 4 on the bag. Cow eats good and is in fair condition. Once there was a very large one came on and she did not give hardly any milk. She does not give as much now as she ought to. She gets mostly corn fodder with pumpkins, carrots, and bran.—P. A., Sherman, Mich.

—I think this cow is suffering from cow pox. Washing the teats and udder after each milking with a one per cent solution of hyposulphite of soda will bring about a cure in most cases. The occasional application of sulphur ointment will help to soften up and remove the scabs. The disease is easily spread from cow to cow in the act of milking. The affected cows should be milked last and the milk man should wash his hands thoroughly with soap and a good disinfectant before milking another cow.—John P. Hutton, Assoc. Prof. Surgery and Medicine, M. A. C.

SELLING YOUR APPLES AT A PROFIT

(Continued from page 4)

of four per cent acetic acid, may be reduced to a strength of not less than four per cent, and cider vinegar so reduced shall not be regarded as adulterated. Every manufacturer or producer of cider vinegar shall plainly brand on the head of the cask, barrel or keg or other container of such vinegar, his name, place of business and the words 'fermented cider vinegar,' and no person shall mark or brand as cider vinegar any package containing that which is not cider vinegar. Any vinegar sold or offered for sale shall be marked or branded plainly upon the package or container from which it is sold and also on the original package or container in which it is sold or delivered, in a manner to show its true character and source."

Paragraph 71, Section 6: "No vinegar shall be sold or exposed for sale in which foreign substances, drugs or acids shall have been introduced. No vinegar shall contain any artificial coloring matter, and all vinegar shall have an acidity of not less than four per cent by weight of absolute acetic acid. If vinegar contains any artificial matter, or less than the required amount of acidity, it shall be deemed to be adulterated."

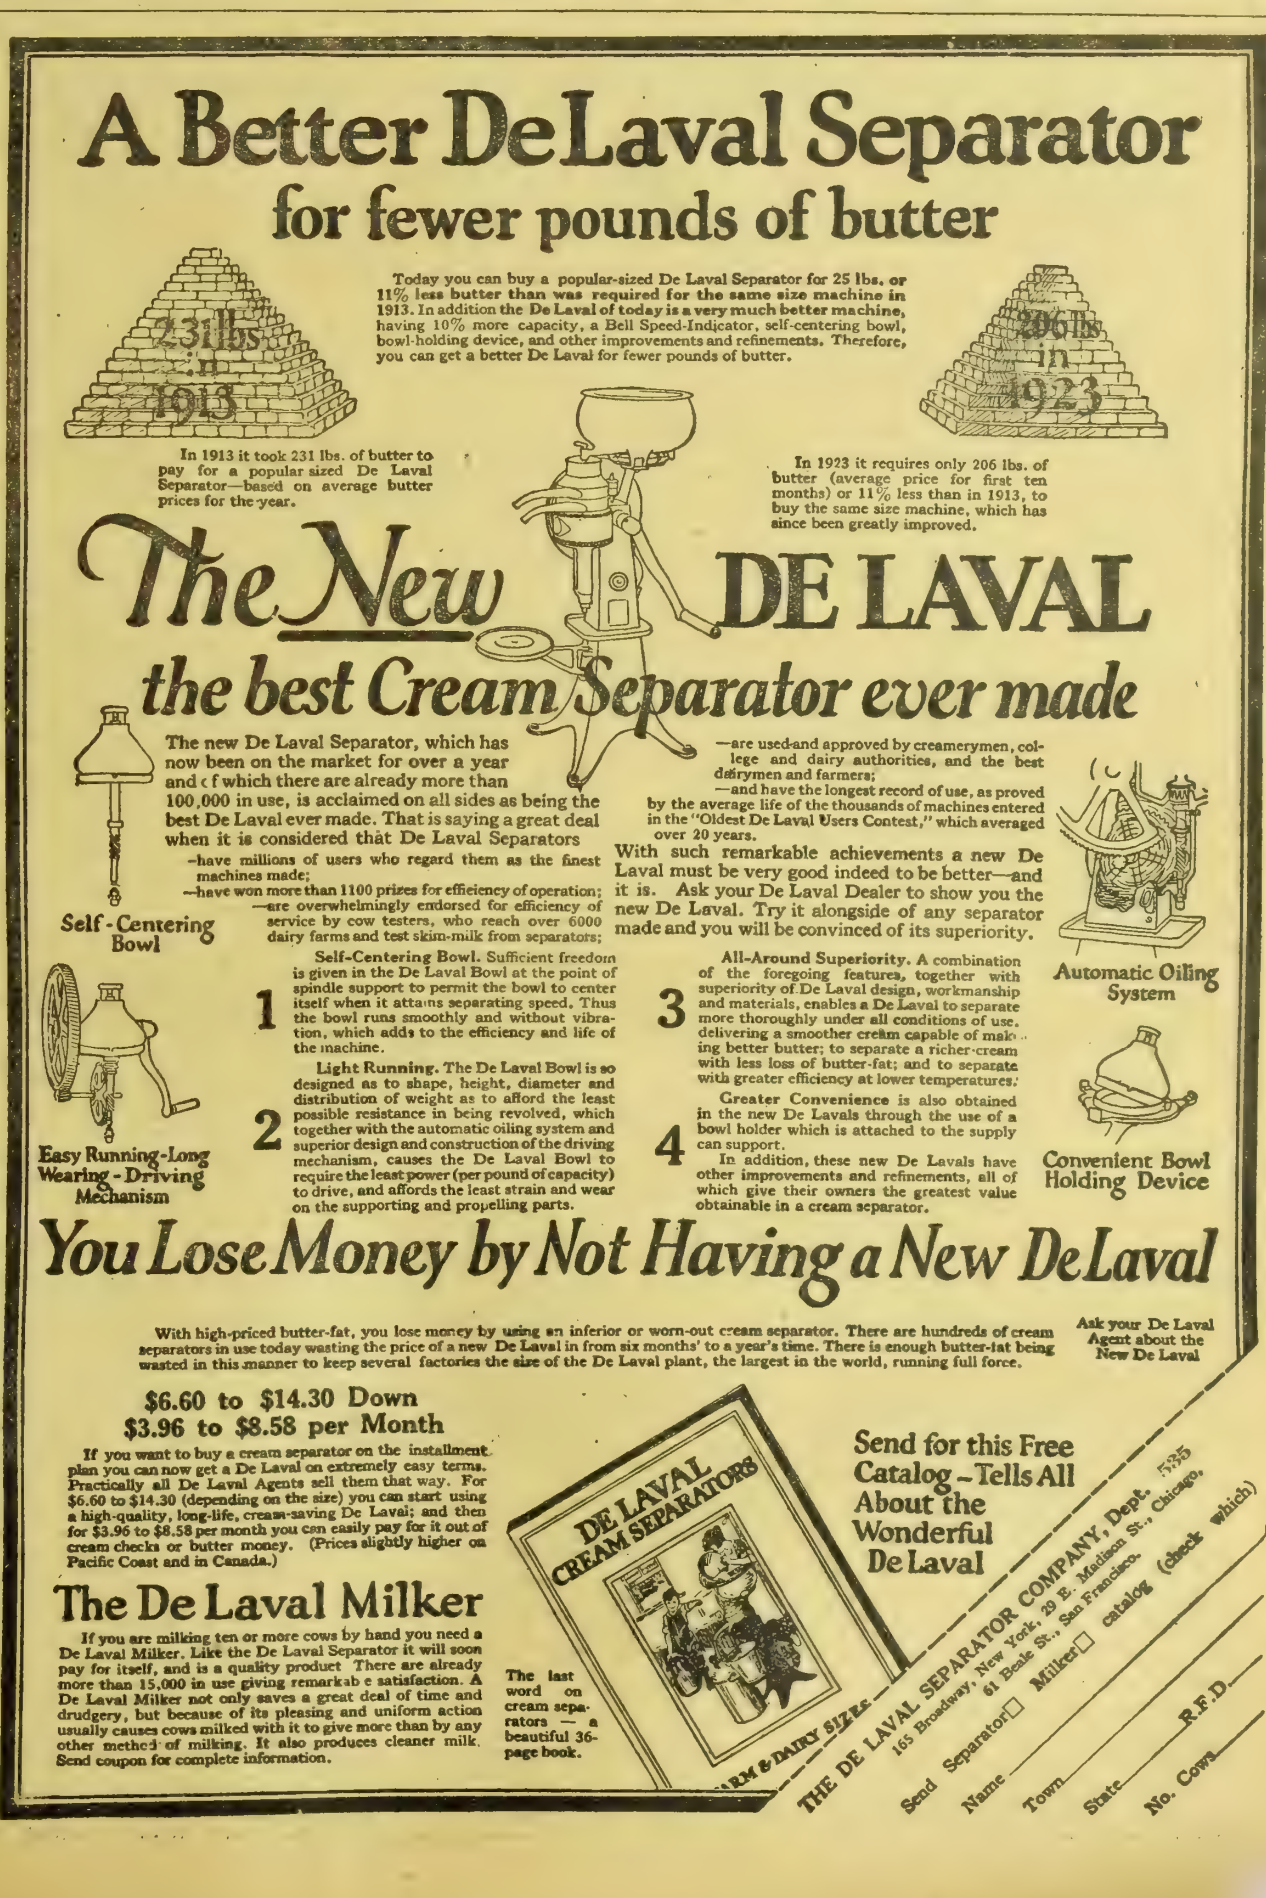
Paragraph 74, Section 9: "Whoever violates any of the provisions of this act shall, upon conviction, be punished by fine of not more than two hundred dollars or imprisonment in the county jail not to exceed six months or both such fine and imprisonment in the descrition of the court."

There are many reasons why vinegar making in the home is not a success. The first mistake is in not using good sound fruit. You can not make good vinegar from unsound or rotten fruit. The microorganisms spoiling the fruit will likewise spoil the vinegar if not properly controlled. The second mistake is in keeping the cider at too low a temperature. It will actually take any where from one to three years to make vinegar if the cider is kept at a low temperature. On the other hand if kept at too high a temperature the alcohol is evaporated and other undesirable organisms enter and destroy the food materials necessary for the yeasts and bacteria in the making of vinegar. Another mistake often made is in the choice of variety of apples. Many apples that make good cider to drink do not make good cider for vinegar due to the small amount of malic acid present. Malic acid is necessary in cider to keep out the putrefactive bacteria that otherwise would spoil the cider. Again many varieties are low in sugar content and sugar is necessary in cider for good vinegar. Contrary to popular opinion sweet apples do not as a rule contain more sugar than sour apples. They simply have less malic acid present which makes them taste sweeter. Taking everything into consideration most varieties of winter apples make the best cider for vinegar. Fall apples are the next most desirable for vinegar making and summer apples the least desirable.

In conclusion it might be said that any one observing a few simple rules of cleanliness, selecting the proper variety of apples, inoculating with pure cultures of yeast and bacteria can make good cider vinegar conforming to the laws of Michigan at a small cost; thus receiving twice as much for the apple crop and in many cases converting an unprofitable crop into a profitable one.

(Editor's Note:—Anyone interested in producing better vinegar send for Special bulletin No. 98, Bacteriological Laboratory, Michigan Agricultural College, East Lansing, Mich.)

FREE BOOK ABOUT CANCER
The Indianapolis Cancer Hospital, Indianapolis, Indiana, has published a booklet which gives interesting facts about the cause of Cancer, also tells what to do for pain, bleeding, odor, etc. A valuable guide in the management of any case. Write for it today, mentioning this paper. (Adv



231 lbs in 1913
206 lbs in 1923
Self-Centering Bowl
Easy Running-Long Wearing-Driving Mechanism
Automatic Oiling System
Convenient Bowl Holding Device
DE LAVAL CREAM SEPARATORS

A Better De Laval Separator for fewer pounds of butter

Today you can buy a popular-sized De Laval Separator for 25 lbs. or 11% less butter than was required for the same size machine in 1913. In addition the De Laval of today is a very much better machine, having 10% more capacity, a Bell Speed-Indicator, self-centering bowl, bowl-holding device, and other improvements and refinements. Therefore, you can get a better De Laval for fewer pounds of butter.

In 1913 it took 231 lbs. of butter to pay for a popular sized De Laval Separator—based on average butter prices for the year.

In 1923 it requires only 206 lbs. of butter (average price for first ten months) or 11% less than in 1913, to buy the same size machine, which has since been greatly improved.

The New DE LAVAL
the best Cream Separator ever made

The new De Laval Separator, which has now been on the market for over a year and of which there are already more than 100,000 in use, is acclaimed on all sides as being the best De Laval ever made. That is saying a great deal when it is considered that De Laval Separators
—have millions of users who regard them as the finest machines made;
—have won more than 1100 prizes for efficiency of operation;
—are overwhelmingly endorsed for efficiency of service by cow testers, who reach over 6000 dairy farms and test skim-milk from separators;
—are used and approved by creamerymen, college and dairy authorities, and the best dairymen and farmers;
—and have the longest record of use, as proved by the average life of the thousands of machines entered in the "Oldest De Laval Users Contest," which averaged over 20 years.

With such remarkable achievements a new De Laval must be very good indeed to be better—and it is. Ask your De Laval Dealer to show you the new De Laval. Try it alongside of any separator made and you will be convinced of its superiority.

1 Self-Centering Bowl. Sufficient freedom is given in the De Laval Bowl at the point of spindle support to permit the bowl to center itself when it attains separating speed. Thus the bowl runs smoothly and without vibration, which adds to the efficiency and life of the machine.

2 Light Running. The De Laval Bowl is so designed as to shape, height, diameter and distribution of weight as to afford the least possible resistance in being revolved, which together with the automatic oiling system and superior design and construction of the driving mechanism, causes the De Laval Bowl to require the least power (per pound of capacity) to drive, and affords the least strain and wear on the supporting and propelling parts.

3 All-Around Superiority. A combination of the foregoing features, together with superiority of De Laval design, workmanship and materials, enables a De Laval to separate more thoroughly under all conditions of use, delivering a smoother cream capable of making better butter; to separate a richer cream with less loss of butter-fat; and to separate with greater efficiency at lower temperatures.

4 Greater Convenience is also obtained in the new De Lavals through the use of a bowl holder which is attached to the supply can support.
In addition, these new De Lavals have other improvements and refinements, all of which give their owners the greatest value obtainable in a cream separator.

You Lose Money by Not Having a New De Laval

With high-priced butter-fat, you lose money by using an inferior or worn-out cream separator. There are hundreds of cream separators in use today wasting the price of a new De Laval in from six months' to a year's time. There is enough butter-fat being wasted in this manner to keep several factories the size of the De Laval plant, the largest in the world, running full force.

Ask your De Laval Agent about the New De Laval

$6.60 to $14.30 Down
$3.96 to $8.58 per Month

If you want to buy a cream separator on the installment plan you can now get a De Laval on extremely easy terms. Practically all De Laval Agents sell them that way. For $6.60 to $14.30 (depending on the size) you can start using a high-quality, long-life, cream-saving De Laval; and then for $3.96 to $8.58 per month you can easily pay for it out of cream checks or butter money. (Prices slightly higher on Pacific Coast and in Canada.)

The De Laval Milker

If you are milking ten or more cows by hand you need a De Laval Milker. Like the De Laval Separator it will soon pay for itself, and is a quality product There are already more than 15,000 in use giving remarkable satisfaction. A De Laval Milker not only saves a great deal of time and drudgery, but because of its pleasing and uniform action usually causes cows milked with it to give more than by any other method of milking. It also produces cleaner milk. Send coupon for complete information.

The last word on cream separators — a beautiful 36-page book.

Cured His Rupture
I was badly ruptured while lifting a trunk several years ago. Doctors said my only hope of cure was an operation. Trusses did me no good. Finally I got hold of something that quickly and completely cured me. Years have passed and the rupture has never returned, although I am doing hard work as a carpenter. There was no operation, no lost time, no trouble. I have nothing to sell, but will give full information about how you may find a complete cure without operation, if you write to me, Eugene M. Pullen, Carpenter, 59-K Marcellus Avenue, Manasquan, N. J. Better cut out this notice and show it to any others who are ruptured—you may save a life or at least stop the misery of rupture and the worry and danger of an operation.

1923 Apple and Potato Show Best Ever

(Continued from page 4)

banks to the round Irish Cobblers, the exhibits showed wonderful color, bloom, and finish, and made a picture which the average person could hardly believe possible of the prosiac potato.

The Russet Rural was easily the leading variety at the Show. In fact, this variety had more exhibits than all other varieties combined. Next came the White Rurals, with the other varieties trailing as to number of exhibits.

In the exhibit of 32 potatoes, Edward Sutton of Central Lake won first with his peck of Russet Rurals and the same peck was later awarded the championship of the whole show.

The peck class of Russet Rurals was really a "contest of the champions" as it included the exhibits of Lee Sneathen of Charlevoix who won sweepstakes at the International Potato Show at Duluth this year and Ernest Pettifor of Gaylord who won the championship of the 1922 International. Sneathen's exhibit placed a close second while Pettifor was awarded third.

When the visitor saw the dozens of other exhibits, all of splendid quality and uniformity, which did not come within the prize money, it was easy to appreciate that winning a place in this competition meant a real honor.

The Upper Peninsula came in for its share of the potato honors as first place in the White Rural peck competition was won by C. R. Millar of Manistique, while John DeLongchamps peck of Green Mountains won first in its class.

The best peck of Irish Cobblers was exhibited by George Harrison of Manton and Wm. Howe of East Jordan won first prize with a peck of Early Ohios. In the "any other variety" class, first place was awarded to Chas. Albert of Vulcan, who exhibited a splendid peck of Russet Burbanks.

Otsego Has Best County Exhibit

A county exhibit consisted of 12 samples of 32 potatoes each, to be selected from the exhibits made by individual growers. Otsego county placed first; Cheboygan county, second; Emmet county third; and Presque Isle county fourth.

To encourage the selection of better market potatoes, the Michigan Potato Growers' Exchange offered prizes for the best exhibits of market potatoes shown by cooperative marketing associations. First place in this division was won by the Central Lake Marketing Ass'n. with the Lake City Ass'n. second and the Marquette County Farm Bureau, third.

A novel feature of the potato exhibit was a contest whereby the housewives visiting the Show expressed their judgment as the kind of potatoes they prefer. Several exhibits, each composed of 150 lbs. of table stock, were displayed and were designated by numbers. Each lady was given a ballot on which she marked the number of the exhibit which she would prefer to buy. Interest in this feature was very marked among the visiting housewives.

A guessing contest, which concerned the number of apples and potatoes displayed in two piles, also received much attention.

Potato Producers Hold Meeting

The Michigan Potato Producers' Ass'n. held two meetings in connection with the Show. Warehouse construction and storage conditions were the two topics especially emphasized. Prof. Floyd Fogle of the M. A. C., Dept. of Farm Mechanics, described approved types of storage houses and showed the details of construction. Prof. Fogle stressed the importance of proper ventilation in these houses. He predicted that potatoes would soon be stored in bonded houses, similar to other commodities which now have that privilege, which would enable the grower to finance his business on the warehouse receipts. The importance of having the best storage houses, so as to comply with the requirements of bonding, was shown clearly.

J. Kotilla, who has been doing special research work for the M. A. C. in connection with potato diseases, showed that most of the troubles met in storing potatoes are caused by insufficient ventilation. He explained that the potato is a living plant and that the life processes go on within the tuber during the winter. This makes it necessary that the tuber have a sufficient supply of oxygen otherwise breakdown will occur in the tissues of the tuber.

Mr. Kotilla showed how this breakdown appears first as rings or spots under the surface of the tuber and later extends to the well known "black heart." These conditions may be caused by lack of proper ventilation of by too high temperatures in storage. In the later case the result is the same inasmuch as the high temperature stimulates the potato and it therefore requires more oxygen to supply its "breathing" process.

An honor club, which admits to membership only those potato growers who obtain an average yield of not less than 300 bushels of potatoes per acre, has been promoted this year by the Michigan Potato Producers' Ass'n. Those winning membership this year are as follows:

Name	Acres	Yield Per A. Bu.
A. L. Dunlap, Lupton	2	301
E. B. Loehne, Central Lake	2	322
A. Verschme, Manistique	2½	324
A. N. McDonald, Millersburg	2	395
Arthur Hockin, Kewadin	4½	333
Tony Shooks, Central Lake	2	318
Irvin Cole, Alanson	2	359
J. G. Woodman, Paw Paw	9	350
C. S. Dearborn, Belleaire	3	350
F. Schmalzreid, Levering	10	342
M. E. Parmelee, Hilliards	2	363
M. A. Rector, Rockford	2	322
J. DeLongchamp, Champion	3	420
Harry Reilly, Belleaire	2	310
R. C. Bennett, Alba	3	308
Lee Sneathen, Charlevoix	2	390
H. J. Bonnett, Beaverdam	2½	305
H. Vandersilk, Central Lake	4½	400
W. Bowers & Son, Central Lake	2	350

In addition to the honor of obtaining membership in the "300 Club," each of the above growers was presented with a very attractive medal watch fob. The 1923 championship goes to John DeLongchamp of Champion with his average yield of 420 bushels per acre.

FUR DEPARTMENT

TRAPPING THE WEASEL

NO animals are more blood-thirsty and carnivorous than the weasel tribe.

They are well equipped both in actual weapons and in activity of body and have powers quite out of preportion to their size. They are gifted with a magnificant fur which in the colder climates, turns a snow white during winter months. Skins should be cased fur side out. The fur of the White Weasel is most valuable; that of the brown weasel is only worth a few cents.

Locate runway or place weasel frequents and hang bait from limb of tree by piece of string, so that it is just within reach of the animal. Bait should hang about 12 inches from trunk of tree and trap should be directly under. Always keep traps used for small animals properly oiled so they will spring with very little pressure upon them. When trapping for weasel as well as all other animals, great care should be used to cover traps and remove all unnatural appearance. Use rabbit, bird or liver for bait.

MICHIGAN HOLSTEIN BREEDERS ADOPT PREFIX NAMES

FIVE Michigan Holstein breeders have adopted prefix names within the past three months for use in naming their cattle. These names have been reserved on the books of The Holstein-Friesian Association of America for the exclusive use of the breeders.

They are: Security, M. O. Posthuma & Sons, Coopersville; Postdale, John E. Post, Durand; Masfarmco, M. J. McPherson, Howell; Oshtemo, H. B. McMurray, Kalamazoo; Cool Lake, Earl Fairbanks Jr., Lansing.

The use of prefix names is of decided advantage to the breeder. It gives him the use of all names in new combinations, even those in previous use by other persons and makes selection of names less difficult. The prefix may become well known and thus become a trade mark for the owner.

Poultry for Profit

NOT GOOD PLAN TO FORCE HENS TO MOULT

Is it a good plan to force hens to moult? About what time and how should they be fed during that time?—Mrs. B. H., Snover, Mich.

—It is not practical to force hens into a premature moult. A number of experiments have been conducted in relation to egg production and moulting. Most of the heavier producers delay moulting until September fifteen or later; in fact most hens that moult subsequent to this date are worthy of being included in the breeding pen. Such hens usually moult quickly and resemble a pin cushion at certain stages of the moulting period. The early and slow moulters are undesirable and do not return to early production as many people seem to believe.

A good ration for the moulting would be as follows:

Scratch feed: two parts cracked corn, one part wheat, 20 per cent bran, 20 white middlings, 20 corn meal, 20 ground oats, 15 meat scrap, 5 old process oil meal.—E. C. Foreman, Professor of Poultry Husbandry, M. A. C.

MICHIGAN TO HAVE CERTIFIED BABY CHICKS

THE Michigan Baby Chick Association has completed its plan for the certification of flocks and state inspection of hatcheries. This announcement was made by C. J. DeKoster, secretary of this Association, This is welcome news to the chick-buying public and the Michigan Baby Chick Association is performing a distinct service to the poultry industry of the state. It will put the poultry business on a firmer basis.

For many years Michigan farmers and poultrymen, like those of other states, have been the victims of unscrupulous poultry producers and hatcheries who had the ability to write flowery advertisements but did not deliver chicks of good quality. There were also many good reliable poultry-men in the state, but buyers had no way of knowing the good from the bad. The Michigan Baby Chick Association saw the necessity of this move more than two years ago and immediately laid the foundation. Progress was slow but sure. The work was started in 1922 by the Michigan Agricultural College but a shortage of men and funds made it necessary to drop the work. This year the Association has formulated a plan whereby they can do the work themselves under the supervision of the M. A. C. Several plans were suggested and discussed and the following was finally put into use:

The certification plan provides that every flock furnishing eggs to the hatchery must be inspected by a member of the inspection committee of the association. The pullet flocks are carefully inspected for size, rate of maturity, freedom of disease, uniformity of type, uniformity of growth and productive ability. The hens are rated for lateness of moult, size and uniformity, general vigor, freedom of disease and productive ability. Male birds are inspected for size and physical development, character, constitutional vigor and breeding.

Then the inspector is to determine what the general conditions around the farm are, such as sanitation, ventilation, over-crowding, forcing for production and feeding. These are the points upon which the score cards will be judged by the board of directors to whom the inspector makes his report. Flocks that do not come up to the standard requirements will not be certified. When a flock fails to pass the inspection test, the flock owner benefits by the inspection and can generally improve his flock and within a few years may be able to have them certified. When a flock passes the inspection a certificate is issued the flock owner showing that his flock is up to the required standard. Most of the hatcheries in the state are coming in on this certified stock plan. It will mean better chicks, better satisfied customers and a big boost for the baby chick industry of Michigan.

Before the 1924 season opens all hatcheries of members of this Association will be inspected by a man from the poultry department of the Michigan Agricultural College. Hatcheries will be inspected for sanitation, ventilation and general conditions. This works hand in hand with the certification plan and unless a hatchery has the facilities to hatch good strong chicks under good conditions it will not be able to sell certified stock. The Association feels that a man can have the best stock in the world and if they are not hatched right the stock will do no one any good.

Plans of this kind have been used by the state of Wisconsin successfully; Illinois has adopted a similar plan for next year; and why should Michigan lag behind? Michigan is not lagging behind, thanks be to a few live men, who have put this big thing across. We say "Big" thing, because we believe that the certification of flocks and a state inspection of hatcheries is the biggest forward step that has been made in the poultry industry of the state.

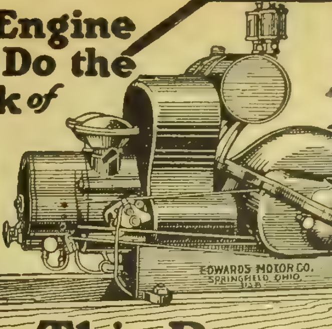
UNCLE RUBE SPINACH SAYS

MAN IS HEAD OF THE HOUSE

JEST a few days ago or there about, a feller where I work at —he'd been quite a bit chesty 'bout how he run things out to his place—sed he was boss at home an' run his own place. Well, you know how it is when a feller gits that way? Of course no human bein' has ever figgered out 'zactly how comes—but any way, some fellers do 'magine they run things up in their homes an' less they git too chesty 'bout it I most gen'rally let 'em dream their dreams and say nothin' 'bout it. But this young guy got onto my nerves a little. Oh he wasn't a kid,—35 or 36 prob'ly—an' I argued with him 'cause bein' long in years—not old you know, but well past my twenties—I kinda sort o' thought he wasn't much different from any other married man. So you see, just to prove I was right and that he didn't run his own home I angled 'round 'til he invited me out to his house for dinner—for Sunday dinner. Well now I have my Sunday dinners paid for—that is gen'raly speakin, if not, well then I wait 'til Monday and I can most allus git trusted on Monday. But to continue—or rather git back to where I wuz at. He invited me to go out to his place for my Sunday dinner. Well an' good! I accepted the invitation at once, I wanted to see a house where the husban' wuz boss an' so I sed I'd be glad to go out.

This wuz on Thursday night an' I wuz quite proud to think that I, out of all the youngsters comin' from the South, that I wuz the only one invited. An' he invited me 'cause I had advocated 'at a man should run his own place.

Oh, well, folks, I didn't go out there, I'm sorry as I can be. I know you're sorry to. Saturday night—jest the night when I thought it'll be a short night cause I was planin' on a free dinner—by the great horned spoon an' striped cats an' blind pigs—the young feller came to me an' sez—in a kinda sinful voice, "Uncle Rube its all off, the wife don't want company an' I can't take you out to the houso without her consent an' "—well folks, he took off his workin' cap an' showed me a bunch, a lump on his head jest 'bout the size of a brown leghorn egg and he sez "you see how it is, Uncle Rube—Course" he sez, "I run my own home but——my wife don't want you out there". Oh I'm so glad I'm free, no woman can tell me where to go and when to come back—yes, yes, I'll be there in jest a minute, what's the hurry? Cordially yours, UNCLE RUBE.



My Engine Will Do the Work of 6

"I set out to build a farm engine that would have every feature the farmer wanted and none he didn't want. It has now been on the market six years. Thousands of satisfied users tell me I've succeeded. I'm proud to have this engine bear my name."
—A. Y. EDWARDS

EDWARDS FARM ENGINE

Try This Remarkable Engine FREE

There is no other farm engine like it. Simple in construction and easy to operate. It is only one engine, yet it takes the place of six engines. It will give from 1½ to 6 H. P., yet it is so light that two men can carry it easily. Set it anywhere and put it to work.

Change Power as Needed

It is a 6 H. P. when you need 6, or 1½ H. P. when you need only 1½, or any power in between. Fuel consumption in proportion to power used and remarkably low at all times. Adjustment from one power to another is instantaneous.

Burns Kerosene

Operates with kerosene or gasoline. Easy starting, no cranking. The greatest gas engine value on the market. And you can prove all of these statements to your own satisfaction.

What Users Say

Ivan L. Blake, of Hannibal, New York, says: "Only engine economical for all jobs. I run a 28-inch cord wood saw, a 24-inch rip saw, a washer, a pump, and a grinder, and it sure runs them fine. It has perfect running balance, and it sets quiet anywhere."

Clarence Rutledge, of Manitoulan Island, Ontario, says: "Have given my Edwards four years' steady work and like it fine. It uses very little fuel. I run a 28-inch cord wood saw, also a rip saw, 8-inch grinder, ensilage cutter, line shaft for shop, churn, washer, separator and pump. Have had ten other engines and the Edwards beats them all."

Frank Foell, of Cologne, New Jersey, says: "It's a great pleasure to own an Edwards engine. I run a wood saw, cement mixer, threshing machine, etc. Do work for my neighbors. Easy to move around and easy to run. I would not have any other."

Free Trial Offer

Now—I want to prove my claims to you. I want to send you an Edwards Engine for absolutely free trial. Just write your name and address on coupon and mail. I will send at once complete details about my farm engine and about my free trial offer. No cost or obligation. Mail coupon now.

MAIL THIS COUPON

PULLETS, HENS AND COCKERELS

S. C. White Leghorns and S. C. and R. C. Black Minorcas. Must make room before cold weather. About ready to lay.
LAPHAM FARMS, Pinckney, Mich.

High Grade, Utility Cockerels For Sale—April hatched—White Wyandottes, Barred Rocks and White Leghorns. C. W. Heimbach, Big Rapids, R. 5, Michigan.

LEGHORNS

LEGHORNS

S. C. Buff Leghorn Hens, Pullets and Cockerels. Hens and pullets $2.50 each; cockerels $3.00 to $5.00 each. Show birds a matter of correspondence. LAPHAM FARMS, Pinckney, Mich.

FOR SALE—LARGE IMPORTED SCOTCH White Leghorn Stock Cockerels and Cock Birds. Also exhibition and bred-to-lay S. C. Buff Leghorns. FAIRVIEW POULTRY FARM, C. J. Sweet, Prop., Ann Arbor, Michigan.

RHODE ISLAND REDS

RHODE ISLAND REDS TOMPKINS STRAIN to make room for young stock. I will sell after November 1, 1923, 50 2 year old hens at $2.00 each; 25 1 years old hens at $3.00 each; cockerels at $2.50 and up. All these cockerels are from my best 3 year old hens that layed 205 eggs or better in their pullet year. Quality breeder of Rhode Island Reds.
WM. H. FROHM, New Baltimore, Mich., R. 1.

WHITTAKER'S R. I. REDS. MICHIGAN'S greatest color and egg strain. Cockerel price list ready in September. Improve your flock with Whittaker's red cockerels.
INTERLAKES FARM, Box 4, Lawrence, Mich.

Fine Rose Comb R. I. Red Cockerels $2.00 Each. Giant Bronze Turkeys, toms $9.00; hens $7.00.
Mrs. Albert Harwood, R. 4, Charlevoix, Mich.

WYANDOTTES

March Hatched Rose Comb White Wyandotte Cockerels, Fishel Strain. Beauties at $3 each. Mrs. Tracy Rush, 104 Grover Ave., Alma, Mich.

PLYMOUTH ROCKS

BARRED PLYMOUTH ROCK COCKERELS $5 each. From first prize winning strain at Chicago and Detroit. J. A. Barnum, Union City, Mich.

PARK'S STRAIN BARRED ROCK COCKERELS from extra selected stock headed by M. A. C. cockerels. April hatched, $4.00 each. 3 or more $3.50 each. Shipped approval and prepaid on orders received before December 15.
REESE BROS. Williamston, Michigan.

FOR SALE—SUPERIOR RINGLET BARRED Rock cockerels, Cocks, Hens, and Pullets, Show Birds and Breeders. J. L. Wyndham, Tiffin, Ohio.

ORPINGTONS

BUFF ORPINGTON COCKERELS FOR SALE. Cooks Strain.
A. J. BREWBAKER, Elsie, Michigan.

Maplehurst Farm Buff Orpington Cockerels—Exhibition and Production strain—Flock culled by Prof. Foreman. $5.00 to $7.50.
D. MORRISON, Albion, Michigan.

ANCONAS

S. C. ANCONA COCKERELS HATCHED FROM Sheppards very best, order early, $5.00 each.
H. CECIL SMITH, Rapid City, Mich., R. 2.

TURKEYS

Pure Bred Mammoth Bronze Turkeys, Champion strain. Large and vigorous. Unrelated stock.
Mrs. B. Smatts, R. 1. East Jordan, Mich.

BOURBON RED TURKEYS: THE BEST SIDE line for a farm. We sold $400.00 worth last year. Write for prices, etc.
R. W. ROBOLTHAM, Hesperia, Michigan.

FOR SALE UNRELATED STOCK. BOURBON Red turkeys. Brown and White Chinas and Canadian wild geese. Black Muscovy, White Pekin and wild Mallard Ducks. Pearl Guineas.
J. D. CALLAGHAN, Fenton, Michigan, R3.

LARGE VIGOROUS BOURBON RED STOCK Turkeys. Axtell Strain.
MARY BEACOM, R4, Marlette, Michigan.

BOURBON RED TURKEYS STATE FAIR WINNERS.
THOMAS G. CALLAGHAN, Fenton, Michigan.

MAMMOUTH BRONZE TURKEYS PURE BRED. For breeding only. Write me.
JOHNSON TURKEY FARM, Six Lakes, Michigan.

PURE BRED BRONZE TURKEYS. HEAVY, hardy, well marked. Hens $6.00, Toms $9.00.
CHAS. S. CLELAND, Deckerville, Mich.

MICHIGAN'S BEST GIANT BRONZE TURKEYS. Another excellent flock ready for sale. We place 100 breeders in Michigan each year. Furnish unrelated stock. Save by buying early.
N. EVALYN RAMSDELL, Ionia, Mich.

Pure Bred Mammoth Bronze Turkeys. Sicilian Buttercups, S. C. Buff Leghorn and Silver Wyandotte cockerels. Caroline Kunkel, R. 4, Boyne City, Michigan.

FOR SALE BIG BRONZE TURKEYS. Male and Females.
ELMER O. HACKENBERG, Marcellus, Mich.

FOR SALE—PURE BRED MAMMOTH BRONZE Turkeys from large and vigorous stock.
MRS A. W. HUMPHREY, R. 3, Ithaca, Mich.

THOROUGHBRED GIANT BRONZE TOMS FOR Sale. Large beautiful birds. Michigan's best strain. Write for prices. MARY A. JOYNT, Omena, Mich.

MARKET FLASHES

MARKET SUMMARY

Active buying gives wheat market strength. Corn unchanged. Oats and rye follow trend of wheat. Beans steady. Butter and eggs in demand. Large supply of potatoes weakens market. Apples easy. Cattle trade slow but steady. Sheep and hogs active and prices gain.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

Farming Conditions

PERHAPS never before were farming more mixed than now, and while there are many complaints of hard times and forced economy, numerous reports come from more prosperous districts where farmers and stockmen have been able to meet their obligations without going heavily into debt. Naturally, the worst reports come from exclusively wheat growing districts, but many farmers who are in the habit of carrying on dairying as well as devoting part of their efforts to raising other grains and feeding live stock are nore than making both ends meet. In same farming districts it is reported that an accumulation of bad paper is being liquidated, numerous farmers having been carried by country banks in the hope of better crops and better prices, and this tends to postpone the dawn of a better day. On the other hand, it is cheering to learn that less money is needed for financing farmers than was anticipated. The Federal Farm Loan Board has completed its plan of financing this year's crops, having loaned a total of $32,000,000, and the wheat growers failed to take advantage of the fullest credit facilities. Only $2,403,896 of the total loaned to farmers was loaned on wheat. All of the loans for which wheat was furnished as security were made in the St. Paul, Wichita and Spokane districts. Corn husking has been going forward steadily in the states comprising the corn belt, and early sown wheat is showing up unusually well. Hogs have been marketed in overwhelming number, the last crop of pigs having been a huge one, but low prices have favored a large consumption of fresh pork, and cured meats and lard have also been eaten so largely that there are no uncomfortable accumulations anywhere. Fresh pork roasts are retailing in the Chicago meat markets at 17 cents per pound, and they are affecting the sales of beef and mutton to a marked degree, as these meats are not any cheaper. The return of Thanksgiving day brought unusually large supplies of poultry to market, and prices for turkeys were much lower than a year ago, receipts being larger than ever before. As farmers know, turkeys are apt to be difficult to raise, but where owners are successful and raise large numbers for the market, profits are liberal. To a remarkable extent farmers are doing their marketing of poultry and other farm products by using motor trucks, and profits are largely increased thereby. North Dakota farmers are great turkey men, shipping car loads of prime dressed turkeys to Chicago and other large markets.

Increased Michigan Bean Crop

The official crop report for Michigan says the average yield increased this year from 11 to 11.5 bushels an acre, aggregating a total production of 6,532,000 bushels, and probably the largest quantity of white beans ever grown in any state in one year. The average pick is placed at 8 per cent, with approximately 6,000,000 bushels of merchantable beans.

The Bean and Pea Journal says: "The demand for soybeans has exceeded the supply of the better varieties in Iowa, according to a member of the farm crops section of Iowa State college. This condition obtains in spite of the fact that the acreage of soybeans has been doubling annually, while in many counties the acreage is estimated at from 10,000 to 15,000 acres. While most of this acreage is planted with corn for hogging down a good many fields are planted for the production of seed."

Large Wheat Supply

While farmers of the far west are in numerous instances reported to be holding their wheat for higher prices and even going so far as to defer payment of interest on mortgages, other farmers are accepting prices offered, fearing values may go lower later under heavy offerings. Stocks in sight are growing in volume rapidly, and a short time ago it was started on the best of authority that available supplies of wheat east and west of the Rocky Mountains, in Canada and afloat aggregated 247,000,000 bushels, comparing with 197,200,000 bushels a year ago. It is as evident as ever that unless especial efforts are made, wheat is not likely to sell much, if any, higher, the worlds, surplus being so great as to make sharp competition between rival exporting companies. The wheat situation is a domestic one, and not dependent upon exports, and we are importing wheat from Canada. Harvesting wheat is going on in Argentina, and the surplus of that country for export is estimated at 170,000,000 bushels, while the Austrailian surplus is placed at 60,000,000 to 80,000,000 bushels. Germany, France and other European countries have grown large crops of wheat and potatoes, but the Germans are so impoverished that comparatively few are able to buy food in a normal way. Corn farmers as a class are in good shape financially, and undoubtedly they will ship a great deal of corn to market after corn husking is over. Stocks of corn now in sight are insignificant, and it is impossible to scrape up enough to bring exports to even a moderate amount, although cash corn has had a large fall in prices. Very good exports of oats, rye and barley are reported, and rye prices still rule unusually low, with the visable supply in this country nearly twice as heavy as at this time last year. Corn and other feeds are not generally regarded as too high for feeding to stock on the farm, although corn does look high when it is recalled that a little more than two years ago new cash corn sold in the Chicago market for 49 cents a bushel.

Late sales were made of December wheat at $1.02, comparing with $1.19¼ a year ago; December corn at 72 cents, comparing with 72 cents last year; December oats at 43 cents, comparing with 44 cents last year; and December rye at 67 cents, comparing with 83 cents a year ago.

Prime Dairy Cows

The honor list of cows in state testing associations for October, just released by the dairy extension department of the University of Illinois, shows that the highest producing cow in any of the 19 groups was owned by Rock River Farm in the Ogle county test group. This is the property of Senator Medill McCormick. The cow is a purebred Holstein, which produced 2,236 pounds of milk and 101.5 pounds of butter fat.

The next highest cow was owned by A. D. Machamer of the Jo Daviess group. This cow was a grade Holstein, which produced 2,164 pounds milk and 84 pounds butter fat in the month.

The highest producing herd also was owned by Mr. Machamer. Five grade holsteins in this herd averaged 1,458 pounds milk and 46.1 pounds fat. The lowest record was 522 pounds milk and 32.7 pounds fat for 22 purebred Jerseys in the Know-Warren group.

The Cattle Outlook

Now that the Thanksgiving extensive consumption of poultry is over, the demand for beef may be expected to be reasonably large until the Christmas and New Year holidays start up another lively demand for turkeys, geese, ducks and chickens. Only a moderate demand exists for heavy beef steers, as has been the rule for many weeks, and the local packers and city butchers as well as eastern shippers show a marked preference for yearlings, which have been selling at a liberal premium over prices paid for heavy cattle. Prospects appear promising for well-bred and well fattened cattle, but it appears to be the prevailing opinion among cattle feeders that in most instances it will not be advisable to go in for a long feed. It also is highly probable that fat cows and heifers will be good sellers. After a two years comparison of long and short feeding at Purdue University in Indiana it was demonstrated that light weight cattle which were roughed through the winter and fed out in the spring and summer months for marketing late in the summer have a better show for profits than heavy steers fed for four or five months in the winter. The Chicago cattle receipts for Thanksgiving week were so unusually small that prices advanced 25 to 75 cents, the bulk of the steers selling at $8.50 to $11.60 and the best yearlings going at $12 to $12.75, while the best heavy steers went at $11.50 to $12.25. Common steers sold at $6 to $7 and cows and heifers at $3.50 to $10.50. Stockers and feeders were higher at $5 to $7.50.

The Hog Industry

It was demonstrated months ago that the farmers had greatly overdone hog breeding, and the explanation of the tremendous declines in prices is found in the highly sensational increased shipments to the leading packing points. The recent spread in Chicago prices has narrowed materially, but prime heavy butcher hogs are still selling much above the best light bacon hogs. Recent receipts of hogs in Chicago have averaged 235 pounds, being four pounds heavier than a year ago and twenty-one pounds over the ten-year average. Lard is especially active at much higher prices than a year ago. Despite liberal Chicago hog receipts last week, prices were not much lower, late sales being at $6.45 to $7.15, comparing with $7.30 to $8.60 a year ago. Combined receipts in twenty markets for the year to late date amount to 38,793,000 hogs, comparing with 30,351,000 a year ago.

Lambs Promise Well

While many more flocks of lambs are being fed this winter in Michigan, Ohio, Indiana, Illinois, Wisconsin and other states than a year ago, lamb and mutton are far more popular meats than in former years, and it looks promising for sheepmen who bought feeders right and finish them right. Around Thanksgiving the consumption of lamb meats was very small, as usual, but sellers managed to put price up on very much reduced supplies. In regard to marketings in the near future, it should be noted that cheap pork causes many families to buy pork in place of mutton. Poorly fed lambs are too numerous and sell badly, as do heavier lambs, especially lambs weighing from 85 to 100 pounds and over. Lambs sell in Chicago at $9.50 to $13.25 and feeders at $11 to $12.35.

WHEAT

The Detroit market showed slight change during the week ending December 1 and the grain was steady owing to smallness of receipts. Demand from the eastern millers is on the increase and any grain is sold as soon as it appears on the market. There is little demand from other directions, dealers declare.

CORN

Offerings of the new crop are large but the quality of most of the grain coming forward is poor. Too much wet weather left the grain soft and it requires quick handling to avoid loss. Although driers are working overtime a lot of the corn is going hot and sour. This is keeping the market steady. As soon as the soft corn has been disposed of farmers are expected to hold the balance of their surplus and wait for higher prices. And if there is as much poor corn as is reported the farmer who has some first class corn stored away will make some money before several months have passed.

OATS

Oats are firm and unchanged at Detroit. Some of the other large markets in this country report prices slightly higher and demand fair. Country offerings to arrive are nil.

RYE

There is nothing doing in the Detroit rye market and the grain is easy with a quiet tone prevailing.

BEANS

There was a gain of 5 cents in the Detroit bean market last Saturday but this left the price 10 cents under what it was a week previous. Fair quantities of beans are being shipped to New York from Michigan. The eastern dealers are reported to be well pleased with the grade of beans they are receiving from our state this year.

POTATOES

Potatoes were fiirm at Chicago last week but lower on most other markets. At Detroit the supply was plentiful and the market had an easy tone to it.

HAY

Trade has been rather slow and eastern markets especially have a little easier tendency. Receipts have been ample and under a light demand these markets have been unable to realize top prices for anything under very choice stock.

STATE FRUIT GROWERS HOLD 23RD ANNUAL MEETING

(Continued on Page 3)

from 20 to 40 per cent of the fruit crop on futures before the crop is harvested. He argued that such a practice would tend to prevent glutted markets and would make a foundation for the market at harvesting time.

Government inspection of cars of fruit at loading points was praised as an excellent method of merchandising as it enabled cars to be sold in the cities by auction and f. o. b. loading point.

Merchandising the apple was the topic assigned to Prof. V. R. Gardner, head of the Horticultural Department of the Michigan Agricultural College. Using numerous charts as illustrations, Prof. Gardner outlined the present apple marketing situation with remarkable clearness. He showed that over 90 per cent of the apples are sold and out of the growers' hands by November first of each year. In contrast with this dumping, Prof. Gardner showed that the demand for apples is practically constant throughout the ten months from August to May, inclusive, whereas the bulk of the marketing is done within a comparatively few weeks following the harvesting. Using data obtained from chain stores, restaurants, and grocery stores in Detroit, Lansing and Grand Rapids, Prof. Gardner showed how remarkably uniform this demand is for apples throughout the year.

Without minimizing the importance of grades, standards, advertising, cooperative marketing machinery, and the like, Prof. Gardner showed how proper merchandising is the key to the apple situation. "If there is one principle more basic, more fundamental, than all others in merchandising it is that success lies in being able to sell people what they want, where they want it, and when they want it," stated Prof. Gardner in emphasizing his point that merchandising the apple must be made as stable a transaction as the daily sales, of coffee, shoes, and sugar.

Home storage of fruit is rapidly decreasing and now the greater part of the apple crop is marketed in small quantities from week to week. More storage capacity, especially cold storage, is a prime necessity in Michigan today, according to Prof. Gardner. "With a commercial production averaging more than 1½ million barrels of apples annually Michigan should have storage facilities for at least 1 million barrels," stated Prof. Gardner.

A Fight on Futures

The question of whether, or not, future sales of fruit are an advantage to the fruit grower was the most debated, and hotly contested question of the meeting.

James Nicol, of South Haven, President of the Michigan Fruit Growers Inc., the central cooperative fruit marketing exchange of the state, attacked the present system of selling fruit on future sales. He described a transaction of this past grape marketing season wherein a fruit broker in Michigan sold one hundred cars of grapes for future delivery. Having thus sold himself "short" the broker proceeded to flood the grape growing section with letters telling of a large grape crop in California and predicting a glut on the markets with consequent ruinous prices for grapes. In this way the broker proceeded to hammer down prices and break the grape market. This whole transaction enabled the broker to buy grapes at low prices to fill orders which had been sold previously at much higher figures.

Mr. Nicol advocated government regulation of these sales of futures and insisted that each future sale should be registered. With the sales thus recorded and available for inspection, Mr. Nicol believes that much of this market manipulation will be abolished. "No dealer should have the right to sell 100 cars of fruit at any price he pleases when he doesn't own a dollars worth of fruit himself," stated Mr. Nicol. "If he is allowed to do this, the sale should be recorded and should also be published in the newspapers for the benefit of the growers."

Mr. Nicol's views met with hearty endorsement from the fruit growers and the society went on record as favoring government registration of future sales of fruit.

Bulk Cars Injure Apple Market

Asserting that the sale of Michigan apples in car lots in bulk is working great injury to the reputation of Michigan fruit and is also a direct injury to Michigan fruit growers who carefully grade and pack their fruit, the State Hort. Society passed a resolution demanding that sales of bulk apples in carload lots be designated as a sale of a closed package and be subjected to the rules and regulations now applying to smaller packages.

The Society also passed a resolution asking for a Truth-In-Fruit-Juices law which will protect both the fruit grower and also the consumer of the fruit juices.

Aircooled Storages For Farms

Storage houses cooled by air are profitable investments for the fruit growers and more of them should be built, according to Prof. Roy E. Marshall of the M. A. C. Hortical Dept. Prof. Marshall stated that there are now about 14 of these aircooled apple storages in Michigan and they have a total capacity of 107,000 bushels. Twelve of these storages were built during the past year, showing that Michigan growers are waking up to the need for storage facilities.

The advantages of small air-cooled storages were explained by Prof. Marshall as follows: Require only a moderate investment, have low operating cost, allow the grower to spend all of his time harvesting because later in his storage he can sort, grade, and pack, and permit the grower to hold his fruit until the market conditions warrant his selling.

Where the quantity of fruit is 50,000 barrels, or more, a commercial cold storage is desirable. "There should be five or ten more cold storages, with a capacity of from 50,000 to 150,000 barrels each, located in our principal fruit producing sections," declared Prof. Marshall.

Increase in Cherry Crop

George Friday of Coloma, speaking on the subject of Cherry Marketing, stated that within 10 years the cherry crop of Michigan will have quadrupled. He recommended careful preparation in advance to handle the marketing of this prospective increase.

Fertilizing

Prof. F. C. Bradford spoke on "Profitable and Unprofitable Use of Fertilizer In the Apple Orchard."

Careful study of three experimental orchards showed that present production of orchards is not an accurate sign as to whether, or not, they need fertilizer. By studying wood growth, fruiting, and bud development some orchards are seen to be deteriorating and should receive fertilizers. Other orchards, also in profitable production, may be maintaining their growth and hence the application of fertilizers would be unprofitable in such cases. The point made by Prof. Bradford was that it is necessary to carefully study the orchard before applying fertilizers, also that fertilizer is most profitably applied during the season of a big crop in order to counteract the tendency of the trees to produce a light crop the following year.

Winners In Student Contests

In the apple judging contest, in which students from the M. A. C. take part, W. G. Lensen of Traverse City won first place; Gerald J. Stout of Cedar Springs, second; Lillian Lewton of Tacoma Park and H. J. Wilkinson of Detroit tied for third place.

The public speaking contest for M. A. C. horticultural students was won by E. R. Bristol of Almont. Lillian Lewton of Tacoma Park was second and H. J. Wilkinson of Detroit, third.

Re-elect Officers

By unanimous vote the present officers of the Society were re-elected for another year. The officers are as follows:

President, A. J. Rogers, Beulah.

Secretary, T. A. Farrand, Eaton Rapids.

Treasurer, J. P. Munson, Grand Rapids.

Members of Excutive Committee: Prof. V. R. Gardner, M. A. C.; R. J. Coryell, Birmingham.

Do you want 15$^{\underline{82}}$?

OR TEN or twenty times that much *additional profit*, depending simply on the number of cows you own. Listen—

Down in Fairfax County, Virginia, the dairymen belong to a Cow Testing Association. Various kinds of feed are given the 665 cows in these herds, but LARRO is the general favorite. A year's record, compiled by the official tester, makes the reason plain:

Herds which received more than 50% of LARRO earned an average net profit of *$15.82 more per cow* than the other herds.

Fully half of all these Fairfax County cows were in the LARRO extra-profit division!

Only a feed made of tested ingredients—feed that never varies in the kind, the quality or the percentage of ingredients—a feed absolutely free from dangerous iron and steel trash—can make that extra money for you. LARRO answers these specifications—absolutely. There's a LARRO dealer near you. Write us if you don't know where to find him.

The Larrowe Milling Company, Detroit, Mich.

FREE "Feeding the Fresh Cow" is the title of an article that appears in the December issue of the Larro Dairyman. If you are not receiving this excellent, free magazine for cow-owners, fill out and mail this coupon now, or take it to your LARRO dealer.

The Larrowe Milling Company
52 Larrowe Bldg., Detroit, Mich.

Gentlemen:
I am now feeding......cows and I want to receive, without cost, your magazine—"The Larro Dairyman."

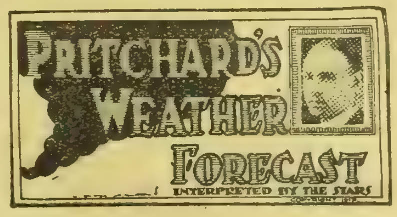
TOO LATE TO CLASSIFY

Mammoth Copper Bronze Turkeys, Champion Strain, large bone, good color. Best is the cheapest. Prices reasonable. **Emma Godshalk, Marcellus, Michigan.**

Barred Rock Cockerels, Husky, Vigorous Birds bred from great layers. Sons of Detroit and Grand Rapids 1st prize males.
W. C. Coffman, Benton Harber, Mich., R. 3.



THE early part of this week will be generally fair in most parts of Michigan. Any showers or snow flurries that may appear at this time will be more the result of local conditions than a regular storm.

However, about Tuesday light rains will occur that may turn to snow flurries before the middle of the week.

These storm conditions will soon pass and the sky again become clear. Temperatures will average cold, especially the nights and mornings but by Saturday temperatures will again moderate.

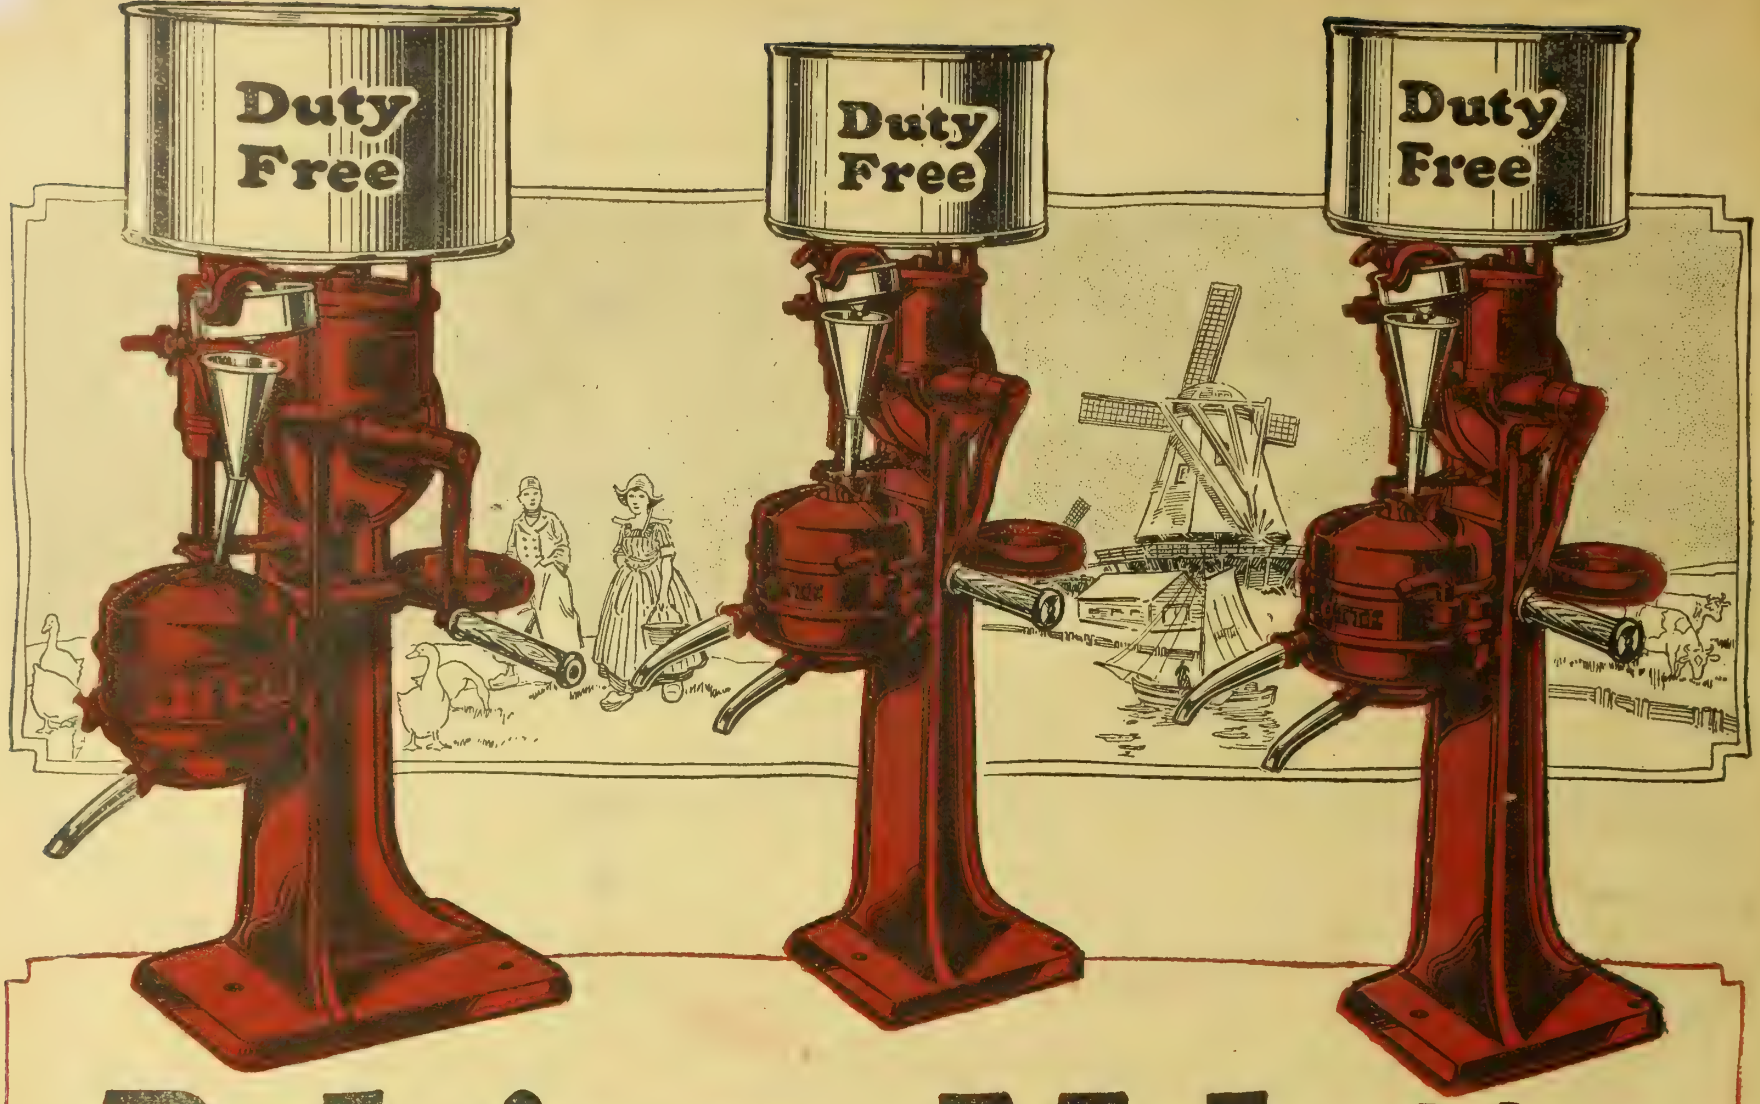
Week of December 16

Radical changes in temperature may be expected in Michigan this week. The high temperature points for this week will be reached about Sunday, Wednesday and early part of next week. Decided changes to colder will follow each of these high points, effecting this state about Tuesday and during closing days of this week.

During early part of this week and again about the middle rains, turning to snow, will be more or less prominent to most parts of the state.

White Christmas

Christmas, 1923, will be white. We are basing this prediction upon the fact that the month in general will yield more than the normal amount of precipitation and during the cold spells this will be in the form of snow. In those sections (if there are any in the state) where the covering up to Christmas has been very light, the warmer temperatures just before the holiday may cause it to disappear but the white mantle will again appear either on or within 48 hours following December 25th. Michigan will receive its share of sleet and snow before the arrival of the new year.



Belgium Melotte

Imported Separator

The Belgium Imported Melotte contains the famous single-bearing, *self-balancing* bowl. This patent Bowl hangs from one frictionless ball bearing and spins like a top. It is *self-balancing.* It skims as perfectly after 15 years use as when new. Positively cannot get out of balance — cannot vibrate and thus cause cross currents which waste cream by re-mixing with milk. Send coupon below today. Get the FREE Book that tells about this great Melotte.

$7.50 After Trial

We will send an Imported Belgium Melotte Cream Separator direct to your farm on 30 days' absolutely Free Trial. Use it just as if it were your own machine. Put it to every possible test. Compare it with any or all others. The Melotte is easy to keep clean and sanitary because it has only one-half the tinware of other separators. Turns so easily that bowl spins 25 minutes after you stop cranking, unless brake is applied. No other separator has or needs a brake. After you have tried it 30 days, and you know it is the separator you want to buy, pay $7.50 down and balance in small monthly payments.

Free Trial

Your choice of any model. NO MONEY DOWN—FREE TRIAL—SMALL MONTHLY PAYMENTS—DUTY FREE. This wonderful Belgium Melotte Separator has been picked by a jury of thousands of farmers—picked by dairy experts throughout the world to be the "king" of all separators ever manufactured. It has broken all records for Efficiency of Skimming, Ease of Turning, Convenience of Operation and Durability. Send the coupon for Big Free Book.

Write

Mail coupon for catalog giving full description of this wonderful cream separator. Don't buy any separator until you have found out all you can about the Melotte and details of our 15-year guarantee. Don't wait—be sure to mail coupon TODAY!

THE MELOTTE SEPARATOR, *H. B. BABSON, U. S. Manager*
2843 West 19th Street, Dept.33-09, Chicago, Ill. — 2445 Prince Street, Berkeley, Calif.

PINE TREE MILKER
The Cow's Adopted Child

Pine Tree Milker

AT LAST! Here is a milker with seven years' successful record back of it. A milker that is as supreme among milkers as the Melotte is among separators. Every owner of 8 or more cows can now afford to buy. Send today for our special Pine Tree small-herd offer.

The Melotte Separator, *H. B. BABSON, U. S. Mgr.*
2843 West 19th Street, Dept. 33-09, Chicago, Ill.
2445 Prince Street, Berkeley, Cal.

Without cost to me or obligation in any way, please send me the Melotte catalog which tells the full story of this wonderful separator and M. Jules Melotte, its inventor, and hundreds of letters from American farmers.

M. A. C. STUDENT FIRST IN POULTRY JUDGING

THE REV O. W. BEHRENS, representing the M. A. C., ranked first in a national intercollegiate students poultry judging contest at Chicago last week, according to word received here. The M. A. C. team was second, Missouri winning first place. Other members of the M. A. C. team were: C. H. Wright, of Williamston, who was fifth among individuals and George Allen, of Rockford, Ill., who was sixth. Mr. Behrens was a chaplain in the U. S. Navy during the World War and later was a student pastor at East Lansing.

FARM BUREAU AGAINST PRICE FIXING AT ANNUAL MEET

OSCAR E. BRADFUTE of Xenia, Ohio, was unanimously re-elected president of the American Farm Bureau Federation at the fifth annual meeting held at Chicago Dec. 10-13. J. E. Reed of St. Paul, Minn., was elected vice-president.

The convention was addresses by Secretary Wallace of the U. S. Dept. of Agriculture, Julius Barnes, president of the U. S. Chamber of Commerce, and many other national leaders, who discussed present day problems as they affect the American farmers. Strong resolutions were adopted by the convention.

Michigan State Farm Bureau Members were represented by their president, W. E. Phillips of Decatur, vice-president M. L. Noon of Jackson, Secretary-Manager C. L. Brody of Lansing, Mrs. Edith Wagar of Carleton, James Nicol of South Haven, E. C. McCarty of Bad Axe, and other delegates.

Secretary Wallace told the Farm Bureau that the packers should keep their books open to the public—that the public had a right to an understanding of their great business, notwithstanding the packers' objections to the contrary. He was assured of farmer support in his stand. He congratulated farm organizations for their harmonious relations with each other.

Following, and in brief, is a summary of the resolutions adopted by the Farm Bureau convention:

Government price fixing of farm commodities unsound.

Henry Ford's Muscle Shoals project advocated and Congress urged to vote on question without delay.

Class 1 railroads should be electrified.

Amendment urged to intermediate credit act changing minimum loan period from 6 to 4 months.

Amendment to eligibility clause of Federal Reserve Act advocated limiting all re-discounts, including commission and brokerage to 2 per cent above the base federal reserve rate.

Limitations of immigrants to the present total, with recommendation that basis upon which the percentage is determined be shifted from 1910 to 1890 or as early period; also that they be selected after physical, mental and other tests made over seas.

Taxes should be progressive—the greater the income the higher the rate; they should be laid as far as practicable, so as to tend to the equitable distribution of wealth.

General sales tax opposed; issuance of all tax-free securities should be stopped; all deductions allowed in figuring income taxes should first be set off against tax-free income.

They urged that steps be taken to stop leaks in 1921 tax law, and an amendment passed whereby profits derived from the sale of stock, received as stock dividends, shall be taxable at the regular surtax rates.

Reduction of income taxes opposed; provision approved whereby federal and national banks should be taxed the same as any other business or the farm.

Establishment of a co-ordinated policy of transportation recommended, involving farm-to-market roads, the railroads, the construction of Great Lakes-St. Lawrence and Lakes-to-Gulf waterways, and an American merchant marine.

Immediate action should be taken by Interstate Commerce Commission to slash freight rates on farm products sold at disproportionately low prices.

Grain futures and packers and stockyards control acts endorsed.

Co-operative marketing of farm products approved as offering the most practicable means of stabilizing agriculture on a profitable basis.

Adoption of plan recommended for licensing of all dealers and shippers engaged in interstate shipments by the Department of Agriculture under existing laws or such additional laws as may be necessary.

Development of super-power, hydro electric facilities and the storage and utilization of water for electrical purposes; development of water-power resources.

ZEELAND POULTRY ASSOCIATION WILL HOLD ANNUAL SHOW

THE annual exhibition of the Zeeland Poultry and Pet Stock Association will be held at Zeeland December 28, 29, 31, 1923, and January 1, 1924. A hearty welcome is extended to all breeders of poultry who care to exhibit their birds in competition. The special inducement of cash prizes, silver cups and special premiums should draw poultrymen from considerable distance. The officers of the Association who are in charge declare that it is to be a real show and the best birds will win regardless of who the owner might be, and to this end they have engaged two of the best judges in the country. They have arranged two classes, standard and utility, which takes in the farmer as well as the back-yard poultryman. All entries must be in by Wednesday, December 26th, at 12 o'clock, midnight. The show will be governed and conducted under the official poultry show rules of the American Poultry Association, and all prizes will be awarded strictly in accordance with the Standard of Perfection. Let's go!

CANADIAN IS WHEAT KING OF NORTH AMERICA

H. G. L. STRANGE of Fenn, Alberta, is the new wheat king of North America. When his exhibit was awarded the wheat championship at the International Grain and Hay show, Chicago, it marked Canada's twelfth win in thirteen years of international competition against the best wheat growers of the continent.

Canada began winning international wheat championships in 1911 when Seager Wheeler of Rosthern, Sask., famous wheat wizard, carried off first prize at the New York Land show. The following year the championship went to James Holmes of Raymond, Alta. In 1913 it was won by Paul Garlach of Allan, Sask. Seager Wheeler won it again in 1914, 1915 and 1916. Samuel Larcombe of Birtle, Man., won it in 1917. Seager Wheeler won it in 1918. J. C. Mitchell captured in in 1919 and 1920 and R. O. Wyler of Luseland, Sask., in 1922.

The only break in the Dominion's record came in 1921, when G. W. Kraft of Bozeman, Montana, kept the honor in the United States.

Mr. Strange's winning variety this year was Marquis. Marquis wheat is the staple spring wheat of Canada and a large part of the United States. It was evolved by Dr. Charles Saunders, then Dominion cerealist and developed to its present perfection by Seager Wheeler. It has meant millions of dollars to farmers of North America.

FINE POULTRY AT DETROIT SHOW

ONE hundred and forty poultry breeders from Michigan, Ohio, Illinois, Indiana, Wisconsin, Pennsylvania and Ontario were represented at the Detroit National Poultry Show, held week before last at the Light Guard Armory. About 1,500 birds were exhibited. The quality of the birds shown in Detroit was said to be second only to those exhibited at the Madison Square Garden, in New York City.

A Regular Statesman

A citizen of Nosepaint Gulch was sounding the praises of Congressman Wombat.

"What did Congressman Wombat ever do for you?" asked another citizen.

"Well, he once sent me a package of turnip seed."

What the Re-Apportionment Fight Is All About

Wayne County Locks Horns With Rest of Senate and Unparalleled Battle Rages at Special Session of Michigan Legislature

By STANLEY M. POWELL

(Lansing Correspondent of The Business Farmer.)

DARK war clouds have hovered over the special legislative session called by Governor Groesbeck to discuss problems of legislative re-apportionment. The feeling was none too friendly when the lawmakers assembled and it seems to get worse with each passing day. It now looks as tho the special session would prove merely a useless expense with no satisfactory results being achieved.

The senate, with but one dissenting vote, passed a bill which would increase the number of Wayne county senators from five to seven. This bill has been reported favorably by the House Committee on Apportionment and is now up for final passage. However, the Attorney General has submitted an opinion in which he declares that this measure would probably be held unconstitutional, so there is little hope of its being passed. Some members are in favor of redrafting the bill to give Wayne county eight senators, but there appears to be little probability that such a measure would stand any chance of mustering the 51 votes necessary for its passage.

Kill "21 for Wayne"

The House Committee on Appointments surprised everybody by reporting favorably a bill which would increase the number of Wayne county representatives from 14 to 21, an increase of exactly 50 per cent. However, even this large increase was regarded by many of the members as being insufficient to make the bill constitutional, so when it came up for final passage it was hopelessly defeated by a vote of 32 to 64. The vote was later reconsidered and a recess taken until an opinion could be secured from the Attorney General as to its constitutionality.

When the opinion came, it stated that the bill was unconstitutional in two respects: first, it gave Livingston county, which does not have even a moiety of population a separate representative, and second, there was a gross inequality between the populations of the districts as outlined. For instance, in the proposed district to be comprised of Kalkaska, Crawford, Oscoda, and Ogemaw a population of 18,195 would be given a representative, while in Wayne county one member would be required to represent 56,078 inhabitants. There were other proposed districts that were only slightly in excess of the Kalkaska district in population. With this plain opinion staring them in the face, not even the Detroit members could vote for the bill, and it was defeated 90 to 3.

Since this measure has been defeated, re-considered, and defeated again, under the rules of the House the subject matter of representative re-apportionment cannot be brought up during the present session without a supension of the rules, which requires a two-thirds vote. To date every effort in this direction has been defeated, and it now looks as though there was small possibility of getting any re-apportionment legislation during the present session.

Situation a Deadlock

Since the constitution makes it mandatory upon the legislature to pass re-apportionment legislation this year, there has been a wide spread sentiment for some legislation of this character. Due to the intense bitterness which developed between the Wayne county members and those from the rural districts at the regular session over the gas tax issue, it was regarded from the first as practically impossible for any bill to be passed which would give Detroit all she was asking. It has been practically agreed all along that whatever was done would be more or less of a compromise, but since the Attorney General has declared all of these compromise bills unconstitutional, it now looks as though the situation were a deadlock.

It was apparent that none of the representatives wished to be held up in the light of openly defying a definite constitutional mandate. On practically every roll call several members "reserved the right to explain their vote and did so at some length in an effort to justify their positions. In some cases this was a little difficult because perhaps there were some selfish motives which prompted some of the members in taking the stand which they did. There are always some members who fear that they will be lost out in the cold and have their hopes for future political advancement blasted.

After the House had twice defeated the re-appointment bill, Speaker Welsh made a statement to the newspapers in which he said: "This is a fearful thing. The members who oppose re-appointment to-night openly, brazenly, and criminally violated their oaths to support the law of Michigan. If they were justified, the bootlegger, the highway robber are justified. What can we say to private citizens who break a law when the elected representatives of the people wilfully ignore the constitution upon which our laws are based?"

Welsh Speaks Plainly

The next day when his collegues saw this statement in one of the Detroit papers they were thrown into a tumult of resentment. Representative Fred Ming of Cheboygan demanded an explanation of the speaker. Speaker Welsh met the situation without flinching. Calling the speaker pro-tem to the chair, he left the rostrum and coming down before the clerk's desk, in one of the most dramatic scenes ever enacted in the House of Representatives delivered a forceful speech in which he not only admitted all that the papers had said but added to it and made it even stronger. He concluded his remarks by saying: "I did make that statement and I make it here again that the action of this House in openly defying, brazenly defying, the constitution of the state of Michigan is the most tragic action that has ever taken place within these four walls."

On the next day, however, he slightly modified his remarks by making a conciliatory speech in which he said, "While I did and still do criticize their judgement, I have never intended and do not now impugn their motives."

Shall Citizen or Alien Count?

Members of the House justify their positions by declaring that they never had a chance to vote on a constitutional measure and point out that the Appointment Committee has stated that it would not be possible for them to report out a bill giving Wayne any more representatives than was done in the measures which have already been held unconstitutional. They state that it would not be a desirable thing either for Detroit or for the state at large for Wayne county to have the greatly increased representation which it is demanding. They feel that if representatives were to be distributed according to population it should be done on the strictly citizenship basis, without considering the number of aliens. There are 183,503 aliens in Wayne county, which is more than 62 per cent of the total alien population of Michigan, although Wayne county has only about one-third of the adult inhabitants of the state. 25 percent of the population of Wayne county are aliens and do not have the right of self-government even in their own county, yet Wayne is asking for state representation in the state legislature for these non-citizens.

City Domination a Menace

Then, too, it is granted that one of the basic principles of our American form of governments is that areas as well as population totals should be considered in giving representation. This principle is carried out even in our U. S. Government. The state of Delaware with 223,000 people and New York with 10,385,000 have exactly equal representation in the U. S. Senate. This provision was no doubt adopted to prevent the country from being dominated politically by a few congested centers of population.

To prohibit such a condition arising in the state government nearly every state having a large city has adopted some restriction to keep the city from ruling the state, or as it is sometimes expressed "to keep the tail from wagging the dog."

Maryland, for instance, has 1,449,661 people of whom 733,826 live in Baltimore. Yet its 27 senators come one from each county with but three extra ones for Baltimore, while in the lower house Baltimore has but 24 out of 101 members. Thus Maryland's greatest metropolis, with over half of the state's total population, is represented but by one-fourth of one house and one-seventh of the other. Still more striking is the case of Rhode Island, where out of a total population of 604,397 there are 237,595 who live in Providence, while only 3 per cent of the state's population is rural. In the lower house, which has 100 members, each city or town no matter how small has one member and no city or town, no matter how large, can have more than one-fourth of the whole number. Providence, with 40 per cent of the state's population, can elect only one-fourth of the lower and only one-thirty-ninth of the upper. More illustrations might be given to show how these problems are being met in other states.

Moiety Clause Is Safe-Guard

It is pointed out by those who oppose re-apportionment at this time that whether or not the legislature does anything at its present session, the constitution provides that in 1926 the question of revising this document shall automatically be submitted to the voters. If they authorized its revision, a constitutional convention would be held in 1927. Because of this situation many law-makers argue for leaving the present districts undisturbed for the next two years. The constitutional convention is composed of three members from each senatorial district, so the more senators Detroit gets, the more voice it would have in drafting the new constitution. If given its own way, it would probably discard the moiety clause entirely and virtually take over the complete control of the state.

Present conditions make it quite

(Continued on Page 23)

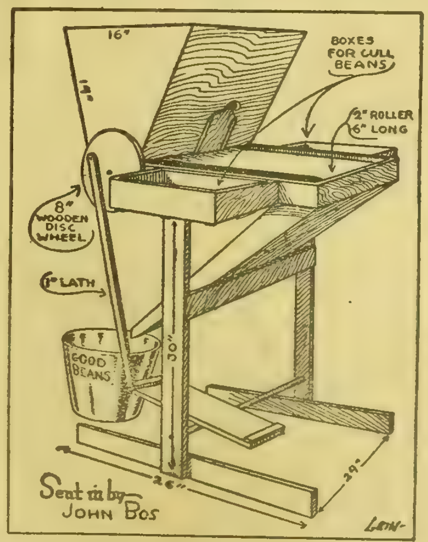
Prize Plan For Home-Made Bean Picker

(Awarded First Prize of $10 in Contest.)

AFTER a very careful examination and study of all the plans submitted in our home-made bean picker contest the judges have at last announced the winner of the money offered. It was a close contest several plans being so good that it was difficult to decide which was the best. They finally got the number down to two, then the battle started, some were in favor of one while the others were just as determined that the other was the best. One plan was sent in by Alice Babcock of Sherman, Michigan, and the other by John Bos, Marion, Michigan, and the one finally chosen was by John Bos. After studying them from every angle his was declared the easiest to operate. However, all of the plans were good and we are publishing the best of them. If none of them suit you, you can get the ideas as to the good points of each one and then build one just suited to your needs. We have several plans yet to publish so watch for them in near future issues.

John Bos' Plan

"I am sending you a sketch of my bean picker, that I made and used since seven years ago, which I wish you would consider in your picker contest. It isn't hard to make as the necessary dimensions are given in the sketch, the material required we all have on hand. The main frame is made from planed 1x4 in. The hopper is made from ¾ in. box lumber that we have laying around, it is provided with a tin slide above the running canvas to regulate the thickness of beans suitable. The running canvas we made from an old binder canvas which is 6 inches wide. I made my cull bean boxes from some old sewing machine drawers, the canvas running between. As shown in the sketch our frame is well braced as this is always important and you will notice the hopper is built so it will drain empty as it sets quite far over the canvas. The rollers over which the canvas runs are two inches in diameter which insures plenty surface contact with the canvas to prevent slipping. The machine works smooth and practically noiseless. Hoping this sketch will be of benefit to our readers, we are, Yours truly, John Bos, Marion, Michigan.



Farm-Labor Unity Urged at Gleaner Convention

Farm Organization Favors Enforcement of Prohibition Law, Government Ownership and Operation of Railroads, Lower Taxes, Discontinuance of Tax Exempt Bonds, Approves Aid for Disabled Soldiers but Rejects Bonus

THE Gleaners, organized in this State in 1894, met for the first time in Detroit, where the National Gleaner Temple is located, week before last. The convention was combined with a "home-coming" celebration and more than one thousand delegates and visitors were present on the opening day. All sessions were held in the big assembley rooms of the Hotel Statler, and officers report the most successful convention ever held by this organization.

The convention opened on Wednesday and continued through to Friday evening. On Wednesday afternoon special street cars too the delegation to the Ford motor plant, where special guides took them through the factory. Later a visit was made to the National Temple, located at Woodward and Palmer avenues. Wednesday evening, special memorial services and a special program by Gleaner talent was the attraction. Thursday was devoted to business rotine. Thursday evening the Gleaners gathered for a banquet at Hotel Statler. Four hundred and sixty seven broke bread together. Excellent music was provided and Hon. H. F. Baker, Nathan F. Simpson, of the State Tax Commission, Harry L. Hurlbert, who is in charge of Michigan Industries and Rev. Howard Field were the speakers. The election of officers took place Friday morning, all officers being reelected unanimously and without opposition.

Officers reports showed the society in a prosperous condition, with assets of two million dollars and a membership approximating seventy-six thousand.

The Gleaners have made a careful study of public affairs and that they positively knew what they wanted was indicated by the report of the legislative committee.

Legislative Committees Report

The question of transportation and distribution is of utmost importance to profitable farming and, likewise, affects every man, woman and child of this nation.

Since the war we have tried the plan of government guarantees thru the Esch-Cummins Law and this has been followed by increased freight and passenger rates until the charges imposed are inreality a subsidy, placing a burden upon the people which must, in some manner be shifted.

As a means of reaching this end we insist that the water should be squeezed out of the capitalization of the railroads and the rates arranged under the Esch-Cummins Law to meet its requirements upon the reduced capitalization. Unless the provisions of the present laws are modified the only alternative is Government ownership of the Nation's transportation lines which are the arteries of trade. We believe in the principles of government ownership and operation under a commission divorced from politics and fully authorized to so nationalize the transportation lines that the people may receive the benefit of economic and efficient transportation service. As organized Farmers we pledge our support to the St. Lawrence-Mississippi Deep Water way Project and recommend that the Gleaner Organization give its full support to the encouragement of this Project.

Mail Service

The citizens of the United States now enjoy the added benefits to the mail service of parcel post for which the Farmers worked for more than three decades. The method of rented cars for carrying the mail and parcel post of the railroad companies is both unsatisfactory and wasteful and we are certain that, nationalizing the transportation lines under Government ownership will place these cars under the full control of the Government and will have the added benefit of placing the employes under Civil Service. Under the present plan the periodic strikes and tie-ups have cost the shippers of this Nation millions of dollars and it is our opinion that, in no other way can this misunderstanding between capital and labor be adjusted.

Protecting Out National Resources

Private interests are securing the ownership and control of the water power and thus depriving the people of a benefit that is rightfully theirs. We suggest that Congress consider well the advanced step taken by the State of Illinois and also of the Province of Canada to preserve the water power for the people.

So Strong—Lamentably Weak

It seems passing strange that a Nation so strong and powerful that it may extend its strong right arm out to every farm and every village or city home and, knocking at the door, demand the sons of that household for military service across the seas, is strangely, lamentably weak when it comes to solving its own domestic troubles.. We refer especially to the fuel problem which is one of the Nation's richest inheritances. For more than thirty years we have had semi-annual strikes and tie-ups because of the troubles between the mine owners and the miners. Strange to say, these troubles occur just at a time when fuel is most needed and it is evident that there is never a supply on hand for immediate use at such times.

Your committee does not claim a conspiracy between the miners and mine owners but briefly calls your attention to the fact that these troubles occur at a time when the mine owner can get an extra dollar, the miners a few extra pennines and the consumer pays the bill. We, therefore, recommend Government supervision with power to control all natural resources and we recommend that it be brought strongly to the attention of our representatives at Washington that what this Country and its people most need is action not the eternal compromises without any definite results.

It has been many times said that the Farmer and industrial worker have nothing in common; that they cannot and will not get together. In view of existing conditions such a statement is absurd. To substantiate this it is only necessary to say that the Department of Agriculture has given out facts in connection with the operation of the farms of the Nation for 1922 which show that, where the Farmer received seven billion dollars for his products, the working-man and consumers generally, paid twenty-two billion dollars for the self same products. With a spread of fourteen billion dollars between the price the Farmer receives and what the working-man pays for the products of the farm, it would certainly seem that there is plenty of opportunity, when conditions are understood on both sides, for getting together on the part of these two great forces with the one thought of the elimination of those who render but a meager service to either producer or consumer and, yet, take as their profit more than sixty-five per cent of the producer's and consumer's dollar.

Care of the Soldier Boys

We condemn the policy of the Government in its treatment of the injured soldier boys who were willing to give their all for a principle. In every locality will be found brave lads who returned from the fields of battle with shattered nerves and ruined in body and health, who are eking out a miserable existance, many of them with families to support, on a pension scarcely large enough to keep the wolf from the door. The Farmers of the Nation are not in favor of a bonus to all soldiers at this time but we are in favor of giving liberal pensions for all injured war veterans and these pensions should be sufficient to keep the family together and give every possible assistance for their future care and comfort.

Taxes

The Farmers of this Nation are carrying a burden of taxation altogether out of proportion to the earning value of their farms. In nearly every state the assessed valuation is the same as it was during the war period while the productiveness of the farm has decreased one half. Taxable property owned by the Farmer is in such condition that it cannot be covered and, therefore, the tax collector has the property before him as an open book while the more favored classes can put their holdings in the safety deposit vault and escape their portion of this burden.

We demand that the policy of issuing tax-exempt bonds and stocks be discontinued at once thruout the entire Nation in order that the wealthy class may bear their just portion of the burden for the support of the Government. We must remember, as Farmers and tax-payers, that our responsibility extends further than simply complaining because big bond issues are floated and thus increasing the indebtedness of every farm and home in our states. It is our privilege and should be considered a duty to vote and work against the conditions of this orgy of extravagance and reckless bond issues that are becoming prevalent thruout the United States.

We deplore the condition which seemingly exists among the citizens of this Country that law enforcement is a question for each individual to decide. Laws are provided for the protection of the people; officers are chosen to administer the laws as written—the question as to the necessity for the law and the operation of the law having already been decided upon by the people either direct or thru their representatives. An officer sworn to administer the law either should to the best of his ability uphold and administer the law or resign from his position. One hundred per cent Americanism means obeying the laws of the Nation and, as the prohibition question has been fully and finally settled by a legally enacted amendment to the Constitution of the United States, the citizen who will not uphold the law is not true to the principles of this Country.

We recommend that the National Officers use the full power of this Organization and such resources as are available to wage a fight against one backward step in the campaign for the enforcement of the Eighteenth Amendment to the Constitution of the United States.

The Farm Bloc

This Committee can hardly understand why there is all this opposition to the Farm Bloc in Congress. Is it not merely putting into practice the same plan and force that have instrumental in shaping legislation for all the industries during the past half century? The organized Farmers of the Nation should get soundly back of the so-called Farm Bloc and put forth every effort to increase its strength in Congress; not for selfish interests but to speak with sufficient power and authority to be heard.

Daniel Webster, at a critical time in the Nation's history, said: "Nothing will ruin this Country while the people themselves undertake its safety and nothing can save it when the Nation's safety is placed in any hands but their own."

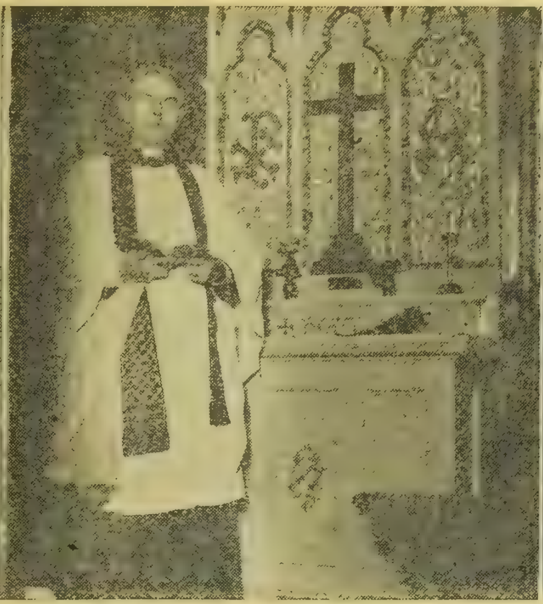
As a Nation, we have wandered far away from this good advice. A minority of the citizens of the Nation now rule both states and Nation. It is a deplorable fact and one which should cause concern on the part of every forward looking American citizen that, in this free Country where every man and woman are soverign rulers, sixty-three percent of our boasted citizens haven't sufficient interest in state and national affairs to even go to the polls and cast their ballot.

In every regular constituted Gleaner lodge-room the American flag finds its place beside the altar upon which we have made our pledge, therefore, let us, as individual Gleaners, solemnly promise that we will uphold all that that flag stands for, pledging to ourselves, our Country and our Order that we will exercise our franchise as American citizens on election day.

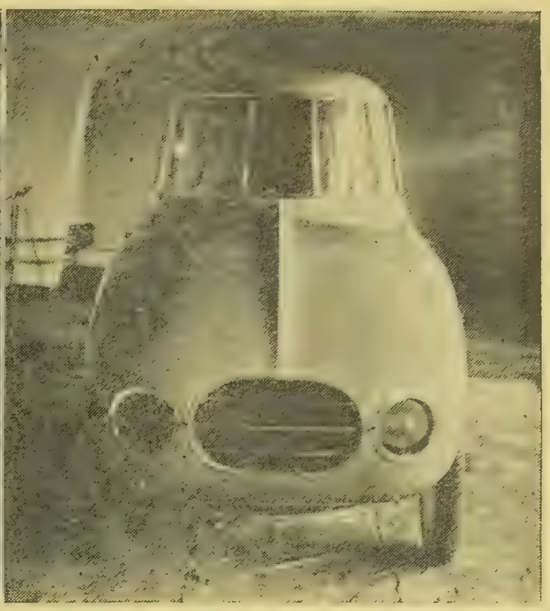
Delegates who attended the biennial convention of the Gleaners at Detroit, gathered in front of the Gleaner Temple, national headquarters, and had their picture taken.

PICTURES FROM FAR AND NEAR

NOT THAT SHE NEEDS IT.—Pretty Miss Agnes Reilly of New York, doesn't need this reducing machine personally, but she finds it great to keep in condition. She was snapped at the electrical and industrial show held in New York City recently.



WORLD'S SMALLEST CHAPEL.—Rev. Thomas J. Lacey, rector, standing near the altar of the tiniest church in the world which has just been consecrated on the porch of the church of the Redeemer, Brooklyn, N. Y. It cost $1,230.



A FUEL SAVER.—According to tests this car burns 25 per cent less fuel than a common built automobile of same horsepower. This is due to its lightness and the shape of the body, it offers little resistance to the air.

COOK GOES TO JAIL.—Dr. Frederick A. Cook, noted Artic explorer who was sentenced in Texas courts to 14 years and 9 months in jail, and assessed a $12,000 fine for fraudulent dealings in oil wells.

MORE THAN ONE KIND OF MULE WEARS PANTS.—Here is Miss Katherine Crowley, pretty southern Pacific girl, driving Gerry, the most obstinate of mules. It is said that he will not step until his front legs are encased in a pair of trousers. Rather modest for a mule.

CONTINENTAL BEAUTY TO INVADE AMERICA.—Mme. Fernade Diamante, an olive skinned beauty, is planning to visit America and see this country from the Broadway stage. She is considered a wonderful dramatic actress.

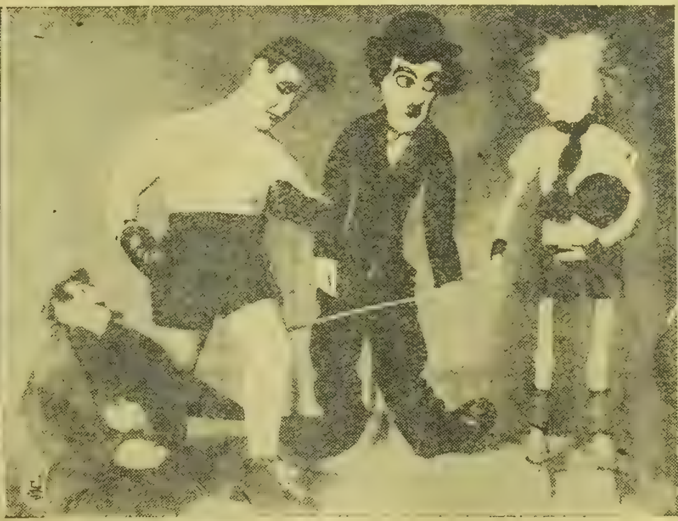
AKRON AERIAL
POLICE PATROL

FIRST AIR ARREST MADE.—Howard Calver and Frank O'Niel (left to right) have been arrested as Akron, Ohio's first sky traffic violators. They violated a city ordinance prohibiting stunt flying over certain districts. They have been sentenced to a day in a baloon prison.

MUSSOLINI IN NEW GARB.—The Italian Premier was recently made Honorary Commander of the Italian Air Forces, and he is wearing the regulation uniform.

A MOVING LETTER BOX. —All letter boxes in Amsterdam, Holland, are attached to the rear of street cars, and at the end of their runs, they are emptied and sent to the post office. This method saves many hours and considerable work.

HE'S CIVILIZED.—This is Mr. Lion, a cat owned by a lady in Youngstown, Ohio. As a kitten he refused to drink milk from a saucer so he was given a bottle, equipped with a nipple. Although he is over a year old he continues to take his meals in this way.



RUSSIA'S CONTRIBUTION TO TOYLAND.—From the land of the Soviets come these quaint toys, Russia's contribution to the bag of Santa Claus. They have made their first appearance in England, and the stores of London are stocking up as they expect these toys to prove very popular. Here is Charlie Chaplin, Jack Dempsey, a priest and an athlete.

SOMETHING NEW IN CADDIES.—We have seen boys, girls, old men, young men, and even dogs, acting as caddies but this is the first time we ever saw an elephant doing this work. He seems to enjoy his duties. We'll look for crocodiles next.

Farmers' Clubs Favor Gas Tax and Salary Cut

Governor Is "Raked Over the Coals" On All But Two Points At Annual Meeting of Michigan State Association of Farmers' Clubs at M. A. C.

By R. C. GROESBECK

(Special Correspondent of The Business Farmer.)

RESOLUTIONS scoring Gov. Alex J. Groesbeck, the state administrative board, and the public utilities commission, and demanding the enactment of an adequate income tax law, a gasoline tax of two cents per gallon, the repeal of the present automobile license law, and the enactment of a weight tax of sixty cents per hundred weight on all motor vehicles, were the principal features of the thirty-first annual meeting of the Michigan State Association of Farmers' Clubs, held at the Michigan Agricultural College December 4 and 5.

Hitting the policies of the state's chief executive, the resolutions asked that "representative state government be restored by the elimination of the extraordinary power now possessed by the governor," and that the state administrative board be abolished or decidedly modified. The association further asked that the "useless" commissions appointed by the governor be discontinued.

The resolutions were drafted by a committee composed of Edgar Burk, of St. Johns; Senator Charles B. Scully, of Almont; Charles Cook, of Owosso; Alfred Allen, of Mason; and Herman Hass, of Ann Arbor. Senator Scully, who is closely connected politically with Herbert Baker, of Cheboygan, former state senator, and leader of the Farm and Labor movement in Michigan, was instrumental in getting most of the resolutions before the session of the association.

Resolutions Adopted

The complete resolutions as adopted by the association were:

Resolved, That we restore representative state government by the elimination of the extraordinary power now possessed by the governor to the end that the Administrative Board be abolished or decidedly modified.

And, further, that the various useless commissions appointed by the governor be discontinued, and such commissions as are necessary, be made elective by the people to whom said commissions are responsible.

Resolved, That we reduce the operating expenses of state government by removing twenty-five per cent of the state employees on the state payroll.

Resolved, That we reduce the operating expenses of state government by reducing twenty-five per cent of the major salaries.

Resolved, That we ask for a resumption of legislative responsibility for appropriations and disbursements without dictation and interference of the executive branch.

Resolved, That the exercises of the constitutional board of the University of Michigan and the Michigan Agricultural College, namely: the Board of Regents of the University and the State Board of Agriculture be left to the proper authorities without executive interference.

Resolved, That we ask for a return to the auditor general's department the sole responsibility for the state's bookkeeping and accounting.

Resolved, That we ask for the abolition of all useless and duplicating state agencies.

Resolved that we hold every peace officer strictly responsible for the enforcement of the law, and welcome and encourage any agency that stands for statuatory and constitutional rights.

Repeal Auto License Law

Resolved, That the present automobile license law be repealed, and the governor, at the special session of the Michigan legislature, ask for a weight tax of sixty cents per hundred pound weight for all passenger and freight motor vehicles operating on the highways, together with a gas tax of two cents per gallon.

Resolved, That it is the sense of the Farmers' Clubs that the state public utilities commission is not functioning in the interest of the people, but rather to the interest of the utilities themselves, and the cost of operating the same is around $500,000 annually, which is money uselessly expended.

Therefore, we would recommend the repeal of the said act and return to home rule regulation of public utilities as far as possible.

Whereas, the fundamental principle of republican farm of government is under three heads, viz.: executive, legislative, and judicial, and should be held distinctly separate; therefore we would suggest that as the governor is the executive branch, the legislature is the legislative branch, and the courts of the state the judicial branch, that the governor and the State Administrative Board confine their actions to the executive branch of the state government, without interference with the powers of the State Board of Agriculture or other like bodies.

Whereas, the problem of overproduction has been fraught with loss and discouragement to farm people, and

Whereas, the advent of the tractor and truck has largely increased production and decreased consumption,

Therefore, be it resolved, that we are opposed to any more development of public tracts of land for agriculture at public expense.

Whereas, the greatest force in America today is organization, and whereas, our American agriculture is having a desperate struggle to unify its farmers, and

Whereas, only in union can the farm group ever hope to stem the tide of special interest, and

Whereas, too much division still lurks in the organization of Michigan agriculture,

Therefore, be it resolved, that the Michigan State Association of Farmers' Clubs go on record condemning as disloyal and vicious any attempt of those who make bold to arouse in any way the spirit of antagonism among our leading farm organizations.

Resolved, That since the Board of Agriculture has been acting within its constitutional rights in dealing with the funds appropriated to our state agricultural college, and since the said board carried endorsement of our entire membership, that we endorse the stand taken by the State Board of Agriculture in its endeavor to give the extension department the support it needs in these days of financial depression.

Resolved, That the legislature enact a law making it a fine for a person to trespass upon farms for the purpose of hunting and fishing if notices are posted, without the consent of the owner.

Lower Taxes

Resolved, That we ask and demand as a substitute for the crushing taxes upon realty and home owners, an income tax, to meet all the operating expenses of state government.

Resolved, That it is the sense of the State Association of Farmers' Clubs that we defer the reappointment for state representation until the constitutional amendment in 1926, and then have it passed on actual citizenship.

Resolved, That we endorse the Farm Bureau in its efforts to standardize and establish an adequate farm organization in cooperation with local clubs and granges, and that we commend our farmers' clubs for the part they have played in helping to make its foundation permanent.

Several resolutions dealing with national affairs were also adopted by the association. They commended President Coolidge on his stand in granting amnesty to political prisoners; urged the fixing of prices by growers' exchanges, such as the fruit growers and milk producers operate, rather than by the government; recommended the sale of Muscle Shoals to Henry Ford or to any other person offering better terms, in order to provide power for the electrification of railways, nitrate for the farmers as fertilizer, and materials for explosives.

Many Prominent Speakers

A number of prominent speakers addressed the members of the association during the two days' meetings. Among these were Marion L. Burton, president of the University of Michigan; Clark L. Brody, manager of the State Farm Bureau and a member of the State Board of Agriculture; Dr. Eben Mumford, of the extension department of the Michigan Agricultural College; and Lee S. Noble, president of the association.

Herbert Baker, of Cheboygan, scheduled for an important address, telegraphed Senator Scully that he would be unable to attend because of the state convention of Gleaners, being held in Detroit at the same time. He expressed his best wishes for the success of the association, and stated that he "heartily approved the actions of the State Board of Agriculture, and was unalterably opposed to the actions of the State Administrative Board."

L. Whitney Watkins, head of the State Department of Agriculture, was also slated for an address, but was unable to be at the meetings because of illness.

Dr. Eben Mumford, of the M. A. C. extension department, gave the principal address at the first day's session. "The loss of youth is the greatest loss that agriculture, as an industry, has suffered in its history," he said. "More young people have left the farms in the past two years than every before. The greatest fault with agriculture is its failure to interest the youth of the nation."

Dr. Mumford termed the present

Michigan Carries Off Its Share of Prizes At International At Chicago

By MILON GRINNELL

ON the opening day of the Hay and Grain Show at the International Livestock Exposition. Chicago, December 1st, farmers from Michigan won: 2 places in the hard winter wheat class; 12 places in soft red winter wheat class; 3 prizes on field peas; 3 prizes on field beans; 6 prizes on yellow soy beans, and 3 prizes on soy beans and other varieties, as stated in our last issue. The opening day was only an indicator of what the farmers of our fair state was going to do all through the show.

In the oat division Michigan captured 28 of the 35 awards for Region 2, which includes parts of Iowa, Minnesota, Wisconsin, Ohio, Ontario, Connecticut, New York and Rhode Island. The first position in this class by a Michigan man was fourth and it was won by L. H. Laylin of Mason, who was a big winner in other classes.

J. C. Wilk, of Alma, was next on the list of Michigan winners with 6th place. Ralph Jewett, of Mason, took 7th; R. E. Davis, of Fairgrove, was 8th, and R. Wooden, of Hanover, was 9th. Others were G. L. Dailey, of Kalamazoo, 10th; Douglas E. Bow, Saginaw, W. S., 11th; Jesse W. Pickett, Dutton, 12th; J. R. Scott, Fairgrove, 13th Ed Coler, Fairgrove, 14th; David E. Hanson, Berlin, 15th; D. A. Geddes, Saginaw, 16th; A. E. Hilliard, Mason, 17th; L. E. Wooden, Hanover, 18th; Roy L. Bow, Saginaw, W. S., 19th; T. J. Wilk, Alma, 20th; H. B. Armstrong, Highland, 21st; J. A. Wilk, Alma, 22nd; Pliny W. Jones, Black River Falls, 23rd; Lewis D. Hess, Ceresco, 24th; Lynn Jewell, Leslie, 26th; Francis Robinson, Watrousville, 27th; Fred Schwaderer, Cass City, 28th; Wood Bros., Rives Junction, 29th; C. D. Graham, Union City, 31st; Arthur W. Jewett, Jr., Mason, 32nd; Henry Lane, Fairgrove, 33rd; Rossman Bros., Lake View, 35th;

Then of the 25 awards in the six-rowed barley division went to Michigan. Henry Lane, of Fairgrove, headed the list of Wolverine winners. His sample won third place. A. W. Jewett, Jr., of Mason, took sixth place. Fritz Mathey, of Fairgrove, placed seventh. Others were J. A. Wilks, of Alma, tenth; A. E. Hilliard, of Mason, eleventh, and Lynn Jewell, of Leslie, twelfth. Michigan farmers won fourteenth, fifteenth, sixteenth and twenty-first places also.

Big Winners on Rye

There were nearly 100 entries in the rye division and as usual Michigan carried off most of the honors. First place was won by Geo. C. Hutzler, South Manitou; L. H. Laylin, Mason, took 3rd; Arthur W. Jewett, Jr., Mason, 4th; L. T. Lasenby, Mason, 5th; A. E. Hilliard, Mason, 6th; Lynn Jewell, Leslie, 8th; Ralph Jewett, Mason, 9th; Melvin J. Smith, Springport, 10th; H. E. Owen, Ovid, 11th; Mrs. B. Johnson, South Manitou Island, 13th; Allen Schroder, Caro, 14th; W. H. Warner, Concord, 15th; Douglas V. Bow, Saginaw, W. S., 16th.

In the alfalfa class of the hay division, Chas. Laughlin, Dansville, took 5th place; L. H. Laylin, Mason, 7th; Edward W. Laughlin, Dansville, 9th; A. E. Hilliard, Mason, 10th; Ralph Jewett, Mason, 14th; Lynn Jewell, Leslie, 15th. On red clover first place went to Wisconsin but after that Michigan farmers had things about their own way. C. Robert Laughlin, Dansville, placed 2nd; Arthur W. Jewett, Jr., Mason, 3rd; Chas. Laughlin, Dansville, 4th; E. W. Laughlin, Dansville, 5th; L. H. Laylin, Mason, 6th; Lynn Jewell, Leslie, 7th; Ralph Jewett, Mason, 8th; L. T. Lasenby, Mason, 9th; A. E. Hilliard, Mason 10th. In the timothy class Arthur W. Jewett, Mason, who was declared hay champion of the show, won 1st; A. E. Hilliard, Mason, 2nd; L. T. Lasenby, Mason, 3rd; L. H. Laylin, of Mason, 4th; Lynn Jewell, of Leslie, 5th; Ralph Jewell, of Mason, 6th. In the mixed class, timothy and clover, Michigan won the first four positions, A. E. Hilliard, of Mason, taking 1st; L. T. Lasenby, of Mason, 2nd; Lynn Jewell, Mason, 3rd; and L. H. Laylin, also of Mason, 4th.

The Michigan Agricultural College is to be commended on its fine display at the hay and grain show. It was the same as the one made at the state fair this year and it made a much better showing than any of the other state displays.

Live Stock Winnings

In the livestock show Michigan livestock held its own in all classes where entries were made.

In the Aberdeen Angus cattle division Queen's Guards, owned by William E. Scripps, of Orion, won fourth place as senior bull calf, Woodcote Stock Farm, Ionia, placed fifth. Woodcote Stock Farm also won second on junior bull calf. William E. Scripps won first prize for the best Aberdeen Angus cow with calf by side, second for aged Angus cow, and third in the junior calves class. Woodcote Stock Farm placed in the junior yearlings and senior calves classes. C. H. Prescott and Sons, of Tawas City, were the big Michigan winners in the Shorthorn division, placing second in the junior calves class and high in all other classes in which they had entries. The M. A. C. represented Michigan in the Hereford division and won 7th place on senior yearlings.

Michigan made a great showing

Farm Bureau Provides Bean Marketing Agency

One Thousand Carloads of Beans Marketed Last Year Through Bean Department of Michigan Elevator Exchange, an Organization but One Year Old and Serving 25,000 Farmers

By STANLEY M. POWELL

(Lansing Correspondent of The Business Farmer.)

AS a reader of THE BUSINESS FARMER, it is with no little satisfaction that I noted in several recent issues of your progressive publication continued reference to the desirability of having a farmers' state-wide cooperative bean marketing organization. You have made the need for this very clear and it does not need further emphasis.

However, it seems fitting at this time to call the attention of your readers to the fact that there is already in Michigan an organization which it seems to me is filling most of the requirements which you have suggested. I refer to the Bean Department of the Michigan Elevator Exchange, an organization serving 25,000 farmers, which is already well established, which last year marketed 1,000 carloads of beans for its 107 member elevators, besides handling 2,600 cars of grain and 1,300 cars of hay, bringing the total business up to $5,000,000. The Exchange is thus a very important factor in marketing Michigan-grown beans, grain and hay. It maintains traffic, organization and auditing service for its locals.

On a Sound Basis

It is, of course, obvious with a going concern such as the Elevator Exchange, the costly period of experimentation has already been passed through. The truth of this is evidenced by the fact that last year the Exchange returned to its farmer members $8,000 in patronage dividends and at the end of its fiscal year had a surplus of some $17,868.12, and its business is growing and prospering rapidly.

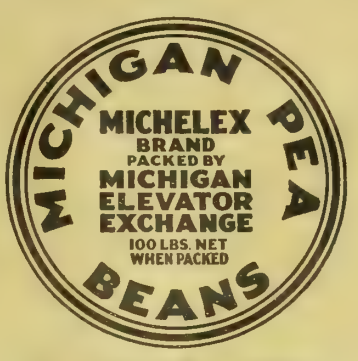
The history of this organization has been one of rapid growth and substantial development. It was founded in 1920 as a department of the Michigan State Farm Bureau and started out with a membership of twenty cooperative elevators. Headquarters have always been in Lansing.

By the spring of 1921 the Exchange business had developed to a point where it was necessary to employ separate sales managers for the grain, hay and bean departments, for the original membership of 20 had increased to 80 local associations. (Mr. C. S. Benton, a man who had had long experience as a bean salesman and traffic expert, ws selected to head the bean department.

In July, 1921, the Elevator Exchange was incorporated as a separate organization, although it is still affiliated with the Michigan State Farm Bureau as one of its commodity exchanges. It now serves 107 local associations that have contracted to sell all their beans, grain and hay through the Exchange.

Adopts Michelex Brand

The phenomenal growth in the quality of beans handled and the steady and substantial expansion of selling territory is due to a large extent to the quality of beans shipped by the member elevators. The trade realizes that the Exchange ships the grade of beans they sell. To capitalize on this asset, the Bean Dept. of the Michigan Elevator Exchange has established the Michelex trade mark which is used on all choice hand picked beans marketed through the Exchange. Michelex trade marked beans have met with distinct favor on the part of the bean buyers, as they are always uniform and up-to-grade. These branded beans teach the trade to come back for more of the beans put up by the Elevator Exchange farmers.



This trade mark is stamped on all bags of choice hand picked beans marketed through the Exchange.

While the Exchange has never experienced any difficulty in marketing all the choice beans which its members had for sale, there have been times when the question of moving off-grade beans has been a serious problem. The outlet for off-grade beans appears to be very limited, and each year finds this trade becoming smaller, especially on a declining market, when the trade is more interested in quality than in price.

Inasmuch as many of its member elevators were not equipped to pick their beans to choice, the Michigan Elevator Exchange rendered another very important and progressive service to its bean producing members when it was instrumental in the organization of the Michelex Elevator and Warehouse Company and the establishment at Port Huron of a bean picking plant with a picking capacity of more than a car of beans per day.

This means that growers and local elevators, who in the past have been entirely without picking facilities, can now have a satisfactory outlet for their picking stock. They can send it to the picking plant at Port Huron where there is the most modern machinery for making it into high grade choice hand picked stock.

This is the Michelex Elevator and Warehouse Company plant at Port Huron, the bean picking and storage plant recently leased by the Michigan Elevator Exchange. It is one of the most completely equipped terminal bean elevators in the state.

The entire output of the Port Huron establishment will be marketed under the Michelex brand which assures a strong demand and a premium over unbranded stock. There is every indication that the organization of the Michelex Elevator and Warehouse Company will fill a long felt want in the bean marketing situation in Michigan. All Michelex beans are inspected and certified by inspectors of the Michigan Bean Jobbers Association before they leave the state.

Has Best Sales Connections

The Exchange's Bean Department has splendid connection with some of the largest and most careful buyers. The bulk of the beans are sold to the large canners, as Heinz, Armour, Van Camp and to the wholesale grocers throughout the eastern and central states. Mr. C. S. Benton, the bean manager, has a close knowledege of the bean business and the consumer demand in all parts of the country. He is in constant touch with the managers of the member elevators so that he can fill all orders promptly.

One of the big savings which is effected by this organization of the country elevators is the traffic service which it renders possible. Of course, no local elevator could maintain an expert transportation and rate department but they need such service. The cost would be prohibitive with one elevator, but when the expense is divided among the business of 107 local elevators the cost is very small and the savings effected have proved to be very great.

Cars delayed in transit costs the shipper money. Rates are ever changing and so are rules. Someone must protect the elevators or they will experience big losses through overcharging. The traffic department of the Elevator Exchange helps the members to get cars and checks their freight rates and makes claims for them. This is a service which the Elexator Exchange gives to its members free.

The dividends which have been returned to the members have been made possible through the fact that the overhead operating cost of this state-wide sales agency has been kept down very low. The Exchange charges $20 per car for beans or 4 cents per bag, and out of this small charge has been made enough to make the patronage dividends and the surplus possible.

Believes In Contracts

Perhaps the success of this bean marketing venture is largely traceable to the fact that it has had definite iron-clad contracts which have insured a steady volume of beans and has made possible a low everhead. The 107 local associations have all contracted to sell all their beans, grain and hay through the Exchange.

However, if the locals find that they have better bids from other sources than the Exchange, it is in the Exchange rules that they may avail themselves of any such better offer, but they must pay the Michigan Elevator Exchange the regular

(Continued on Page 23)

The Marlette Farmers' Co-op. Elevator Company, at Marlette, Sanilac county, serves around 400 farm bureau members and has been in business for five years. It is a member of the Michigan Elevator Exchange.

The Snover Farm Bureau Association, at Snover, Sanilac county, is another member of the Elevator Exchange. The Association handles, on an average, over $13,000 a month for its members.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

PLANTING HICKORY NUTS

When should hickory nuts be planted or wont they grow from nuts, or would it require small trees and transplant them? If nuts will grow what kind of soil should they be planted in and when, also how deep? How and when should horse chestnuts be planted? How deep? —Mrs. A. O., Carsonville, Michigan.

—Hickory nuts may be planted either in the fall or spring. If they are to be kept until spring before planting they should be stratified, which may be done by placing them in a box alternating layers of nuts with layers of sand. The box should be placed out doors during the winter where it should be covered with wire netting to keep out the rodents. If the nuts are planted in the fall many of them may be dug out by the squirrels during the winter.

The nuts should be planted about one and a half inches deep. The hickory requires rather deep fertile soil.

Horse chestnuts may be handled in the same way as hickory nuts, either stratified or planted in the fall. Stratifying is usually considered the safest.—A. K. Chittenden, Professor of Forestry, M. A. C.

PASSING OF CHILD UP TO TEACHER

I've got a little sister 10 years old the 10th of this month. She's in the sixth grade and was also last year. She passed her examination, her lowest mark being 78 and the highest 100. They wouldn't pass her on account of her age. Now can they hold a child back for that? She's full of ambition, but the learning of some things twice has given her no courage. Would you please let me know if there is a law that can hold her back on account of her age? A. DeV., Dighton, Mich.

—The passing of a pupil is a matter which is in the hands of the teacher or if in a graded school, the superintendent. It would be impossible to pass on the matter at a distance. —T. E. Johnson, Department of Public Instruction.

INTOXICATING LIQUORS

Has a man the right to make fermented liquor for his own use? Has he the right to treat his friends or sell it out to friends? What can be done with a father that gives his 3 year old baby fermented liquor?—Mrs. A. M. W., St. Charles, Mich.

—It is unlawful for any person to make, sell, give away or have in his possession intoxicating liquor. Any person who violates this law may be prosecuted, and, if convicted, is subject to a fine or imprisonment, or both, in the discretion of the judge. —Asst. Legal Editor.

RED WOOLEN UNDERWEAR AND RHEUMATISM

Is it true that red woolen underwear will keep aches and pains away?—Mrs. A. O., Carsonville, Mich.

—Red woolens have no more merit than any other woolen underwear. People who are subject to a great deal of exposure should always wear woolen.—Dr. C. C. Young, Dept. of Health.

ASPARAGUS CULTURE

Will you please tell me about the care and culture of a new asparagus bed?—W. A. R., Petoskey, Mich.

—An asparagus bed is usually started by planting either one or two year old roots. One-year roots are preferable. The roots may be grown from seed or they may be obtained from a reliable seedman. When only a few are needed for starting a bed in the home garden, it is usually more convenient and satisfactory to purchase the necessary plants. The roots should be planted as early in the spring as the ground can be worked. If the roots are grown on the premises, they should be dug as needed for planting. If received from a distance and the soil is not prepared for planting, they should be carefully "heeled in" near the place where they are to be planted or packed in moist soil and placed in a cool cellar until they are needed.

The best soil for asparagus is a deep, rich, sandy loam, but it may be successfully grown in any well-drained soil. If the soil is heavy it should be made lighter by the use of large amounts of stable manure or in the home garden it is often advisable to trench the soil to a depth of about two feet and mix sand or sifted ashes with the soil which is removed to make it lighter and more porous. The soil should be well enriched with stable manure and all noxious weeds and grasses thoroughly subdued previous to planting. When preparing the soil it should be dug or plowed and the surface soil made fine and mellow as deeply as possible. The plantation is then laid out by making furrows or trenches about four feet apart and eight or ten inches deep to receive the plants. The roots are set about eighteen inches apart in the bottom of the furrow taking care to get the crown or bud uppermost and the roots evenly spread out like the spokes of a wheel. The object of setting the roots deep is to permit of digging or working over the surface of the bed without interfering with the crowns or roots. Only enough soil is placed in the furrow to cover the crowns about two inches, the balance being gradually worked in during the season after the plants start into growth.

The plants should be well cultivated the first season. In the fall, after growth has ceased, mow off the tops and burn them. In the spring of the second year, a dressing of well-rotted manure may be applied and thoroughly worked into the soil before the plants start to grow. If manure is not available, about one ton per acre (or 2 pounds for each hundred feet of row) of a high-grade complete fertilizer may be applied. Cultivation should begin as soon as the shoots appear and continue as long as it is convenient to get between the rows. Late in the fall remove the tops and burn as in the preceeding season.

In the spring of the third year some shoots may be cut but the cutting should not continue for more than two weeks. After the bed is well established, cutting may be continued for six or eight weeks. Cutting should never be continued too long as the plants must be given time after the last cutting to store food in the roots for the next season's crop. The general care of the bed during the third and each succeeding season should be about as follows: (1) Thorough digging or disking of the soil before growth starts in the spring. (2) As soon as the shoots start, cultivate between the rows to keep down the weeds and conserve moisture. (3) At the close of the cutting season apply a dressing of well-rotted manure or commercial fertilizer and thoroughly work into the soil. (4) Cultivate frequently during the summer as long as convenient to get between the rows. (5) After growth ceases in the fall, mow off the old tops and burn them to destroy insects and diseases.

If the asparagus beetle becomes troublesome during the cutting season leave a few shoots here and there uncut. These will serve as trap plants on which the beetles will collect. They may then be poisoned with arsenate of lead, 3 tablespoonfuls of powder in a gallon of water or 1½ pounds in 50 gallons. After the cutting season is over the plants may be protected from beetle injury by two or three sprayings with arsenate of lead as directed above.

The Palmetto is the leading variety grown and is usually recommended.—R. E. Loree, Department of Horticulture, M. A. C.

MARKET FOR PEPPERIDGE TREES

I have some pepperidge trees. They run small in timber. When can I sell same, or is there not much value on that kind of timber? Some tell me it is valuable. I have an offer of $1 a cord.—W. H. H., Mungee, Michigan.

—The pepperidge, more commonly known as the black gum (Nyssa sylvatica) is not found to much extent in Michigan and is therefore not listed on Michigan markets. In the south where it occurs with red gum (Liquidambar styraciflua) and the tupelo (Nyssa aquatica) it is considered as inferior in value to either the red gum or the tupelo.

The red gum, with which many people confuse the black gum, is in demand by many veneer factories because it makes a passable imitation of Circassian walnut or mahogany, depending upon the stain applied; but the black gum lacks the necessary grain for this market. Most of it is sold with tupelo but it lacks the broad clear widths of the latter.

The black gum or pepperidge has one characteristic which gives it a special value and that is that it is very difficult to split. This quality brings it into use considerably in berry boxes, hubs, table legs, crates, barrel veneers and exselsoir.

The problem of whether to sell timber as logs or as cordwood has to be settled according to the conditions existing in each particular stand. In general, it is best to sell the logs, if a suitable market can be found. The Forestry Department at the Michigan Agricultural College is endeavoring to help the farmer in getting a better financial return out of his woodlot by keeping a list of timber buyers in the State who use woodlot timber in logs or sawed to dimension. We will be glad to send to anyone interested a list of such buyers in their locality.

The price obtained for logs or standing timber varies with the distance from market and quality and size of the product, as well as the kind of timber. In this particular instance it would probably cost about $1.25 a rick for cutting the timber into fuelwood. Since there are three ricks of 16-inch wood to the cord, it would cost $3.75 per cord. With a sale price of $10 per cord, and a cutting cost of $3.75, the difference ($6.25) would represent the value of the standing timber, per cord. Figuring two full cords per 1,000 feet, board measure, of logs, the value per 1,000 feet of standing timber for cordwood would be twice $6.25 or $12.50. One would need to get at least $12.50 a thousand feet for the logs in order to equal the price received for fuelwood.

Knowing the cost of manufacturing the timber into fuelwood and figuring two full cords to the thousand feet B. M. of logs one can then determine whether any offered price for the logs is preferable to the price offered for fuelwood.—J. C. DeCamp, Assistant Professor of Forestry, M. A. C.

CAUSE OF WARTS

What is the cause of people having warts?—Mrs. A., O., Carsonville, Mich.

—Warts are benign tumor growths. Cause not known.—Dr. C. C. Young, Dept. of Health.

What the Neighbors Say

SUGAR TAX TO PAY BONUS

"A flat sales tax of 2 cents a pound on all sugar consumed in the United States, as a substitute for the present tariff, is advocated by the United States Sugar Association as a means of providing revenues sufficient to meet a possible soldiers' bonus. The association sent out letters to members of Congress and other public officials stating that the proposed tax would increase the Government's revenues $104,042,674 a year or enough 'to discharge the entire obligations to be incurred under the bonus bill, without further increasing the cost of sugar to consumers'."

DEAR Mr. Editor:—Yours of recent date, relative to child labor in the beet fields, received. I am still getting the article I promised you on this subject into shape, and will mail it to your paper as soon as possible. I am mailing under separate cover, a copy of our beet paper that we sent out to all members of the Michigan Sugar Beet Growers' Association, which I am sorry to say, we were forced to discontinue publishing on account of the lack of cooperation and funds.

I am enclosing a couple of newspaper clippings which should be carefully gone over, as here is a proposition which not only concerns the beet farmer, but the factory as well. This proposition of a sales tax on sugar, to pay a soldier's bonus is the usual plan to pass it on to the man least able to defend himself, the farmers, as if this proposed tax goes through all sugar beet contracts will be so made that the factory will not lose only in perhaps the loss of business.

The organization pushing this propaganda appears to be the United States Sugar Association, which in name at least, is the same organization that has been working extensively in the west and mailed by the Scotts Bluff Republican, as being a Cuban organization, and not an American organization, as the name implies. I am enclosing clipping which we reprinted in our paper on page 4. Every farm paper, every farm organization, and every factory, having the interest of Michigan, its industry, and its farmers, at heart, should get busy as this idea of a sales tax when once started, will in the end envolve every farmer in the United States. This article enclosed states that the consumer will pay no more than he does now, which no doubt may be admitted for the time being, but it should be made plain that this proposed tax of 2 cents per pound, will be paid by the United States beet grower. I will suggest that your paper takes the lead in this fight. Your paper, no doubt, is the most read by the beet growers of Michigan, of any paper in Michigan, and also has given the most space and cooperation in the grower's problems in the past. Give us a full page on this. I am sure every farmer will read every word, whether he is a beet grower or not. Also I feel every factory will have a like interest especially those that are offering 50-50 contracts. Also every bank doing business in a farming community.—C. E. Ackerman, Durand, Mich.

FORBID KILLING OF YOUNG CALVES

DEAR Editor—I am attaching to this copy of letter written to the Editor of the Detroit Times on October 22 to which I have not had any reply.

What do you think of this idea of forbidding the kiling of young animals?

Editor, The Detroit Times, Dear Sir: In your October 18 issue you say that the real way to save leather and improve the food supply would be to discourage or forbid the killing of young calves or of any beef animals not full grown.

All right, now who do you expect should pay for the feeding of the animals until grown? On our farm we have about 15 grade bull Holstein calves a year; I will make you a present of them if you will pay for the feed and care of them until they are of age. Don't you know that you or any one else in the City, State or Nation could get an almost unlimited amount of bull calves for $5 a head; and that the farmer makes more money to sell them when a week old at $5.00 than he can get any time afterwards.

I will sell you six yearling pure bred Holstein bulls right now for just what their feed costs and not ask one cent for labor or profit.

Believe me as far as I am concerned bull calves, especially not pure bred, are going to get the ax if they are not disposed of within two weeks after birth. It costs 25c a day and more to feed them milk, and they gain about one pound a day in weight, and then what are they worth? I will tell you—from 6c to 10c a pound in the market when they are salable. Can any one afford to pay 25c and get a return of 10c?

It is not up to the farmer to carry on such a losing game, you or any one else can do it if you want to. How many bull calves do you want right now at $5.00 a piece one week old?

You say—"If every calf grew to full size, can you imagine what the beef and leather supply would be?" I sure can, and can you imagine what the price would be to the farmer?—Charles Staff, Wayne Co.

A Giant Who Works For You

There is a giant who works tirelessly to lighten the labor on the American farm, to make the farm more productive, and farming more profitable.

He is personified by the vast resources of the Ford organization, whose herculean labors are directed primarily toward lowering the cost and increasing the efficiency of Ford cars, Ford Trucks, and the Fordson Tractor.

The larger this giant has grown the lower the prices of Ford products have fallen, and the more valuable they have become from the investment standpoint as farm equipment.

To the farmer this has meant lower and lower farm costs, better arrangement of farming activities, more money crops, all with less effort and therefore with greater net profit—proof enough that it is to his interest to standardize on Ford equipment.

Oh Money! Money!

by ELEANOR H. PORTER

THE STORY TO DATE

MR. STANLEY G. FULTON, 50-year old bachelor and possessor of twenty million dollars, calls on his lawyer and they discuss the disposition of this large fortune after its owner's death. The lawyer is in favor of giving the money to colleges or charities while Fulton is opposed to these ideas. He remembers that he has some distant cousins and decides to leave the money to one of them, but first he determines to learn which one will use it to the best advantage. To find out who is the worthy one he, through his lawyer, gives, each cousin $100,000 to use as they will. Before giving them the money grows a beard and, using the name of Mr. John Smith, goes to the town where they live to find out what kind of people they are. Upon arriving in town he visits James Blaisdell, one of the cousins, where he tries to hire board and lodging. While there he meets Miss Flora Blaisdell, another cousin who is a dressmaker. They decide they cannot rent a room to him and supply him board and refer him to Frank Blaisdell's, the third cousin. He gets a room there and, passing as a writer gathering material for a book on the Blaisdell family in this country, he starts out. He calls on all of the Blaisdells and as they all talk of a relative by the name of Miss Maggie Duff he decides to call on the lady. He finds her living with her father, an old man who seems to have soured on the world.

(Continued from December 8th issue.)

IT was while at work in the corner that he came to learn so much of Miss Maggie's daily life, and of her visitors.

Although many of these visitors were strangers to him, some of them he knew.

One day it was Mrs. Hattie Blaisdell, with a countenance even more florid than usual. She was breathless and excited, and her eyes were worried. She was going to give a luncheon, she said. She wanted Miss Maggie's silver spoons, and her forks, and her handpainted sugar-and creamer, and Mother Blaisdell's cut-glass dish.

Mr. Smith, supposing that Miss Maggie herself was to be at the luncheon, was just rejoincing within him that she was to have this pleasant little outing, when he heard Mrs. Blaisdell telling her to be sure to come at eleven to be in the kitchen, and asking where she could get a maid to serve in the dining-room, and what should she do with Benny. He'd have to be put somewhere, or else he'd be sure to upset everything.

Mr. Smith did not hear Miss Maggie's answer to all of this, for she hurried her visitor to the kitchen at once—to look up the spoons, she said. But indirectly he obtained a very conclusive reply; for he found Miss Maggie gone one day when he came; and Benny, who was in her place, told him all about it, even to the dandy frosted cake Aunt Maggie had made for the company to eat.

Another day it was Mrs. Jane Blaisdell who came. Mrs. Jane had a tired frown between her brows and a despairing droop to her lips. She carried a large bundle which she dropped unceremoniously into Maggie's lap.

"There, I'm dead beat out, and I've brought it to you. You've just got to help me," she finished, sinking into a chair.

"Why, of course, if I can. But what is it?" Miss Maggie's deft fingers were already untying the knot.

"It's my old black silk. I'm making it over."

"Again? But I thought the last time it couldn't ever be done again."

"Yes, I know; but there's lots of good in it yet," interposed Mrs. Jane decidedly; "and I've reached a point where I just have got to have help. So I came right over."

"Yes, of course, but"—Miss Maggie was lifting a half-finished sleeve doubtfully—"why didn't you go to Flora? She'd know exactly—"

Mrs. Jane stiffened.

"Because I can't afford to go to Flora," she interrupted coldly. "I have to pay Flora, and you know it. If I had the money I should be glad to do it, of course. But I haven't, and charity begins at home, I think. Besides, I do go to her for new dresses. But this old thing—! Of course, if you don't want to help me—"

"Oh, but I do," plunged in Miss Maggie hurriedly. "Come out into the kitchen where we'll have more room," she exclaimed, gathering the bundle into her arms and springing to her feet.

"I've got some other lace at home—yards and yards. I got a lot, it was so cheap," recounted Mrs. Jane, rising with alacrity. "But I'm afraid it won't do for this, and I don't know as it will do for anything, it's so—"

The kitchen door slammed sharply, and Mr. Smith heard no more. Half an hour later, however, he saw Mrs. Jane go down the walk. The frown was gone from her face and the droop from the corners of her mouth. Her step was alert and confident. She carried no bundle.

The next day it was Miss Flora. Miss Flora's thin little face looked more pinched than ever, and her eyes more anxious, Mr. Smith thought. Even her smile, as she acknowledged Mr. Smith's greeting, was so wan he wished she had not tried to give it.

She sat down then, by the window, and began to chat with Miss Maggie; and

"No, Maggie, I don't know, really, what I am going to do—truly I don't. Business is so turrible dull! Why, I don't earn enough to pay my rent, hardly, now, ter say nothin' of my feed."

"But I thought that Hattie—isn't Hattie having some new dresses—and Bessie, too?"

A sigh passed Miss Flora's lips.

"Yes, oh, yes; they are having three or four. But they don't come to me any more. They've gone to that French woman that makes the Pennock's things, you know, with the queer name. And of course it's all right, and you can't blame 'em, livin' on the West Side, as they do now. And, of course, I ain't so up ter date as she is. And just her name counts."

"Nonsense! Up to date indeed!" (Miss Maggie laughed merrily, but Mr. Smith, copying dates at the table, detected a note in the laugh that was not merriment.) "You're up to date enough for me. I've got just the job for you, too. Come out into the kitchen." She was already almost at the door.

"Why, Maggie, you haven't, either!" (In spite of the incredulity of voice and manner, Miss Flora sprang joyfully to her feet.) "You never had me make you a—" Again the kitchen door slammed shut, and Mr. Smith was left to finish the sentence for himself.

But Mr. Smith was not finishing sentences. Neither was his face expressing just then the sympathy which it might be supposed to be showing, after so sorry a tale as Miss Flora had been telling. On the contrary, Mr. Smith, with an actual elation of countenance, was scribbling on the edge of his notebook words that certainly he had never found in the Blaisdell records before him: "Two months more, then—a hundred thousand dollars. And may I be there to see it!"

Half an hour later, as on the previous day, Mr. Smith saw a metamorphosed woman hurrying down the little path to the street. But the woman to-day was carrying a bundle—and it was the same bundle that the woman the day before had brought.

But not always, as Mr. Smith soon learned, were Miss Maggie's visitors women. Besides Benny, with his greivances, young Fred Blaisdell came sometimes, and poured into Maggie's sympathetic ears the story of Gussie Pennock's really remarkable personality, or of what he was going to do when he went to college—and afterwards.

Mr. Jim Blaisdell drifted in quite frequently Sunday afternoons, though apparently all he came for was to smoke and read in one of the big comfortable chairs. Mr. Smith himself had fallen into the way of strolling down to Miss Maggies almost every Sunday after dinner.

One Saturday afternoon Mr. Frank Blaisdell rattled up to the door in his grocery wagon. His face was very red, and his mutton-chop whiskers were standing straight out at each side.

Jane had collapsed he said, utterly collapsed. All the week she had been house-cleaning and doing up curtains; and now this morning, expressly against his wishes, to save hiring a man, she had put down the parlor carpet herself. Now she was flat on her back, and supper to be got for the boarder, and the Saturday baking yet to be done. And would Maggie come and help them out?

Before Miss Maggie could answer, Mr. Smith hurried out from his corner and insisted that "the boarder" did not want any supper anyway—and they could live on crackers and milk for the coming few days?

But Miss Maggie laughed and said, "Nonsense!" And in an incredibly short time she was ready to drive back in the grocery wagon. Later, when he went home, Mr. Smith found her there, presiding over one of the best suppers he had eaten since his arrival in Hillerton. She came every day after that, for a week, for Mrs. Jane remained "flat on her back" seven days, with a doctor in daily attendance, supplemented by a trained nurse peremptorily ordered by that same doctor from the nearest city.

Miss Maggie, with the assistance of Mellicent, attended to the housework. But in spite of the excellence of the cuisine, meal time was a most unhappy period to everybody concerned, owing to the sarcastic comments of Mr. Frank Blaisdell as to how much his wife had "saved" by not having a man to put down that carpet.

Mellicent had little time now to go walking or auto-riding with Carl Pennock. Her daily life was, indeed, more pleasure-starved than ever—all of which was not lost on Mr. Smith. Mr. Smith and Mellicent were fast friends now. Given a man with sympathetic understanding on one side, and a girl hungry for that same sympathy and understanding, and it could hardly be otherwise. From Mellicent's own lips Mr. Smith knew now just how hungry a young girl can be for fun and furbelows.

"Of course I've got my board and clothes, and I ought to be thankful for them," she stormed hotly to him one day. "And I am thankful for them. But sometimes it seems if I'd actually be willing to go hungry for meat and potatoes, if for once—just once—I could buy a five-pound box of candy, and eat it all up at once, if I wanted to! But now, why I can't even treat a friend to an ice-cream soda without seeing mother's shocked reproachful eyes over the rim of the glass!"

It was not easy then (nor subsequently) for Mr. Smith to keep from asking Mellicent the utterly absurd question of how many five-pound boxes of candy she supposed one hundred thousand dollars would buy. But he did keep from it—by heroic self-sacrifice and the comforting recollection that she would know some day, if she cared to take the trouble to reckon it up.

In Mellicent's love affair with young Pennock Mr. Smith was enormously interested. Not that he regarded it as really serious, but because it appeared to bring into Mellicent's life something of the youth and gayety to which he thought she was entitled. He was almost as concerned as was Miss Maggie, therefore, when one afternoon, soon after Mrs. Jane Blaisdell's complete recovery from her "carpet tax" (as Frank Blaisdell termed his wife's recent illness), Mellicent rushed into the Duff living-room with rose-red cheeks and blazing eyes, and an explosive:—

"Aunt Maggie, Aunt Maggie, can't you get mother to let me go away somewhere—anywhere, right off?"

"Why, Mellicent! Away? And just to-morrow the Pennock's dance?"

"But that's it—that's why I want to go," flashed Mellicent. "I don't want to be at the dance—and I don't want to be in town, and not at the dance."

Mr. Smith, at his table in the corner glanced nervously toward the door, then bent assiduously over his work, as being less conspicuous than the flight he had been tempted for a moment to essay. But even this was not to be, for the next moment, to his surprise the girl appealed directly to him.

"Mr. Smith, please, won't you take me somewhere to-morrow?"

"Mellicent!" Even Miss Maggie was shocked now, and showed it.

"I can't help it, Aunt Maggie. I've just got to be away!" Mellicent's voice was tragic.

"But, my dear, to ask a gentleman—" reproved Miss Maggie. She came to an indeterminate pause. Mr. Smith had crossed the room and dropped into a chair near them.

"See here, little girl, suppose you tell us just what is behind—all this," he began gently.

Mellicent shook her head stubbornly. "I can't. It's too silly. Please let it go that I want to be away. That's all."

"Mellicent, we can't do that." Miss Maggie's voice was quietly firm. "We can't do—anything, until you tell us what it is."

There was a brief pause. Mellicent's eyes, still mutinous, sought first the kindly questioning face of the man, then the no less kindly but rather grave face of the woman. Then in a little breathless burst it came.

"It's just something they're all saying Mrs. Pennock said—about me."

"What was it?" Two little red spots had come into Miss Maggie's cheeks.

"Yes, what was it?" Mr. Smith was looking actually belligerent.

"It was just that—that they weren't going to let Carl Pennock go with me any more—anywhere, or come to see me, because I—I didn't belong to their set."

Miss Maggie said nothing, but the red spots deepened.

"Yes. It's just—that we aren't rich like them. I haven't got—money enough."

"That you haven't got—got— Oh, ye gods!" For no apparent reason whatever Mr. Smith threw back his head suddenly and laughed. Almost instantly, however, he sobered: he caught the expression of the two faces opposite.

"I beg your pardon," he apologized promptly. "It was only that to me—there was something very funny about that."

"But, Mellicent, are you sure? I don't believe she ever said it," doubted Miss Maggie.

"He hasn't been near me—for a week. Not that I care!" Mellicent turned with flashing eyes. "I don't care a bit—not a bit—about that!"

"Of course you don't! It's not worth even thinking of, either. What does it matter if she did say it, dear? Forget it!"

"But I can't bear to have them all talk—and notice," choked Mellicent. "And we were together such a lot before; and now—I tell you I can't go to that dance to-morrow night!"

"And you shan't, if you don't want to," Mr. Smith assured her. "Right here and now I invite you and your Aunt Maggie to drive with me to-morrow to Hubbardville. There are some records there that I want to look up. We'll get dinner at the hotel. It will take all day, and we shan't be home till late in the evening. You'll go?"

"Oh, Mr. Smith, you—dear! Of course we'll go! I'll go straight now and telephone to somebody—everybody—that I shan't be there; that I'm going to be out of town!" She sprang joyously to her feet—but Miss Maggie held out a restraining hand.

"Just a minute, dear. You don't care—you said you didn't care—that Carl Pennock doesn't come to see you any more?"

"Indeed I don't!"

"Then you wouldn't want others to think you did, would you?"

"Of course not!" The red dyed Mellicent's forehead.

"You have said that you'd go to this party, haven't you? That is, you accepted the invitation, didn't you, and the people know that you did, don't they?"

"Why, yes, of course! But that was before—Mrs. Pennock said what she did."

"Of course. But—just what do you thing these people are going to say to-morrow night, when you aren't there?"

"Why, that I—I—" The color drained from her face and left it white. "They wouldn't expect me to go after that—insult."

"Then they'll understand that you—care, won't they?"

"Why, I—I— They—I can't" She turned sharply and walked to the window. For a long minute she stood, her back toward the two watching her. Then, with equal abruptness, she turned and came back. Her cheeks were very pink now, her eyes very bright. She carried her head with a proud little lift.

"I think, Mr. Smith, that I won't go with you to-morrow, after all," she said steadily. "I've decided to go —to that dance."

The next moment the door shut crisply behind her.

CHAPTER VIII

A Santa Claus Held Up

It was about five months after the multi-millionaire, Mr. Stanley G. Fulton, had started for South America, that Edward D. Norton, Esq., received the following letter:—

Dear Ned:—I'm glad there's only one more month to wait. I feel like Santa Claus with a box of toys held up by a snowdrift, and I just can't wait to see the children dance—when they get them.

And let me say right here and now how glad I am that I did this thing. Oh, yes, I'll admit I still feel like the small boy at the keyhole, at times, perhaps; but I'll forget that—when the children begin to dance.

And, really, never have I seen a bunch of people whom I thought a little money would do more good to than the Blaisdells here in Hillerton. My only regret is that I didn't know about Miss Maggie Duff, so that she could have had some, too. (Oh, yes, I've found out all about "Poor Maggie" now, and she's a dear—the typical self-sacrificing, self effacing bearer of everybody's burdens, including a hugs share of her own!) However, she isn't a Blaisdell, of course, so I couldn't have worked her into my scheme very well, I suppose, even if I had known about her. They are all fond of her—though they impose on her time and her

(Continued on page 18.)

JUNK PLUS IDEA EQUALS LIGHTING PLANT

CARL HELBER, a dairy farmer living near Ann Arbor made a lighting plant for his barn for around $2. Mr. Helber, who has a large herd of cows, uses a gasoline engine to operate his milking machine and he decided that the engine could do double duty with a little extra cost. He went to a garage and in a pile of old parts of automobiles that had been discarded as junk he found part of an engine and six headlights minus the bulbs. He paid $2 for these.

In the barn he inverted the crank-case and generator that had been salvaged from the junk pile and installed them above the gasoline engine used to run the milking machine. The engine below was connected with the generator by a belt in such a way that the milking machine and generator could be operated simultaneously. The six headlights were equipped with bulbs and fastened in strategic positions about the barn. Two wires were arranged leading from the generator, one to carry the current to the lights and the other to connect with the ground. While the cows are being milked the barn is brilliantly lighted at no additional cost. At other times when light is desired the gas engine may be started in a moment, and the cost is not great.

SEEING THE IMMANUEL MAN

A SERMON BY REV. DAVID F. WARNER

TEXT: "Behold, the virgin shall be with child, and shall bring fourth a son, and they shall call his name Immanuel; which is, being interpreted, God with us."—Matthew 1:23.

HARRY Emerson Fosdick says, "Not often in the Bible are we invited merely to agree with an opinion; we are everywhere called to trust a Person." And that Person makes his advent in our text. "And they shall call his name Immanuel," or "God with us." But what a disappointment! The Jews had so disregarded the Messianic expectation as to externalize their salvation. They longed to be saved from the Roman yoke. And when the angel announces the deliverance to be internal; a salvation from sins, then, to them, this Person was not the Messiah.

Soon, we shall be memorializing that day when God made himself present among men in Jesus, the Immanuel man. But, do we discern better than the first century folks? Is our Christmas faith a Christian faith? A great psychologist has said, if we are truly Christian, we shall see the universe to be, not an IT, but a THOU. Certainly, God is with us, but how difficult to realize his presence, notwithstanding. This is such a real, a throbbing world; a world in which the things of sense and the achievements of men are so real, so everywhere present, that the masses seem to have been made insensible to the presence of God. Sensations of the marvelous things men about us are doing, are so ceaselessly crowding in upon our mental horizon, that the presence of God is well-night lost sight of or forgotten. How many Christmas shoppers take thought of the real meaning of the Christ-mass?

"White Christopher" appeared before a company of profane men one day while they were at work. With his arms outstretched, he looked so awe-inspiring, so Cross-like, that the men stopped swearing. Just this is the value of religion, to pledge to us the presence of Jehovah that we might have correction for our evil ways. The presence in the life of men of a supreme being is fundamental. So the most primitive peoples were animists; later heathenism localized their divine being in sacred places and idols; and in the Old Testament revelation, God is present in the pillar of cloud, the burning bush, and the ark. But gradually, a more moral view began to prevail, and God was at hand without these material associations. Early and late, the prophets are pleading for a recognition of God's presence thru a spiritual awakening and moral reforms. But the Jew was unimaginative and unspiritual, and so the prophet's message did not take. And the Greeks were expectant and longing; so it remained for the great Jehovah to give a pledge in reality, to both Jew and Gentile, of his redeeming presence. Therefore our text announces the coming of Jesus, the "God with us" man.

Said the sick little girl to the nurse who was manifestly selfish, "Didn't you know Jesus was born?" Friends of the yule-tide, are your hearts warm and tender toward the Babe of Bethlehem? Thru your Christmas spirit will your children recall that Jesus was born to save us from a hell of covetousness into which so many are falling? But the Founder of our religion came, lived, and lives that we might keep near God. Men heard him speak, and tho not college bred, no man ever spake as did he. They saw his eyes flame with indignation and weep with tears of grief. They felt his soul in action as a furious tempest, and then as a calm summer breeze. They saw his hand impart the tender, healing touch, and then with a scourge, the same hand cleanses the temple. They saw him go to the Cross because he would not save himself. No, their eyes could not be cheated, this was truly Immanuel.

And this reality is today to every Christian the great "I AM." He says, "I am the door, you can get to God thru me. I am the Bread of Life, feed daily upon me. I am the Light of men, walk in my ways. I am the Ressurrection and the Life, you may have a glorious future in me." And doesn't this Jesus bring God so close as to make heaven to be the atmosphere of Christ about us, rather than a place in the firmament above? I wonder. Think it over. An eccentric, Southern preacher said, in approaching a large forest tree, "O tree, I love thee because Jesus made thee." Certainly, this man was immersed and overwhelmed in the spiritual presence of Christ. And the amazing thing is, this is the heritage of every Christian. And this is that which enables us to put God into our farming. "Thanks be to God for his unspeakable gift." How friendly, warm, and vital should this make our every day living!

And, now, did we walk in the companionship of Christ, what would it do? To the church folks, I may say, it would spiritualize our prayer and worship. A vision of God is fundamental here. Moses saw him sitting on a paved work of sapphire stone. Jacob and Isaiah had marvelous visions of him. But to us he may be many times more real. And our vision of him is to conform to that ideal of life as seen in the personality of Christ. "The pure in heart shall see God." This correct attitude of heart is imperative. Together with another minister, I visited the institution of Jane Adams in Chicago. This minister inquired, "May we see Jane Adams?" The answer came, "Do you have a message for her?" And to my humiliation, this minister exclaimed, "No, we just want to see her." What puerile curiosity! For this woman is great in works of charity and philantropy. But how great and real is God! Yet how often we come into his presence with childish attitudes and hearts unthankful for his goodness and mercies! Due to overcrowded hotels in a Western city where a laymen's convention was on, a drummer, by invitation, shared a room with W. J. Bryan. On retiring for the night, Mr. Bryan said to the traveling man, "It is my custom at this time to read a portion of scripture and pray. Shall I do this audibly?" The drummer graciously yielded, for here was one who made it the practice of his life to pledge to others the presence of the Unseen.

Immanuel-Jesus to Santa Claus. This, we are reminded at this season of the year, has been our descent. And how many good folks have helped to make it so! We talk about the Christmas spirit as if it came from a red-faced, bewhiskered old hobgoblin that comes out of the frozen North and sweeps down our chimneys to give us a gay holiday for exchanging gifts. What unworthy imagery! How different from the reality of that Babe in whose character we are to learn the life of service and sacrifice. The myth of Santa Claus has led to an orgy of commercialism and a day of big dinners and gay feelings. Is it not time that "In chastened mood and with humble heart we gather once more around the Babe in the Manger;" and strive to know the presence of One who came to save us from our sins.

It is time. And only this indwelling of God in the heart is the basis of all right living. We look with disgust at how often religion is used for an handmaid; as in the lodge, in our businesses, our pleasures, and often in the churches. Whereas, religion should be our mistress, to be served in all the avocations and ways of life. Jesus says, "Without me ye can do nothing." And who of us wants to fail?

A father returned from work at twilight. Stealing unnoticed upon them, he was listening to his two small children at play. Said the little sister to her brother, "I can kiss God." "O, no you can't," said the little brother, "God is too far away." But sister steps across the room and kisses her brother. "There," said she, "I have kissed God." And come to think of it, isn't this the creative idea, and the reality that Christ has filled full? Therefore, at this recurring Christmas season, will we refind our Christian faith and have our chiefest cheer in a God who is with us and in us.

In every case when writing say: "I saw your advertisement in The Michigan Business Farmer!" It will guarantee honest dealing.

"The Farm Paper of Service"

DRAFTING CAPITAL

> "Section 1. In the event of a declaration of war, the property equally with the persons, lives, and liberties of all citizens shall be subject to conscription for the defense of the Nation."

IT has always appeared to us that in the time of war, a democracy such as ours, should be put entirely on a wartime basis. If the government has the right to conscript young men for military service, then it has an equal right to conscript property and materials used in the continuance of that war.

Representative John M. Evans, of the First District, Montana, recently introduced a bill of which the above is a section, for exactly this purpose. It is a bill calling for an amendment to the United States Constitution which would, after having been ratified by the legislatures of three-fourths of the several states, make the conscription of property mandatory, as is the conscription of individuals.

Surely the experience of the last war should be of some value to us to lay for the guidance of future generations and if the lessons learned cannot be used for that purpose we must admit that it was largely fought in vain.

Wartime becomes an emergency in which every man and every industry should be on an equal footing and serving only one end. The sight of profiteers, whether in labor or capital, making unheard-of profits, while young men were being put up before the merciless slaughter of the front-line trenches for a pittance is a picture not to be repeated.

Here is something for the American Legion, the many womens organizations and every sane and loyal citizen to get behind and make a reality. As a matter of fact, it would probably be the best possible insurance against another war!

RE-APPORTIONMENT

BEHIND a smoke screen carefully laid by Detroit politicians and largely fanned by the city newspapers, the population of Michigan is being divided and arrayed against itself.

If one were to believe all the metropolitan newspapers said it would be a one-sided issue with the rural delegation at Lansing making a scrap of paper of the state constitution and denying to a large proportion of our citizenship equal representation in making the laws which govern them. It is easy from this point to fan the flames, as they were back in the days of the famous "Boston tea-party" which ended in severing the ties between England and the thirteen struggling colonies.

The present state constitution, as we understand it, provides for representation in the legislature on the basis of population, taking into no consideration the number of citizens or the amount of territory thus represented. Probably those who made this constitution did not forecast the growth of a metropolitan city in which a very large percentage of its population are aliens who have not accepted the responsibilities or who apparently do not care for the privileges of United States citizenship. No man could advance a sound argument that it was the intention of the makers of our constitution to protect the rights of these visitors who come here only to take advantage of American conditions, accumulate enough American dollars and sail away to their homelands where their accumulation is enhanced to a point that they may retire in peace and comfort.

On page 3 of this issue our Lansing correspondent carefully and impartially outlines both sides of the re-apportionment fight, which we know will be read with great interest by the mass of thinking farmers in Michigan but which we hope might be read by the misguided citizens of our metropolitan cities.

Detroit newspapers would have their readers believe that the rural districts of Michigan do not appreciate what the growth of Detroit has meant to the prosperity of the state. This statement is a malicious slander because there is not a citizen of Michigan who does not hold in the utmost respect and the greatest pride the growth and prosperity of our great metropolis.

There is every reason why all sections of Michigan should be allied for their common good and we hope and pray that the present adjournment will result in clearing the muddy waters and allow. calm judgment and clear thinking to be applied to the present situation, which is by no means a one-sided proposition. The interests of the state as a whole, including Wayne county, are greater than, and must be given preference to, the selfish interests of any single city in the state.

THE GASOLINE TAX AGAIN

IT probably goes without saying that the proposed gasoline tax of two cents per gallon, which would meet favor with the rural element of Michigan, will have to wait until the matter of re-apportionment is settled and may even be used as a compromise in securing a settlement satisfactory to both sides.

The gasoline tax is not something to be traded in, neither is the matter of state apportionment. Both should stand or fall on their respective merits.

What we do know is that Michigan has an ever-increasing highway expense to meet and that the most direct way to secure enough money to build new roads and to keep those already built in repair is a gasoline tax, such as is now in force in most of the states in the Union.

A year ago when the Governor vetoed the gasoline tax it was a novelty, but during the past twelve months it has been voted on, and with success, in practically every state which ranks with Michigan in total annual registration of automobiles. This means that when a resident of our state goes into any other state he contributes to their good roads fund in every gasoline purchase he makes, but when the hordes of summer visitors from other states come to take advantage of our lakes and rivers they ride over roads which have been paid for and are maintained exclusively by citizens of Michigan. The moral is obvious.

FORGOTTEN!

AFTER you have studied the picture by Tom May which has become world famous, although first printed in the Detroit Journal several years ago, you will be interested to know that it was inspired by the tale of a German washerwoman who came the morning following Christmas to tell Mr. May that she had watched all day long a child who came to the window of a hovel facing her own home and kept peering out as if looking for someone. Late in the afternoon when this good woman went over to make inquiry she found that the child had been looking for Santa Claus and she added wistfully, "I must have been a very bad little girl, otherwise he would not have forgotten me!"

We hope there is no child in Michigan who is going to be forgotten by Santa Claus this Christmas. It may be that in the cities where there are more organizations caring for the needy, there is less possibility of overlooking someone than there is in the country, particularly after a trying period such as we have been experiencing the past two or three years.

If you know of a poor family near you where there is even a possibility that Santa Claus may not come with his pack of good cheer, by all means go to them at once. Do not run the risk of this catastrophe happening in your neighborhood. It takes so little to please the heart of a child and toys on the market are so cheap that under no condition must any child, anywhere in Michigan, this Christmas, be "forgotten!"

STATE OWNED CEMENT PLANT

IT is rumored that the state has taken an option of 453 acres of land two miles southwest of Charlevoix with the intention of erecting a state-owned cement plant to supply the highway requirements of Michigan.

We hope this statement is true. One need not be a radical to commend the ownership by the state of the manufacture of basic raw materials which it uses in such large quantities and in which the employment of penal labor could be so economical a feature.

There is no question but what cement is one of the best and most economical of road-building materials. It is equally true that in the repair and maintenance of the roads already constructed and the hundreds of miles to be constructed, many millions of dollars worth of cement will be required every year by this state. Fortunately, Michigan is well supplied with marl and there is no reason why we should not put ourselves in a position to take advantage of this gift which nature has apparently placed at our doors for this specific purpose.

GOOD BYE, 1923!

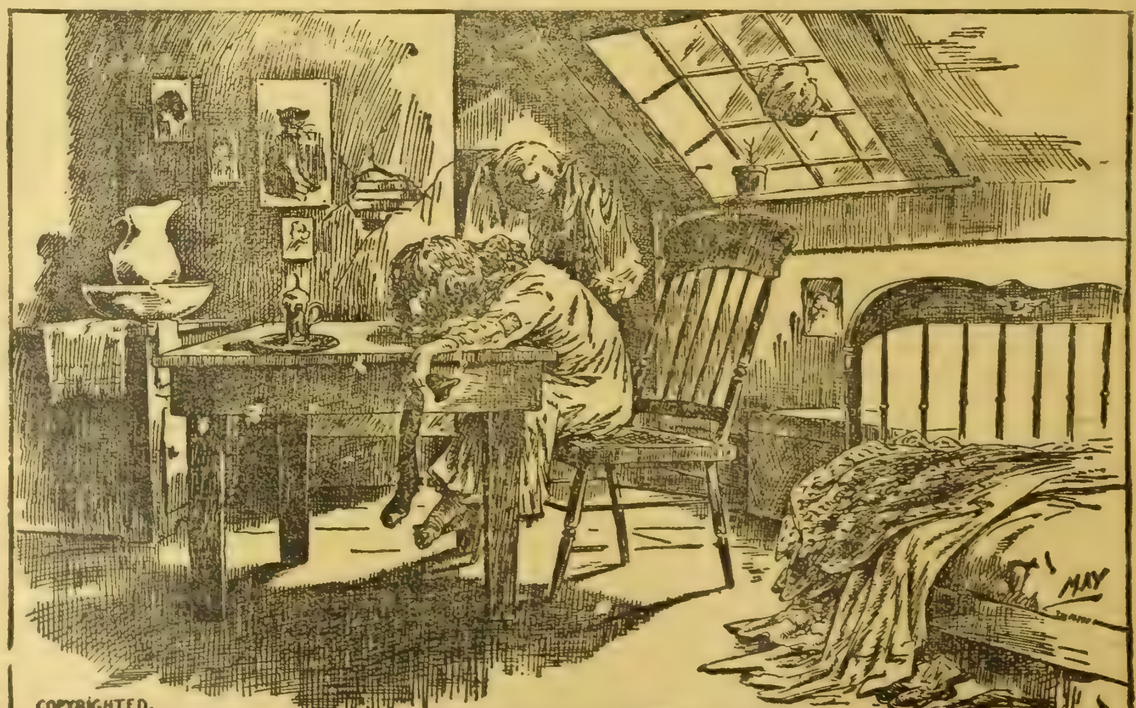
ERE another issue reaches your hands, 1923 will be but a memory and 1924 with all the promises and opportunities of a New Year will be in your possession.

It would be easy to preach a sermon on what you can make of your vast opportunities which unroll themselves before you, but farmers as a general rule have had about all of the preachin' and sympathy they need during the past two years—lets hope for less of it next!

The fact is that 1924 presents a rosy picture for the farmer who has stuck to his knittin' and kept puttin' the manure back on his land. Who has kept building up his herd and the rust off his machinery. This type of farmer needs no sympathy and the amazing (to some) fact is that he is the type who asks none. He has been fed-up on the wind-jammer type of politician who can weep nice, large tears for everyone who will vote him into a nice, fat job.

1923 was a shake-down for the farming business—thousands of farmers left the farms, but everyone that left crowded the farmer who remained nearer the top. Thank God, neighbor, you were one who stuck to the farm!

You are assured of a Happy and Prosperous New Year!



FORGOTTEN! —By Tom May.

PUBLISHER'S DESK

STANDARD FOOD ASSOCIATION

"Here I am again asking your valuable advice in this my trouble. You will remember me writing to you in regard to the Standard Food Association of New York, of which I was supposed to get thoroughbred Belgian hares, which I never got as their offspring were all the way from spotted white to blue and I would like to send back the four breeders which I purchased of them at $25, if I could get my money back to say nothing of express charges. I had no luck with the young which I gave the best of care. What would you advise me to do? I am a poor woman and need the money and can't stand such deals. They agreed to send purebred stock. Please give me your advice.—Always a reader of the M. B. F."

THE above is a sample of letters we get from folks who try to raise Belgian hares for resale to the company from whom they buy the original breeding stock. Perhaps somewhere in Michigan there is someone doing this successfully and making money from the scheme. If there is we would like to hear from them. But what letters we receive are exactly along the line of the above, which ought to be sufficient warning to our readers.

If, however, there are any still beguiled by the amazing profits to be made by the simple procedure as outlined in this or similar circular matter, we might repeat some of the stories as told to the vigilence committee which has been conducting an investigation:

A gentleman from Arkansas writes that he paid the company $22 for a pair of rabbits after he had seen their advertisement and after the company had written "continually even urging me to borrow money to get them with." He points out that the company was very prompt in writing to him before he paid his money. Read the balance of his story as he himself writes it.

"On December 23, I wrote to them that I had four pairs of rabbits to ship, all of the same litter and to please send shipping instructions. I waited almost two weeks and got no reply—so I wrote again and after waiting two weeks longer without result, I thought it strange—they had always been so prompt in answering me. I was determined to get an answer so I send a registered letter and got an immediate reply.

"They told me to ship my rabbits and pay expressage, as they had no funds at shipping point to pay for express, and as I had the contract, I supposed, of course, that they would refund the money.

"I shipped them in two lots. The first lot consisted of two (2) does and two (2) bucks. They said that they had received all O. K., and that I was to send my contract back and get a renewal before I could get my check. I had a true copy of the contract made, then I sent the original to them and kept the copy. In answer they told me that I had shipped Flemish Giants instead of Black Siberians and they were under weight. Now I have proof that I have never had or owned another kind of hares but the ones purchased from the company, and their young, so if I shipped them Flemish Giants, they misrepresented them to me as Black Siberians."

Another typical story comes from Pennsylvania, from a gentleman who paid $92 to prepay an order. He writes as follows:

"After waiting five months for delivery, on September 17, I submitted a letter to the Standard Food & Fur Association in which I cancelled my order. On September 25 I received a crate in which were three rabbits shipped via the American Express Company, express bill on end of crate was dated September 20—please note five days express live stock two hundred miles—and was marked 'Four (4) live rabbits.' On September 26 I received a letter written under date of September 24 from the Standard Food & Fur Association advising 'that we have this day forwarded you an exceptionally fine consignment of Imported Spotted Giants. etc.' On September 27 I received another letter dated September 24 from the Standard Food & Fur Association saying 'we have this day forwarded you 3 does and 1 buck of French Argent de Champagne via the American Railway Express Company.' Both letters were signed by the Secretary but his signature was undecipherable so that his name remains a mystery.

"We placed the rabbits in pens and, of course, have been feeding them. Today we made an investigation with the purpose of determining their sex and there was revealed the exceedingly pleasing (?) fact that each of the three rabbits were in complete possession of all the essentially masculine faculties."

OUR GERMAN BABIES FEEDING FUND

IT is too early to publish a full report on the generous contributions by readers of The Business Farmer to the German Babies Feeding Fund which we announced in the last issue.

We will remit the amount received up to December 20th., to the American Red Cross and specify to that splendid organization that every penny contributed by our readers is to be sent direct to Germany, if possible by cable to reach there before the Christmas season, to buy milk for the needy children.

We acknowledge to December 17th, the time of going to press, the following contributions:

Edwin P. Harms	$10.00
Employees of The Business Farmer	13.00
George M. Slocum	10.00
Mrs. Grant Slocum	10.00
Mrs. D. F. Wilcox	10.00
Sydney Floyd Bigger	4.00
Adam Falk	3.00
Henry J. Fuss	2.00
Mrs. Blanche Snider	1.00
S. A. Y.	1.00
Theo. Bengel	1.00
Total to December 17th	$65.00

One letter just received reads:

Dear Mr. Slocum:—I am a little boy seven years old, and I had this $4 saved up to buy Christmas presents with, but when mamma read in your paper about the babies in Germany starving, I thought I would send it to them instead.—Sydney Floyd Bigger, R3, Box 24B, Cheboygan, Mich.

WE WILL CONTINUE THE FUND

Since the original appeal was made, President Coolidge has gone on record as endorsing the appeal of the American Red Cross for Funds to Feed Starving German Babies, so we will continue to receive and acknowledge through these columns, any amount, large or small which our readers care to send in for this noble purpose. We will be glad to have you take up a fund in your local church, lodge or farmers' organization. It will certainly go a long ways towards proving that there is a God in Heaven and Peace on Earth, Good Will to ALL Men!

Contributions can be made in care of the publisher, George M. Slocum, The Michigan Business Farmer, Mt. Clemens, Mich., and should be made in check, money-order or registered letter, made payable to "GERMAN BABIES FEEDING FUND."

The Farm Home
A Department for the Women

Edited by MRS. ANNIE TAYLOR

Christmas

DEAR FOLKS:—The one time in the year when our hearts should be light and our heads held high with happiness and gladness for all who come within our sphere. It is a wonderful day for our loved ones and those of you who have the family complete at this time of the year are indeed fortunate.

I want to thank you all for your splendid help and cooperation in bringing before our readers the many new and useful subgestions that you have so willingly sent in to me. I have tried hard to make our department a family affair where we could discuss all the problems that confront the average woman on the farm. The recipes bave been fine and I know a great many have enjoyed reading them.

Below you will find a few articles that are more or less personal with every mother, and I hope you will read every word in them. Use our page. Don't just read it I am always at your service. I want to wish you all a Merry Christmas and I really believe 1924 will be the best year our farm-folks have seen in a long time. So I wish you a Happy New Year.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

SANTA CLAUS

HE comes in the night! He comes in the night!
He softly, silently comes,
While the little brown heads on the pillows so white
Are dreaming of bugles and drums.
He cuts through the snow like a ship through the foam,
While the white flakes around him whirl.
Who tells him I know not, but he findeth the home
Of each good little boy and girl.

His sleigh it is long, and deep, and wide;
It will carry a host of things,
While dozens of drums hang over the side,
With the sticks sticking under the strings.
And yet not the sound of a drum is heard,
Not a bugle blast is blown,
As he mounts to the chimney-top like a bird,
And drops to the hearth like a stone.

The little red stockings he silently fills,
Till the stockings will hold no more;
The bright little sleds for the great snow hills
Are quickly set down on the floor.
Then Santa Claus mounts to the roof like a bird,
And glides to his seat in his sleigh;
Not the sound of a bugle or drum is heard
As he noiselessly gallops away.

He rides to the East, and he rides to the West,
Of his goodies he touches not one;
He eateth the crumbs of the Christmas feast
When the dear little folks are done.
Old Santa Claus doeth all that he can;
This beautiful misson is his;
Then, children, be good to the little old man
When you find who the little man is.
—ANON.

PREPARATION FOR MATERNITY

"WE didn't have children when we should and then when we wanted to everything seemed to go wrong." How many a bitter tragedy of modern life is summed up in these words. The story, which unfortunately is being enacted every day, brings into vivid relief the fact that preparation for maternity and the care of the infant are necessary if serious dangers are to be avoided and the greatest joy of life is to be consumated. We no longer lead a primitively natural life; our food and habits are modified by social conditions; our intelligence brings with it greater sensativeness and the ability to forsee and apprehend suffering and responsibility as well as the capacity for greater joy and pleasure. Maternity means some sacrifice of comfort and pleasure, but at the same time the fulfillment of the greatest happiness that life affords. Medical progress has kept pace with the needs for special care and precaution incident to the changed conditions of life, and the risks and dangers of maternity are today less than ever before. Some may resent or scoff at the need of such precautionary measures, but neglect of them ends with the recognition "We've found out that there's something to being prepared and that prevention saves a lot of trouble."

THE NEW HEALTH EDUCATION

THE first idea that is often found at work in the health movement that health is primarily a physical matter. This idea is predominent in the emphasis of brushing one's teeth, in masticating one's food and in exercising one's muscles. Contrariwise, health is not only physical but also mental and social. One's teeth are more dependent on what one's mother eats during pregnancy than on teeth-cleaning habits; one's digestion is related as much or more to mental attitudes than it is to mastication; and exercise that neglects the satisfactions and annoyances in the nervous system is making false claims for wholesomeness. The teacher of health education must recite as one of the first principles: Mind and body are one. Health and happiness are not built up; they come from activities that produce them as by-products. The important consideration in this connection is to teach boys and girls to live correctly, to establish wholesome habits, and to farm socially useful attitudes. The school by its sterile program of calisthenics may delude itself about "building up health," but boys and girls go to college seeking to be excused from the requirement of physical education. It is far more important that the schoolseek constantly to develop a skill in and a love for some form of physical activity that they will carry with them throughout life. In an article that is full of sound common sense, Dr. J. F. Williams of Teachers' College, Columbia University makes the above remarks and brings home forcefully the need for interest and satisfaction in work and play if a real hygiene is to be taught.

The hotter a man gets under the collar the higher the blood pressure. —Hygeia.

THE NERVOUS CHILD

"THE so-called nervous child is frequently an untrained child of untrained and weak parents. It has been estimated that 50 per cent of the nervous children belong in this group. The children may be over-stimulated by excessive attention, as by rocking and coddling. The young, inexperienced mother is frequently confused by her task. Her new responsibility may make her extremely nervous. She shows anxiety if he does not sleep, or she becomes frenzied if he does sleep. She over-clothes him lest he catch cold. She picks him up the moment he cries. She paces the floor with him or sings to him. She fails to feed him regularly. In short, she fails in the normal training process." Dr. Isaac A. Abt, in the December issue of Hygeia, stresses the importance of the influence that the attitude of the mother has on the temperament of the child. He readily imitates her anxiety and is unconsciously impressed by the air of confusion that reigns when she fusses and worries over him. As the child grows up he becomes more and more imitative and susceptible to the atmosphere around him. He learns that he is delicate or that he is naughty; he listens to the stories told of his pranks and nerves. The feelings of personal inferiority that may be thus engendered often have the most serious consequences in after life. A child's toys should be simple. Elaborate and complicated playthings teach him extravagence and selfishness and he becomes discontented and begins to demand more and more in the way of excitement and variety.

Fear is a normal part of childhood, but it should never be played for discipline; childhood fears are a potent course of nervousness in later years. In addition fear is a shock that jars the whole nervous system and its effects last a long time. To avoid and remedy nervousness, one of the greatest essentials is healthful occupation. Every normal child should have a certain amount of work assigned to him. It produces a feeling of satisfaction and self-appreciation, keeps the attention fixed and avoids fanciful dreaming. This of course must not go to the extent of fatigue, but regularity of well chosen and interesting work is one of the best safeguards against nervousness.

HOW TO REMOVE STAINS

To remove hot-water marks from polished furniture, dampen a cloth in denatured alcohol and rub lightly over the spots. Let stand for half a day to dry. If all the marks are not removed, apply again after the furniture is dry.

To take marking-ink out of linen, use a saturated solution of cynid of potassium, applied with a camel's hair brush. After the marking disappears the linen should be washed in cold water.

If ink is spilled on your hand, wet the end of a match and rub over the ink. Wash in cold water and the ink will come off.

To remove dirt or stains from a colored hat caused by the grease of the hair or by your collar rubbing against it, try rubbing the hat with a cloth soaked in benzin. The dirt will disappear instantly.

To remove grease spots from woolen cloth, use vinegar instead of gasoline, as it removes it much quicker, and does not leave a ring.

To clean silver purses, cover with butter-milk and let stand all night. Then rinse in tepid water.

Sometimes when you remove a spot with gasoline you leave a ring about the part cleaned. You can remove this by holding it over the steam of the teakettle.

Rub steel blades of knives with emery paper before puting away for any length of time, and they will not rust.

After squeezing the juice from a lemon, use the remains for cleaning brass, by first dipping in salt and powdered brick dust. This is excellent also for scouring copper cooking vessels.

MOTHER'S PROBLEMS

A Word of Praise

I HAVE known parents who never praised their children, no matter how deserving of praise they were. They were, they said, "afraid to praise them"—afraid lest they get "big-headed," and over-proud of their accomplishments. And I have known children who developed a deplorable "don't care" attitude, merely because no favorable mention was ever made of their efforts when they were best, so that it seemed to the child that it mattered little whether work or studies graded high or low.

A bit of praise honestly given may spur a child on to untold heights. Many a child's big ambition is to please Mother or Daddy, and it is nothing short of cruel to withhold the word of praise the childish ears are open for. Even if the work is not worthy of praise, criticism of it should be friendly, constructive and careful. To crush all the joy and expectancy out of an accomplished task, may crush something vital out of the child.

I know a successful woman who delights in telling to what she owes her success. "As a little girl," she has often said, "I was told by a neighbor woman that I had worked a bit of embroidery exceptionally well. 'But I might have known you would have,' she added, 'for everything you undertake to do, you do well!' After those words of praise, I just had to work hard, and do my best. I had to live up to that woman's bit of praise. I am still guided by it. Whatever I do, I try my best to do well!"

Let's all remember that. A bit of honest praise may give a child a mark to live up to that will affect the whole of his life. If you are raised on a throne, so to speak, you are not going to give up your place of power without putting up a good, stiff fight. Whenever the chance occurs place your child on a throne and watch the gratifying way with which he fights to maintain his lofty perch in your eyes.

Personal Column

I am enclosing a letter on my experience of picking beans. Hoping it will be of some use:—Noticing the request for more plans and letters on bean pickers I thought I would give some of my experience with picking beans. For nine winters we have had bean pickers in the house. My sister and myself always did the picking. My mother was unable to do the work all alone, so we would do the washing, ironing and scrubbing. Then we could sit down and pick beans. We never raised many beans ourself, but would pick for the neighbors, and some for the elevator. The winter of 1921 we hand picked 363 bushels. For the culls we got 9c per pound. When we would be busy with other work, my small sisters would pick awhile, and in that way they earned their own spending money. I think it pays better for farmers to hand pick their own beans, then they have their culls which are very good for feeding purposes, and the hand picked beans can be sold for first class beans. The name of the picker we used is "The Clipper", made by A. T. Farrell Company. I have tried others, but like this one the better. This is not an expensive machine. One could not be made much cheaper. Hoping this will be of some use to our readers.—Miss Schoof, Michigan.

My Letter of Thanks.—My Dear Mrs. Taylor: Here I am again after many weeks of silence. I had intended to write you a letter of greetings to be published in our paper for my dear friends over the state who have taken an interest in us. My family were all sick at Thanksgiving time, so had to let it go by. Now as I can only reach my thanks to you, I wish you to put before them all my greetings for a Merry Christmas and a Happy New Year. I have not forgotten any one of them, but am not in a position this year to remember them all personally, so take this method of wishing them the seasons greetings. Forever grateful,—Mrs. Jennie Hains, R. 4, Box 40, Harrison, Michigan.

Re-Silvering a Mirror.—As I am a subscriber of the Michigan Business Farmer would like to know if some of our readers could tell me what to use and how to re-silver looking glass or mirror, and if I could silver a glass that has never been silvered before and where could I get the material to re-silver it with. We like the M. B. F. and get many good ideas out of it.—Veronica C. Paul.

Knitting Done at Home.—Seeing the inquiry for a mitten knitter in your paper of November 10th, would be glad of any work that I could do at home, as I am not able to get out to earn anything. Would knit, crochet, piece quilts, or quilt them. Will be glad to correspond with anyone desiring work done.—Mrs. Minnie Driscoll, R. 2, Kingsley, Michigan.

Three Splendid Suggestions.—I am very interested in the Farm Home Department and would like the opportunity to help some of its readers, if possible.

Raspberries and Huckleberries—Make a good combination for jam. Yellow transparent apples and huckleberries are excellent for spreads.

Washing Windows.—Use a soft sponge or cloth and clear warm water to wash the glass, and then go over it after it is rinsed with a rubber window cleaner which can be purchased for the small sum of 19 cents. This method is much easier and more satisfactory than using cloths.

Varnish—Applied to the linoleum dries over night leaving a smooth, glossy, easy-to-clean surface, which protects and prolongs the life of the linoleum.—Harriet C. Reeves.

Hearty Dishes—Let us hear from some of our readers that know good wholesome dishes that may be served to the men folks.

Dear Mrs. Taylor: I received your

letter regarding the painting of my walls and thank you so much for all your trouble.

I am sending a few recipes of things that my family like especially well. I patented most of them myself. They can most likely be standardized and improved as I have had no domestic science lessons and only know what I have learned for myself. I hope you may find some of them useful for the cook-book. I am interested in hearty dishes for supper and hope the book will have some good ones. Thanking you for your help, I am sincerely.—Mrs. V. C., Cass, City.

Knitting Done at Home.—Anyone desiring knitting done, write Mrs. F. Fuller, Wolverine, Michigan. I love to knit these long evenings. I knit double mits for men, also single ones for children.

Buchrum Substitute—If you are in need of some and can't get to town, use bed ticking starched very stiff, let dry, then sprinkle and iron smooth.—Mrs. M.

Quilt Pattern—Sometime ago I received a splendid quilt pattern, drawn and the directions given. I sent this to one of my readers and I am wondering if I might have it back, so I can print it for all of us to use. If there are any readers who have patterns, I would like to have them and would appreciate it if you will send them to me real soon. —Anne Taylor.

—if you are well bred!

Duty to Your Chaperon.—At school receptions, sleigh-rides, class meetings at private homes, and so on, there is always a chaperon, who is giving her time for your enjoyment. Her kindness should be repaid by your courtesy.

1. As soon as possible after greeting your hostess, greet your chaperon.
2. Also, just before leaving, speak to her again cordially and gratefully.
3. See that your chaperon is not left alone. If the function is a dance, invite her to dance; or sit out a dance with her, sometimes. Make her enjoy being your chaperon.
4. Never tease to stay when the time comes to go.
5. Don't hinder your chaperon by loitering over your wraps; be ready when she is, and leave the building with her.

RECIPES

Tomato Soup—One peck ripe tomatoes, one dozen large onions, one bunch celery, one bunch parsley, six whole cloves, eight bay leaves. Cook and strain then add to the juice, one-half cup flour, one-half cup sugar, one-half cup butter, one-half teaspoon black pepper then bring to a boil and can or bottle and seal.—Mrs. Egbert Hall.

Quick Oatmeal Cookies—Four cups of rolled oats or oatmeal (raw), two cups white flour, two cups brown sugar. Mix together then add one cup shortening and one teaspoon salt. After this is thoroughly mixed add one-third cup of water in which is dissolved one scant teaspoon of soda. I usually add a little lemon extract. Roll quite thin and cut into squares with a knife. Bake in rather hot oven. Let them partially cool in the pan or they will break up badly.

I have received many helpful suggestions from our page and hope that some one will like these.—Mrs. Elmer Van Antwerp.

Crab Apple Butter.—Four quarts of crab apples, wash and quarter them but do not pare or remove cores. Put in a preserving kettle with four cups of water and cook until well done. Mash through a collander and add three cupfuls of granulated sugar, two tablespoonfuls of ground cinnamon and two teaspoonfuls of salt. Cook about three-quarters of an hour or until thick. This will keep in jars with pariffin.—Mrs. W. E. Fitzgerald.

Candied Citron.—One of our readers asked for this recipe and I am sure you will find this one sent in by a reader very fine. Use mature citron. Peel melon and remove center; then cut into squares; allow one pound of sugar for every pound of citron, using the least water possible to prevent burning. Cook sugar and water until the syrup is thick. Put citron and thinly sliced lemon into and cook thoroughly. When done remove citron from kettle and strain. Then place on an enamel or earthen pan and put into a hot oven. Turn frequently to prevent sticking and to make it dry evenly. When nearly dry sprinkle heavily with sugar and return to oven; when thoroughly dry wrap in oiled paper. This syrup makes nice jelly by adding sugar. We raise our citron in summer, gather before the frost and lay away until we have plenty of time to candy them which may be any month of the year.—Alma Becker.

Canned Sausage Meat.—Sausage or fresh pork may be fried only partly done, put into cans and the grease poured in. Seal and invert the cans until cold so the grease will form a seal over the top. This keeps fine.—Mrs. W. E. Fitzgerald.

Vegetable Soup.—One peck of ripe tomatoes, twelve ears of sweet corn (or three pints canned) six stalks celery, six onions, two quarts chopped carrots, two small or one large head of cabbage, six peppers, three red and three green, five quarts of soup stock. Mix all together, bring to boil, pack in hot sterilized cans and boil three hours. Makes about ten quarts and is fine.

Fish.—Be sure fish is fresh, scale, clean, and wash, and cut in pieces suitable for serving, being sure they are small enough to put in the cans. Pack in sterilized cans, putting in one teaspoonful of salt to a quart can. Put on rubber and cover. Screw tight as possible, then give one-half turn back, put cans on rack in canner and fill canner with cold water up to the shoulder of the cans, cover canner and bring to boil slowly. Boil three hours. After the water begins to boil lift cans out and tighten cover; turn upside down and if any of the cans leak, put on a new rubber quickly. Put can back in canner and boil fifteen minutes; tighten and set aside; before they are cold tighten again. The fish can be fried or baked after taking from cans and is like fresh fish.

Meat.—I have canned pork, beef, mutton, fish, liver, hearts, and tongues, and chickens like I do fish and have never had any spoil. In canning meats it is best to kill them yourself or otherwise be very careful they are fresh. Have everything ready to work quickly. Cans, covers and rubbers thoroughly sterilized. In canning chicken the rib pieces can be left for other purposes as they take lots of room and not much meat. The bones in the beef and mutton can be broken into small pieces; put in lots of water and boiled for soup stock, can and you may have soup any day. I put the soup stock in cans hot; put cans in hot water and boil three hours. It will keep indefinitely.—A subscriber.

Filled Cookies.—One cup melted lard, one cup of sugar, one teaspoon baking powder, one-half teaspoon soda, two-thirds cup of sweet milk, flour to make dough which will roll out thin, cut with any shaped cooky cutter, place in the center of each cooky a spoonful of the filling, place another cooky on top with edges even, press the edges together and bake.

Filling.—One cup chopped raisins, one-half cup of sugar, two level tablespoons of flour, one-half cup of boiling water mix the sugar and flour, stir it into the hot water (not boiling) when thoroughly blended, allow to boil, add the raisins, stir well and allow to get cool before using. Add a sliced banana to the white of one egg and beat until stiff. The banana will entirely dissolve, and a delicious substitute for whipped cream will result.—Mrs. P. F.

MY FAVORITE RECIPES

Mocked Bisque or Cream of Tomato Soup—One quart of stewed tomatoes; one quart milk; one teaspoon salt; one-eighth teaspoon pepper; one-fourth teaspoon soda; two and one-half tablespoons butter; two tablespoons corn starch. Heat the tomatoes till soft, strain and add soda. Heat the milk in a double boiler. Rub the butter and corn starch together, adding slowly, enough hot milk to make it pour easily. Stir slowly into the scalding milk and cook fifteen minutes. Add seasoning and strained tomatoes. Serve at once. The soda prevents the acid in the tomatoes from curdling the milk. This is my old recipe from my high school book and I use it all the time. It is very delicious.

Plum Pudding—One cup suet, chopped fine, one cup sweet milk, two cups seeded raisins, one cup molasses, two cups flour, one teaspoon soda, one cup currants, one-fourth cup each of citron, orange, lemon peel, one teaspoon cinnamon, one-half teaspoon each of cloves and nutmeg. Steam it two hours and serve it with hard sauce.

The Runner's Bible

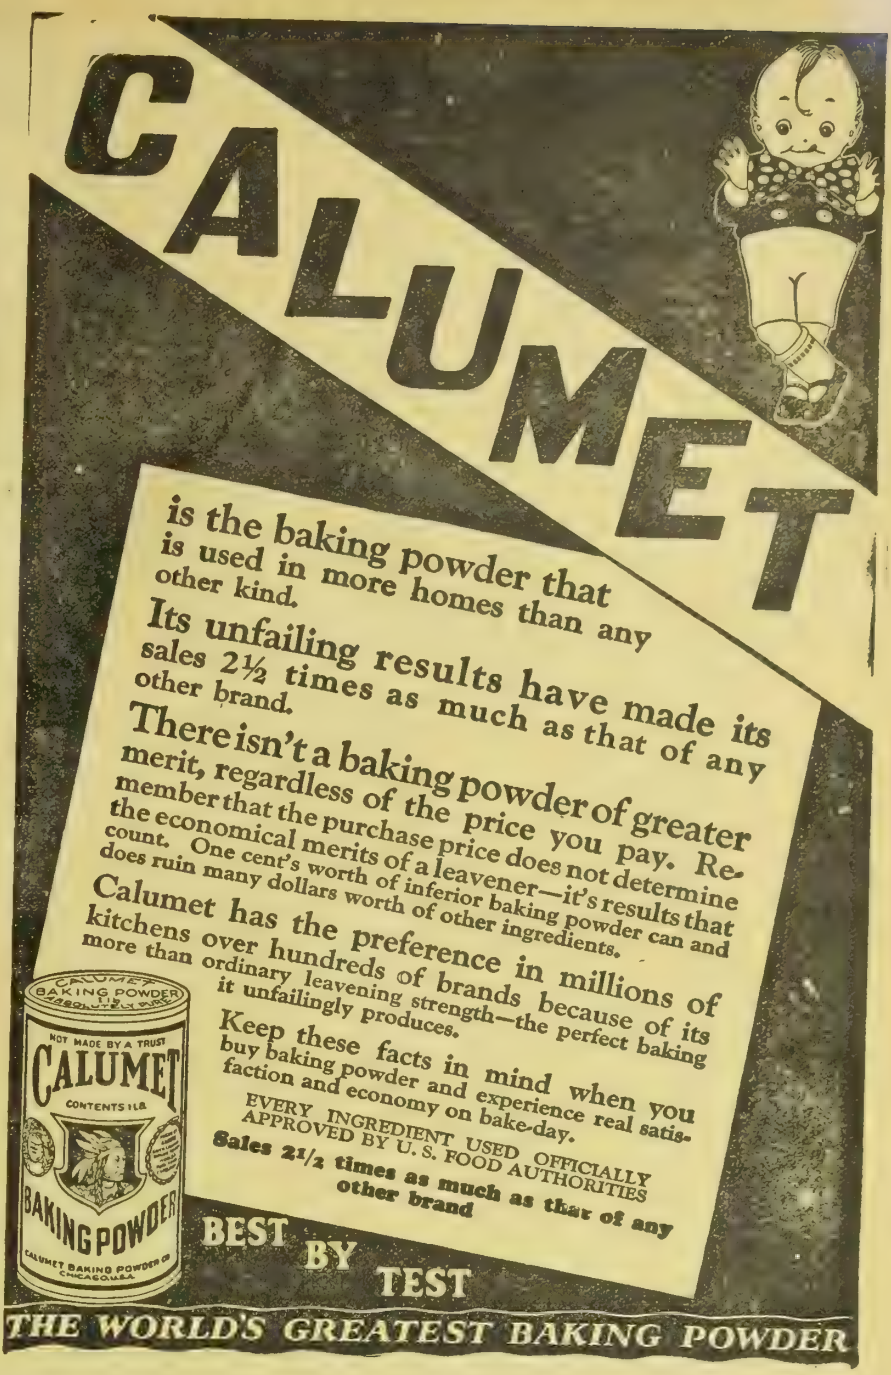
How beautiful upon the mountains are the feet of him that bringeth good tidings, that publisheth peace, that bringeth good tidings of good, that publisheth salvation, that saith unto Zion, Thy God reineth. Isa. 52:7.

Be sure you carry happiness and glad tidings about with you. If in a solemn and serious manner you say to a man, "Let me prepare you to die that you may live after death," you will hardly be able to get his attention. But if, with enthusiasm you will tell him that you have good news for him, that it is possible for him to have perfect health, to be prosperous, and happy here upon this earth, he will eagerly listen for every word. Man longs for help, he wants it now—to-day.

WOMEN'S EXCHANGE

IF you have something to exchange, we will print it FREE under this heading providing: First—It appeals to women and is a bonifide exchanges, no cash involved. Second—It will go in three lines. Third—You are a paid-up subscriber to The Business Farmer and attach your address label from a recent issue to prove it. Exchange offers will be numbered and inserted in the order received as we have room. —MRS. ANNIE TAYLOR. Editor.

108—Ladies shoes No. 3½, No. 6½, and 7, also rubbers. Men's cloth mittens and pattern.—Mrs. Geo. Morgan, R. 3, Vicksburg, Michigan.



CALUMET

is the baking powder that is used in more homes than any other kind.

Its unfailing results have made its sales 2½ times as much as that of any other brand.

There isn't a baking powder of greater merit, regardless of the price you pay. Remember that the purchase price does not determine the economical merits of a leavener—it's results that count. One cent's worth of inferior baking powder can and does ruin many dollars worth of other ingredients.

Calumet has the preference in millions of kitchens over hundreds of brands because of its more than ordinary leavening strength—the perfect baking it unfailingly produces.

Keep these facts in mind when you buy baking powder and experience real satisfaction and economy on bake-day.

EVERY INGREDIENT USED OFFICIALLY APPROVED BY U. S. FOOD AUTHORITIES

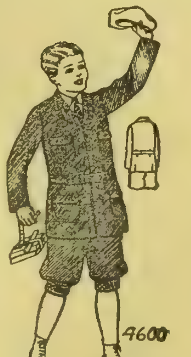
AIDS TO GOOD DRESSING

SEND IN YOUR SIZE

Lately some of you ladies have been sending for patterns without giving size. This means expense and delay for both of us. I hope you all realize the importance of sending in your size when asking for patterns.



4600. A Popular Suit Style for Growing Boys—Tweed, cheviot, serge, khaki and linen are good materials for this model. The ample pockets will please the boy who has such good use for them. The Pattern is cut in 4 Sizes: 8, 10, 12 and 14 years. A 10 year size requires 4¼ yards of 36 inch material.

4606-4594. A Smart Costume—This comprises a popular short Jacket (or coat) and the new cuff Skirt. One could use caracul, velvet or other pile fabrics for the Jacket and wool plaid suiting, twill or heather mixtures for the Skirt. The Jacket is cut in 6 Sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. A 38 inch size requires 3⅛ yards of 40 inch material. The skirt which measures 1⅝ yard at the foot is cut in 7 Sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. A 29 inch size requires 2⅝ yards of 54 inch material.

Order from the above or former issues of The Business Farmer, giving number and sign your name and address plainly.

ADD 10c FOR FALL AND WINTER FASHION BOOK

Address all orders for patterns to

Pattern Department, THE BUSINESS FARMER, Mt. Clemens, Mich.

DEAR girls and boys:—But a few more days and then Christmas. Christmas, what a wonderful word that is to both young and old. The moment you hear it from the lips of some of your friends, or you read it some where, so many things spring up in your mind. Maybe you think how last year Santa Claus forgot to bring some of the things you wanted. Or possibly you are worried about what to ask for this year. And I hope you think of the little boy or girl living down the road a little way from you who was forgotten entirely last year. Resolve that this year she or he will not be forgotten and to be sure that she or he is not send a present yourself. Even though it may be a doll or toy that you received last Christmas, that you are tired of, it will be new to this girl or boy and both you and the receiver will be happy. Some times you may think that you have so few things and have none to spare but if you will stop and think for a moment you will realize that you have much to be thankful for and that there are many that are worse off than you. Make Christmas a real merry Christmas by bringing some happiness into at least one other home besides your own. Your Christmas will seem much pleasanter if you do.

A very merry Christmas and happy, prosperous New Year to all of you.—UNCLE NED.

OUR BOYS AND GIRLS

Dear Uncle Ned:—May I join your merry circle? I am a farmer girl 14 years of age, and am in the 8th grade at school. I am 5 feet 2 inches tall, and have dark eyes, dark bobbed hair, and a fair complexion. Have I a twin? We have two weeks vacation. Everyone expects to get their potatoes dug before school starts. I have both mother and dad and have five sisters. Our baby is two years old. The one which guesses my correct birthday will receive a nice long letter. Just the month, not the date. Uncle Ned, try also. As my letter is getting towards the basket I'll quit before it gets there. Here are 3 riddles: What was the first bet ever made? Ans. The alphabet. If you court a young woman, and you are won, and she is won, what will you become? Ans. One, of course. What trade would you recommend to a small man? Ans. Grocer (Grow-Sir). Your loving niece.—Miss M. I. S., Reed City, Michigan.

Dear Uncle Ned:—I have never written to you before so I made up my mind I would write to you. My father is a reader of the M. B. F. and likes it very well. I always read the Children's Hour. I will describe myself. I have brown hair, brown eyes. Am about 4½ feet tall and am ten years old. My birthday is November 27th. I live about 9 miles from Allegan, or 1½ miles west of Hopkins, Michigan. Do you like to pick up potatoes, Uncle Ned? I don't. I live on the main road between Allegan and Grand Rapids, Michigan. I think the answer to Ermalee Lockwood's riddle is a stove. I live on a farm of 105 acres. We have 8 cows, 4 horses, 5 cats, 6 pigs and 250 chickens. For pets I have a calf named Jack, and a cat named Cottontail. Well my letter is getting long so will close with a riddle: Why is a postage stamp like a little boy? The one who guesses this riddle will receive a nice long letter from me. Your loving nephew.—Edwin C. Nicolai, Allegan, Mich., R. 6.
—Well Edwin, your birthday comes on the same day in the same month as mine. I never thought picking up potatoes was such hard work. It isn't near as hard as picking up stones.

Dear Uncle Ned:—As I have been a silent reader for over a year, I thought I would like to join your merry circle. No one ever wrote from this part of the state that I know of, so I will start if my letter doesn't go in the waste paper basket. I am a girl with bobbed, blonde hair. I have it bobbed with bangs. Am 59 inches tall, 14 years of age, 8th grade, light complexion. I'm living in a city with about 3,000 population. It is quite a nice place. It is right in the thumb of Michigan. I live about 18 miles from Lake Huron, altho I go to the lake quite often. I love to read the Children's Hour very much. There is one girl that wrote to the Children's Hour, she lives in Argyle. That's about 20 miles from here. I've been there quite often. We went to Port Huron about 3 weeks ago, and next Sunday I think we will go again. I do quite a bit of traveling. I can't ever stay at home. Port Huron is about 80 miles from here by road. I think I will close for this time, so goodbye. From your want-to-be niece,—Elizabeth Eberte, 308 S. Silver St., Bad Axe, Michigan.

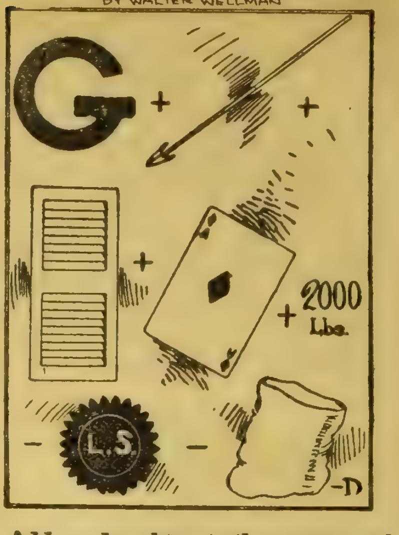
The Children's Hour

Dear Uncle Ned:—I have read the M. B. F .and enjoy it. I have written before, but I guess it reached the waste basket. I live near Clear Lake. It certainly is a pretty lake. On the north shore is the Meceola Golf Links, and by the side of that is the Lakewood Association. There is 28 cottages there. On the west side is a hotel. There is a high dive and some boats to rent. The east side an association owns to, by the name of "Seven Oaks". This summer I went swimming every day. I can swim, dive and float some. I am 5 feet and 3 inches tall. My birthday is the 7th of November. I have a light complexion and light brown hair. I will close with a riddle: Why is a green back more valuable than a silver dollar? Lovingly,—Faybelle Robinson, R. 2, Box 18, Big Rapids, Mich.

Dear Uncle Ned:—Tap! Tap! Tap! May I come in? I won't stay long but just long enough to take off my hat. I am altogether a new bird. I live on a farm four miles from Stambough. I go to school and am in the 8th grade. I guess I will describe myself. I am 14 years old. Have I a twin? I am 5 feet and 9 inches tall, have blue eyes, brown hair. (Oh, yes, I bobbed it the first of August.) The weather here has been nice and warm. I have been to Iron Mountain and had a very good time and the trip was just dandy. Have you been in Iron Mountain, Uncle Ned? Guess I will close and leave some room for the rest. Will the cousins write to—Agnes Manning, Stambough, Michigan, Box 211.

A LARGE COLLEGE

BY WALTER WELLMAN



Add and subtract the names of the objects, and have, as a result, the name of a large college popular with many young men.

Answer to puzzles in last issue: ALBANY and NELSON.

A Gift For Dad

"HOW many men there are today who have lost the respect of their associates and made failures of themselves merely because at one time or another they were afraid to say 'No'."

When Sam O'Hearn had heard these words from the lips of Professor Simmons, principal of Columbia High School, one morning in assembly, he wondered to himself if he wasn't one of those persons who can't say "No." He was afraid so.

* * *

"Now here's the proposition, O'Hearn. You're the star man of Columbia's basketball team. The whole team swings around your playing at center. It would be the simplest matter in the world for you to throw the game to Parker High next Thursday night if you just wanted to, and if you will we fellows'll make it worth your while. What d'you say?" It was Pinky Pinkerton of Parker High. Pinky had the reputation of being the leader of the betting students of his school, and inasmuch as betting on any games between the two institutions was forbidden by the faculties, Pinky took great delight in his reputation.

Sam O'Hearn listened to Pinky's words with a throbbing heart.

"What's it worth to you guys?" he eagerly questioned.

"Well, twenty-five dollars is a good price, I guess."

Twenty-five dollars! What wouldn't Sam O'Hearn do for that sum. Especially right at that moment for he was in dire financial straits. He had been working every evening after school and all day on Saturdays at Johnson's Corner Drug Store, where he and Pinky were now conversing during a spare moment, "helping out," in an attempt to earn sufficient money to purchase his mother and dad a Christmas present in the form of a talking machine that he had seen standing in the window of the Music Shop downtown.

But even though he toiled hard and long in Johnson's he was positive he could not get enough money together to purchase the machine. It was priced at 35 dollars and to date, just one week before Christmas he had but 25 of these. Ten dollars short.

"Twenty-five dollars," murmured Sam O'Hearn as the scheming, crafty Pinky Pinkerton from Parker High, stood by with a half sneer on his face.

Sam leaned farther over the counter in the rear of Johnson's Drug Store, where Pinky had come to make his offer, and thought. That twenty-five dollars added to the twenty-five he already had would not only give him enough to purchase the talking machine as a Christmas present for his folks but would leave him fifteen dollars more which would provide him with spending money for many weeks. What an opportunity!

Then suddenly it came to Sam that by selling the game to Parker he would not be playing square with his school, Columbia. What would his classmates think if they ever found out that for a measly old twenty-five dollars he had "thrown" a game to their hated basketball rival? What would Peggy Hartman think, especially?

But, shucks, why be so foolish, Sam thought. Columbia High had never done him any especial good that he could see—why should he deprive himself and his folks of something that would give them no end of pleasure just because he was a ninny and afraid to take a chance? It would be easy for him to "fix" it so that Parker would win—but, then, maybe somebody would find out.

As if he knew what Sam was thinking about, Pinky Pinkerton broke in on Sam's thought. "None of your friends'll ever get wise. All us guys at Parker will keep the whole business under our hats, and nobody will ever know."

That was the straw that broke the camel's back. Sam O'Hearn cast aside his honor and, "I'll take you up on that, Pinky," he said, deliberately. "How'll we work it, now?" And then Pinky, realizing that he had poor Sam—Sam whom all had though so highly of, of whom his parents were so proud—under his influence, leaned his crafty head forward, and laid the plans for the "throwing" of the Columbia-Parker game on the following Thursday night, the night before Christmas eve.

It was the night of the Columbia-Parker basketball game. Sam O'Hearn, in his basketball togs, stood leaning against a locker in the gymnasium of Columbia High where the game was to be played, deep in thought. He was thinking of the agreement he had made with Pinky Pinkerton of Parker several nights before. Had he done right in promising Pinky he would "throw" the game to Parker for twenty-five dollars just to favor some of those crafty betting Parker students? Somehow he felt guilty of having committed a great wrong. "Nonsense,' 'he tried to tell himself, "I haven't done anything I shouldn't," but this thought had no effect. He still felt guilty.

"Better hurry out on the floor and get in a little practice before we commence, Sam." It was the voice of Mr. Parks, the Columbia coach. Sam stirred himself from his deep meditation. He looked up. Mr. Parks stood in front staring hard at him. "Something wrong, Sam?"

Sam's eyes fell. He couldn't force himself to look the coach squarely in the eye. It was that infernal guilty feeling.

"Naw—no, sir," replied Sam, and with a couple of words of advice from the coach on how to get the jump on Parker's center, Sam strode slowly and thoughtfully through the swinging door and onto the floor of the big gymnasium where already the other men of Columbia were practicing.

Sam saw that the balcony of the gymnasium was crowded to overflowing with eager spectators..

Leaning far over the railing of the balcony Sam saw Peggy Hartman with a host of her girl friends. She waved. Sam waved back. Farther back in the crowd Sam saw his pal Jimsy Perkins—good old Jim. Jim yelled a terrific war cry to Sam. Sam waved and smiled.

Somehow the feeling of guilt surged through him with greater force. What—oh, what would they say if they ever found out? And they might—there was a chance of it.

Columbia High had finished her preliminary practice. Parker had taken hers. The referee was stepping out from the locker room, whistle in hand. The game was about to start.

Sam O'Hearn had returned to the locker room. He was in a quandary. He was positive now that he wasn't doing the right thing to take that filthy money from Parker's betting crowd.

"And I'm not going to do it." Sam's lips compressed in a straight line. His jaw tightened.

He hurried to his locker. Taking from it his big brown dressing gown, he threw it over his shoulders. Then with a quick stride he dashed up the circular stairway and onto the balcony of the gymnasium. Getting his bearings, his quick eye hunted out Pinky Pinkerton and his group of boisterous followers. He wormed his way quickly through the crowd to where they were.

"Pinkerton," he called.

Pinky turned, looking crossly and questioningly. "What d'you want now?"

"I'm here to tell you that I'm not going to take your money and I'm not going to throw the game to Parker." With these words, sharp and pointed, Sam quickly turned, leaving the startled Pinky staring open-mouthed after him, and made his way back to the locker room. How much better he felt! "I'm going to play harder than ever in this game," Sam told himself. He did.

Sam, feeling light of heart and happy, hurried home through the snow late that night. The spirit of Christmas was in the air. He felt cheerful.

San's dad, Mr. O'Hearn, was reading his evening newspaper when Sam stamped into the house. Mrs. O'Hearn had gone to bed.

"Dad, I want to tell you something," announced Sam as he pulled a chair up to the cheery grate fire. And then he went into detail about the offer from the betting students of Parker, how he had said he would accept it, and then later how he had declined. He told about the talking machine he had been intending to buy and how now, without the funds, he'd have to give it up.

"Son," said Mr. O'Hearn, "never mind about the talking machine—I'll go fifty-fifty with you, and we'll make it a joint present to mother. You have given me enough Christmas present tonight. I'm glad to see you're a man, my boy. Accept my thanks and congratulations. I'm proud of you. Now then, let's pile to bed, shall we?"

DAIRY and LIVESTOCK

THE "SCRUB BULL FUNERAL"

A SERIES of "scrub bull funerals", scheduled to occur in each of the fifteen counties comprising the Upper Peninsula of Michigan is an outstanding feature of the better livestock campaign to be conducted during the season of 1924; by the Upper Peninsula Development Bureau of Michigan, an organization devoted to the industrial growth and progress of that region.

The final details of the plan whereby the Development Bureau will distribute one thousand dollars in cash prizes to various live stock associations throughout the fifteen counties at the end of the year 1924, were discussed at length during the recent county agricultural agents' conference, held at Marquette, Michigan, and definite rules and regulations governing the contest were drawn up.

The campaign is the climax of an energetic effort conducted during the past few years throughout the Upper Peninsula of Michigan to encourage dairy farming as the branch of agriculture best adapted to the soils, economic and climatic conditions existing throughout that section and spurred on by the extension department of Michigan Agricultural College, the State Department of Agriculture, the Upper Peninsula Development Bureau, and other co-operating agencies, a definite plan is now in progress for the immediate upbuilding of upper Michigan's dairy livestock population.

Practically every community in the several counties throughout the peninsula is showing an active interest; and in fact, a keen rivalry apparently exists.

The particular plan to which this article refers involves primarily the substitution of pure bred bulls for "scrubs", rather than just the elimination of "scrub stock."

At the recent county agricultural agents' conference, a central committee was named, its members representing the Michigan Agricultural College, the railroads of the Upper Peninsula, and the Upper Peninsula Development Bureau. The committee follows:

D. L. McMillan, superintendent, U. P. Experiment Station, Chatham, chairman; E. G. Amos, assistant state leader of county agents, Marquette, secretary; G. E. Bishop, secretary manager Upper Peninsula Development Bureau, Marquette; J. A. Jeffery, land commissioner D. S. S. & A. Railway, Marquette; and O. E. Reed, department of dairy husbandry, Michigan Agricultural College, East Lansing.

In addition, central committees will be organized in each county to work directly with the county agricultural agents among the farmers of their respective districts.

Following are a few of the more important rules governing the contest:

"The awards won by the various counties must be spent under the direction of the committee that was in charge of the contest in the county, with the one stipulation that the money be spent in advancing the dairy industry in the county.

"The following ways of spending the money are suggested:

1. Promotion of calf club work;
2. Rebate on bulls bought;
3. Dairy tours;
4. Scholarships;
5. Revolving fund for purchase of improved dairy cattle.

"Awards will be made on the basis of the number of scrub bulls of breeding age replaced by registered bulls.

"Any county, which at any time during the year completes its work with one hundred per cent pure bred, registered bulls, will be entitled to first place. Should any more than one county show one hundred per cent registered bulls, they will be entitled to first, second, third and fourth places, respectively, in the order in which they have completed the work, regardless of the number of scrubs replaced.

"No less than eight counties must compete in this contest, before prize money is available, and no county is ligible to a prize unless at least twenty-five scrubs are replaced.

"All entries must be made to the chairman of the Central Committee before January 1, 1924. After this date, the entries may be accepted at the discretion of the committee. All replacements are counted from January 1, 1924, to December 31, 1924, inclusive, provided* that pure bred registered bulls calves purchased after July 1, 1923, that replace scrub bulls of breeding age after January 1, 1924, shall count as legitimate replacements.

"Any question which may arise in this contest will be referred to the Central Committee. This committee shall consist of a representative of the Upper Peninsula Development Bureau, of the Michigan Agricultural College, of the Upper Peninsula Experiment Station, of the railroads operating in the Upper Peninsula, and of the supervisory extension force, making a total of five members on the committee.

"A monthly report showing date of replacement, address of the owner of the scrub bull replaced, the age of the scrub bulls, age and breed and registration number of registered bull in which an interest has been purchased, and the name and address of the men who have agreed to use the service of the pure bred bull owned in the community, will be forwarded on the first day of each month to the chairman of the Central Committee."

The interest being emphasized in the better livestock and dairying campaign throughout the Upper Peninsula of Michigan is by no means limited entirely to the agencies named above, for it has extended also to the banks, manufacturers, and other business interests in the various districts. In fact, so keen has this interest become that practically every bank throughout the Upper Peninsula of Michigan now stands ready to loan money to worthy farmers for the purchase of pure bred livestock, and during the past year alone, the pure bred livestock population has been considerably increased through this means.

The past two years have indeed brought about a marked transition in the agricultural status of the Upper Peninsula of Michigan, and it is the prediction that with the successful achievement of the goal set for the year 1924, dairy farming will be definitely established as a thriving and profitable industry throughout the Upper Peninsula of Michigan. That, at least, is the aim of the various agencies which are cooperating in this effort.

INVENTS NEW LAMP

Said to be Whiter and Cheaper Light than Electric or Gas.

WASHINGTON. Patents have been granted by the Government to a lighting engineer by the name of Johnson, on a new lamp for burning ordinary kerosene oil. This lamp produces a vapor from the oil which makes a blue flame that incandesces a mantel, and thus creates a very strong, soft, pure white light. As it consumes only 6% oil mixed with 94% air, it is exceedingly economical. Said to be very simple to operate, odorless, noisless, and dangerless.

F. H. Johnson, 609 W. Lake Street, Chicago, Ill. He also wants local distributors and has a very unique selling plan to offer agents. He is even offering to give one free to the first user in each locality who will help introduce this new light.—(Adv.)

VETERINARY DEPARTMENT

APPLY RAW LINTSEED OIL

I have a horse which has pimples come on him, and he will rub himself against everything. He rubs until the hair is rubbed off. Could you tell what is the matter and what would you advise to do for him?—Mrs. W. S., Caro, Michigan.

—It is impossible to tell what kind of a skin disease your horse is suffering from without making an examination. Try applying raw lint-

20 Extra Quarts of Milk
Count 'em
From Every Sack of
International Special Dairy Molasses Feed

as compared to using wheat feeds or ground grains. We guarantee this increase has been secured in hundreds of actual tests.

INTERNATIONAL SPECIAL DAIRY MOLASSES FEED contains protein, molasses and fat combined in proper proportions to provide the necessary nutrients and energy required for maximum milk production. Both protein and molasses produce milk. Special Dairy contains both.

This great feed is digestible and palatable and is skillfully processed and mixed, thus insuring a big extra gain in milk. Accept no substitute. Inferior brands offered by other mills cannot produce the same profitable results as Special Dairy.

Free!—A Wonderful Dairy Book!

We have just published a beautiful Dairy Book containing fourteen large colored pictures of World's Champion Cows of various breeds. These pictures were made from actual photographs. Every dairyman will want a copy of this book. Nothing like it was ever before published—it is a masterpiece.

Your dealer will tell you how you can obtain a copy free of cost. If not sold by your local dealer, write us giving number of cows owned by you. Also give us your local dealer's name and address and we will mail you one of these books free of cost.

Many Barren or Aborting Cows Can Be Saved

Don't be too quick to call in the butcher. Often a valuable cow is barren or abortive simply because her genital and digestive organs are in a sluggish condition and fail to function until strengthened through medicinal aid.

Kow-Kare is used successfully in thousands of cases every year where nearly all hope of a cow's future usefulness is abandoned. This cow medicine tones up and strengthens the vital functions of sick and unproductive cows. It helps nature in the processes of production and reproduction. Every mail brings us letters such as these, from enthusiastic users:

H. V. Whitmore, Thurmont, Md. writes: "We have been feeding your Kow-Kare for about three months with very good results. We haven't had one to abort since we began feeding it. We lost about one-half of the calves in the last two years."

Amos B. Miller, Mechanics Grove, Pa. says: "My cows had been aborting, as many as 75 per cent. some years. After using Kow-Kare for a short time only one or two aborted, and after continuing it for some time have had no trouble. It has also improved the general condition of my cows and increased the quantity of milk."

John Watt, Freeport, O. writes: "I have a choice Jersey cow. Heretofore I have had bother to get her with calf. Hearing of Kow-Kare for barrenness, I got a can and gave her two or three doses. Brought her in all right. After using it the first time she was mated she got with calf, and came around all right after she had her calf."

Some of the heaviest losses in the dairy can be avoided or corrected by the judicious use of this famous cow remedy.

If you are not using Kow-Kare now, ask your feed dealer, general store or druggist about it. Large size package, $1.25; medium size 65c. If your dealer is not supplied, order direct. We pay postage.

Our valuable free book, "The Home Cow Doctor", tells how to use Kow-Kare in treating Barrenness, Abortion, Retained Afterbirth, Scours, Bunches, Milk Fever, Lost Appetite and as a general conditioner to increasing milk yield. Write us for this book.

seed oil to the affected parts of the body and brushing it in with a body brush. You can repeat this treatment once or twice at intervals of five or six days. If you have a veterinarian in your locality I would advise that you have him make an examination of your horse and prescribe treatment.—John P. Hutton, Asso. Prof. Surgery and Medicine, M. A. C.

STERILITY IN CATTLE

Wish to ask a question concerning cows that won't ketch when they are drove three or four times. We have some that are Holsteins. They look well, eat well, and hold up fairly well in their milk and cream tests, but won't get with calf. Have been drove three times each and let run with bull for one month, and still they don't ketch.—Mrs. J. B. L., Pentwater, Michigan.

—It is impossible to determine the cause of sterility in cattle without a personal examination. In most cases of sterility failure to breed is due to disease of the reproductive organs. Ocassionally it may be attributed to faulty nutrition or a constitutional disease. Furthermore, the cause of sterility may be found in the bull. If a qualified veterinarian is not available for making a personal examination, I would suggest that you flush the vagina of each cow about three times a week with a solution made by adding four ounces of borax to one gallon of clean warm water using about one-half gallon for each animal. If there is reason to suspect that the bull is the fault, I would suggest trying another bull.—E. T. Hollman, Asso. Prof. of Animal Pathology, M. A. C.

MICHIGAN CARRIES OFF ITS SHARE AT INTERNATIONAL

(Continued from Page 6)

on hogs, and much credit is due the Detroit Creamery Farm, Mt. Clemens, especially in the Duroc Jersey Chester White and Poland China divisions. On Poland Chinas the Detroit Creamery Farm won: 4th on junior boar pig; 1st, senior sow pigs; 1st, junior sow pigs; 1st, young herds; 1st, produce of sow; 1st get of boar, and junior champion sow. On Duroc Jerseys the Creamery Farm won: 2nd junior yearling sow; 3rd and 4th, senior sow pig; 2nd, young herd bred by exhibitor; 1st, produce of sow; 3rd, get of boar, and junior champion sow. In the Chester White classes the Creamery Farm won: 1st, junior boar pig; 1st, aged sow; 1st, senior yearling sow; 1st, junior yearling sow; 1st, 3rd, senior sow pig; 2nd, 4th, 5th, junior sow pig; 1st, young herd; junior champion boar; senior champion sow; junior champion sow; reserve champion boar, grand champion sow, and reserve champion sow. Andy Adams, Litchfield, was not far behind the Creamery Farm in nearly all classes of Chester Whites.

M. A. C. Wins On Hogs

The animal Husbandry Department of the M. A. C. won signal honors with its hogs. While the barrow show was the strongest in the history of the Show, there being an increase of 20 per cent in entries in these classes over last year, the college hogs succeeded in winning forty-six prizes. Among the premiums won were ten firsts, seven seconds, five thirds, four fourths, two fifths, three sixths, two sevenths and seven eights, and in addition to this two campionships, two reserve championships, one grand championship and one reserve grand championship.

Seven breeds of hogs were shown by the College, the premiums in the "on foot" classes being distributed among the different breeds as follows: Duroc Jerseys, 4; Poland Chinas, 6; Chester whites, 4; Berkshires, 6; Hampshires, 4; Tamworth, 5; and Large Yorkshires, 7.

It was in the Swine Carcass classes where the outstanding honors were won. In the 100-200 lb. class with sixty-two entries, second prize was obtained with "Michigan Laddie," a Berkshire barrow. In the 200-300 lb. class with fifty-eight entries, first premium was won with "Michigan-Repeater," a Berkshire barrow. A Berkshire, "Michigan O. K.," also won first premium in the 300-400 lb. class, against forty-six entries, while in the 400 lb. and over class with twenty-five entires, the College won first place with "Michigan Col.," a Chester White, and fourth prize with "Michigan State," a Duroc Jersey.

In addition to these honors, the carcass produced by "Michigan O. K." was made grand champion of the entire show, while the carcass produced by "Michigan Repeater" was given the reserve grand championship ribbon.

W. S. Adams, Litchfield, was the big Michigan winner in the Tamworth division and his animals placed well in nearly all classes. In the Tamworth division the M. A. C. took first, second and third in the class for fat barrows, 350-450 pounds, and first on a pen of three barrows of the same weight. Another Tamworth barrow won fourth in the 250-350 pound class. High awards went to the college in the fat Yorkshire division also. One barrow won the Yorkshire grand championship and first in the 150-250 pound class. Second place in this class likewise went to the college, as did first in the 250-350 pound barrow class, first and second in the class for pens of three barrows, 150-250 pounds, and first in the class for pens of three barrows 250-350 pounds.

The M. A. C. did all of Michigan's winning on sheep. In the Hampshire division the college won 5th on ewe lambs, association special; 5th, 3 ewe lambs; 4th, 3 ewe lambs, association special. The college also won prizes in the Shropshire and Oxford divisions.

Pervenche, owned by the Michigan Agricultural College, was named grand champion mare in the Belgian division of horses. She was also junior champion mare. In winning the grand championship, Pervenche exceeded her achievement of a year ago, when she was named reserve champion.

William E. Scripps, of Orion, took several places in the Belgian division, winning first in the class for two animals, produce of one dam, second in the class for stallion and three mares, and third in the three-mare class. The college took second place in the last-named class.

In the Percheron division the M. A. C. won several places. J. L. Miller, of Caledonia, was another from Michigan to win prizes on this breed of horse.

The International Livestock Exposition was a decided success from Michigan's point of view. As I heard one man from this state say, "The way the M. A. C. and individuals from old Michigan are taking prizes, it makes me want to tell the world where I'm from."

OH MONEY! MONEY!

(Continued from page 10.)

sympathies abominably. But I reckon she'll get some of the benefits of the others' thousands. Mrs. Jane, in particular, is always wishing she could do something for "Poor Maggie," so I dare say she'll be looked out for all right.

As to who will prove to be the wisest handler of the hundred thousand, and thus my eventual heir, I haven't the least idea. As I said before, they all need money, and need it badly—need it to be comfortable and happy, I mean. They aren't really poor, any of them, except, perhaps, Miss Flora. She is a little hard up, poor soul. Bless her heart! I wonder what she'll get first, Niagara, the phonograph, or something to eat without looking at the price. Did I ever write you about those "three wishes" of hers?

(Continued in January 5th issue.)

Second Sight

The young lady palmist of the church bazaar said to one of her girl clients: "I see by your hand you are going to be married."

"Wonderful," said the girl.

"You are engaged to a man named Wilkins," continued the amatuer seer.

"How amazing," gasped the girl, "surely the lines on my hand can not reveal the name——"

"Lines," sniffed the palmist. "Who said anything about lines? You are wearing the ring I returned to Mr. Wilkins three weeks ago."—Argonaut.

FORD RUNS 57 MILES ON GALLON OF GASOLINE

A new automatic and self-regulating device has been invented by John A. Stransky, 2109 Fourth St., Pukwana, South Dakota, with which automobiles have made from 40 to 57 miles on a gallon of gasoline. It removes all carbon and prevents spark plug trouble and overheating. It can be installed by anyone in five minutes. Mr. Stransky wants agents and is willing to send a sample at his own risk. Write him today.—Adv.

Uncle Rube Spinach Says:

HOW I GOT INTO THE MOVIES

THERE'S been times, quite a few, when I wanted to live the quiet life. I wuz on the farm then an' the quiet life sort of appealed to me. But you know I hankered for somethin' different. I wanted action—went to movin' pictur' shows an' such an' finally come to think I'd like to be a movie actor myself. Well folks I'm it—a movie actor, I mean. I'm a real actor now, I'm it every minute of my life 'ceptin' when I'm sleepin'. An' even then my landlady sez I'm movin' some. She sez, which's neither here nor there, 'at I sleep not only long, but loud. Well mebbe so—that don't bother me none. Anyway, I don't play the phonograph, the ukalele, nor the saxaphone, when I'm sleepin'. Well as I sed, I'm into the movies now an' course you'll want to know how it all happened. An' while I don't like to brag 'bout myself, yet as nobody else does it, I've got to do something for myself, so I'm jest goin' to bust out an' tell you all about the hull thing.

My first introduction wuz jest a few days ago. I went up town an' wuz kinda lookin' into windows an' at things on the street. Long skirts an' such, you know, an' a cop, a police, come up just behind me, tapped me on the shoulder with a little stick he had in his hand, an' told me to git movin'. I guess he wuz surprised to see me move so swiftly. You see lately, well since I went to bootleggin', I've been kinda s'picious of any man what wears a blue coat with buttons, brass buttons, onto it, so I moved with alacrity, if you know what that means, an' I wuz out of his sight in less time 'an I can tell it. That wuz my first appearance in the movie art.

Well, since I got hit jest a few days ago, by one of Hank Ford's offspring, I've been kinda movin' every time I hear an auto honk. I move in sever'l an' various directions. Sometimes I find myself into the top of a tree before I know 'at I've left the ground. The song of the siren mebbe is alright, but I'll be darned if I like to hear it come in from an auto behind me. So you see that put me right into another movie act, in fact, makes me purty nigh a star, 'cause I move so thick an' fast.

An' then you know, bein a widower, without a wife, an' there bein' sév'ral widows without husbands—well 'course this is another story—an' yit I'm jest as 'fraid of 'em as can be, an' that makes me a real movie actor. I move whenever I see one of 'em comin'. They mean alright—guess mebbe they do—mebbe solicitin' for the Japs or somethin', but anyways it means danger an' so I move—git into the movies an' am a reg'lar actor in self defense. Yes, an' there's the feller I owe money to—a cash customer, so to speak. Gosh, I move when I see him comin'.

An' then sometimes, with jest a little money in my suit case, or wherever I happen to have it, I go into a department store an' ask for some socks. The lady clerk shows me some for 80 cents or a dollar a pair, an' I sez: "Ain't you got some for 'bout 10 cents apiece." She looks at me with nose in the air—to git more wind, I s'pose—an' sez "Oh, you wear the cheap kind?" Well I move—she ain't my kind of girl any way, an' bein' 'at I hardly ever don't wear socks and how, I jest take my hat off'n my head for a minit, or maybe less, an' think of holy words or whatever it is an' I come away.

A movie actor in fact if not in name. Yes, since I'm in the movie class all right, you may never see me in pictures 'less I throw my hat in the ring, for pres'dent, then you wouldn't see me prob'ly, but you might see a pictur' of the hat.

Cordially yours.—UNCLE RUBE.

Poultry for Profit

TURKEYS AFFECTED WITH POISON IVY

I am now treating my turkeys for poison ivy. They are not getting any better but thought before I neglected any longer I would inquire if you have ever known of fowls getting poisoned. There are several patches of poison ivy around where the turkeys roam. If you know of any treatment better than the one I am using will you please send it to me. I am using two teaspoonfuls of Epson salts with one cup of boiling water, and when cooled enough to use I put in one teaspoonful of baking soda and wash their heads twice a day.—Mrs. L. A. H., Harbor Beach, Michigan.

—This is a new experience to all members of the department. The baking soda which you have used is probably the most effective method of combating this trouble, providing of course, you have made a correct diagnosis. There is a possibility that this particular flock of turkeys has become affected with Chicken Pox, in which case the skin erruptions would occur.—E. C. Foreman, Prof. of Poultry Husbandry, M. A. C.

SEND AFFECTED HEN TO M. A. C.

I know I am safe to tell you its Roup from what I have read of this disease although during past year is first I had it in my chickens. At first eyes and nose seemed to water, then later on the left side of the eye, appears a lump that looks like it contains matter, swells around the eye and sometimes over the eye till blind. Will eat until they die. It is hard for me to see a case of it among chickens until lump appears. I have always caught the ones affected and cooped them away from the rest. They live for a long time in this stage and I try to doctor them by putting a supposed medicine to be good for roup in drinking water and feed a chicken tonic, but anyway they finally die. Please tell me if there is anything that can be done for them in this stage? For the ones who seem well I clean everything best I can; hen house and drinking pans, spray with Creolin and put a drop in the drinking water. Give Epsom salts occasionally. Anyway this don't prevent well ones from getting the disease, and I don't know what to do next. I have several hens that look nice, but cannot tell how soon before they will have the disease. I now have four and have lost several. I always put the dead ones where no other chickens can ever get near them, and always coop the ones affected as soon as I see it. I sure would like to do something to save the ones that look well now.—O. McC., Mancelona, Michigan.

—Conditions like those described are very apt to be due to intestinal parasites such as tape worms or round worms. Coccidosis is also apt to be responsible for such symptoms. It will, therefore, be evident that nothing can be prescribed in the line of treatment until the real cause of the trouble is uncovered.

My advice is that you either have some of these chickens examined by a veterinarian or that you send a few of the affected ones to the Veterinary Department of the Michigan Agricultural College for diagnosis. H. J. Stafseth, Res. Assoc. in Bacteriology, M. A. C.

Get Winter Eggs!

See to it that there is song and cackle, scratch and action, going on in your poultry yard.

That's when the eggs come.

Feed

Dr. Hess Poultry

PAN-A-CE-A

See them get busy. It gives hens pep.

Nux Vomica is what does it—that greatest of all nerve tonics. A Pan-a-ce-a hen can't hold still. It's her good feeling that makes her hop around.

Pan-a-ce-a has Quassia in it to make hens hungry. Great combination! One makes them eat—the other helps them digest what they eat.

No dormant egg organs when that combination gets to work on a hen's system. You just get eggs—eggs.

A Pan-a-ce-a hen is always a hungry hen—an industrious hen. She gets off the roost winter mornings, ready to scratch for her breakfast.

Tell your dealer how many hens you have. There's a right-size package for every flock.
100 hens, the 12-lb. pkg. 200 hens, the 25-lb. pail
60 hens, the 5-lb. pkg. 500 hens, the 100-lb. drum
For fewer hens, there is a smaller package.

GUARANTEED

I spent 30 years in perfecting Pan-a-ce-a

FRUIT AND ORCHARD

Edited by FRANK D. WELLS

MICHIGAN vs. WESTERN

AT a meeting of men interested in Michigan fruit, recently held in Detroit, the apple was the subject of discussion. The western product was matched against homegrown fruit and the result was—well, let the reader decide for himself.

Apples were there from Washington, such as can be obtained on the market. Apples were there from Michigan, the best that could be procured. They were compared in the package and out of it. They were eaten raw and cooked. They were baked and made into pie and sauce. Certainly the test was a fair way of trying the fruit. It was not color, but the really important qualities that counted. The results were of interest, not only to every apple growed, but to everybody who takes pride in the Great Lakes apple district.

First to be considered was the packing. The western stock was of a uniform grade and so closely packed that there was no shaking, even after coming on the railroad from the Pacific coast to Detroit, a journey long enough and rough enough to loosen the fruit if anything short of an earthquake could. The Michigan packages were all loose and shaky. The fruit varied from medium to large and very large in the same package. As might be expected the weight of such loosely packed cases was not uniform. Some were several pounds too light. The closely packed western fruit was up to standard in weight.

Some of the home-grown fruit was ripe, some half ripe, some decidedly green, so the flavor varied from good to indifferent and from indifferent to bad. The rivals from the Pacific coast were uniformly ripe, so similar in flavor. Score again for the latter.

In every way the West equalled Michigan and in some respect was so far ahead that it was hardly worth while to make a comparison.

It may be objected that these men were interested in western apples, so were not fair judges, but such was not the case. They were in reality prejudiced in favor of their home state, and came to the meeting expecting that Michigan would have the better of the contest. But the evidence was there and it was too strong for denial.

This is not saying that the western flavor is equal to that of the Michigan apple at its best. These judges did not say that fruit could not be grown here which would discount the best of western apples, but they did not and could not get it. So it should be expected that they and consumers generally will buy something that they know and can depend upon, rather than invest in uncertainties.

Michigan can produce as good apples as are grown and that is being done every year, but such fruit, when properly packed, does not need to depend upon the general market. There is a place for all of it and more like it.

But the fact remains that the packing and grading of Michigan fruit is deplorably poor. When will it be better? The subject has been discussed and agitated for years, yet little progress towards reform has been made. When will the time come that the name Michigan will stand for what it ought to on a package of apples?

(Rather severe on our homegrown fruit. Have any of our readers a word to say on the subject?—Editor.)

NOTES AND COMMENTS

If the orchard hasn't a cover crop it ought to have one. Weeds are better than nothing.

* * *

An orchard long in sod becomes rootbound. The sod can be flopped over until the ground freezes. A sod upside down is still a cover for the ground.

* * *

A few years ago I had to make cider of my russets, said an apple grower. Now I pick them for the auto trade in the spring. Wish I had more of them.

* * *

There is one mistake to which the novice is liable. The strawberry bed is covered too early. A mulch is important, but it should not be applied till the ground is well frozen. It is the thawing and freezing that plays hob with the plants. Put on the straw so as to keep the ground frozen until spring.

* * *

Plant a mulberry for the birds. They like the fruit and will spare the cherries, or some of them. The Russian variety grows quickly and bears abundantly. The fruit is not so good as that of some other kinds, but the birds don't care. Do they eat the fruit for what it is, or do they think they are getting a nice fat black worm?

FUR DEPARTMENT

THE MINK

THIS animal is of the weasel tribe. It is a flesh-eater—birds, fish, rabbits and other small animals form its principle food, it being particularly fond of muskrats, will also, if given the opportunity, raise havoc in the chicken house. Because of the value of his pelt the Mink is rapidly being exterminated in the more thickly settled districts and while some of his traits are not admirable, he is too valuable an animal and has paid too many hundred times the damage he has done in his occasional raids to deserve total extermination. His favorite haunts are along streams, around lakes and in settled districts, ditches and drains. His pelt becomes prime in early November and is too valuable to be destroyed earlier than that. He also loses quality early and by breeding season in February should be left to produce more good dollars for the next season. The mink furnishes about the hardest proposition the amateur trapper has to contend with as more skill and a better knowledge of its habits is necessary to be successful than of the other common fur bearers. There are many good mink sets but the amateur will find natural water sets the most profitable. I will try to describe a few for you. A log laying along the bank so part of it is in the water forms a base for one of the best. Place your trap, I prefer No. 1 or No. 1½ Newhouse, in about two inches of water and securely stake a bait of bird or fish just beyond—it will usually catch any but the wisest that pass that way. Any natural looking hole under a bank or a hollow log at the edge of the water or a drain tile coming into the creek or ditch will be thoroughly investigated by every Mink that passes and a trap carefully placed in the approaches to these points will be successful. The less you disturb the surroundings the more success you may expect. Don't set several traps in poor places but look for the spot the mink has got to step in, in his investigations and you will be surprised at the ease with which this clever animal is caught. They are great travelers and while they may not pass the same spot once in several days they can usually be counted on to return. I have followed mink signs long distances looking for just the right place to make a set and my patience has usually been rewarded. Always case handle your skins and take the bone from the tail and open the tail to the tip. Remove all fat and see that the fur is clean and dry before stretching. Time spent in making suitable boards is as productive of good returns as time spent in properly setting your trap. A long narrow board slightly narrower at the shoulders than at the base and tapering to a point at the nose with edges to 1-16 of an inch varying in width at the base from two to four inches and made from 3-8 inch box lumber make the finest kind of mink boards, and will turn out a skin that the buyer will call "trapper handled." In stretching have back in middle of board, pull on evenly and don't try to over stretch. Tack tail open and hang in a cool dry place. Never turn fur side out.

THE MICHIGAN BUSINESS FARMER
"The Farm Paper of Service"
Tell Your Friends About It

The Agricultural and Business Situation

Revised Monthly by the Department of Research of the American Farm Bureau Federation.

PRICES:

Features in the agricultural situation this past month have been the decline in wheat, corn and hog prices, and the rise in cotton prices.

Wheat at Chicago is off 6 cents from a month ago. Canadian wheat is coming in over the 30-cent tariff wall. This is due to the high milling qualities of Canadian wheat, which is demanded at a premium, and to the scarcity of high grade hard wheats in the United States. With the low supply of domestic wheat east of the Rocky Mountains, a higher tariff would without doubt be effective in raising the price in this territory.

The Wheat Council of the United States is recommending a reduction of wheat acreage from 62 million to about 50 million acres as fast as alternative crops can be profitably introduced. The purpose is to take American wheat producers off the world market and raise the domestic price to profitable levels. The ultimate effectiveness of the proposal is dependent upon a prohibitive tariff and the holding down of production in face of the price incentive to increase it.

Estimated cotton production was reduced three-fourths of a million bales by the November Government forecast. Prices have gone up another 5 cents, now standing at about 35 cents per pound.

Prices of fat hogs at Chicago are now around $6.85, compared with $7.00 a month ago and $7.70 a year ago. Since September 1 combined receipts of hogs at eleven leading markets have been about 30 per cent greater than in the same period last year. This has been caused partly by the unfavorable corn-hog ratio (7.9 bushels of corn now equal in value to 100 pounds of pork compared with the average of 11.2 bushels). Another influence is the growing prevalence of cholera, which the Department of Agriculture reports more serious than in any year since 1914, when the last extensive outbreak reached its height. Owing to low prices, the cost of immunizing and relative freedom from disease for a number of years, the percentage of susceptible animals is extremely high.

Corn has dropped over 15 cents a bushel at Chicago during the last thirty days. It is now 83 cents, compared with $1.01 a month ago. Of the corn quoted at $1.01 at Chicago, farmers had little or none to sell. The supply of corn this year, counting the crop and carry-over, is slightly larger than last, but its quality is low and feeding value per bushel is below normal.

INTEREST RATES:

In August, 1920, at the beginning of the depression of 1921, interest rates on four to six months' commercial paper were 8.25 per cent. They had declined to 4.25 per cent by July, 1922. From this low point they reached 5.25 per cent last spring and now stand around 5.12 per cent. This fall, when the seasonal demand for money would ordinarily cause an increase in the rate, there has been a slight easing off. The belief is fairly general that it will continue to decline moderately the balance of this fall and winter, and that a plentiful money supply at low rates will provide a sound basis next spring for expanding business activity.

GENERAL BUSINESS:

Industrial production has declined since last spring. This has led to the fear that another business depression is starting. The National City Bank of New York points out that we have never had a serious business depression in this country which began in an easy money market. "It is inconceivable," says the bank, "that the conditions which create a real crisis can develop without the pressure which results from an over-extended credit situation."

Moreover, there is no accumulation of goods which should cause factories to further reduce activity. Demand for the products of factories due to full employment at high wages continues unabated and farm purchasing power will probably be almost one-half billion dollars more this crop year than last.

Construction work has not caught up with the demand for buildings and promises to proceed at a high rate. Railroads are handling big traffic volume without congestion and are placing large orders for new equipment. The depressing influence of the European situation has probably spent its force. The memory of the 1921 collapse, still fresh in the minds of business men, will tend to hold overexpansion in check and should be an important factor in assuring a comparatively long period of even activity.

Butter	153	145	134
Wool	222	221	189

4. Relative Purchasing Power of Farm Products:

(U. S. Bureau of Agricultural Economics)

The quantity of various commodities which a given amount of each farm product would purchase at prices prevailing in 1913 is put equal to 100. The figures given represent the percentage of this quantity which the same amount of farm products would purchase in September, 1923. Prices at the farm are used for agricultural products, and wholesale prices at central markets for other commodities.

	All Commodities	Cloths, etc.	Fuel, etc.	Metals, etc.	Building Mtls.	House Furn'g
Cotton	142	103	124	152	120	120

MARKET FLASHES

MARKET SUMMARY

All grain quiet after small gains in wheat and rye. Beans firm after small advance. Eggs lower. Butter firm. Dealers expecting large supply of poultry for Christmas. Potatoes slightly firmer. Dressed calves and hogs easy. Cattle steady. Hogs higher. Sheep lower.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

Improved Farmer's Outlook

NINETEEN hundred and twenty-four promises to be an improvement over the closing year, and in various farming districts the present year has not been so bad. Much depends upon the lines of farming followed, and the most unsatisfactory returns have followed wheat farming, this affecting many of our Michigan farmers. On the other hand, the many Michigan farmers who are fruit and berry specialists have come out well ahead, the marketing of these, as well as of grapes, reaching vast totals. The Chicago market for Michigan grapes, apples, peaches, cherries, plums, etc., is quickly reached, being across Lake Michigan, and it uses a large proportion of these famous products. Since prohibition became a law of the United States, for some reason, the consumption of grapes has reached hitherto undreamed of proportions, and this applies to the grapes of California, New York and other states as well as to the Michigan grapes. Michigan beans too have had a widening sale and brought liberal returns, as have the products of dairies, butter, eggs and poultry having larger consumption than ever before. Recently butter has undergone a further advance, and tub butter is selling in Chicago retail markets around 60 cents a pound. Eggs come high at this season when the hens can hardly be coaxed into attending to business, but the cold storage eggs help out a lot, October, November and December being the low production months. According to the Department of Agriculture, about one-half of the eggs are laid in the four months from March to June, and if it were not for the placing of eggs in storage there would be an enormous shortage in the winter period. There is a serious honey shortage this year, but the bees at any rate provided the farmers plenty of the delicious sweet. The turkeys did unusually well this year and brought in good profits, even if they sold lower than last year. A small flock of turkeys is a good thing, and so is a supply of geese and ducks, even if you fail to market many. Then there is the onion, which the truck farmers find extremely profitable, as was pointed out during the recent convention of the National Onion Association held in Chicago. About a million bushels of onions are brought from Spain to this country every year, while the annual consumption of home grown onions is about seventeen times this amount. Onions are good for the health, as well as pleasant to eat, and no farm should be without its garden, in which there should be a well kept onion patch.

Increased Trade in Corn

The greater part of the interest of the Chicago grain trade is centered in corn at the present time. The wheat and oat markets are in a rut, and speculators are not trading at all freely in the two cereals. Country offerings of corn are not large, and farmers continue to be dissatisfied with prevailing prices. The visible supply of corn in the United States is insignificant as are exports. Within a short time corn has sold lower than a year ago, but a little more than two years ago it sold down to 46½ cents.

Increased Movement in Rye

Millers are doing a good business in rye, two Chicago mills making around 2,000 barrels a day, while a number of outside millers are also busy. The rye flour is mostly shipped to Germany, one of the Chicago mills having sold around 5,000 barrels within a week. Rye is being shipped from Chicago, all rail, to eastern mills, one mill taking 5,000 bushels a few days ago. Exports of rye flour are being included in the reports of wheat flour which swells clearances and has created the impression that wheat flour clearances are on a large scale. Rye has been marketed freely, the liberal offerings having ran the visible supply in this country up to 18,266,000 bushels, comparing with 8,713,000 bushels a year ago. Recent sales were made of rye in the Chicago market at 68 cents, comparing with 90 cents a year ago.

The Wheat Outlook

Wheat farmers are waiting developments before selling freely, but prospects do not look very bright for government help in putting prices on a higher level, and declines follow after rallies in prices. Prices are much lower than a year ago, and the visible supply in the United States reached a total a while ago of 72,547,000 bushels, comparing with 33,516,000 bushels on the same day in 1922. It turns out that a great deal of wheat has been fed to live stock owing to the low market price, and a short time ago Secretary of Agriculture Wallace reported that around 90,000,000 bushels had been used in this way, a much larger quantity than was supposed. At the present time the leading wheat exporting countries of the world are the United States, Canada, Argentina and Australia, and fair exports are being made by this country, although not enough to put prices higher. December wheat sold recently in the Chicago market at $1.05, comparing with $1.23⅝ a year ago. Corn sold around 72 cents, comparing with 74⅝ cents a year ago. Oats sold around 43 cents, comparing with 45½ cents a year ago.

The Hog Outlook

Stockmen throughout the corn belt states are hoping for higher prices for hogs after the last crop of pigs matures and is out of the way; and it is estimated by men who are well informed that breeding of sows for next spring's pigs will show a falling off or from 20 to 25 per cent, but this is merely a guess. At any rate the wise course seems to be for farmers to do less breeding. Of course, corn and hogs will always be among the staple farm products in this country, for our domestic consumption of fresh and cured hog products reaches enormous proportions, while this country does a large part in feeding the world. There are many complaints regarding our foreign trade, but somehow European countries manage to buy liberal quantities of lard and cured hog meats in this country, and weekly exports are extremely large. Lard is selling at far higher prices than a year ago, because of the enormous demand, but prices for fresh pork are off and retail meat shops in Chicago are selling roasts and chops for 10 to 15 cents a pound. Overwhelming marketing of hogs explains the tremendous decline in their prices, and within a short time average prices for hogs were the lowest since 1915. Up to recent date the combined hog receipts in twenty markets for the year amount to 40,802,000 head, comparing with 32,001,000 for the same time last year and 30,829,000 two years ago. The spread in hog prices has greatly narrowed, bringing light and heavy kinds much closer together. Hogs sold in Chicago recently at $6.50 to $7.25, comparing with $7.25 to $8.30 a year ago.

Increased Cattle Feeding

An increase of 2 per cent in the number of cattle on feed in the eleven corn belt states is shown by a preliminary Department of Agriculture report. The states showing the largest gains are those having either a large amount of soft corn which must be utilized within a few months or a big increase in corn production. As compared with 1922, there is an increase of 10 per cent in the number on feed in South Dakota and Minnesota, and 5 per cent in Illinois, Nebraska, Indiana and Wisconsin. Ohio is off 10 per cent and Kansas 5 per cent. It is estimated that the average weight of fed cattle will be somewhat less than last year.

Yearling Cattle Wanted

Seldom, if ever, has the demand for well fattened yearling steers and heifers been so good as during recent weeks, and in the Chicago market killers have discriminated severely against fat heavy steers. For a short time after Thanksgiving the demand for beef was so lively that despite unusually large receipts of cattle in the Chicago market, prices advanced materially, but later on the demand fell of so much that a big drop in values took place on all except choice yearlings. Recently the bulk of the steers sold at $8 to $11.50, with prime cattle taken at $11.75 to $13.25, and sales all the way down to $6.40 to $7.50 for the commoner light weights, and inferior little steers salable at $4.25 to $6.35. Approaching cold and stormy weather made farmers disposed to hasten marketing their short fed cattle, and the offerings averaged poorly in grading. The best beeves were taken at fancy prices for the Christmas trade and comprised but a small share of the transactions. Cows and heifers sold at $3.25 to $10.50, while calves sold at $5.75 to $10.65 and stockers and feeders at $5.75 to $10.50. A year ago common to prime beef steers sold at $6.65 to $14. Combined receipts in twenty markets for 1923 to late date amounted to 14,058,000 cattle, comparing with 13,610,000 a year ago.

Sheep and Lambs on Feed

There were about 3 percent, or 170,000 head, more sheep and lambs on feed for market in the Corn Belt and Western states on December 1, this year than on the same date last year according to an estimate given out by the United States Department of Agriculture. The total estimated number on feed this year is 5,170,000 head of which 2,838,000 head are in the Corn Belt and 2,332,000 head are in the west as against 5,000,000 head on feed last year of which 2,624,000 head were in the Corn Belt and 2,376,000 head were in the west.

In the Corn Belt states there are about 210,000 head more on feed this year than last. Of this increase over 40,000 head are in the states east of the Mississippi and 170,000 head in those west. The states showing considerable increases are Indiana with 55,000 more and Iowa with 117,000 more while the two largest feeding states, Michigan and Nebraska, show little change. The farm feeding in Illinois shows an increase of around 60,000 head but this is more than offset by a decrease of 70,000 head at feeding stations adjacent to Chicago.

The western feeding areas show a decrease of some 40,000 head from last year. Colorado, however, shows an increase of 40,000 head from 1,400,000 last year to 1,440,000 head this year. This increase is due to 150,000 head more in Northern Colorado, the Arkansas valley showing a decrease of 110,000 head and the San Luis Valley practically the same number as last year. Idaho shows a decrease of 70,000 head while Utah shows the same number as last year. California and Nevada show decreases of 50,000 and 35,000 head respectively while Montana and Wyoming show increases of 20,000 and 15,000.

While the total market movement of sheep and lambs from Corn Belt pastures and western ranges this year shows an increase of around 300,000 head over last year. This increase has been due to the increased marketings of western lambs. The marketings from the Corn Belt states during the months when the native grass stock moves show a decrease of over 500,000 head from last year and every state shows a decrease; the marketings of western lambs from July 1, to November 1, show an increase of over 800,000 head. The shipments of stocker and feeder sheep and lambs into the Corn Belt through markets show an increase of around 300,000 head from August 1, to November 1. This decreased marketing of native stock may indicate either an expansion of the sheep industry in the Corn Belt by holding back ewes and ewe lambs or the possibility of an increased marketing of native stock this winter; in which latter event the Corn Belt marketings will be larger than above indicated.

The movement of feeding stock both into the Corn Belt and Western areas was earlier this year than last and the movement during November showed a sharp falling off. The weight of feeding lambs was probably about the same in all areas this year as last.

The indications are that the supply of fed sheep and lambs for slaughter coming from areas that usually ship to Corn Belt markets during the next five months will be somewhat larger than last year but that the supply in the areas shipping to the Pacific Coast markets will be smaller. But since there are always considerable numbers of lambs put on feed after December 1, if this number this year shows a marked falling off the total market supply of fed stock from now to June 1, may be no larger than it was last year.

The first Colorado lambs of the season have arrived in Chicago and sold at $13.

BEANS

Reports from the eastern markets show the demand for pea beans is very good and good quality stock is finding ready market. In the east most Michigan choice pea beans are put in cartons and sold at a nice profit. Why not put them up in cartons here in Michigan and keep the profit at home where it belongs? Prices at Detroit are up 5 cents but the market is unchanged.

POTATOES

The supply of potatoes is ample at Detroit to care for all demand and the market is steady. Prices are unchanged.

WHEAT

Detroit—Cash No. 2 red & No. 2 mixed, $1.10½.

Chicago—Cash No. 2 red, $1.09¼.

Prices one year ago—Detroit, Cash No. 2 red, $1.42.

CORN

Detroit—Cash No. 3 yellow, 78c; No. 4, 74c.

Chicago—Cash No. 2 yellow, 72¼@72½c.

Prices one year ago—Detroit, Cash No. 2 yellow, 80c; No. 4, 78c.

OATS

Detroit — Cash No. 2 white, 50½c; No. 3, 48c.

Chicago—Cash No. 2 white, 43½@45½c; No. 3, 41¾@43¾c.

Prices one year ago—Detroit, Cash No. 2 white, 52½c; No. 3, 51c.

RYE

Detroit—Cash No. 2, 73½c.

Chicago—Cash No. 2, 70c.

Prices one year ago—Detroit, Cash No. 2, 94c.

BEANS

Detroit—C. H. P., $4.85@4.90 per cwt.

Prices one year ago—Detroit, C. H. P., $7.50 per cwt.

POTATOES

Detroit—$1.16@1.33 per cwt.

Chicago—$1@1.15 per cwt.

Prices one year ago—Detroit, 94c@$1.00 per cwt.

HAY

Detroit—No. 1 timothy, $23.50@24; standard & light mixed, $21@22; No. 2 timothy, $21.50@22; No. 1 clover mixed, $21@22; No. 1 clover, $21@22 per ton.

Chicago—No. 1 timothy, $25@26; No. 2, $23@25; No. 1 light timothy & clover mixed, $24@26; No. 1 clover, $23@25 per ton.

Prices one year ago—Detroit, No. 1 timothy, $16.50@17; light light standard, $16@16.50; light mixed, $16@16.50; No. 2 timothy, $14@15 per ton.

PRITCHARD'S WEATHER FORECAST
INTERPRETED BY THE STARS

Week of December 23

LIGHT showers or snow flurries are probable during early part of this week in Michigan and in some sections it may be just enough to get by with a "White Christmas." The temperature about Sunday will be cold for the season but by Christmas day will be moderating.

About Thursday there will be an increase of storm indications with more rain or snow, if not some sleet and wind, in the state but the week goes out with a brief change to cooler and mostly pleasant weather, except for some local storms.

Week of December 30

Light rains over southern counties of Michigan with rain, sleet or snow in sections farther to the north are the conditions to be expected during first half of this week. The winds will be brisk to high with the probabilities that with any great amount of snow after Monday, drifts will be common. These conditions may last through Wednesday.

Following the middle of the week temperatures will drop decidedly and the sky clear off. Bright days and clear star-light nights will probably hold out during the balance of week. Temperature, however, will moderate during closing days of this week.

January Warm

The average temperature for January in Michigan is expected to be above the seasonal normal. The precipitation for this same period is expected to average about or possibly a little above the normal. We would interpret this that January will not see heavy snow fall in Michigan for the month as a whole.

Summer Forecast O. K.

Latest government figures show Michigan experienced temperatures three degrees below normal during the summer months and that no high temperature marks were made. These facts agree with our forecast of last June. We also stated at this time that "October and November moisture conditions will tighten up," a forecast that has been remarkably proven by the disasterous forest fires in October due to dry weather and the ideal weather for out-door work and sports in November.

WHAT THE RE-APPORTIONMENT FIGHT IS ALL ABOUT

(Continued from Page 3)

evident that the only safe-guard of the rural districts in this re-appointment struggle is the moiety clause in the state constitution which provides that any county having more than half of an exact mathmatical ratio of representation should be entitled to its own representative. The population of Michigan according to the 1920 census was 3,668,412. There are 100 representatives in the state legislature, so an exact ratio would be 36,684. A moiety would be one-half of this or 18,342.

While the constitution specifically provides that any county having a moiety of population is entitled to independent representation, it does not make clear whether or not this rule should apply to a group of smaller counties. In other words the legislators are at a loss to know whether they should cease grouping counties when the district thus formed has a moiety or whether they should continue until the total population has reached a full ratio. The Attorney General has ruled that the moiety clause does not apply to districts, but only to individual counties.

Regarding the senatorial reapportionment the condition is somewhat different. There is no moiety clause covering this situation, but the language of the constitution is regarded by some as being significant, for, while it says that the representatives shall be apportioned anew every ten years, it says that the senatorial districts shall be "rearranged." The Detroit members insist that the new senatorial districts should be formed strictly on the basis of population, which would give Wayne ten senators. However up-state senators insist with equal firmness that there is nothing in the constitution that provides that the senatorial districts shall be arranged solely on the population basis. They maintain that the legislature is perfectly at liberty to take into consideration any and all other factors.

Bitterness Still Lingers

It is apparent that some bitterness still lingers in the minds of the up-state members as a result of the gas tax fight in the regular session. These members are none too friendly to their Detroit colleagues or to the administration in general. They are not in favor of relinquishing any of the control which they now enjoy. As one senator expressed it, when testifying before the Senate Apportionment Committee, "Let Detroit learn to govern itself before it tries to govern the whole state."

Before the session convened it was definitely reported that the "Give Detroit nothing" sentiment of the up-state representatives would make it impossible to pass any sort of a constitutional re-apportionment bill. When the governor and Detroit members moved heaven and earth to defeat the gas tax at the regular session they "sowed a wind and they now reap a whirlwind."

Itch for Gas Tax

Probably nothing will restore a complete friendly feeling among the members of the state legislature until the Governor submits a message to them permitting them to enact the long desired state two cent gasoline tax. If he permits the legislature to consider the problem of highway finance there will probably be very little opposition to the gas tax. The only question will be regarding the best form of such a tax and whether or not the present license fees shall be reduced or displaced by a weight tax.

A wail is going up from certain cities in Michigan that if the gas tax is enacted, provision should be made for the return of a portion of the revenue to the cities from whence it came. However, some leading representatives have a scheme which they believe will quiet this opposition. They are going to urge the passage of a law to require the state to take over the entire burden of a trunk-line construction and maintenance. This would apply equally to trunk lines whether passing through a city or the open country. They believe that such a bill would be fair and would receive the support of the city people who are now objecting to all the revenue of the gas tax going directly into the state treasury.

It now looks as if the governor would not give the legislature a chance to even consider the question of a gas tax.

FARMERS' CLUBS FAVOR GAS TAX AND SALARY CUT

(Continued from Page 6)

day as the most critical in the history of agriculture. "Farm equipment throughout the country has been wearing out, and has not been replaced," he said, and estimated that from ten to fifteen billion dollars would be required to restore America's agricultural equipment to its former place.

He added that the equipment of the farmers is now in much the same shape that the railroad supplies were at the close of the World War, and urged the farmers to take definite and united action to remedy the situation at once.

In speaking of the work of the agricultural colleges of the country, Dr. Mumford said, "The agricultural colleges and their experimental stations are the great laboratories working for the farmers, and play a very important part in the success of the industry. The value of Rosen Rye, developed by specialists at the Michigan Agricultural College, to the farmers of this state has been more than the total cost of maintaining the institution since its foundation 66 years ago."

The early history of farm organization was traced by Dr. Mumford, and the advantages of its present day form pointed out. Each farmers' association, the grange, the farm bureau, and the farmers' clubs, has its own service to perform, according to Dr. Mumford, and these organizations should cooperate rather than compete.

"Through complete federation, all farmers' organizations of the country can work together on their problems, and can speak in a united voice that will bring results. Complete federation is the next step," he declared.

Clark L. Brody, head of the State Farm Bureau, gave a short address at the annual banquet, held in the evening of the first day's sessions. In urging greater organization among the farmers of the state, he said, "It is necessary for each group of producers of various farm products to organize separately if they are to market their products in the best way. Each organization can market their own products, and by cooperation among these organizations, the greatest good to the farmers of the state can be accomplished."

Mr. Brody pointed out that marketing organizations gave the farmers the best sales and distribution ability that can be obtained, and urged that the associations demand greater ability when selecting their managers, and that they stand ready to pay these men adequate salaries.

Dr. Marion LeRoy Burton, president of the University of Michigan, was the principal speaker at the final session Wednesday afternoon. "Brains plus character is the nation's need today," he said. "The thing that America needs is to stop guessing and base her decisions on genuine thought."

President Burton spoke on "The Mind," which he said he considered to be of far greater importance than any of the social, economic, or agricultural problems that he might discuss.

There are many kinds of minds, according to President Burton, but the ideal type is the thinking mind. "We must train our people to think if we are to have real progress," he said. "Three things are necessary for a thinking mind. First, you must get rid of all prejudices; second, forget all about popularity; and third, do not 'shy' at the problems which confront you."

He mentioned the taxation problem only in passing, but said, "I am profoundly in sympathy with the farmer when he says that land is taxed far too much."

Robert S. Shaw, acting president of the Michigan Agricultural College and director of the college experiment station, and L. Whitney Watkins, head of the State Department of Agriculture and a member of the State Board of Agriculture, were made honorary members of the association at the final meeting.

FARM BUREAU PROVIDES BEAN MARKETING AGENCY

(Continued from Page 7)

handling charge. It is remarkable that not more than one per cent of the total sales made by member associations are made to parties outside of the Exchange.

After joining the Michigan Elevator Exchange the local elevators have the privilege of using a crop contract between themselves and their farmer members. This contract permits the farmer to sell outside of his local association if he can get a better price, but he must pay his local co-op the regular handling charge to which it is entitled on his business.

The Michigan Elevator Exchange is a non-profit organization and any surplus accumulated after the actual overhead expenses are paid is returned to the members as a patronage dividend.

The Detroit Times is the only metropolitan newspaper in Michigan having the reputation of being absolutely unbiased editorially and politically—it is the one paper giving all sides of every question from purely a news point of view—so completely informative that the reader himself can draw his own conclusions without prejudice.

For the amusement and entertainment of its readers The Times presents two full pages of Comics daily—all the famous Comics by the greatest artists. The Times stands eminently supreme in this department of a newspaper.

Two complete Magazine pages every day is another great feature of The Times—Bedtime Stories for the kiddies, the best serials, beautiful drawings by the famous Nell Brinkley and Popini, recipes and helpful hints for the household, together with many other attractions make this department of the paper of inestimable value to the women folks.

An extensive and complete Market and Finance page is one of the standards by which The Times is fast becoming a household word in Michigan.

Brisbane's "Today" Column alone is worth the price of the paper.

ANOTHER MICHIGAN WINNER AT INTERNATIONAL

WE have just learned that we omitted the name of one of Michigan's prize winners from the list of winners at the International Livestock Exposition, Chicago, published in the last two issues of the THE BUSINESS FARMER. This winner is Mr. George D. Stuck, of Overlook Farm, Otsego, breeder of thoroughbred Aberdeen-Angus cattle. Mr. Struck is the proud possessor of two prize ribbons and a cash award of $25. And this gentleman has been breeding purebred Angus cattle for only three years.

OCEANA COUNTY GROWERS RENEW ORCHARDS

THE orchards of Oceana county, one of the richest fruit-growing sections of the state, are being restocked. A larger fall setting of fruit trees is reported than ever before. This has been due partly to the mild weather which has made late planting possible, and also because of the increased profits from orchards.

One feature has been the large renewal of peach orchards. For years Oceana county was one of the big centers for peaches. During the last few years, however, there was a decline in the acreage of peaches in favor of cherries and apples. The old peach orchards now are being replanted.

M. A. C. PURCHASES CHAMPION BELGIAN STALLION

RANGE LINE PHOENIX, a two year old Belgian stallion, has been purchased to head the purebred Belgians owned by the Michigan Agricultural College, according to R. S. Hudson, who has charge of the college horses.

At the International Livestock exposition in Chicago this year, this colt was Junior and Reserve Grand champion, besides placing first in his class. He was also Junior champion and first ribbon winner in his class at the Ohio State Fair.

Jupiter, the well known Belgian stallion that has been exhibited by the college at the International, the Michigan and Ohio state fairs, and numerous other showings throughout the country, where he took many first honors, has been sold to Bell Brothers, of Wooster, Ohio, according to Mr. Hudson.

The Breeders Gazette, in a recent report of the Chicago show, makes the following comment on Range Line Phoenix: "The three year old and two year old stallion classes were the 'high spots' of the Belgian show. Each class furnished a champion. Louis de Maeter and Range Line Phoenix, winners of premier championship honors this year, were two of the most popular choices for such distinction in the history of the show. George Potts showed them in fine bloom.

"Range Line Pheonix, a growthy roan, won handily from the other two year olds. He has a great set of bottoms, long pasterns, clean ankles, and hard, lean hocks. He is a real stock horse prospect. The Michigan Agricultural College is to be congratulated on the purchase of such a horse to head its band of Belgian mares."—R. C. Groesbeck.

STATE HOLSTEIN MEN DINE FEBRUARY 4

THE Annual Banquet of the Michigan State Holstein Association will be held at Lansing on the night of Monday, February 4th. The Annual Meeting will be held the following day, Tuesday, February 5th, at the Michigan Agricultural College, East Lansing. William Moscrip, of Minnesota, probably the best known dairy cattle judge of the U. S. A., will be present to demonstrate Dairy Type and to hold a judging "school." It is planned to hold a High Class Sale of Selected Holsteins at the College the afternoon of February 4th.—J. G. Hays, Extension Specialist, Michigan Holstein Association.

PLAN CO-OPERATIVE FARM MARKETING

EFFORTS to formulate a policy for "orderly marketing and co-operative production" by the farmer as represented by the National Grange are to be made in Washington, Jan. 15-19 by a marketing committee of that organization, National Master L. L. Taber announced Friday, December 21.

Members of the committee who were appointed by Mr. Taber are A. W. Goss, Seattle, Robert McMullen, Hutchinson, Kan.; John McSparren, Furniss, Pa.; Robert P. Robinson, Wilmington, Del.; O. L. Martin, Montpelier, Vt.; Albert Manning, preside Pottsville, Pa.; and David Agans, Three Bridges, N. J. Taber

(Continued on Page 22)

DON'T SIGN THAT SUGAR BEET CONTRACT

I HAVE just received reliable information that The Owosso Sugar Company has rejoined the Manufacturers' Association and agreed to join with the other Michigan factories in doing away with the 50-50 contract for the next season, 1924. The contracts agreed upon were in the field, Monday, December 31st, and are a 45-55 proposition with the farmer on the short end as usual. This arrangement puts the farmer back to where he was years ago only he is taking more chances of losing on this new contract than ever, and gives the factories a monopoly of his beet workers, the wages of which the farmer pays. Will the Michigan sugar beet growers place their necks within this nooze and sell their 1924 beet crop 5 months before it is time to plant it, and 10 months before harvest time, or will they not sign one single one of these contracts and look around and get their bearings? Are we, here in Michigan where we formulated the 50-50 contract, going to take anything less when our brother growers throughout the west are now getting 50-50 contracts which we carried to them by our President John C. Ketchem who was elected by them president of the National Beet Growers Association. Haven't we any pride? Will we swallow the sop thrown to us by this Michigan Sugar Beet Manufacturers Association and this company that just has, by their last move, shown the Michigan growers their hand. Are we going to stand for and insist on a tariff policy which protects a bunch of giants who give the farmer what they want to and gouge the public with high sugar prices, and give them the right to go into foreign countries and get cheap labor under contract which they will control and bring them within our midst to deteriate our farm community life and bring upon ourselves such charges of working children and even 5 years old babies, as recently charged by the National Child Labor Committee, or will we say "No, absolutely no," when called upon and told to sign on the dotted line?

Every Michigan beet grower should withhold contracting until after the meeting at Lansing during the week beginning January 21 which will be attended by representatives of the United States government, they having spent most of last summer going into the matter of the costs of growing sugar beets.. Let's not sign a contract until after March 1st, 1924, which is then two and one half months before planting time.—C. E. Ackerman, Former Manager, Michigan Sugar Beet Growers Ass'n.

Electricity For All Farm Homes in Michigan

Special Committee Working Under the Direction of State Public Utilities Commission Is Trying to Solve Light and Power Problem

By R. C. GROESBECK

(Special Correspondent of The Michigan Business Farmer.)

CAN the network of high tension power lines that cover almost the entire state of Michigan be used to furnish electricity to the farms? This is a question which a special committee, working under the direction of the state Public Utilities Commission, is trying to solve.

The special committee which has been appointed to carry on an extensive investigation consists of George W. Bissell, dean of engineering at the Michigan Agricultural College; L. Whitney Watkins, head of the state department of agriculture; Roy T. Duncan, of the Detroit Edison Company; Alfred Fisher, of Ann Arbor, director of the committee on public utilities information; and A. B. Cook, of Owosso, master of the Michigan State Grange.

It is thought by the committee that the rural power lines of the state can be used for the double purpose of furnishing electricity to the farms and lighting the rural highways. Electrical power is not available for farms at the present time because the voltage is too high, but, according to Dean George W. Bissell, chairman of the special committee, the problem of stepping down the voltage is financial rather than mechanical. The cost of constructing the necessary transformers, and how to meet this expense is the big problem.

The cost of constructing these transformers would be a fixed charge, and would have to be met from funds received from the service. How this cost is to be distributed, particularly in communities where the number using the service would be continually changing, constitutes a problem all in itself, he said.

Peter Fagan, secretary of the Michigan Public Utilities Commission, declared that it is important that no false steps be taken in the movement to make power available for farms in this state.

In Illinois and Wisconsin, he said, the power companies extended their lines to the rural districts, and, for a time, supplied power to the rural communities at a loss. After the lines had been established, the companies suddenly demanded that their rates be increased to cover the cost of the service, with a result that the farmers became greatly dissatisfied with the system. The State Public Utilities Commission, according to Mr. Fagan, hopes to make sure that Michigan gets started on the right road in this work.

The men working on the project believe that farmers of the state would be glad to obtain power from these transmission lines because of the greater convenience in comparison with the home generating plants now in use on many farms. Electricity, they believe, can be used to advantage in many farm operations, such as cutting wood, running milking machine, and chopping feed. It would also make possible the use of many conveniences about the farm home that cannot now be used.

The committee will also make every effort to devise a means of using the rural power lines to furnish electricity for lighting the rural highways as well as furnishing power and light on the farms. It is becoming more and more necessary that some means be found to make the highways safe for night travel.

During the past two years an experiment in this work has been conducted on the road between Lansing and East Lansing through the cooperation of the Consumers Power Company, the Lansing Automobile Association, and the township authorities. Over a stretch of about two miles, lights are mounted on poles 30 feet high. The light from these makes the use of bright automobile headlights unnecessary. The lighting thus far has been very satisfactory, but of course, the project has been used only as an experiment.

In speaking of the work done by the special committee, which will report back to the Public Utilities Commission February 15, Dean Bissell said, "In our report we are to give a precise statement of the problem, and recommend principles to be followed in its solution. We shall obtain information about the prectices followed in other states, ascertain the attitude of the producing companies, discover how much interest is manifested by the rural population in obtaining electrical service, and find out to what extent the manufacturers of farm machinery are prepared to furnish power-driven appliances suitable for use on the farm.

"I believe that after the present agricultural depression has passed, all progressive farmers will be glad to make use of electrical current if it can be had at reasonable rates. Of course the rates will differ in different parts of the state. Farmers in Wayne county will be able to get the service cheaper than those in outlying sections. But we hope that the rates can be made low enough to make electricity practical for all parts of the state."

A MEETING OF MICHIGAN BEAN INTERESTS

A MEETING of bean growers and others in Michigan interested in orderly marketing, advertising, and in other ways making the bean crop a more profitable one, will be held at the Owosso Armory, Owosso, beginning 10:30 A. M. Friday, January 18th. The meeting is being called by A. B. Cook, president of the Michigan Bean Growers Association, and will be held under the auspices of the Association, R. L. Churchill, secretary and manager of the California Lima Bean Growers Association, will be present and Michigan men representing all phases of the industry will be on the program. It is to the interest of every bean grower in Michigan that he attend this meeting. Be there, without fail.

California Bean Man Urges Co-operative Marketing of Michigan's Crop

THE plan to put on a nation-wide advertising campaign to increase consumption of pea beans created much interest in all parts of the country and the news of Michigan's failure to raise her share of the money was received with much regret. We recently received a letter from R. L. Churchill, secretary and manager of the California Lima Bean Growers Association, Oxnard, Calif., commenting on it. He did not write the letter for publication but it contained so much of interest to all growers that we urged we be permitted to print it. He finally consented and we are publishing it herewith.

WE have noticed the editorial paragraph under the heading "Scalping Beans" in your issue of November 24th.

It has seemed strange to us for several years past, that a group of the largest bean growers in Michigan did not take active steps to organize for the cooperative marketing of the major portion of Michigan's production of pea beans. This has been more puzzling in recent years because of the very rapid development in the cooperative marketing on a large scale of such products as cotton and tobacco, which have been and are being supported by many thousands of growers, both large and small, scattered over a number of states. According to reliable governmental reports, the cooperative marketing of cotton, tobacco, rice and peanuts, has within the past two or three years, transformed the South from a condition of financial distress to one of the most prosperous sections of the United States.

We have written a number of letters during recent years to Mr. A. B. Cook, of Owosso, Mich., suggesting that some active steps be taken to organize the Michigan bean growers, not only for the benefit of your growers, but also because of the detriment to the bean business of the entire country caused by the erratic fluctuation of prices on Michigan beans, which tends to create a lack of confidence in the minds of the distributing trade with respect to all varieties of beans, and undoubtedly to a certain extent adversely affects the movement and price of all varieties.

With reference to advertising of beans, our Association has expended as much as $45,000 annually in advertising lima and baby lima beans, although marketing only about half the California production of these two varieties, and not being engaged in marketing any other varieties. It is accordingly almost humerous to us that Michigan fell down on raising $16,000 for National advertising of Michigan beans from all those interested.

However, it is undoubtedly true that growers much more than elevator men should be the ones to contribute towards the advertising of Michigan beans, particularly if growers will place themselves in position to really benefit by orderly and intelligent marketing, with resultant stabilization of the market.

As we understand the situation now existing in Michigan, there is so much manipulation and speculation existing, that the growers, most of the bean elevators, and the jobbing and distributing trade, are all suffering from the uncertain and chaotic conditions obtaining. Undoubtedly many of the elevator men would welcome a strong growers organization, and there is no particular need or reason why growers should build new elevators or purchase any of those new operating, as they could undoubtedly arrange to continue to use cleaning and storage facilities now provided, and confine the activities of the growers cooperative marketing association to the marketing of their beans under grades and regulations established by their own organization. The present National and State laws favorable to such associations, and the facilities offered by recent revisions of Federal Reserve Bank laws and the continued services of the War Finance Corporation, permit cooperative marketing associations to very easily finance liberal advance payments to grower members and to carry out a sane and reasonable marketing policy and price level in connection with distributing the sale and movement of the products over a period of eight or ten months, if desired.

In your editorial, you expressed the hope that someone will step forward ready to take on the task of organizing Michigan bean growers and handling their products, but you make a better suggestion when you urge some of the large growers to call a meeting to talk matters over and see if something cannot be started. Undoubtedly you realize that the interest taken by President Coolidge and Secretaries Hoover and Wallace in the problem of farmers, and recommending cooperative marketing, as one of the post practical means of securing assistance and relief, indicates more than a friendly attitude on the part of the Federal government, and we are confident that merely the asking would bring experts from the United States Bureau of Markets to assist in organizing your Michigan bean growers, as soon as sufficient interest was manifested.

Undoubtedly trained and experienced men connected with existing cooperative marketing associations of various farm products, including beans, could also be secured to assist your growers, to organize.

We have not written you this letter for publication, and are inclined to believe that it has not been properly written for publicity purposes; but we are much interested from the standpoint of the bean industry in the entire United States in seeing Michigan bean growers form a

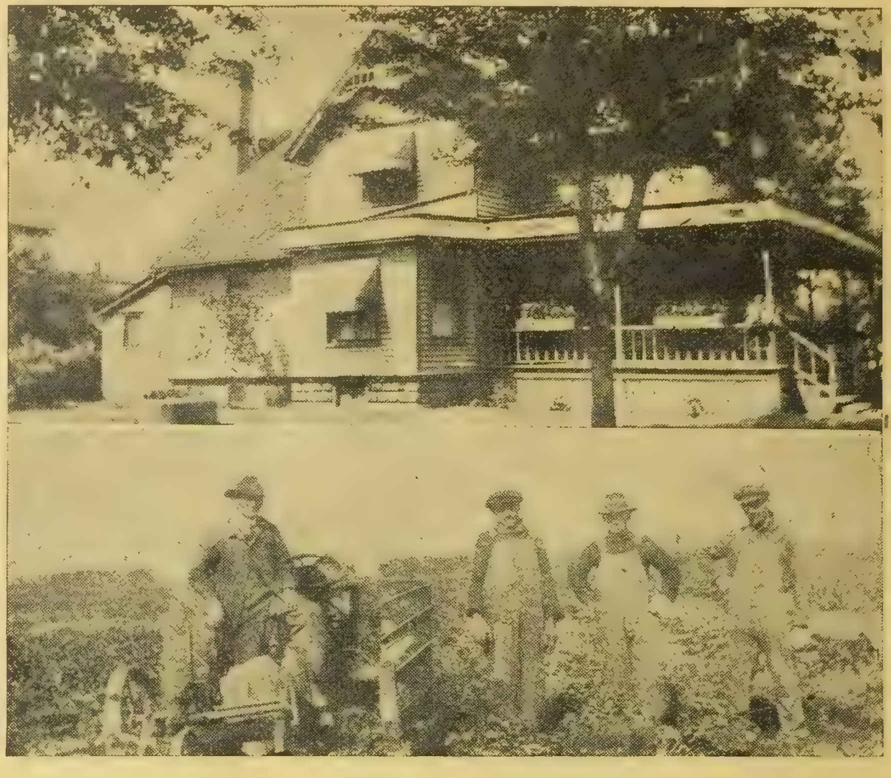
(Continued on Page 22)

What Will Beet Growers Get For 1923 Crop?

Authority Believes That Farmers Who Grew Sugar Beets the Past Season Will Make a Good Profit on Their Crop. Discusses Contract for 1924

By C. E. ACKERMAN

(Written Exclusively for The Business Farmer.)



ABOVE: The home of C. E. Ackerman, Durand, Michigan, Mr. Ackerman's farm contains 350 acres and he had 40 acres of sugar beets in 1923.

BELOW: Mr. Ackerman is shown here using tractor and plow which has been remodeled into a beet plow. Three contract beet workers are shown with Mr. Ackerman.

WHEN the 15th of February, 1924, rolls around the beet growers of Michigan will have received full settlement with the 17 sugar factories of Michigan and then we will know how the beet deal came out. Since this year sees 3 different contracts, the 45-55 labor aid contract and the famous 50-50 contract, the final outcome of these contracts and the higher price of sugar with also an extraction thus far that is above the average, the proposition is more interesting than usual. On account of very little having been written about the Michigan sugar beet industry by the growers, I am induced to give a general review of the industry from the growers' standpoint for the past three seasons. During the latter part of the year 1920 the sugar industry came into its after the war readjustment. The three outstanding conditions of facts at that time were as follows: 1st, there were around one and a half million tons of unmarketable surplus sugar. 2nd, the refund market for sugar was $4.60 per 100 pounds New York, and 3rd, the Federal Reserve Banks had curtailed all sugar loans. This indeed did make a gloomy outlook for the industry. Starting the New year, January 1st, 1921, the sugar factories came out with contracts offering $5.50 per ton for beets and went through the year getting a little better than 50 per cent of an acreage in the United States and around 80,000 acres in Michigan. At the end of the year the factories came out with financial statements showing losses of over $11,000,000.00. One Michigan factory even went so far as to get their financial statement showing over $1,000,000 loss printed in the congressional record.

The grower not being able as usual to furnish figures showing his loss, in dollars and cents, simply went broke and finally continued in the business as usual (a characteristic which applies to the farming business only). Although the after effects of this and other calamities the farmer has gone through at the same time is now being heard of down in Washington from political men with something to offer to help the farmer.

The beginning of the year 1922 saw a little improvement. Farmers got $7.12 for their beets and the average price of sugar was around 6 cents per pound.

The factories could not make any money this year on account of the high coal, limestone and material costs and mainly on account of the fact that they could not run a full season of 100 days owing to the fact that the growers would not grow the beets on account of the high costs and the low price of beets and sugar and also on account of an unsettled dispute between the Michigan Sugar Beet Growers' Association and the factories. At the beginning of the year 1923, the industry seemed to be in a deplorable condition. Many large growers of beets had decided not to grow another beet. Sugar factories stock went down over two thirds on the market and it looked as if many factories would close up indefinitely, and to some, it looked like losing their capital stock, they having depleated their large surpluses built up during the war. In fact, the business never did look darker for the factory and the farmer than at this time. Most growers had long since given up hopes of ever coming to any understanding with the factories in regards to a better participating contract asked by the growers' organization, and the factory men were also a discouraged lot of fellows, although their training enabled them to not show it in their faces so plainly like the farmer does. In due time, the forepart of 1923, all the Michigan factories came out with their contracts which were along the old style and offering $6.00 per ton for beets. Little headway was being made getting contracts and many farmers had dismissed the idea of ever growing beets again. Finally the Owosso Sugar Company broke away from the sugar manufacturing Association and came out with the long sought 50-50 contract, which gave the grower one-half of the average extraction of sugar per ton of beets, for the seasons run at the average New York price for the months of October, Novermber, December and January, and also a 45-55 contract where the factory furnishes labor assistance. Shortly after this the association factories came out with a new contract offering $7.00 per ton for beets and a little better sliding scale on the lower priced sugars. Then the Owosso company also came out with the $7.00 contract making three contracts for them in the field at the same time. This seemed to stimulate the industry together with the fact that sugar began advancing in price. Farmers called meetings of their organizations advising growers to try out the new contracts with the result that the Owosso company secured a full acreage harvesting enough beets to run their two factories to capacity for a full run notwithstanding the fact that this summer was a very bad one on account of draught in many sections preventing the germination of the seed, many acres being lost thereby.

This year 109,400 acres were planted to sugar beets an increase of 28,000 acres over last year, and all factories sliced beets with the exception of one at Marine City. In the United States the acreage was increased over 120,000 acres and 89 of the 99 factories in the country sliced beets this year, and will turn out approximately 900,000 tons of sugar which is about one-fifth of what we consume. It might be stated here that in Michigan we produce less than one-sixth of one per cent of the sugar used in the world and less than enough to supply Michigan itself. Thus it can be seen that there is little danger of over production of sugar in the United States for some time to come.

It also will be of interest to the sugar beet grower to know that the present rise in prices is world wide and is not confined only to the United States as some would have us believe, and that the most casual examination of trade statistics will show the world supplies are less in 1923 than in 1922 by over 1,000,000 of tons and that the decrease is entirely in the western hemisphere or in those places from whence the United States and the United Kingdom get their sugar. I would like to pass a word to the Michigan farm housewife that it would not be a bad idea to lay in 4 or 5 hundred pounds of sugar for next summer and fall. It may go lower, but the writer doubts it, as to its going higher, time will tell. It however is evident that we are coming near and nearer to a sugar shortage which

Baby Beef Plan Insures Good Cash Market For Michigan Herefords

SO much interest has been shown in the baby beef marketing plan devised by T. F. B. Sotham, of Michigan Hereford cattle fame, that we secured this article, based on an interview with Mr. Sotham. There is much of interest to you in this article whether you are a breeder of Herefords or not.

WHEN Hereford cattle men of the United States dig into the records to find the oldest Hereford breeding establishment they immediately turn up in Michigan, for here it is where they find one of Michigan's leading farms in the breeding of Herefords, the result of sixty-three years of consistent breeding. It is the herd established by Governor H. H. Crapo, of Swartz Creek, Michigan, and now under the able supervision of young W. W. Crapo, of Detroit. The first cows of this herd were purchased through Willian H. Sotham, father of T. F. B. Sotham, of St. Clair Michigan.

THOMAS FREDERICK BEAUBOIS SOTHAM

Looking back into Hereford history, we find that in various parts of Michigan were located some of the noted herds of the seventies and eighties. There was Tom Foster, of Fostoria; Fairfield, of Bay City; Phelps, of Pontiac; Sotham, of Bloomfield Hills; Crapo, of Flint; and many others. The elapse into the nineties saw the breed migrate into the West where they have ruled on the plains ever since.

The call of the cheap pasture lands of the West and the rapid increase in value of eastern lands made the West appeal to the cattle men of the eighties and the market for beef cattle was transferred to the West, with the result that the drain on eastern Herefords at very satisfactory prices ended with a thorough thinning out of Herefords in Michigan. Then the growth of the now great population centers adjacent to Michigan led to a great increase in the production of dairy products and helped cause a decline in beef-cattle demand in Michigan.

And now that the cheap pasture of the West has reached prices that make eastern lands compare favorably when beef cattle production is concerned, it is only fitting that Michigan lands should present the best opportunities for beef production. It is the contention of T. F. B. Sotham that two acres of $100 Michigan land will keep a cow; in the West in the great ranching sections it takes from five to twenty acres and sometimes more to keep a cow. Such land ranges from $5 to $20 an acre. Thus you have the same amount of interest to pay on land investment. Land in the West that takes less than this to keep a cow is equally higher in price, while in Michigan there is a good deal of land that two acres will keep a cow at a much lower figure than the above $100 per acre. Then again it is the contention of Mr. Sotham that Michigan, with her spacious barns thus comfortably housing her cattle in the winter eliminates the terrific mortality loss as a result of cattle being outdoors all winter.

As a result of Mr. Sotham's experience with Hereford cattle on the ranges in this country as well as in Argentina, South America, on the

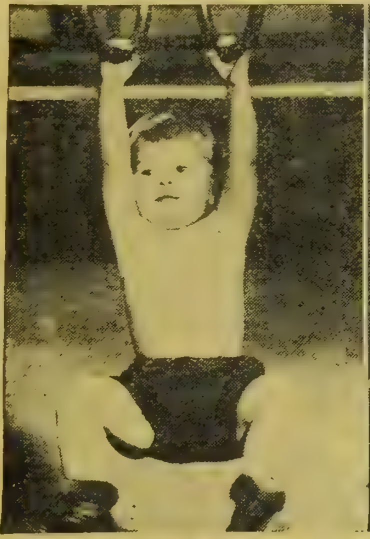
WILLIAM HENRY SOTHAM

PICTURES FROM FAR AND NEAR

RUTH ENJOYS FARM LIFE.—Here are "Babe" and Mrs. Ruth, with one of their Guernsey cows and her calf, on their farm at Sudbury, Mass. "Babe" says he is "as fit as a fiddle" and intends to continue to break home run records during the coming season.

ARTISTS SAY SHE IS MOST BEAUTIFUL ENGLISHWOMAN.—Mrs. F. A. Baldwin is the wife of Squadron Leader F. A. Baldwin, of London, England. This is the latest picture of the London beauty to reach this country.

UNITED IN BRILLIANT ROYAL CEREMONY. The Crown Prince of Sweden and Lady Louise Mountbatten, just after their marriage in London. They are the future rulers of Sweden. Their marriage unites that country with England.



THE WORLD'S STRONGEST "STRONG MAN".—John Salvatore, 22 months old, of St. Paul, Minnesota, can chin himself 15 times. He spends a half hour each day in gym work and is said to have never been sick one day.

STATE PRIZE WINNERS IN HOME ECONOMICS.—Each of the above girls proved herself to be the best in home economics in boys and girls club work during 1923 and represented her state at the International Congress of Boys and Girls Clubs, held at Chicago. The girls visited Montgomery Ward and Company where this picture was taken. Michigan's champion, Miss Ilda Meitzner, Utica, is shown in the insert in the lower, left-hand corner of the picture. She also appears in the group, second row from the rear.

A BULL'S EYE EVERY SHOT.—Mrs. Gus Knight of Upland, California, who has won the title of champion woman trap shooter of the Pacific coast. She hits the clay pigeons with alarming regularity and few men care to compete with her.

GRAND CHAMPION OF 1923 INTERNATIONAL.—Broadus White Socks, senior yearling Aberdeen-Angus, was declared the king of cattledom by Judge William Read, of London, England. The judge is standing in the background. This fine animal was purchased by the Sears-Roebuck Agricultural Foundation to whom we are indebted for this photo.

BRILLIANT STUDENTS AT U. S. COLLEGE.—Left to right: Margaret Hsieh and Grace Li, both students at Wellesley college. Miss Li is the daughter of a former president of China and Miss Hsieh is a famous chinese writer, who is well known despite her youth.

WHAT'S A COUPLE OF FORDS TO ANGELO.—Angelo Taramaschi, Italian wrestler, demonstrating before a large crowd in Boston, Mass., how he can hold two cars pulling in opposite directions. Many were afraid that there would be two Angelos where only one bloomed before, but he showed up the Lizzies at the demonstration.

DICTATOR FOR A DAY.—Here is Adolf Hitler, one-time leader of the Bavarian Royalist army, who became dictator of Germany for one day. Photo shows him conferring with one of his officers shortly before his downfall.

FAMOUS SCULPTOR MODELS LLOYD GEORGE.—P. Bryant Baker, well known English sculptor, with the bust of Lloyd George he modeled. The subject never sat for the bust, the sculptor studying him while he was in action.

STIRS PARIS WITH HIS GENIUS.—Little Pietro Mazzini, five and one-half years old, whose mastery of the piano has made him the sensation of Paris. He is declared one of the most brilliant child pianists of the age.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

VOTING FOR OVERSEER OF HIGHWAYS

I have been a devout reader of the M. B. F. for a good many years. It's good. Every citizen of Michigan ought to read it. Your Service Bureau is especially valuable. Please answer through this department this simple question. Has an elector of a township in this state, who resides in one road district and has also taxable property in the other road district of the same township, a right to vote for an overseer of highways in each road district where he has taxable property, or can he only vote for the one overseer in the district where the elector resides, regardless of how much taxable property he may own in the other road districts of the same townships?—W. F. B., Hillman, Michigan.

—In defining the eligibility of electors to vote for highway overseer in any road district, the statute provides that he must be a resident of road district, or an elector of the township, having taxable property in such road district. It does not require that he be both, but that he be either one or the other. If you own taxable property in one road district you may vote there for overseer, altho you may live in another. You may also vote in the one in which you are a resident, provided, however, that in both cases, that you are a qualified elector in the township. The statute does not limit the number of road districts in which any one person may vote, so you would be eligible to vote in each district in which you have taxable property.

This statute justly gives to those, whose property helps bear the burden of maintaining the highways, a voice in choosing the person who shall have charge of their maintenance. —Asst. Legal Editor.

LIABLE FOR ALL DEBTS

If a man signs notes and bonds with a person and the man he signs with goes to the wall could the signer fix his property so his creditors could not get it. Could he give or deed it to his wife or mother, or could a person mortgage for all he is worth? Will a joint deed hold good? Can an unmarried man hold the same amount of property as a married man with family? Will a joint deed held between mother and son be the same as man and wife? Is there any law against a man trying to defraud his creditors.—Mr. M., Carson, Mich.

—An individual's interest in property held under a joint deed is subject to levy on execution for the payment of his debts. Any transfer of property by a debtor for the purpose of defrauding his creditors is unlawful, and such a transfer could be set aside. A homestead is exempt from the payment of debts in most cases. —Asst. Legal Editor.

DISTANCE TO THE SUN

Dear Editor:—Will you be so kind as to answer through the columns of your esteemed paper the distance in miles of our earth from our sun; also the distance between our earth and moon; also the relative distance between the sun and moon at new moon and full moon.—C. C., T., Sand Lake, Michigan.

—The revolution of the earth around the sun once a year is not in an exact circle but rather an ellipse and the sun is to one side of the center of this ellipse. The earth reached its farthest point from the sun on this irregular orbit last July 5th when it was about ninety-four and a half million miles distant; the earth's nearest approach to the sun will be next New Year's day—about ninety-one and a half million miles distant. From an astronomical standpoint this three million miles difference between the nearest and farthest point to the sun is very small and astronomers roughly call the distance ninety-three million miles, which is the average distance of the two extremes.

The average distance of the moon from the earth is given as 238,840 miles but as the orbit of our satelite is also in the form of an ellipse with the earth at one side of the exact center, the distance varies from 221,617 miles, as it will be on December 6th, to 252,973 miles, as it will be on December 19th.

The relative distance between the sun and moon at new and full moon varies with the season. By using average figures, however, we learn the difference in miles to be a little short of a half million. That is, the moon is a half million miles nearer the sun at new moon than at full moon; a mere trifle, so to speak, since this figure is only about the 180th part of the whole distance between the sun and earth. The least possible distance between the sun and moon is about ninety-one million six hundred thousand miles. —Pritchard's Weather Forecast.

RECOVER DAMAGES

Will you please advise me what would be the proper thing for me to do in this case. I bought a Jersey bull calf, age 18 months. The bull was sold to me as a sire to be all right in every way. He seems to be perfectly healthy but is not a sire as I have had to take my cows to a sire ever since I have owned this bull, which has been better than six months. I went to the man I bought him from, stated the facts to him as they are and asked for an adjustment, either a bull that is a sire or my money refunded as this calf is no good to me as he is now. He said he could not understand it and up to date has made no effort to make the matter right. Now as I feel that I am entitled to an adjustment I would like your advice before I go to him again. Since my deal I have learned that this calf is not the first one sold here in the neighborhood by this breeder that has proved out this same way.—W. H. L., Belding, Michigan.

—If the seller sold you the calf as a sire, when in fact it was not a sire, you could recover from him such damages as you have suffered in an action on an implied warranty.—Asst. Legal Editor.

ASSESSING FOR COUNTY DRAIN

Please advise me in regards to County Drain. About ten years ago the county drain was dug. Several farms surface water drained into this ditch at about the middle. Though this ditch does not come within a half a mile we were assessed several hundred dollars special drain tax. We understand they assessed us a certain per cent of the entire cost of the ditch. Can they assess us for the entire cost of the ditch or for just that portion where our surface water enters their drain to the outlet?—G. D. S., Fremont, Michigan.

—In reply you are advised that property benefitted by the construction of the drain should be assessed a certain percentage of the entire cost of construction.—H. Victor Spike, Assistant Attorney General.

FAILED TO NOTIFY INDORSER OF NOTE

Will you kindly advise me on this matter? A gives note to B, it being endorsed by C. A does not pay. Note was due three months ago, but B did not notify C. Now must C pay the note? Thanking you in advance.—F. G., Charlevoix, Mich.

—B's failure to notify C, the indorser, of A's non-payment would discharge C, unless notice of non-payment was waived.—Asst. Legal Editor.

HOW TO PLANT RAMBLER ROSE BUSH

How should a rambler rose bush be planted, with rich manure around it or none at all? Should it be kept dry or moist?—Mrs. A. O., Carsonville, Michigan.

—While the ground cannot be too rich, the roses should not be planted in manure alone. The best land for growing Crimson Rambler roses is good wheat land. The plants should be thoroughly watered after planting, especially if it is in a dry time. —Thos. Gunson, Professor of Horticulture, M. A. C.

PAY TAXES UNDER PROTEST

What proceeding will have to be taken after the board of review of the township have refused to comply with the law of the state governing exemption from taxes of 80 acres of stump land? Applicant has complied with the law, but the board refused to act on it, claiming it would make other peoples' taxes higher, etc. The law has been strictly complied with so far, as far as the applicant is concerned. I was elected Justice of the Peace at our last election, and have been consulted in this matter. I would like to have your opinion and advice.—C. K., Ashley, Michigan.

—The party aggrieved by the decision of the board of review may apply to the Michigan State Tax Commission at Lansing, asking that body to review the action of the board of review. The owner of land illegally assessed may pay the taxes under protest and bring action against the township for the recovery of taxes so protested.—Asst. Legal Editor.

ONE PHONE HAS STRONGER GENERATOR THAN OTHERS

We have a telephone line here at Brohman. Get service through the Michigan Telephone Company at White Cloud. I would like to know for the benefit of the community here if a telephone is put on the line that has a stronger generator than the rest of the phones, will that have any effect on the other phones to prevent them from getting central? C. R., Brohman, Michigan.

—Ordinarily the subscriber on a rural line installs a telephone with higher resistance fingers than those contained in the other sets on the line, penalizes himself more than the others on the line because the other telephones having lower resistance ringer coils will consume most of the ringing current sent out from headquarters, and he will have difficulty getting his signals. This is true whether the telephones are bridged on a metallic line or bridged on a ground line to earth.

There should be no difficulty experienced by the other parties on the line for getting Central, if some one party had installed a high resistance set, unless there should have been trouble on the set so that the generator remains bridged across the line at all times. Such a condition would be almost the equivalent of a short circuit. The condition you described in your question would more often happen on the case of a new set being installed that had extremely low resistance ringer coils, which likewise would have the effect of a short circuit on the line.—A. R. Sawyer, Prof. of Electrical Engineering, M. A. C.

MIX-UP IN ACCOUNT

May I call for your help, as I'm in trouble with out local lumberman? I let an account run with him when building, and have since settled with him by paying off as much as possible at different times. I received a receipt each time and kept them but he always refused to give me a statement, stating he was too busy to make one out, and he never puts the price of each article on the slips, only the total. I settled with him in full last year, and dealt with him again several months ago, and now when I asked to settle with him a month ago he asked for over $70.00 more than he had coming. I then showed him my receipts and found he was mistaken, in fact, no mistake but swindle. I had lost one receipt of $22.40 so he still thinks he has this coming, at least. Can you please tell me whether I owe him this when he refuses to state the price of each article on his slips, and also refuses to make out statements?—E. L., Pt. Hope, Mich.

—If you have settled the old account with the lumberman, he could not include in the new account, items of the old one. I would insist on having an itemized statement of the account before paying it.—Asst. Legal Editor.

MUST FIGHT FIRE

Can a state fire warden compel a man to fight fire? Last spring a fire warden ordered me and some of my neighbors out to fight fire. We put in a whole day, and never got our pay. I don't care so much for the days work, but it puts one out a lot that time of the year.—G. T., South Branch, Michigan.

—Deputy fire wardens are authorized to impress any able-bodied men into the service of fighting fires when it is necessary to do so. The law provides that the services of such men shall be paid for at the rate of $2.00 per day.—John Baird, Director, Dept. of Conservation.

RADIO DEPARTMENT

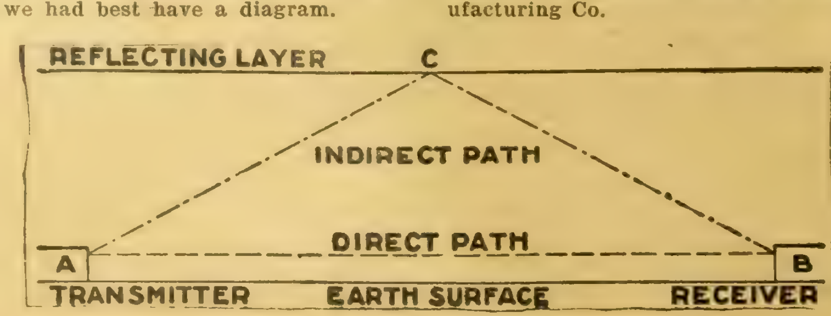
WHAT CAUSES FADING

MANY of us have experienced a feeling of great disgust when listening to a good concert from a broadcasting station to have the music gradually die out. This usually happens at the most interesting part, for instance, when a distant station is just about to sign off. Frequently the regularity with which the signals die out at the crucial point leads one to think that something has control of this phennomomen and is using this control with diabolical intent.

The periodical dying out of radio signals is known as fading. There have been many attempts to make measurements on radio transmissions to determine the exact cause of fading but few of these measurements have produced any worthwhile data. The best explanation of fading seems to be a theoretical one. It is believed that at a height of thirty or forty miles above the surface of the earth that the air becomes so rarefied that it becomes a conductor of electricity. As such it acts like a reflector of the electromagnetic waves by which radio communication is effected. The result is that the waves reach the receiving antenna not by one definite path but by a number of paths of different length. To make this clear I think we had best have a diagram.

"A" represents a radio transmitting station sending out electromagnetic waves which radiate in all directions. Some of them go directly to the receiving station "B" while others go by an indirect route up to the conducting layer and then down again. If the difference in length of these two paths is right, that is, a mutiple of the wave length, the waves will add and the effect produced will be greater than by direct transmission alone. But the difference in length may also be such that the waves do not add and thus the effect may be less than it would be by direct transmission. The reflecting layer is constantly shifting so that the reflection varies momentarily between the limits described resulting in varying intensity of the siginal received. This the fading.

This simple explanation of fading leads to several interesting things. The reflecting layer is very definite during the day. Hence there is less fading during the day and this seems to be the case. On account of the lack of reflection, the range of a station is much less during the day than at night and this we all know to be the case. It would also appear that it is impossible to send raido signals away from the earth. —By Roger H. Bryant, Radio Engineer, Westinghouse Electric & Manufacturing Co.



How Banks Operate Under the Farm Loan Act

Farmers Who Wish to Purchase Land Can Secure Long Time Loans From These Banks

By JOHN H. KRAFFT

THIS is the fourth and concluding article of the series prepared by Mr. Krafft, that has been appearing in THE BUSINESS FARMER. Mr. Krafft here discusses the Federal Farm Loan Act and how it makes it possible for a farmer to secure a long time loan.

THE Federal Farm Loan Act was not emergency legislation. Congress proceeded with great care, after a most careful and thorough study of the entire fields of rural credits. No legislation in the history of this country received more careful consideration. It was the first successful effort in the United States to organize farm credit and to provide financial machinery, and instruments of credit by which agriculture may go into the money markets of the world and obtain adequate funds at rates of interest it can afford to pay and upon terms adapted to the peculiar character of farming operations.

The Federal Farm Loan Act, establishing the Federal Farm Loan System under which both Federal Land Banks and Joint Stock Land Banks operate, is a system of finance borrowed from Europe. This system has been adapted to American conditions. It was developed in Europe through more than one hundred and fifty years of experience. There were several Commissions sent to Europe by the United States to study agricultural financing in the various European countries. These Commissions came back with a report to Congress and recommendations upon which the Federal Farm Loan Act was based.

The Act provided for a dual system of banking consisting of Federal Land Bands and Joint Stock and Land Banks. It created a Federal Farm Loan Bureau, part of the United States Treasury Department, and made provision for the appointment of a Federal Farm Loan Board which has supervision over the banks operating under this System. It divided the United States into twelve Federal Land Bank Districts and established in each one of these Districts a Federal Land Bank, and also provided for the chartering by the Federal Farm Loan Board of Joint Stock Land Banks. These banks can operate in not more than two states.

Under this Act the farmer is permitted to choose between two different types of banks authorized by the United States Government to make long term amortized loans. To borrow from a Federal Land Bank the borrower joins a local National Farm Loan Association. These National Farm Loan Associations are the agencies through which the Federal Land Bank Loans its funds. The borrower from a Federal Land Bank takes 5 per cent of his loan in capital stock in the local Association and has a double liability on this stock. The local Association in turn owns this amount of stock in the Federal Land Bank. The Federal Land Bank holds this stock as collateral against the loans of all of the borrowers in the association.

A borrower from a Joint Stock Land Bank makes his application directly to the Joint Stock Land Bank or through a local bank representing the Joint Stock Land Bank. He does not make and stock investment in the bank.

Both Joint Stock Lank Banks and Federal Land Banks are limited by law to an interest rate not to exceed 6 per cent. Both are limited to a profit of 1 per cent—the difference between the interest rate and the bond rate. Out of this margin of 1 per cent the bank must pay all operating expenses, salaries, rent, heat, light and other incidentals. Joint Stock Land Banks are limited to make loans not to exceed fifteen times their capital, which gives them a maximum gross profit of 15 per cent. Federal Land Banks are allowed to loan Twenty times their capital, which gives them a maximum gross of 20 per cent. Out of these profits, of course, comes the cost of management. These banks do not charge any commissions for making loans. The Federal Land Bank is permitted to make a charge for the cost of appraising the land by a Federal appraiser and the cost of examining the Abstract by the banks' attorney. In addition to this the local Association is permitted to make a charge sufficient to carry on the work of the Association and to pay the salary of the Secretary of the Association. A Joint Stock Land Bank is only allowed to make a charge for the actual cost of examining the land by the Federal appraiser and the cost of examining the Abstract by its Attorneys. They are not allowed to charge any commissions, neither are their correspondents allowed to charge any commissions.

Both Joint Stock Land Banks and Federal Land Banks are subject to semi-annual examinations by the Federal Farm Loan Board. Borrowers in both Joint Stock Land Banks and Federal Land Banks enjoy the same protection. Both types of banks are limited to loans not to exceed 50 per cent of the value of the land alone, pus 20 per cent of the amount insurable buildings add to the land to make the total value of the farm. The funds must be used for agricultural purposes or to take up an existing encumbrance originally created for such purposes. Federal Land Banks are limited to loans not to exceed $25,000 to one individual and to borrowers who actually live on and operate the farm. Joint Stock Land Banks are limited to loans not to exceed fifteen per cent of their capital and in no case to exceed $50,000, but are not restricted to borrowers who actually live on the land just so the funds are used for agricultural purposes.

The purpose of this dual system of banking was to give the farmer the choice of joining a cooperative institution and making a loan through the National Farm Loan Association from the Federal Land Bank and purchasing 5 per cent of his borrowings in stock in the Local Farm Loan Association, or of making his loan directly through a Joint Stock Land Bank without this stock investment. No loans are made either by Federal Land Banks or Joint Stock Land Banks to speculators or on questionable security or to borrowers of questionable personal standing. It is necessary in each case that the borrower has a reputation of meeting his obligations promptly and that he owns good and well managed security. The rates of interest in any type of a loan is based very much upon the type of security offered, therefore, Congress found it necessary to place restrictions in order to obtain adequate funds for the farmers through these banks.

After the loans have been made by these banks they are sent to Washington for final approval by the Federal Farm Loan Board. When approved by the Board, they are used as collateral with the Registerar of the District and bonds issued against these loans. These bonds are sold on the open market and the sale of the bonds is very much dependent upon sound judgment in selecting the security guaranteeing the bonds—in other words—by inspiring confidence into the bond buyer. The Government makes a guarantee to every bond buyer of either Federal Land Bank or Joint Stock Land Bank bonds that the security on these bonds consists of farm mortgages where the funds have been used for agricultural purposes and that no loan exceeds 50 per cent of the actual value of the land, plus 20 per cent of the amount insurable buildings added to the land to make the total value of the farm. In order to make good on this guarantee to bond buyer, the Federal Farm Loan Board appoints Government Land Appraisers. These appraisers are assigned to the various banks and must make an inspection of all loans and approve the loans before the bank can pay out the funds. It has been argued by some people that the amount these banks are allowed to loan under the Act should be increased. If these banks were allowed to make larger loans the result would be that the interest rate would be increased proportionately and while this would help a small percentage of the farmers, the fact remains that the limitations as they stand give most of the farmers the opportunity of making their loan through this System and of enjoying the benefits of the System. The restrictions, as they stand, operate to the decided advantage of the desirable borrower with good security.

In order to obtain a loan from the Federal Land Bank, the applicant makes application to the Secretary of National Farm Loan Association and to obtain a loan from a Joint Stock Land Bank, makes his application direct to a Joint Stock Land Bank or through a local bank representing the Joint Stock Land Bank. The applicant fills out an application form and swears to it before a Notary Public. Within a short time the land is appraised by the local committee in case the application is made to a Federal Land Bank and if approved by the local committee the application is sent to the Federal Land Bank and a Government appraiser re-inspects the security. In a loan from a Joint Stock Land Bank the appraisal is made only by the Federal appraiser, unless the Bank has an appraisal made by their local correspondent which Joint Stock Land Banks always do. If the loan is approved by the appraiser and also by the Bank the applicant is asked to deliver a completed Abstract brought down to date which must show a fee simple title in the name of the borrower. The procedure then necessary is the same as in any other farm loan, other than the fact that the loan must be made on the amortization plan and the farm must be inspected by a Government inspector and the title approved by an Attorney appointed by the Government.

By "amortization" is meant a contract under which a small payment per thousand of the loan in addition to the interest is paid off every year, and the loan matures in a given number of years. The banks operating under the Federal Farm Loan System are allowed to make loans running from five to forty years, however, most of these banks are making loans for a period of thirty-three years. The borrower, however, has the option of paying off after five years. This gives him a loan which runs at his option for from five to thirty-three years. Assuming that the interest rate on a loan is 6 per cent and a borrower obtains a loan from one of these banks for $10,000, a payment of $350.00 semi-annually will pay interest and entire principal in a little less than thirty-three years, as loan never falls due at any one time. You may ask how you can pay off this loan in thirty-three years by paying 1 per cent of the principal annually. If you should deposit $50.00 semi-annually at 6 per cent compound interest, it would amount to $10,000 in a little less than thirty-three years. The depositor would have paid in only $3,300, but the compound interest would, in that time, amount to $6,700. That is the plan on which these loans are made and paid, except that instead of making a deposit of $50.00 the borrower pays the same on the principal in his note. If the note is paid before maturity he only pays the unpaid balance. The borrower does not get something for nothing, he pays at the rate of $70.00 per annum on $1,000 borrowed from which is deducted interest at the rate of 6 per cent on the unpaid principal and the balance applied on the debt, but he never has any renewals with incidental expense. No one can disturb him in the possession of his land, nor demand further payments than that. The loan, in fact, never falls due in a lump sum but is gradually amortized or paid off by the regular semi-annual installments. The borrower has the privilege of paying $100 or any multiple thereof on the principal on any interest paying date after five years. The contract which the borrower signs runs for a period of from five to thirty-three years at his option. It has been the policy of Land Banks to allow payment of the loan before five years if there was some sound reason for this, however, when this privilege is granted there is a charge made for it.

Land Banks do not make loans on undivided interests or anything less than an absolute fee simple title.

Piconning Farmers are on the Right Track

READERS of the agricultural press have read much during the past year about the wonderful dairy development which has taken place in Arenac county. If the folks in northern Bay county have their way, they will also be included in those accounts, because they are preparing to follow the lead of their neighbor county to the north, and go much further.

Learning by close association and observation what active co-operation between farmer and business man has done in Arenac county toward greater prosperity by developing the dairy business, the Board of Commerce and the Grange at Pinconning are planning a similar project in their community. This desire has been accentuated by the advent of a new up-to-date milk-plant at Pinconning, owned by Mr. Tom Halpin who has had a great deal of experience with the manufacture of dairy products. This assures the producer of an excellent market for his milk and cream.

Various agencies, including the Michigan Agricultural College, the N. E. Michigan Development Bureau, and the Agricultural Department of the M. C. R. R., are being enlisted in this work. A series of educational meetings will be held during the winter at which authorities on dairying will be invited to speak. One of the first steps taken was on arrangement with the Agricultural Department of the M. C. R. R. for the leasing without charge of three purebred Holstein sires to three groups of Farmers. These animals have been delivered to their caretakers. Not only does this impress the farmers with the worth of a purebred sire but it also provides high-class breeding for about 30 farmers. Since all three of these animals are out of dams that made over 24 pounds of butters in seven days, and two of them are out of sires whose dams produced over 31 pounds of butter in seven days, it is very reasonable to suppose that these sires will be of great benefit in raising the standard of the livestock in the neighborhood of Pinconning. The fact that several purebreds have been purchased since by the neighbors would indicate that the object-lesson is not being missed.

Northern Bay county is ideally adapted dairying according to Mr. Halpin, owner of the new creamery. He says that he looked around for four months for a suitable location and that he thinks he has found it in Pinconning. He feels that wonderful developments will take place in dairying in that community in the next few years, and that all will prosper because of it.—E. J. Leenhouts.

Does Your Son Want to Become a Veterinarian?

Promising Future For Young Farmer Boys Who Study Veterinary Science to Fit Themselves to Guard the Health of Our Farm Animals

By WARD GILTNER

Dean of Veterinary Medicine, Michigan Agricultural College

(Written Exclusively for The Business Farmer)

SYSTEMS of agriculture differ in different lands. In America it rests substantially upon animal industry, and American agriculture with all its defects and unsatisfying features, is, all things considered, the greatest, the most efficient and the most satisfying system of agriculture that the world has known. It is a fairly safe assumption that the relationship of animal industry to the success of American agriculture is one of cause and effect. A weakening of animal industry in America means a serious weakening of agriculture; a change in the system of agriculture involving the reduction of animal industry to a lesser role means a less satisfying system.

The maintenance of a successful animal industry does not depend on following a simple formula. I do not know that we are interested at the present time in a program of increased live stock production but it seems to me that the same method for achieving such an end might be used to bring about a more profitable animal industry. After reviewing all the possible ways whereby there might be an increase in our available meat food supply former Secretary of Agriculture Houston said: "But an easier and more definite program for a large increase in the meat supply involves the eradication of the cattle tick, of tuberculosis and of hog cholera, and the prompt suppression of such diseases as the foot and mouth disease."

Is it not a fact that the maintenance of the health of live stock is the most logical and the more certain way both to increase and economically to foster animal industry? Human experience has developed a method and means to accomplish this desirable end and that is through veterinary science. Science applied to thė sloution of the problems of animal industry has made possible the proud position of American agriculture. The veterinarian in American is called upon to protect the horses and mules of the Army through the medium of a well organized and competently manned veterinary corps. A veterinarian heads the Bureau of Animal Industry of the U. S. Department of Agriculture and is aided by the largest well trained body of veterinarians (about 1500) in the world. It is the service of these men that protects the country against entrance of foreign animal plagues, such as cattle plague and foot and mouth disease, or eradicates the disease before it makes headway if it gains entrance into the country. Accurate knowledge backed by good judgment is required in such work. Investigations into the nature of disease must be in progress constantly. The veterinarians of the Bureau are also required to assist the various state veterinary boards and commissions to eradicate or suppress such diseases as Texas fever of cattle, dourine of horses, tuberculosis of cattle and swine, hog chorera, scab of sheep, cattle and horses and many other diseases constantly menacing the health of domesticated animals. It is the function of these men also to inspect the meat that is slaughtered in establishments that engage in export or interstate trade, thus protecting the health of the people.

The various states must maintain an adequate corps of trained veterinarians whose honor and integrity are unquestioned and whose professional training is on a par with that required by the learned professions. Municipalities demand the services of veterinarians in the capacity of meat and milk inspectors and to protect the health of animals in the various city departments. Many large private establishments employ veterinarians to attend their valuable live stock possessions. The great English race horse, Papyrus, was attended by a veterinarian on his recent visit to this side of the Atlantic.

Big Field Is Private Practice

Of course the great field for the veterinarian is private practice. The farmer must expect more from well trained, high principled veterinary practitioners than from any other source in his efforts to ward off disease from his horses, cattle, swine, sheep and poultry. To this list of animals must be added pets, such as dogs, cats and others, in which the city dweller has an equal interest. and fur bearing animals, especially the fox, now demanding expert veterinary service because of the effects of domestication on their health.

WARD GILTNER

"AMERICAN agriculture depends on animal husbandry, the success of which depends upon the health of farm animals. The health of farm animals can bė maintained only by adequate veterinary service. The number of students in veterinary colleges has fallen from about 3,000 to about 500. About half the schools have closed; one school closed in November; another has no freshmen and will probably close soon. So far as the closing of these schools is concerned it seems a fortunate circumstance that they are all private enterprises. Veterinary education is a matter of public concern and must be supported by the public, and it is a serious matter that there are only about one-sixth as many students preparing themselves to become care-takers of America's animal husbandry as there were before the war. The disasterous effects of this situation will not be felt for four or five years, but it is certain that within a few years we will suffer from the lack of properly trained young men to look after veterinary practice, meat and milk inspection, animal disease eradication and other aspects of veterinary service."—Prof. Ward Giltner, Dean of Veterinary Medicine, M. A. C.

A lessening in the number and value of farm animals is neither permissible nor possible if we are to maintain our standards of living, except in case of the horse which may be partly, and only partly, replaced by the tractor, truck and automobile. Space and time will not permit of a discussion in this article of the relative merits of draft animals and the internal combustion engine as farm power, nor of the possibility of substitutes for the domesticated animals upon which we depend for food, clothing and other useful things. For those who are alarmed by false predictions of an animal-less age we submit some cold statistical facts. Comparing the figures of 1910 with those of 1920 for numbers and values of live stock we find no cause for alarm.

Now what about the statistics side so far as the veterinarian is concerned. In 1910 there were 199,000,000 animals on the American farms with a value of $5,274,000,000 or 17,000 valued at $413,000 for each veterinary practitioner. In 1920 there were 215,000,000 farm animals worth $8,556,000,000, that is 24,634 having a value of $912,000 for each practitioner. This is the way Dean Moore of Cornell figures it out. These figures do not include poultry or pets.

In 1916 there were about 3,000 students in veterinary colleges in America. There were 22 of these schools, 12 privates and 10 state. Today there are 12 state schools and one private school which has no freshmen class, an indication of early cessation of activities. These schools have less than 600 students enrolled. It is estimated that over 500 veterinarians leave the profession every year because of death, disability or from other causes. In other words nearly as many are lost each year as are now enrolled in all the schools, and the schools release by graduation less than one-fourth of their total number of registrants each year. In 1914 the average attendance in our veterinary colleges was 120, now it is 52 (ranging from 16 to 90).

There is far less interest in veterinary education in America than there is in European countries. France is training more men to combat animal disease than is the United States while our animal industry is valued at an incomparably higher figure than is the French. Compare the following figures for France and the United States for 1921:

France: 13,343,000 cattle; 5,166,000 swine; 9,600,000 sheep; 2,892,000 horses and mules. United States: 41,923,000 cattle; 63,000,000 swine; 37,209,000 sheep; 18,853,000 horses and mules.

We have three times as many cattle, twelve times as many swine, four times as many sheep and nearly seven times as many draft animals as has France. Our Federal government is not spending a dollar on veterinary education while some of the smallest European countries, no more important than some of our states, are spending about as much as all our states combined.

An explanation of the situation is not so easy. In the first place the veterinarian in America has not occupied the lofty position in the public eye filled by the European veterinarian. This is largely a matter of circumstance. Ours is a new country, hewn out of the wilderness only recently. Our agriculture has owed more to our natural resources and to the sturdy character and indomitable will of the pioneer than to a refinement of skill and traditional practice or specific education. The veterinarian was as rough and ready as the pioneer farmer. The designation "horse doctor" was more or less accurate in its descriptive quality. Veterinary education, like all technical and professional education in America was pitched on no higher plane than conditions demanded. With the development of agriculture and agricultural education and their consequent problems, veterinary practice and education have developed—it is no vain boast to say that they have kept apace and it is with pride that both the agriculturist and veterinarian can justly boast of the rapidity of the pace.

Students of Better Class

Today the veterinarian is educated largely at the expense of the state in well—not too well or well enough — equipped and properly manned colleges usually associated with agricultural colleges. The training of the veterinarian is thorough, intensive and extensive. The methods are scientific and effective. The personnel of the profession is becoming high class—consisting of men of character, personality, high ideals and marked ability. Modern veterinary practice demands that its votaries keep abreast of the times in respect of their ability to turn the most recent discoveries in medical science to the advantage of their varied patients. But they have so much to live down! And yet so much achievement to glory in! There is a great need for the general public, and especially parents of available young men, to become acquainted with the nature, the purpose and the vital importance of a profession that is charged with the responsibility of maintaining the integrity of a great essential industry. The profession is not over crowded, the work is fascinating and honorable, its members occupy the highest positions of honor, trust and responsibility in their respective communities.

But agriculture is in the dumps which fact reacts unfavorably upon veterinary science and practice. Perhaps it is fortunate that many poorly qualified men—men who were never well prepared for their training and consequently never well trained, men who have neglected their opportunities to keep themselves informed of the advances in their science and practice, men who may be naturally ill adapted to the peculiar requirements of the profession—it may be fortunate that some such men are leaving the profession to go into business. Agriculture will speedily, or in due time, recover, there will be renewed interest in the pleasure horse and in pet animals and then who will look after them in sickness and advise their owners in order that sickness be avoided? Our veterinary colleges are graduating less than three qualified men annually for each state in the Union. In some states more than that many new positions are being created each year. Young men entering college now are preparing themselves for service four years from now. What will be the situation then? Certainly not better in so far as the number of available men is concerned.

There may be some thoughtless persons or some disgruntled clients who rejoice or at most see no cause for alarm in the veterinary situation. They would admit our premises but not our suggested conclusions. Is there not some other way whereby the livestock industry may be protected? Yes, undoubtedly; but it would be nothing but veterinary science and practice under another name or guise. For after all

Fordson

"In every age and in every section of the world, the happiness and prosperity of the people, generally speaking, can be measured by their success in harnessing power so that each individual can produce more with less effort."

A score of years ago Henry Ford recognized this.

And lest the happiness and prosperity of farm life, the life to which he was born, fall behind the industries of the city, he patiently tested, built and rebuilt in search of a dependable farm power.

The farmer has been handicapped—compelled to sell the things he produced by slow and laborious methods and to buy clothes, house furnishings farm machinery, and other material produced more economically with the aid of power.

The Fordson has changed this. The production of bigger crops, the opening of new sources of farm income are possible now with proper power on the farm the same as in city manufacture. This is being proved today on thousands of Fordson farms.

Tilling in a matter of hours the same acreage that formerly took days, increasing farm income with work often neglected or left undone, replacing work animals with profit producing livestock, Fordson farmers have found life more pleasant and profitable.

Galvannealed
the Triple-Life Wire
Cuts Fence Costs in Half—
is GUARANTEED to last 2 to 3 times longer in any standard test and to have 2 to 3 times heavier zinc coating than ordinary galvanized wire. It should last many years longer; therefore, cost far less than you paid for your present fence.
"Galvannealed" wire amalgamates the rust-proof zinc coating INTO the steel; galvanizing merely lays it ON. That's what will make "Galvannealing" last so much longer than ordinary galvanized wire.
Stiff stay wires and well crimped line wires locked together with the famous little Square Deal Knot so tight they are guaranteed never to slip, make Square Deal a firm, long-lasting, economical fence. 50c copy of Ropp's New Calculator sent free to landowners who write for catalog that tells all about the new high test. What the Neighbors Say

THANKS FOR PRIZE MONEY!

I WISH to advise you that we received the $10.00 prize you sent us for the best home-made bean picker plan. We hereby wish to express our sincere thanks for the same, to Mr. Gerks we also wish to extend thanks. We feel we drew a good plan and we know if anybody makes one like it they will be satisfied with its work. We also wish to state that we couldn't get along without your valuable paper, it covers all branches of farming, so thoroughly that we find something interesting on practically every page of the issues. Our satisfaction is clearly indicated by our last subscription renewal, when we renewed for 5 years in advance. Only wishing we could be of some service to you, I am,—John Bos, Marion, R3, Mich.

SOLDIER FAVORS BONUS

DEAR Editor: Just a few lines in regard to your editorial "Mellon urges tax cut."

Sounds to me very much like the propaganda of a certain well know Chamber of Commerce. Maybe it is? However, this same Mr. Mellon piled up millions upon millions of dollars for himself and associates at the expense of the taxpayers of this country, and, as it often looks, at the expense of the men who fought. Yes it is every American's duty to fight for and uphold our country in time of need, but that is not saying advantage should be taken of their patriotism to beat them out of what they so justly earned, while those in snug jobs at home were making from eight to fifteen dollars a day and those who are fighting the bonus so hard now, were making millions and grafting right and left.

I am telling you right now when you say you have not talked to a soldier who was very strong for a bonus, that you have talked to a darn few soldiers. I am personally acquainted with about three hundred service men, and I have never heard one say he was anything but in favor of it, and at the 32nd Div, Reunion at Grand Rapids last summer, I heard about three thousand voice their approval.

I also notice that in almost the same breath that you denounce the bonus, you approve a bill to give Germany $70,000,000. WHY? Because it might bring up the price of beans a few cents. It is the wish of a large majority of the people that a bonus be passed and you know it, and if it were not, how do you figure our representatives would be building political fences by passing it. I will close, hoping you will be a man fair enough to show the soldier's side of this question as well as the interests that are wishing its downfall.—H. Calkins, Highwood, Mich.

ABSTRACT COMPANY REPLIES TO "E. K."

DEAR EDITOR:—In your issue of September 29, there appeared an article from one of your subscribers signed "E. K." from Cass City, regarding abstracting and particularly regarding a certain abstract which he claims to have purchased from us. He particularly claimed that the charges for work done on this abstract were exhorbitant, and complained of both charges and lack of guarantee as to accuracy. Will you kindly print for us in your valuable paper, the following reply:

His first suggestion is that abstracts should be made by county officials, and implies that such work would be more reliable and would cost less. The county official elected by the people for a period of two years, enters his office with no experience in the work, but must gain this experience by doing the work. During the busy season of the year when transfers of property are frequent, he is kept busy with this work of his office, and this is just the time when abstracts are most needed.

A competent abstractor could not go into the office of the Register of Deeds and make a complete abstract of any parcel of land from the records there found and certify to it as being correct. This may seem strange as the records are all in that office. But these records 'consists of approximately 120,000 deeds and 100,000 mortgages, assignments and discharges recorded verbatum in a chronological order, the first records in our county being made in 1851, and following one another as received for record with no distinction as to land therein described.

To compile an abstract from these records, one may look in the Tract Book and find the name of the person locating that parcel of land. Then we must follow the index of name until a conveyance of that parcel is made by the first owner, then take the grantee's name and foltake the guarantee's name and follow in the same manner, through sixteen books of indices of deeds and twelve books of indices of mortgages. But it often happens that the title does not run smoothly, an owner having perhaps abandoned the land, or perhaps a grantee does not place his deed on record, and then we are lost. But perhaps we know the name of the present owner and can tract back in the same way, beginning with the latest index book and going backwards to the beginning, or until we again become lost because of the dropping out of the party for whom we are looking. And we can go through each mortgage index following the name of those whom we have found to be the owner at one time of the parcel we are interested in, thus getting as nearly as possible, a good chain of title. But on lands in Tuscola County, particularly, there are numerous miscellaneous transfers not to be found in any way except by a careful perusal of each of the 200,000 transfers, and this is a task which it is supposed that a clerk could do in less than half a day and that a county official should be expected to do. An abstract compiled in such a manner, even approximately correct, would not be ready when required, and the cost would certainly be worth talking about if paid for by the time required to do such work.

"E. K." further states that his land abstracted consisted of about eight acres located partly in the Village of Cass City, that the charge of Fifty Dollars was outrageous, and that what he has as an abstract isn't worth much, and further states that he thinks it could have been made in much less than half a day. He also asks some interested person, even a practical abstractor, to answer. So let us see just how this particular abstract was made.

First, an abstract office is made up of vaults in which are kept copies of all the records from the office of Register of Deeds. These have been compiled from the beginning of the records, when time, labor and material were inexpensive, having been carefully guarded in vaults from loss by fire or other destructive agency. These records have been transferred to another complete set of books, one book for each township, each divided into 36 parts, into each of which are put all the transfers affecting that section of the particular township. There are also books for the villages and each village book is also divided into parts, so that each block of the village has a section of its own, and the various transfers affecting these separate blocks are placed therein, a transfer affecting several different parcels being placed under each division affected.

These books form a basis for the abstract work and represent much time and thought, and their value must form a part of the cost of an abstract. An abstract around any village represents many hours close study before any attempt at writing the document is made. The descriptions must be studied, so that all parcels which in any way cover the parcel concerned, are included and all others rejected. These must then be arranged so that a complete history of the parcel of land is shown. Sometimes two or three days are accupied in studying upon one description, before everything is arranged to form the most complete abstract possible from the recorded transfers. After this is done the abstract is written. Then it is compared with the record to be sure that nothing has been omitted. In cases where apparent breaks in title exist, records in offices of Judge of Probate and County Clerk have been searched in the hope of finding some paper which, if recorded in the office of Register of Deeds, might add to the clearness of title and the office of County Treasurer is also entered looking for the tax record.

This, then, is the finished product sent out, being always examined by one who has had years of experience before being mailed, and this work, and the experience, and the intrinsic value of the records all enter into the cost of the finished abstract.

"E. K." is right in thinking that an abstract made from the last twenty years records would be of little value. The only excuse for the existence of an abstract is that it shows a complete history of the title, and that must come from the time of location of the property of its value is lacking. Of course it must be understood, in this connection, that an abstract does not guarantee perfect title. An abstract is simply a history of the title made for the purpose of disclosing errors, if any exist, and cannot change documents to make corrections.

The statement that "E. K." would not object to paying well for a real service seems to have been answered. If an abstract showing a complete history of the title is of value, we consider our work described above, to be a real service. If not, we are wasting not only our time but much mental labor which should be used in a good cause. But we believe that it is only lack of understanding of the real service given by the complete compilation of an abstract that has led to this discussion.

As for some different system, there is no other way by which ones title to property may be determined. A state may not decree a good title in a person who is holding possession of a piece of land without satisfactory evidence that no one else has a good claim to such land. For this purpose, there must first be secured a complete abstract of title and a clear title must be shown, oftentimes expensive court proceedings being required to clear old clouds upon title, and then a Title Certificate may be issued by the state in which such a system has been adopted. As for the reduced cost, a recent visitor to our office, commenting on the reasonableness of our charges, spoke of the cost of abstracts secured in a state in which this system is used, and aid that his firm often had to pay $200 or $300 for one abstract. As for the value of this system, the fact that many decline to deal with titles so registered, does not give us full confidence in its use.—Ealy & Co., Abstractors, Tuscola County, Michigan.

TO INCREASE SALES OF PRISON TWINE

DEAR Editor:—I have seen by the papers that the Michigan farmers were not buying as much prison twine as they should. One reason is I think that the persons who order it cannot take the time to canvass their townships to see about what they can sell. I ordered one-half ton and if I could have had two ton I could have sold it by doing a little advertising, I believe. If one person in each township could order what they could sell and give good bonds or security for the amount, and settle with the prison every two weeks and not sell any of it, except for cash, the sale of twine could be increased double. I know it could more than double in my township. I believe the farmers ought to support this to the limit. I would like to hear from someone else who has a better plan.—Wm. R. Symons, Arenac County, Mich.

OUR 1924 COVER MODEL

JOHN ALTON LORD, of Lapeer county, is the young gentleman who so kindly consented to pose for the cover of this issue. He is the son of Mr. and Mrs. F. A. Lord and his father is the owner and editor of the Lapeer County Clarion and the Otsego County Herald. Evidently this young man is optimistic over the prospects of 1924—so are we and we hope you are!

Home, James!

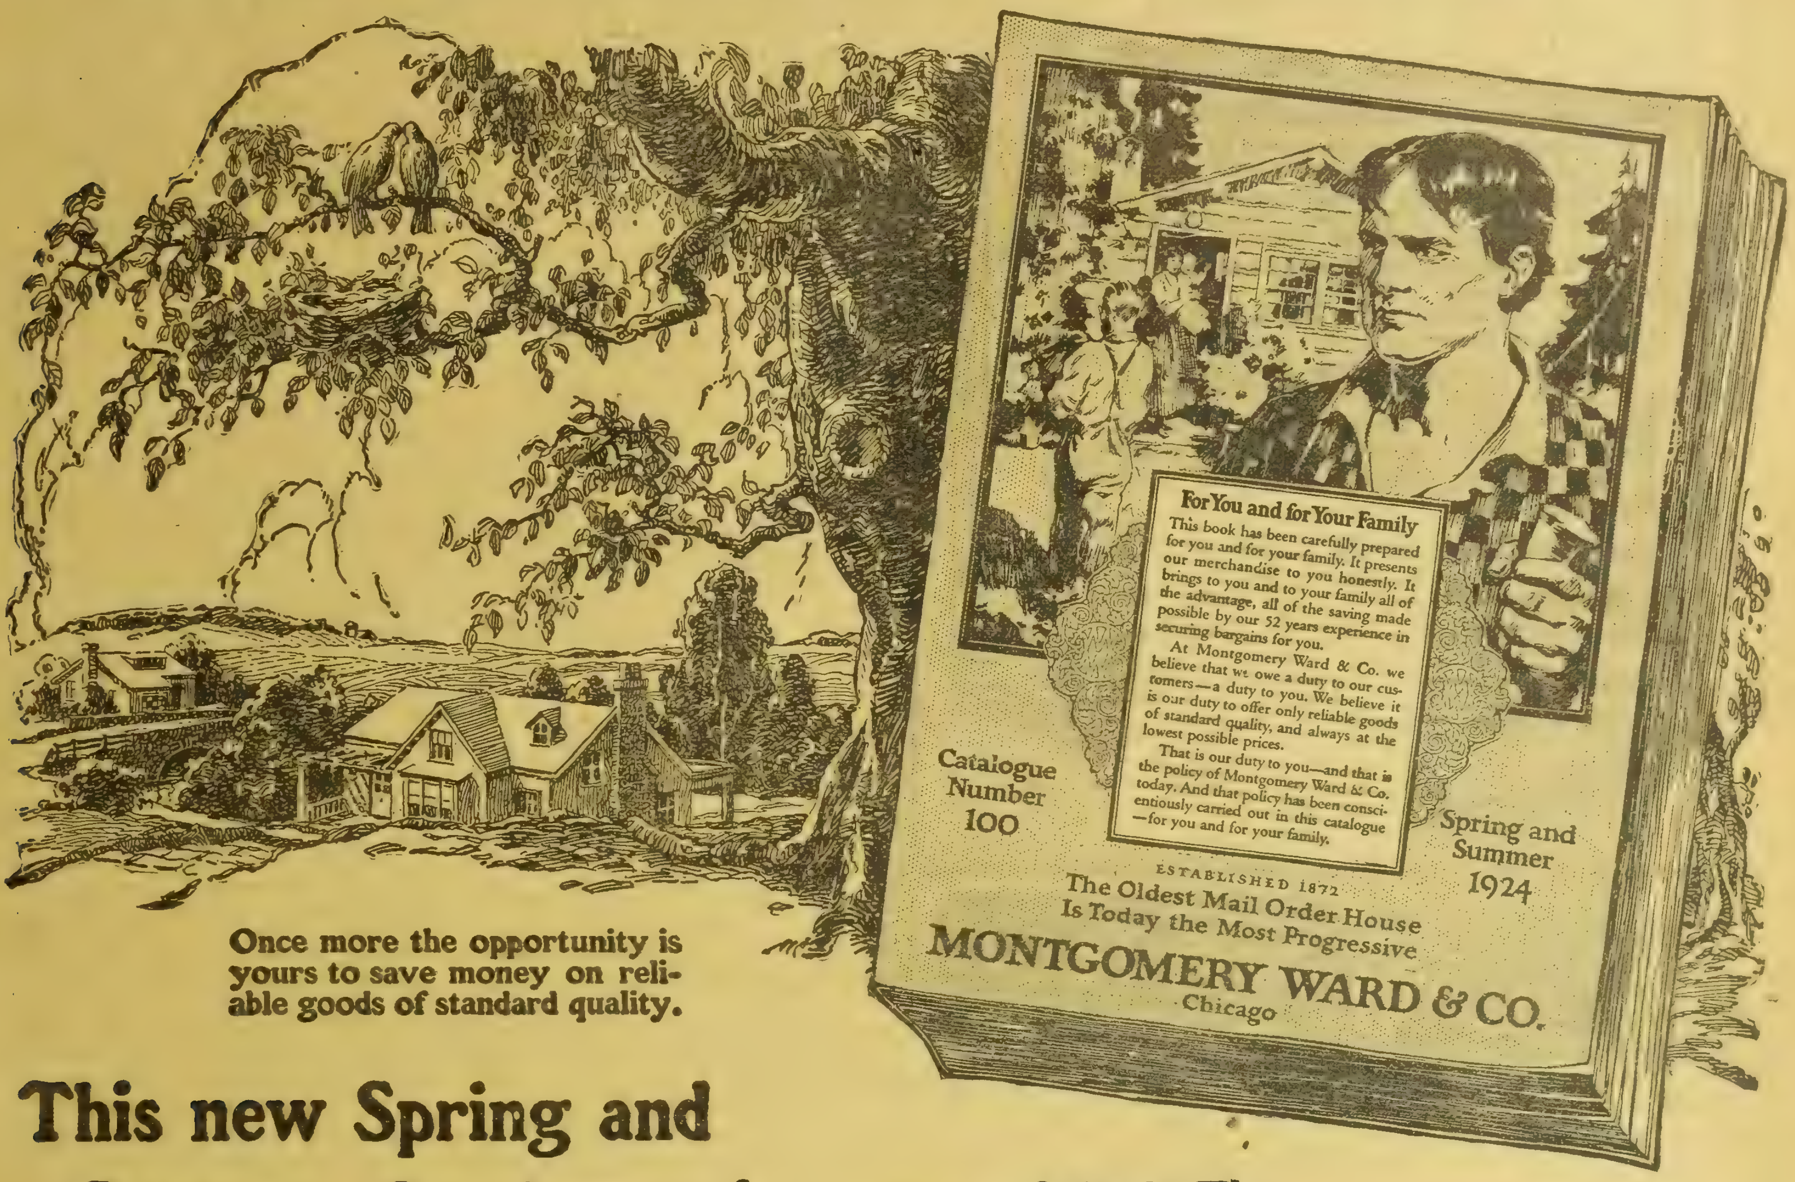
Montgomery Ward & Co.

The Oldest Mail Order House is Today the Most Progressive



For You and for Your Family

This book has been carefully prepared for you and for your family. It presents our merchandise to you honestly. It brings to you and to your family all of the advantage, all of the saving made possible by our 52 years experience in securing bargains for you.

At Montgomery Ward & Co. we believe that we owe a duty to our customers—a duty to you. We believe it is our duty to offer only reliable goods of standard quality, and always at the lowest possible prices.

That is our duty to you—and that is the policy of Montgomery Ward & Co. today. And that policy has been conscientiously carried out in this catalogue—for you and for your family.

Once more the opportunity is yours to save money on reliable goods of standard quality.

This new Spring and Summer Catalogue is yours FREE

This book is yours Free. This new, complete catalogue—offering almost everything you need—is yours merely for the asking.

And what an opportunity this is for you! It brings 50 great stores—a whole city shopping center—right to your door. It offers you an opportunity to save money on every purchase. An opportunity to know before you buy, the lowest price, the right price to pay. An opportunity to buy from a house whose first rule is that you must be pleased with every bargain or you get your money back.

A Real Cash Saving this Season for You

Fifty-one years' experience in buying and manufacturing, in choosing worthy, serviceable merchandise has gone into this book—to insure the biggest possible saving and the greatest possible satisfaction for you and your family.

Fifty million dollars' worth of merchandise bought when costs were lowest, bought for cash, and manufactured just for this Catalogue. This is the enormous cash buying power, backed by long experience, that makes possible these savings for you.

In the East, in the West, in the South, and in Europe, our organization of over 100 buyers search with ready cash for low prices—for bargains. But we never buy merely cheap goods. We never lose sight of your satisfaction with what you buy.

Ward Quality Means Reliable Goods Always

You will get from Ward's only goods that will stand *inspection and use*. We never sacrifice quality to make a low price. We offer only the kind of goods that is *best for you to buy*—the kind that will hold your patronage.

For fifty-one years—Quality has come first at Ward's. And to you who have never bought by mail, we say that we do not believe any business house exercises greater care in expertly testing and proving its merchandise than Montgomery Ward & Co.

Your free copy of the new, complete Catalogue is waiting for you. We can do no more than make you the offer. Don't miss the saving and the satisfaction that may as well be yours.

Everything for the Home, the Farm and the Family

FOR WOMEN: In New York our own Fashion Experts see every new Fashion creation. And we have selected for you the best and most beautiful of New York Styles. To every woman, the young woman and the girl, we offer the opportunity to be dressed in good style and good taste—without paying the usual "Fashion Profits." The Woman's Section of this Catalogue will be a delight *to you*.

FOR THE HOME: Beauty and Comfort and Usefulness—each article we sell for home decoration and home furnishing has these merits. Everything is selected by experts. To the woman interested in beautifying and modernizing her home, this Catalogue offers a treat indeed. Everything practical, everything new, and everything at a saving that makes possible the purchase of more new things than you had planned.

FOR THE FARM: For fifty-one years we have been friends of the American Farmer. And he has been our friend. We are continuing our help by working harder than ever before to make his savings greater and to make his money go farther. Everything must be to his complete satisfaction. This Catalogue offers almost everything for the farm—from poultry and stock supplies to fencing, hardware, and tillage tools.

FOR MEN: Overcoats, suits, shoes—everything for man's, young man's and boy's wear in good style and of serviceable quality. Tires, auto accessories, batteries, everything for the automobile. This book shows, in fact, almost everything a man wears or uses or that is of interest to a man, and the prices offer a saving—always.

Send for the Catalogue

We will send you the Catalogue free. Write for the book—this coupon or a post card will do. Study this Catalogue leisurely in your own home. Learn for yourself the advantage of buying by mail—of buying under our ironclad guarantee that has stood for fifty-one years: "Satisfaction guaranteed or your money back."

Write for this Catalogue. See for yourself the saving, the convenience, the satisfaction that Montgomery Ward & Co. offer you.

THE E-B NEW SPREADER

The Spreader You Want

When you buy a manure spreader you want:

1. A machine that will stand up under its work year after year without giving trouble.
2. One that will spread evenly, and well beyond the wheels, and will chop the manure into fine bits to mix easily with the soil.
3. One that is easy to load—with a box that is only waist high.
4. One with pivoted, auto-type front wheels that turn sharp corners.
5. A spreader with no apron slats, gears or worms to break or get out of adjustment.

Because you get all these things, and more, in the E-B Spreader, it is the logical one for you to buy. Our free booklet gives further information. Send for it.

What Will Beet Growers Get For 1923 Crop?

(Continued from Page 4)

will be more manifest this next spring than last spring.

The big question in the growers' minds at the present time is what will we get for our beets? It cannot be answered for certain until after February the 1st, 1924. And anyone that has stated any price, is simply talking for effect, as the average extraction cannot be known until after the factories close which will not be known until February 1st, 1924. However, I am warranted in stating that my opinion is that it will be good in both extraction and price. One factory manager has told me that up to date the extraction has been above the average, which is about 250 pounds per ton of beets, and the average New York price of sugar since October 1st is around $8.80 for cane.

Another question which is aggitating the growers mind is what kind of contract will the 1924 contract be? This question is no doubt in the minds of the personnel of the factories. Some say there will still be the three contracts for next year, some say the factories will get together and come out with one emboding the good points of all three. I believe this can be done. Further I believe it should be done. Let me suggest a contract embodding a participating contract on a 50-50 basis, charging a certain sum per acre, where labor assistance is furnished and a safe minimum substantial first payment of say $6.00 per ton which would relieve the minds of our growers that are doing business entirely on borrowed capital. I may say frankly that I cannot find a year where the grower actually did gain anything financially by having a guaranteed minimum price in his contract, but if it makes us feel better, why let's have it.

In closing, there is one other question that is bothering the minds of the growers and that is the accusation that they are employing child labor in the beet fields. My opinion is that these that are bringing the charges are not familiar with the facts of the case. It was charged by Mr. Owen R. Lovejoy, Secretary of the National Child Labor Committee that the beet workers children lost 63 per cent of their school time. This if true is not on account of beet work, as schools are closed for the summer, and the harvest does not begin until about October 15th and is done about December 10th and very few children under 16 years can do much topping beets. The writer sends a picture of some of his beet workers that represent the kind that really pay to have in the beet field. Mr. Lovejoy charges that work in the beet fields is detrimental to the health of children, not being a doctor I cannot say. However the writer has labored at most all kinds of farm work since he was six years old, at such work that he could do and has acquired thereby a practical knowledge of his business that is worth a great deal of money. Besides has formed habits of industriousness that lots of children nowdays are not getting. As far as I have observed, the best workers children are not overworked, neither are they under-fed, as stated by Mr. Lovejoy and I have been in every beet growing section in Michigan.

According to Dr. Carl E. Buck, epidemiologist of the Department of Health, there are not so many under-nourished children in the poor sections of the cities as there are among the wealthier class of people, as the food the poorer class of children get is plain, but nourishing, whereas, the children of the rich become dainty in their eating habits and therefore form abnormal appetites not to their good. It this is a fact then moving these children out of the crowded city into the open country in the summer time certainly cannot be detrimental to their health. Especially when their work and play is in the open air. As far as housing conditions are concerned, it should be made clear that the sugar companies are renting houses that are occupied by farmers themselves a couple of years ago, having since moved into the cities. There are a few of the "beet shanties" being used, but they compare very favorably with the usual summer resorter's cottage that he lives in when he takes his vacation.

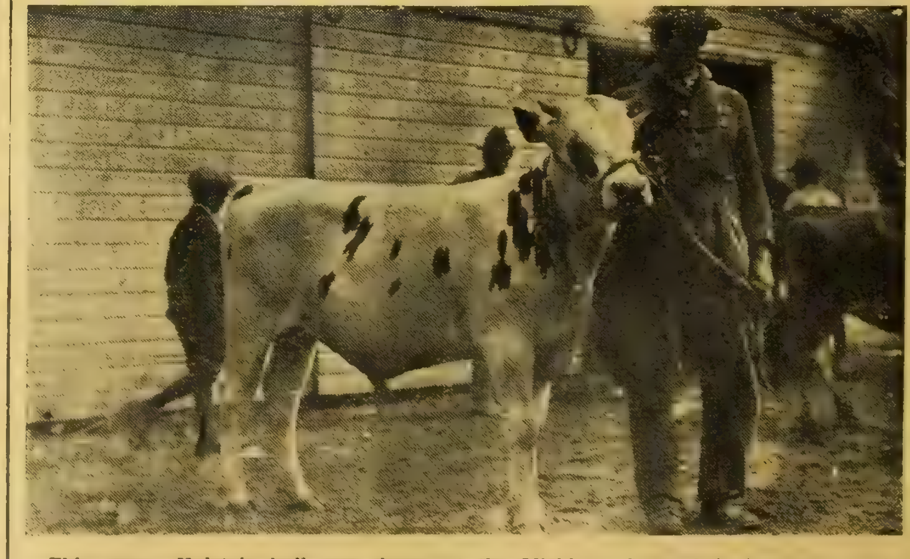
One point more, Mr. Lovejoy charges that his agents actually covered 10,500 acres of the beet fields and found 1358 children at work there if he had covered the whole beet acreage in Michigan then he would have found 14,938 children at work since he states that these children done around 7 acres of beets apiece, there would be only 4,034 acres left for the 10,900 adult laborers the 17 sugar factories hired to work. If Mr. Lovejoy's contentions are true then it is not a question of child labor, but a question of the childishness of labor. The facts are that beet workers do not shirk like so many city workers nowdays, because they are working not by the day but by the acre. Therefore the efficiency of the beet worker and his family for which the Michigan sugar beet growers paid $2,507,000.00 in cash and about $620,000.00 in extra bonuses, house rents, gardens, fuel, and transportation from and back to the cities from whence they came.

THE EXPERIENCE POOL

Bring your everyday problems in and get the experience of other farmers. Questions addressed to this department are published here and answered by you, our readers, who are graduates of the School of Hard Knocks and who have their diplomas from the College of Experience. If you don't want our editor's advice or an expert's advice, but just plain, everyday business farmers' advice, send in your question here. We will publish one each week. If you can answer the other fellow's question, please do so, he may answer one of yours some day! Address Experience Pool, care The Business Farmer, Mt. Clemens, Mich.

INFORMATION WANTED

Have read the experiences of the readers of your paper on The Oil Gas Burner and have decided not to get one. There are two things I would like to learn something about, through your Experience Pool. Namely: The knitting Machines, that are used at home and goods sold, and the union looms for making rugs and cushions.—Mrs. Lida Brooks, R3, Midland, Mich.



This young Holstein bull was shown at the Michigan State Fair in 1923 by his owner, Frances Maulbetsch, Ann Arbor. This young bull won first prize as senior calf, was champion Holstein bull in the club class and winner of fourth prize in the open class of twelve entries. At the Washtenaw County Fair he was first in his class and grand champion Holstein bull. His proud owner stands at his head in the picture.

NEW LEADERSHIP FOR THE NEW YEAR

A SERMON BY REV. DAVID F. WARNER

TEXT: "He that hath ears to hear, let him hear what the Spirit saith to the churches."—Rev. 3:6.

WE jubilantly salute the New Year. We hail it for its revolutionary newness. It brings to us glad tidings of universal unrest; of the giving of industrial tyranny and the forced abdication of political autocrats. But more significant still, ecclesiastical authority is yielding to a more sympathetic and representative leadership. The legalistic John gave way to the leadership of the Christ. Yet, how humbly and graciously! It is not given to too many men to retire, willingly, when a better man appears to assume the role of leadership. This Jesus, for a time, became the visible, personal leader of His church. But isn't He our personal leader, yet? The Revelator sees Him walking among the churches in the wisdom and power of God. Hugh Black saw him on the battle fields of France as the "Comrade in White." And even yet, when we meet in His Name, He promises to be in our midst; and when we go out to our tasks, he says, "Lo, I am with you always."

But one day, He and His disciples took a farewell walk up the gentle slopes of Olivet. "And it came to pass, while He blessed them there He was carried up into heaven." Yet not until he had given them the imperative order to "Tarry" until they were clothed. Clothed with what? With more accessions to their number? With more means? With symbol or sacrament? No. But clothed with power. The Greek word translated "power," is the word for dynamite. That is significant, isn't it? Well, the disciples tarried for this spiritual dynamite. Church folks speak of it as the blessing of Pentecost. And here is where the Holy Spirit assumes the leadership of God's people to convict of sin and impart life and power. "He that hath an ear, let him hear what the Spirit saith to the churches." And so, while a visible leader seems to be a psychological necessity, the invisible leadership of the Spirit is fundamental. The one gives vision, the other gives power. And the church in Sardis needed most of all to recognize the leadership of "the seven spirits of God," which is to say, the Holy Spirit. (Read the Revelation of St. John, 3:1-6).

Sardis was a popular church, widely known and advertised. And while "thou hast a name that thou livest," evidently it was due to a selfish directed publicity. You can see its publicity departments putting out in great, red letters, "The People's Church," or "The Glad Hand Church." "To-night the President's message will be radioed. Be on time and hear the great choir." "O Sardis, thou hast a name, but thou art dead." "Thou hast depended for thy life and power upon machinery and men, when, only the church that is in constant correspondence with Him who hath 'the seven spirits of God,' hath life; not a semblance of life."

In some animals, even after death has taken place, you will notice a spasmodic twitching and movement of the muscles. How many churches and individuals try so hard to hold the respect of the community and friends thru a show of Christian life when their spiritual heart has ceased to beat! And can't we see how possible it is (tho how fatal) to be connected with a church thru a formal adherence, but not thru a vital conviction! "Sartis, thou art dead." But is my church dead? Haven't we been much alive during the past year? Just see our fine training center and take note of all our equipment! And how we have prophesied in the name of Christ and have laid our gifts at our Lord's feet! Why, we don't feel any sting of death. But paralysis is not painful. And it is the business of the world to chloroform the church into an unconscious death. We need to be solemnly aroused to the fear that spiritual paralysis be creeping up to our heart and we be unconscious of it. Samson slept in the lap of a Delilah and went out to perform his usual feats, and wist not that his strength was gone. Sardis was sleeping in the lap of the world not knowing that her life blood was ebbing away. And your church may have plenty of organization activity, but a growing deadness at life's center. Yet, withal, there always stand out in bold spiritual relief, "a few names that have not defiled their garments." "They shall walk with me in white for they are worthy." May this new year find more churches coming out of the denominational blundering promoted by an ecclesiatical hierarchy; away from selfish connection with Christ, their Head. Does it not seem, sometimes, that Christ, the "chief corner stone" would yet be rejected by the builders? And does it not appear that in our zeal to have the biggest church, the best choir, and the most popular standin with the community, that we are in danger of betraying and repudiating the spirit and devotion of the "apostles and prophets" who constitute the first course in the building?

Now, God, thru His spirit, is the self-appointed leader of the church. In the Jewish wilderness assembly, the ark went before them and the cloud was over them; but Kadesh Barnes witnessed their defeat because they preferred man's counsel. In choosing their king, Israel turned from the counsel of God, and while a man-led kingdom was dying out, it became clearer and clearer to the wide-visioned prophets that God must send a leader to earth to vindicate His name and save His people. This Leader came; He served; He died; He ascended; yet, he still walks among us in the "seven spirits of God." And when the heavenly dove made its peaceful descent upon our Savior, God gave of his spirit in overwhelming measure. When Christ ascended He did so that He might fill our "earthen vessels" without measure, with the same spirit and so to impart quickening life and power. May the New Year bring this conscious conviction to all, that it is not in man or the things of man to impart spiritual life; but the holy ways of grace and power are learned from Him, who hath the spirit that was sent by direct course to heal our deadness.

But what is the practical meaning of all this? It is this: "Judgement must begin with the house of God." Your church and mine must get right with God. Sardis, "I have found no works of thine perfected before God." "Be thou watchful and establish the things that remain." Life had not entirely gone out. There was smoldering embers lying about, and the Seer is pleading that she yield to the leadership of Him who does not quench smoldering flax, but fans it into a new fire. This means that until churches yield precedence to Christ, above love of denomination, sacrament, or ritual, or prestige, they can not keep their garment from defilement.

Now, we would not minimize the need of an efficient church for this new era. Modern equipment and organization are important. But all this is but as cold, lifeless machinery without spiritual fitness. The coal is shoveled into the engine but no power is generated. Why? There is no fire. But it takes fire to create fire. Just this is the meaning of Pentecost. Moses came down from the mountain one day with the Ten Commandments, and read them impressively, expecting that his people would learn and obey them before reaching Canaan. But they have not done so to this day. Why? Jesus came down from the new Sanai in a later day and submitted the rules for Christian efficiency in a new age (the Sermon on the Mount), but we treat them as impractical and visionary, and something to be achieved in the long afterwhile. Why? Did you ever try to think it out and feel it out? In the days of river traffic, passengers were want to wait for days for their boat. In the interim they would idle away their time whittling and swaping stories. But when, up the river, the deep scream of the boat's whistle was heard, no matter whether day or night, the whole town awoke into a spasmodic activity until the

The NEW IMPROVED Walsh No-Buckle Harness

NO BUCKLES TO TEAR - NO RINGS TO WEAR

$5

Made in all styles: *Breechingless, Side Backer, Express, etc.*

After 30 Days Free Trial - Send No Money

I send you my Walsh No-Buckle Harness to use on your own team on your own farm thirty days free. See for yourself why this harness with no buckles to tear, no rings to wear, no buckle holes to weaken straps, is three times stronger, better looking, better fitting, handier in every way than any other. Amazing success—thousands used in every state for over 9 years. You can get complete interesting facts by sending for new, big, free book.

WALSH "SPECIAL TEST" LEATHER

Buckles weaken and tear straps. Ordinary harness has 68 buckles and 270 places where ring friction wears straps in two. Walsh has no buckles, no rings—besides it is made of Northern Steer Hide Leather, tanned by special six-month's bark-tan process. Actual test in steel testing machine shows Walsh Leather to be twice as strong as ordinary harness leather. Free book tells about this remarkable test.

Saves Repair Expense

The money spent repairing old harness will make first few monthly payments toward a Walsh—the world's strongest harness. No frequent breakdowns to consume valuable time. The Walsh is easier to put on and take off. No stubborn buckles to bother when winter cold bites the fingers and straps are stiff. Easily adjusted to fit any horse. All I ask is, test it thorougly at my risk and expense.

$5.00 AFTER THIRTY DAYS FREE TRIAL

Balance easy monthly payments, or cash after trial if you wish. Sold direct to you. Satisfaction guaranteed. Write today for my big, new, free book, prices, easy payments and 30 day trial offer, also how to make money showing Walsh Harness to your neighbors.

James M. Walsh, Pres., WALSH HARNESS CO.
421 Keefe Ave., Milwaukee, Wis.

Please send me two sets Walsh No Buckle Back Pad Harness, for which I am enclosing my check. This makes my third set. All of my horses now have Walsh No Buckle Harness. Yours, a satisfied customer—*August Maas, Gettysburg, So. Dakota.*

I am well pleased with my Walsh Harness. Please ship two more sets at once—*D. F. Connors, Auburn, New York.*

"The Farm Paper of Service"

1 9 2 4

OUR very able Secretary of Agriculture, Mr. Wallace, has in his usual clear and concise manner set forward a program, which is at the same time a prediction, of the better things which are in store for American agriculture during 1924.

There can be little question now, but what the farming business on the whole, is convalescing from a period of depression such as has not been experienced since the period immediately following the Civil War.

We who have been closely identified with the agricultural business have felt as though we were passing through a period the like of which had never been seen before, but history in its usual manner has only repeated itself and we are now emerging into the silver lining, the turn in which was felt in most divisions of the farming and stock growing business early in 1923.

The migration from the farms to the cities has only decreased the number of producers and increased the number of consumers. We have pointed out consistently through these columns that this could only work to the benefit of those who would remain on the farm.

It is the real farmers who have stuck by their farms, at least in that territory north of the Mississippi and Ohio Rivers, which is after all the real prosperous agricultural and dairy heart of America.

We look forward with real optimism for the farmers in Michigan particularly during 1924, and those who were smiled at as their neighbors drove toward the city with their household effects are going to have a chance to smile, if our prediction proves correct, before the end of this very year.

As old Bill Nye once said, "Things might have been wuss, but I don't see how!"

FARMERS IN SUGAR FACTORIES

FROM Owosso comes a report that most of the labor employed in the sugar beet plant operated there has been recruited this year from the farming district immediately adjacent to this plant.

It may be that this is a solution to the employment of the surplus of farm labor which is created with the locking up of Nature's storehouse, in the early winter, here in Michigan.

Perhaps the conditions which have forced the present situation at Owosso, which is doubtless reflected in other sections of the state, is a move in the right direction. Would it not be possible for the factories to begin slicing later in the season after the farmers and farm labor were released from their fields? This may offer a suggestion for a happy solution to one of the present day farming problems.

CHRISTMAS TREE WASTE

NO one who has in his heart a love for conservation could go about the streets of Detroit or any other large city in Michigan Christmas Day filled with the true Christmas spirit. He was too embittered by the sight of thousands of unused Christmas trees lying in every vacant lot because the supply had far exceeded the demand, great as that must have been.

Even the city newspapers are up in arms against this unwarranted destruction of the years of growth necessary to create this standing timber in the northern part of our state. To duplicate these young trees which are destroyed will take years of patient effort and the surprising part is that most of them were cut down by a lawless bunch of vandals who drove into northern Michigan via auto truck from the cities and actually stole them from property which was not their own.

It would be impossible for the state police if they were numbered in the thousands to protect these trees which are scattered over so large an area and in so many countries, but it should not be hard to check from the selling end, where the trees came from, and if they were legitimately purchased.

No one would want to deprive a single child of the sight of the Christmas tree but there must be a way to discourage this wholesale destruction and the needless waste which it involves, and no larger subject can attract the attention of the State Board of Conservation. They should have the support of the legislature in any law they want enacted to curb this practice.

THE SUGAR BEET SITUATION

THERE is no man in Michigan who enjoys a better reputation among the beet growers themselves than C. E. Ackerman of Durand, who on page 4 of this issue discusses the sugar beet situation in Michigan, the probable price to be paid and the outlook for the future.

Mr. Ackerman has been a leading figure in many of the bitter fights which have been staged in Michigan and he is one of the men who has been given considerable credit for the progress which has been made to benefit the growers during the past few years.

The fact that he is optimistic over the future of sugar beet growing in Michigan is a signal for congratulations on the part of beet growers in our state and for the sugar beet industry generally.

We hope every reader in the sugar beet country will not only read this article but pass it along to his friends and neighbors who grow beets and we want you to know that the columns of THE BUSINESS FARMER are always open to a discussion of any of the points which Mr. Ackerman or any other writer brings up so that you may feel perfectly free to state your facts and they will be published with your name or not as you so desire. The important thing is to get the opinion not only of one reader but of the many who are confronted with perhaps other problems or who have other ideas which are worthy of discussion.

SECRETARY OF AGRICULTURE OPTIMISTIC OVER FARMING IN 1923-1924

THE industry, courage and faith evidenced by the farmers of the Nation during the past three years are slowly bringing their reward. Improvement in agricultural conditions continues—not as rapidly as desired or needed, nor as rapidly as deserved, but nevertheless it continues. The promise of the year has been fulfilled.

So we come to the end of the third year of post-war depression with a feeling of greater confidence born of better times already realized and with justified hope of still further improvement in 1924.

In general, the crops of 1923 were good. Some sections in the cotton belt and in the wheat belt suffered from the ravages of weather and insect pests, but the aggregate crop production was equal to the average of the five preceding years.

Considering money return we find that the values of most crops are greater than in 1922. The total value of all crops is 12 per cent greater. The values of the wheat, rye, rice, clover seed, cranberry, peach and pear crops are below 1922; in the case of wheat 11 per cent below. The values of all other important crops are greater.

It is difficult to measure the productive value of livestock during the year, dependent as it is upon crops marketed in that form. In general, it has been a prosperous year for sheep growers, fairly good for dairymen, less satisfactory for producers of hogs, and discouraging for growers of range cattle. Cattle feeders, however, have done very well on the whole.

Experience gained during these years of depression, however, together with progress already made, warrant a hopeful attitude for the coming year. Gradually crop acreage is being better adjusted. The domestic market continues strong. The children keep coming, and that means a steadily increasing number of mouths to be fed. Those who stay by the farm and do good farming can look forward to better times as a reward for their years of toil and hardship. Those businesses depend directly upon farm purchases can find decided encouragement in the growing gross income of the farmer, for he will buy as his income expands.

The year 1924 comes with the promise of continued improvement in the material prosperity of the farmer, and the farmer continues to be the material and spiritual backbone of the Nation.—Henry C. Wallace, Secretary of Agriculture.

THE SPECIAL SESSION

IT cost the tax payers of Michigan considerably more than $20,000 to call an extra session of the legislature and to find out who actually is "boss" at Lansing.

After meeting for nearly two weeks the legislature was adjourned without passing one single bill or performing one single act of benefit to the state unless it be reasoned that their refusal to enact the reapportionment bill until a constitutional amendment is voted upon would be worth the astounding amount which this cost.

Of course the voters and taxpayers of Michigan know that the legislature's refusal to consider the reapportionment act was largely a thrust at Governor Groesbeck who, rightly or wrongly as you may think, is accused of being a supreme "boss" on his job and neither his pleading nor his threats could change the majority of the legislature in anything that he sponsored.

There is much to be said on the matter of reapportionment in this state. It is not a simple problem and is one that will require considerable discussion if the people of Michigan are to vote intelligently on an amendment to the constitution regarding it, which now seems necessary if any is made.

Anyway we hope the boys enjoyed the week or two they had at Lansing just before Christmas!

MORE VETERINARIANS NEEDED

IF you have thought that the auto repair man had the veterinarian by the throat and that with the apparent "passing of the horse" there was to be no more need for the old familiar "horse doctor", prepare to change your views.

Professor Ward Giltner, head of the Veterinary Department of M. A. C., leads a very timely discussion on this subject in a special article in this issue, in which he encourages farmer boys to take up this lucrative employment in their neighborhood as a veterinarian and points out that the number of horses, cows, mules and swine have largely increased not only in Michigan but in the entire United States during the past ten years in spite of its phenomonal development in automotive power.

There are any number of communities even in our own state where there is no good veterinarian within easy access, and yet the number of animals on the farms is constantly increasing and their needs for medical attention must be as carefully guarded as are those of their human owners.

There is many a boy going into some other profession from the farms today who could make a greater success as a veterinarian not only because of the opportunities it presents but because of his natural aptitude for handling animals and his real and perfectly natural joy in working with them.

Fortunately Michigan has an excellent veterinary department at its agricultural college and the man in charge of it is acknowledged as the foremost teacher of his profession in the United States today. If you are interested or if you have a boy who is interested we suggest you write Professor Giltner. You will find him only too anxious to help you make the right start.

THE GOVERNOR SMELLS "PORK"

PERHAPS Governor Groesbeck is right when he points out the possible danger of a "Pork-Barrel" in Michigan which will become as popular with a certain type of politicians as is that larger and more famous river and harbor bill in the national congress.

It now appears, according to the Governor, that certain members of the Legislature who make demands for state road improvements in their own districts, offer to trade votes on important measures with the simple assurance that their demands for road improvement be granted.

As it now stands, the construction and improvement of roads in Michigan, is entirely under the governor and his state board of administration, and it is likely that this one has given rise to the popular conception that the present governor is using czar-like methods in the administration of his office. It is obvious that the matter of road building must be considered in the light of the use to which all sections of the state will give these main highways. The matter of local connecting roads is one that is strictly within the confines of the county; and should be so considered. It is likewise obvious, that if the building of roads in Michigan, were to be entirely based on the activities of the various representatives at Lansing, there would be no complete plans ever carried out, and the state would appear simply as a crazy-quilt of roads, heading in all directions, but ending nowhere.

PUBLISHER'S DESK

The Collection Box

The purpose of this department is to protect our subscribers from fraudulent dealings or unfair treatment by persons or concerns at a distance.

In every case we will do our best to make a satisfactory settlement or force action, for which no charge for our services will ever be made, providing:

1.—The claim is made by a paid-up subscriber to The Business Farmer.

2.—The claim is not more than 6 mos. old.

3.—The claim is not local or between people within easy distance of one another. These should be settled at first hand and not attempted by mail.

Address all letters, giving full particulars, amounts, dates, etc., enclosing also your address label from the front cover of any issue to prove that you are a paid-up subscriber.

THE BUSINESS FARMER, Collection Box

THE SOLUTION FRAUD

THE National Vigilence Committee is issuing warnings of a fraudulent proposition which goes under several names, but is a fluid claimed to renew the life in a worn-out storage battery instantly.

We have not heard from this in Michigan yet, but we can very well issue this warning, thus locking the stable-door for once before the horse is stolen!

If anyone offers you any kind of "monkey-glands" which are guaranteed to make your old storage battery act like a new one in a jiffy, call the sheriff and send me the particulars.

A SONG WRITING SWINDLE

ALLURING statements regarding the easy money supposed to be made in song-writing are published from time to time and serve as a bait to the ignorant and unwary who then become easy victims for the "songsharks."

Without advertising these concerns could not secure fresh victims. Here are a few typical advertisements:

WHY DON'T YOU WRITE THE WORDS FOR A SONG. We'll help you along by composing the music Free and publishing same. Send poems today.

WRITE THE WORDS FOR A SONG. We will compose music, secure copyright, and print. Submit poems on any subject.

NO MONEY NEEDED FOR PUBLICATION—Poems set to music and published on commission.

WRITE THE WORDS FOR A SONG. We revise Poems, write music and guarantee to secure publication. Submit poems on any subject.

WRITE A SONG POEM—Love, Mother, Home, Comic or any subject. I compose music and guarantee publication. Send words today.

SONGS AND POEMS WANTED. We compose music, publish, sell and pay you five cents royalty on every copy sold.

The fake publisher and song-shark secures his victims through advertisments in the cheaper grade magazines of wide circulation. To those who respond he sends alluring circulars and booklets to show how easy it is to turn out song-poems that may bring "fame and fortune." With the false bait contracts are sent out for the victim to sign, together with "Certificates of Guarantee" and "Money Refund Certificates." In order to induce the signing of these contracts the advertisers, whether "Music Company," "Corporation," "Student," "Bureau" or by the name of an individual, flatter the prospective victim by praising his song-text, no matter how poor it may be. Of course they offer to revise it and have their "Chief Composer" set it to music. If the sucker is slow in answering a series of clever follow-ups pursue him until he takes the bait, signs the contracts, sends his money and is hooked.

Any hack musician of experience can grind out commonplace music by the yard. With song-texts set before him on the piano-rack and plenty of music paper he'll wearily work all day on one or two formulas till sick of them, then use another, always basing his scheme on the popular music of the hour.

While the government has closed many of these concerns for obtaining money under false pretense others still flourish and by carefully worded documents that seek to keep within the law they somehow escape the clutches of the authorities.

SONG SWINDLER GETS YEAR AND $2000 FINE

A YEAR and a day in prison was the sentence imposed in U. S. Court by Federal Judge Lindley on W. L. Needham, manager of the Musician Self-Maker Company, in whose trial the government submitted 2220 exhibits of verses which ambitious novice poets and writers sent him in the belief they would be set to music. Needham was convicted of using the mails to defraud. He also was fined $2000.

Many of the writers of lyrics came from their homes in distant states to testify of how they had sent Needham fees from $2 or $3 to $35.

"You were a petty parasite on the community, getting money from trusting people—a high school boy, a woman with a baby in her arms, and a woman 63 years old," said the judge in passing sentence.

Chicago Sharks Wiped Out

The Needham case represents the type of fraud known as the song swindle or fake publishing for the exposure of which the Music Industries Chamber of Commerce has undertaken a campaign on behalf of the Music Publishers' Association of the U. S. and other legitimate music trade interests. An active, systematic drive to warn amateur song writers and get them to report their complaints to the post office authorities, has resulted in saving many victims and checkmating the song sharks.

MADE THEM COME TO TIME

THANKS to you! The —— —— Seed Co. has sent us a check for the amount that I sent them. I know that we have you to thank for ever getting it back even if they did write a soft letter saying how very sorry they were that the order had not received better attention. They had plenty of time to reply to the letters I sent them before it was placed in your hands. It has centainly been a boost for your paper as a good many of my neighbors (some who already take your paper) were interested in the case and many doubted if I would ever get my money back. So thanking you again and wishing you a most successful New Year, I am, Fred R. Smith, Wexford County, Mich.

LIKES M. B. F.

YOU folks certainly publish the best farm paper in Michigan, and I came to you with my trouble. Now please accept my thanks for so promptly taking up my claim with the ———— Company. This letter is to tell you that on the 22nd, part of the goods came and on the 24th the rest came so you see that lets you out without any further trouble. Please again accept my thanks, and here is to you and the best farm paper in Michigan, with best regards.—A. F. Schmidtke, Mason County, Mich.

GOVERNMENT BULLETINS OF INTEREST IN JANUARY

A SMALL list of Farmers' Bulletins of general interest during January is believed to be of value to our readers. Copies may be obtained free by addressing the Office of Publications, United States Department of Agriculture, Washington, D. C. Specify number and name in requesting bulletins.

Farmers' Bulletin 181, Pruning; 828, Farm Reservoirs; 847, Potato Storage and Storage Houses; 947, care and Repair of Mowers, Reapers, Binders; 1036, Care and Repair of Grain Separators; 1040, An Illustrated Poultry Primer from Cold; 1117, Forestry and Farm Income; 1131, Tile Trenching Machinery; 1160, Diseases of Apples in Storage; 1194, Operating a Home Heating Plant; 1387, Laws Relating to Fur Animals for the Season 1923-24.

First Mortgage Real Estate Gold Bonds

Funds you find available for January investment can be most profitably and safely disposed of in Federal first mortgage bonds—known among farmers as Better Bonds.

Nature left that air space

Did you ever stop to think why there is a hollow space at one end of an egg? Nature has provided that air space so that the baby chick may have air to breathe from the time it comes to life within the egg until it is strong enough to break through the shell.

Eggs hatched in an incubator absorb the air from the incubator. If fumes from poor oil are present they will penetrate the egg shell, which is porous, and the little chick dies in the process of incubation.

The Scientific Refining process by which National Light Kerosene is refined eliminates all possibility of these poisonous fumes. It provides clean, uniform heat, producing a healthy chick from every fertile egg.

In lamps it gives a steady white light and leaves a clean wick and a clear chimney. In stoves it burns to the last drop—giving its full share of steady heat. There are no unhealthy fumes or odors.

In tractors it will develop more power than ordinary coal oil. A smooth running engine is assured when this economical fuel is used. The best oil for Lighting Plants.

If your dealer cannot supply you, write us and we will ship at once from one of our 103 conveniently located branches.

Oh Money! Money!

by ELEANOR H. PORTER

THE STORY TO DATE

MR. STANLEY G. FULTON, 50-year old bachelor and possessor of twenty million dollars, calls on his lawyer and they discuss the disposition of this large fortune after its owner's death. The lawyer is in favor of giving the money to colleges or charities while Fulton is opposed to these ideas. He remembers that he has some distant cousins and decides to leave the money to one of them, but first he determines to learn which one will use it to the best advantage. To find out who is the worthy one he, through his lawyer, gives, each cousin $100 000 to use as they will. Before giving them the money grows a beard and, using the name of Mr. John Smith, goes to the town where they live to find out what kind of people they are. Upon arriving in town he visits James Blaisdell, one of the cousins, where he tries to hire board and lodging. While there he meets Miss Flora Blaisdell, another cousin who is a dressmaker. They decide they cannot rent a room to him and supply him board and refer him to Frank Blaisdell's, the third cousin. He gets a room there and, passing as a writer gathering material for a book on the Blaisdell family in this country, he starts out. He cal's on all of the Blaisde'ls and as they all talk of a relative by the name of Miss Maggie Duff he decides to call on the lady. He finds her living with her father, an old man who seems to have soured on the world. He secures what information he can from her and her father. He then writes a letter to his lawyer discussing the various relatives he has met.

(Continued from Dec. 22nd issue.)

I CAN'T see that any of the family are really extravagant, unless, perhaps, it's Mrs. James—"Hattie." She is ambitious and is inclined to live on a scale a little beyond her means, I judge. But that will be alright, of course, when she has the money to gratify her tastes. Jim—poor fellow, I shall be glad to see him take it easy, for once. He reminds me of the old horse I saw the other day running one of those infernal treadmill threshing machines—always going, but never getting there. He works, and works hard, and then he gets a job nights and works harder; but he never catches up with his bills, I fancy. What a world of solid comfort he'll take with that hundred thousand! I can hear him draw the long breath now—for once every bill paid!

Of course, the Frank Blaisdells are the most thrifty of the bunch—at least, Mrs. Frank, "Jane," is—and I dare say they would be the most conservative handlers of my millions. But time will tell. Anyhow, I shall be glad to see them enjoy themselves meanwhile with the hundred thousand. Maybe Mrs. Jane will be constrained to clear my room of a few of the mats and covers and tidies! I have hopes. At least, I shall surely have a vacation from her everlasting "We can't afford it," and her equally everlasting "Of course, if I had the money I'd do it." Praise be for that!—and it'll be worth a hundred thousand to me, believe me, Ned.

As for the husband—I'm not sure how he will take it. It isn't corn or peas or flour or sugar, you see,—and I'm not posted as to his opinion of much of anything else. He'll spend some of it, though,—I'm sure of that. I don't think he always thoroughly appreciates his wife's thrifty ideas of economy. I have not forgotten the night I came home once, to find Mrs. Jane out calling, and Mr. Frank rampaging around the house with every gas jet at full blast. It seems he was packing his bag to go on a hurried business trip. He laughed a little sheepishly—I suppose he saw my glinking amazement at the illumination—and said nothing about being tired of always feeling his way through pitch-dark rooms. So, as I say, I'm not quite sure of Mr. Frank when he comes into possession of the hundred thousand. He's been cooped up in the dark so long he may want to blow in the whole hundred thousand in one grand blare of light. However, I reckon I needn't worry—he'll still have Mrs. Jane—to turn some of the gas jets down!

As for the younger generation—they're fine, every one of them; and just think what this money will mean to them in education and advantages! Jim's son, Fred, eighteen, is a fine, manly boy. He's got his mother's ambitions, and he's keen for college—even talks of working his way (much to his mother's horror) if his father can't find the money to send him. Of course, that part will be all right now—in a month.

The daughter, Bessie (almost seventeen), is an exceedingly pretty girl. She, too, is ambitious—almost too much so, perhaps, for her happiness, in the present state of their pocketbook. But of course that, too, will be alright, after next month. Benny, the nine-year-old, will be concerned as little as any one over that hundred thousand dollars, I imagine. The real value of the gift he will not appreciate, of course; in fact, I doubt if he even approves of it—lest his priviliges as to meals and manners be still further curtailed. Poor Benny! Now, Mellicent—

Perhaps in no one do I expect to so thoroughly rejoice as I do in poor little pleasure-starved Mellicent. I realize, of course, music-culture, and travel; but I must confess that in my dearest vision, this child is reveling in one grand whirl of pink dresses and chocolate bonbons. Bless her dear heart! I gave her one five-pound box of candy, but I never repeated the mistake. Besides enduring the manifestly suspicious approval of her mother because I had made the gift, I have had the added torment of seeing the box of chocolates doled out to that poor child at the rate of two pieces a day. They aren't gone yet, but I'll warrant they're as hard as bullets—those wretched bonbons. I picked the box up yesterday. You should have heard it rattle!

But there is yet another phase of the money business in connection with Mellicent that pleases me mightily. A certain youth by the name of Carl Pennock has been beauing her around a good deal, since I came. The Pennocks have some money—fifty thousand, or so, I believe—and is reported that Mrs. Pennock has put her foot down on the building romance—because the Blaisdells have not got money enough! (Begin to see where my chuckles come in?) However true this report may be, the fact remains that the youth has not been near the house for a month past, nor taken Mellicent anywhere. Of course, it shows him and his family up—for just what they are; but it has been mortifying for poor Mellicent. She's showing her pluck like a little trump, however, and goes serenely on her way with her head just enough in the air—but not too much.

I don't think Mellicent's real heart is affected in the least—she's only eighteen, remember—but her pride is. And her mother—! Mrs. Jane is thoroughly angry as well as mortified. She says Mellicent is every whit as good as those Pennocks, and that the woman who would let a paltry thing like money stand in the way of her son's affections is a pretty small specimen. For her part, she never did have any use for rich folks, anyway, and she is proud and glad that she's poor! I'm afraid Mrs. Jane was very angry when she said that. However, so much for her—and she may change her opinion one of these days.

My private suspicion is that young Pennock is already repentant, and is pulling hard at his mother's leading-strings; I was with Mellicent the other day when we met the lad face to face on the street. Mellicent smiled and nodded casually, but Pennock—he turned all colors of the rainbow, with terror, pleading, apology, and assumed indifference all chasing each other across his face. Dear, dear, but he was a sight!

There is, too, another feature in the case. It seems that a new family by the name of Gaylord have come to town and opened up the Gaylord mansion. Gaylord is a son of old Peter Gaylord, and is a millionaire. They are making quite a splurge in the way of balls and liveried servants, and motor cars, and the town is agog with it all. There are young people in the family, and especially there is a girl, Miss Pearl, whom, reports says, the Pennock's have selected as being a suitable mate for Carl. At all events the Pennock's and the Gaylords have struck up a furious friendship, and the young people of both families are in the forefront of innumerable social affairs—in most of which Mellicent is left out.

So now you have it—the whole story. And next month comes to Mellicent's father one hundred thousand dollars. Do you wonder I say the plot thickens?

As for myself—you should see me! I eat whatever I like. (The man who says health biscuit to me now gets knocked down—and I've got the strength to do it, too!) I can walk miles and not know it. I've gained twenty pounds, and I'm having the time of my life. I'm even enjoying being a genealogist—a little. I've about exhausted the resources of Hillerton, and have begun to make trips in the afternoon to an old cemetery copying dates from moss-grown gravestones, and not entirely lose my appetite for dinner—I mean supper. I was even congratulating myself that I was really quite a genealogist when, the other day, I met the real thing. Heavens, Ned, that man had fourteen thousand four hundred and seventy-two dates at his tongue's end and he said them all over to me. He knows the name of every Blake (he was a Blake) back to the year one, how many children they had (and they had some families then, let me tell you!' and when they all died, and why. I met him this morning in the cemetery. I was hunting for a certain stone and I asked him a question. Heavens! It was like setting a match at one of those Fourth-of-July flower-pot sky-rocket affairs. The question was the match that set him going, and thereafter he was a gushing geyser of names and dates. I never heard anything like it.

He began at the Blaisdells, but skipped almost at once to the Blakes—there were a lot of them near us. In ten minutes he had me dumb from sheer stupefication. In ten minutes he had made a century run, and by noon he had got to the Crusades. We went through the Dark Ages very appropriately, waiting in an open tomb for a thunderstorm to pass. We had got to the year one when I had to leave to drive back to Hillerton. I've invited him to come to see father Duff. I thought I'd like to have them meet. He knows a lot about the Duffs—a Blake married one, 'way back somewhere. I'd like to hear him and father Duff talk—or, rather, I'd like to hear him try to talk to Father Duff. Did I ever write you Father Duff's opinion of genealogists? I believe I did.

I'm not seeing so much of Father Duff these days. Now that it's grown a little cooler he spends most of his time in his favorite chair before the cookstove in the kitchen.

Jove, what a letter this is! It should be shipped by freight and read in sections. But I wanted you to know how things are here. You can appreciate it the more—when you come.

You're not forgetting, of course, that it's on the first day of November that Mr. Stanley G. Fulton's envelope of instructions is to be opened.

As ever yours,
John Smith.

CHAPTER IX

"Dear Cousin Stanley"

It was very early in November that Mr. Smith, coming home one afternoon, became aware that something very extraordinary had happened.

In the living-room were gathered Mr. Frank Blaisdell, his wife, Jane, and their daughter, Mellicent. Mellicent's cheeks were pink, and her eyes more starlike than ever. Mrs. Jane's cheeks, too, were pink. Her eyes were excited, but incredulous. Mr. Frank was still in his white work-coat, which he wore behind the counter, but which he never wore upstairs in his home. He held an open letter in his hand.

It was an ecstatic cry from Mellicent that came first to Mr. Smith's ears.

"Oh, Mr. Smith, you can't guess what's happened! You couldn't guess in a million years!"

"No? Something nice, I hope." Mr. Smith was looking almost as happily excited as Mellicent herself.

"Nice—nice!" Mellicent clasped her hands before her. "Why, Mr. Smith, we are going to have a hundred thousand dollars—"

"Mellicent, I wouldn't talk of it—yet," interfered her mother sharply.

"But mother, it's no secret. It can't be kept secret!"

"Of course not—if it's true. But it isn't true," retorted the woman, with excited emphasis. "No man in his senses would do such a thing."

"Er—ah—w-what?" stammered Mr. Smith, looking suddenly a little less happy.

"Leave a hundred thousand dollars apiece to three distant relatives he never saw."

"But he was our cousin—you said he was our cousin," interposed Mellicent, "and when he died—"

"The letter did not say he had died," corrected her mother. "He just hasn't been heard from. But he will be heard from—and then where will our hundred thousand dollars be?"

"But the lawyer's coming to give it to us," maintained Mr. Frank stoutly. Then abruptly he turned to Mr. Smith. "Here, read this, please, and tell us if we have lost our senses—or if somebody else has."

Mr. Smith took the letter. A close observer might have noticed that his hand shook a little. The letterhead carried the name of a Chicago law firm, but Mr. Smith did not glance at that. He plunged at once into the text of the letter.

"Aloud, please, Mr. Smith. I want to hear it again," pleaded Mellicent.

Dear Sir (read Mr. Smith then, after clearing his throat),—I understand that you are a distant kinsman of Mr. Stanley G. Fulton, the Chicago millionaire.

Some six months ago Mr. Fulton left this city on what was reported to be a somewhat extended exploring tour of South America. Before his departure he transferred to me as trustee, certain securities worth about $300,000. He left with me a sealed envelope, entitled "Terms of Trust," and instructed me to open such envelope in six months from the date written thereon—if he had not returned—and thereupon to dispose of the securities according to the terms of the trust. I will add that he also left with me a second sealed envelope entitled "Last Will and Testament," but instructed me not to open such envelope until two years from the date written thereon.

The period of six months has now expired. I have opened the envelope entitled "Terms of Trust," and find that I am directed to convert the securities into cash with all convenient speed, and forthwith to pay over one third of the net proceeds to his kinsman, Frank G. Blaisdell; one third to his kinsman, James A. Blaisdell; and one third to his kinswoman, Flora B. Blaisdell, all of Hillerton.

I shall, of course, discharge my duty as trustee under this instrument with all possible promptness. Some of the securities have already been converted into cash, and wihtin a few days I shall come to Hillerton to pay over the cash in the form of a certified check; and I shall ask you at that time to be so good as to sign a receipt for your share. Meanwhile this letter is to apprise you of your good fortune and to offer you my congratulations.

Very truly yours,
Edward D. Norton.

"Oh-h!" breathed Mellicent.

"Well, what do you think of it?" demanded Mr. Frank Blaisdell, his arms akimbo.

"Why, it's fine, of course. I congratulate you," cried Mr. Smith, handing back the letter.

"Then it's all straight, you think?"

"Most assuredly!"

"Je-hos-a-phat!" exploded the man.

"But he'll come back—you see if he doesn't!" Mrs. Jane's voice was still positive.

"What if he does? You'll still have your hundred thousand," smiled Mr. Smith.

"He won't take it back?"

"Of course not! I doubt if he could, if he wanted to."

"And we're really going to have a whole hundred thousand dollars?" breathed Mellicent.

"I reckon you are—less the inheritance tax perhaps."

"What's that? What do you mean?" demanded Mrs. Jane. "Do you mean we've got to pay because we've got that money?"

"Why,y-yes, I suppose so. Isn't there an inheritance tax in this State?"

"How much does it cost?" Mrs. Jane's lips were at their most economical pucker. "Do we have to pay a great deal? Isn't there any way to save doing that?"

"No, there isn't," cut in her husband crisply. "And I guess we can pay the inheritance tax—with a hundred thousand to pay it out of. We're going to spend some of this money, Jane."

The telephone bell in the hall jangled its peremptory summons, and Mr. Frank answered it. In a minute he returned, a new excitement on his face.

"It's Hattie. She's crazy, of course. They're coming right over."

"Oh, yes! And they've got it, too, haven't they?" remembered Mellicent. "And Aunt Flora, and—" She stopped suddenly, a growing dismay in her eyes. "Why, he didn't—he didn't leave a cent to Aunt Maggie!" she cried.

"Gosh! that's so. Say, now, that's too bad!" There was genuine concern in Frank Blaisdell's voice.

"But why?" almost wept Mellicent.

Her mother sighed sympathetically.

"Poor Maggie! How she is left out—always!"

"But we can give her some of ours, mother,—we can give her some of ours," urged the girl.

"It isn't ours to give—yet," remarked her mother, a bit coldly.

"But, mother, you will do it." importuned Mellicent. "You've always said you would, if you had it to give."

"And I say it again, Mellicent. I shall never see her suffer, you may be sure,—If I have the money to relieve her. But —" She stopped abruptly at the sound of an excited voice down the hall. Miss Flora, evidently coming through the kitchen, was hurrying toward them.

Jane—Mellicent—where are you? Isn't anybody here? Mercy me!" she panted, as she reached the room and sank into a chair. Did you ever hear anything like it in all your life? You had one, too, didn't you?" she cried, her eyes falling on the letter in her brother's hand. "But 'taint true, of course!"

Miss Flora wore no head-covering. She wore one glove (wrong side out), and was carrying the other one. Her dress, evidently donned hastily for the street, was unevenly fastened, showing the topmost button without a buttonhole.

"Mr. Smith says it's true," triumphed Mellicent.

"How does he know? Who told him 'twas true?" demanded Miss Flora.

So almost accusing was the look in her eyes that Mr. Smith actually blinked a little. He grew visibly confused.

"Why—er—ah—the letter speaks for itself, Miss Flora," he stammered.

"But it can't be true," reiterated Miss Flora. "The idea of a man I never saw giving me a hundred thousand dollars like that!—and Frank and Jim, too!"

"But he's your consin—you said he was your cousin," Mr. Smith reminded her. "And you have his picture in your album. You showed it to me."

"I know it. But, my sakes! I didn't know he knew I was his cousin. I don't s'pose he's got my picture in his album! But how did he know about us? It's some other Flora Blaisdell, I tell you."

"There, I never thought of that," cried Jane. "It probably is some other Blaisdells. Well, anyhow, if it is, we won't have to pay the inheritance tax. We can save that much."

"Save! Well, what do we lose?" demanded her husband apoplectically.

At this moment the rattling of the front-door knob and in imperative knocking brought Mrs. Jane to her feet.

"There's Hattie, now, and that door's locked," she cried, hurrying into the hall.

When she returned a moment later Harriet Blaisdell and Bessie were with her.

There was about Mrs. Harriet Blaisdell a new, indescribable air of commanding importance. To Mr. Smith she appeared to have grown inches taller.

Well, I do hope, Jane, now you'll live in a decent place," she was saying, as they entered the room, "and not oblige your friends to climb up over a grocery store."

"Well, I guess you can stand the grocery store a few more days, Hattie," observed Frank Blaisdell dryly. "How long do you s'pose we'd live—any of us —if 'twa'n't for the grocery store to feed us? Where's Jim?"

"Isn't he here? I told him I was coming here, and to come right over himself at once; that the very first thing we must have was a family conclave, just ourselves, you know, so as to plan what to give out to the public."

"Er—ah—" Mr. Smith was on his feet, looking somewhat embarrased; "perhaps, then' you would rather I were not present at the—er—family conclave."

"Nonsense!" scouted Frank Blaisdell.

"Why, you are one of the family, 'seems so," cried Mellicent.

"No, indeed, Mr. Smith, don't go," smiled Mrs. Hattie pleasantly. "Besides, you are interested in what concerns us, I know—for the book; so, of course, you'll be interested in this legacy of dear Cousin Stanley's."

Mr. Smith collapsed suddenly behind his handkerchief, with one of the choking coughs to which he appeared to be somewhat addicted.

"Ain't you getting a little familiar 'dear Cousin Stanley,' Hattie-" drawled Frank Blaisdell.

Miss Flora leaned forward earnestly.

"But, Hattie, we were just sayin', 'fore you came it couldn't be true; that it must mean some other Blaisdells somewhere."

"Absurd!" scoffed Harriet. "There couldn't be any other Frank and Jim and Flora Blaisdell, in a Hillerton, too. Besides, Jim said over the telephone that that was one of the best law firms in Chicago. Don't you suppose they know what they're talking about? I'm sure, I think it's quite the expected thing that he should leave his money to his own people. Come, don't let's waste any more time over that. What we've got to decide is what to do. First, of course, we must order expensive mourning all around."

"Mourning!" ejaculated an amazed chorus.

"Oh, great Scott!" spluttered Mr. Smith, growing suddenly very red. "I never thought—" He stopped abruptly, his face almost purple.

But nobody noticing Mr. Smith. Bessie Blaisdell had the floor.

"Why, mother, I look perfectly horrid in black, you know I do," she was wailing. "And there's the Gaylord's dance just next week;and if I'm in mourning I can't go there, nor anywhere. What's the use in having all that money if we've got to shut ourselves up like that, and wear horrid stuffy black, and everything?"

(Continued in January 19th issue.)

M. A. C. DISTRIBUTES SPECIAL SOIL TESTING OUTFIT

A SPECIAL soil testing outfit, which makes it possible for farmer to know just where lime is acidity, and thus determine the line requirements of their lands, is being assembled and distributed on a "cost" basis by the Michigan Agricultural College department of soils, according to the announcement of Dr. M. M. McCool, head of the department.

The outfit, going under the name of Soiltex, is being furnished to farmers of the state on request. Directions for applying the test and enough material for two hundred individual tests are included in the outfit.

The Soiltex method presents a very simple way to determine the acidity of the soil. A few drops of liquid from a small can are poured over a small quantity of soil which has been placed on a piece of special paper, and the color of the liquid as it runs off determines the degree of acidity in the soil tested.

This method was perfected by a member of the soils staff at the Michigan Agricultural College some months ago, and has proven to be so effective that the college has determined to distribute the outfits at cost to the farmers of the state.

The use of this testing method will make possible the efficient application of lime on a large scale in Michigan. Many soils need lime or marl applications to overcome acidity, while others need no lime or only a relatively small amount. Only by careful and accurate test can the afrmer know just where lime is needed. The Soiltex method of testing is expected to take the guess out of the work and to result in greater efficiency and economy in the application of lime.—R. C. Groesbeck, M. A. C. Correspondent.

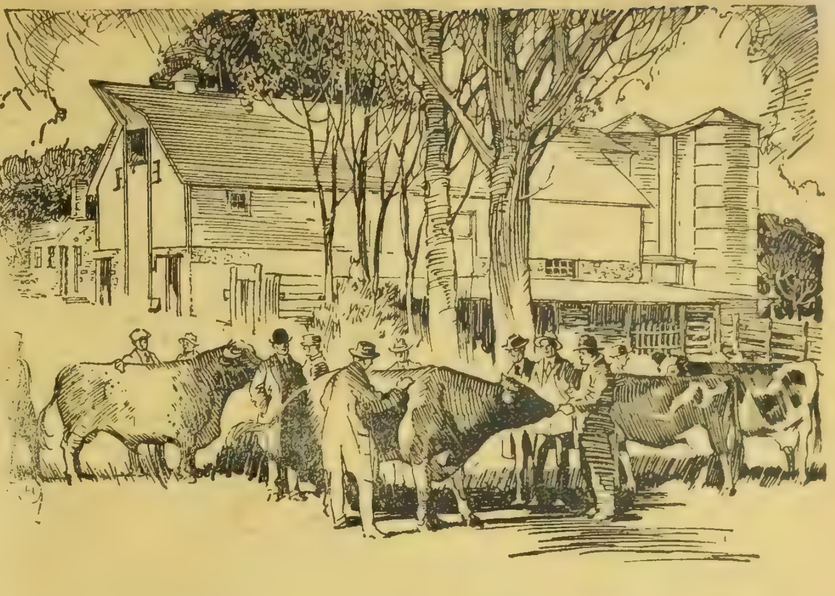
The Scotch of It

Sandy had just met his girl at the end of the street, where she was waiting for him. She was looking into a confectioner's window when Sandy made his presence known by remarking:

"Weel, Jennie, what are y' gaun to have the nicht?"

She, not inclined to ask much, replied: "Oh, I'll just tak what you'll tak, Sandy."

"Oh then, we'll tak a walk," said Sandy, as he led her away.—Pearsons Weekly.



Cattle *and the* Soil

MEN who were brought up on farms in the very districts served by the New York Central Lines now compose the Agricultural Relations Department of this railroad system.

A thorough knowledge of the farmers' problems as well as those of the railroad enables these men to work for the common good of these two interdependent interests.

To improve soil conditions the Agricultural Relations Department has established 525 limestone demonstrations in cooperation with county farm bureaus and experts from various colleges of agriculture.

The department has materially assisted in establishing a Better Sire Campaign for the introduction and breeding up of dairy cattle.

It is the task of the department to foster cooperation between agriculture and transportation and to bring an ever-better service to the farmers of the country.

WHEN WRITING TO ADVERTISERS MENTION THE M. B. F.

The Children's Hour

O, THAT I WERE A BIRD

O, THAT I were a bird,
I'd sing the sweetest songs ever heard,
Thus cheer the world as I go by,
And all trouble defy.

Were I a pretty flower,
I'd not waste e'en one hour,
I'd try some heavy heart to cheer instead
And so make sure the joy ahead.

But only a mortal am I,
I cannot scent the wood nor fly,
So I content must be
To do what is required of me.

—Written by Orville H. Trueblood, Pewamo, Michigan, for the Children's Hour.

DEAR Girls and Boys: How do you like the poem printed above? It was composed by Orville Trueblood, a member of the Children's Hour for some time past, and I think it beautiful. There seems to be many poets among the readers of this page, as I have received several requests to have a poetry contest to see who could write the best poem. I am planning on holding such a contest in the near future so sharpen your pencil, get some paper ready, put your thinking-cap on, and see what kind of a poem you can compose.

Have you read our story, "Martha Curlylocks' Party" appearing on our page, this issue? I want to print one in each issue, when space permits, this winter. If you do not like the kind of stories printed just write and tell me and I will try some different ones. This is your department and I want to print only things that are of interest to you. —UNCLE NED.

THE SUN AND THE BAT-WOMAN

ONCE Sun, wanting to go to bed behind the mountains, got lost in the cliffs. It was getting late. Bat-woman was already out, and Sun begged her to show him the way.

"Very well," said the Bat-woman, "but I want a reward. I have no feathers on my wings and the birds laugh at me. Give me some of the bright-colored feathers from your sunset sky."

"I will do that," said Sun, "but do not go too near my Earth-brother, Sunflower, while he is open. He is jealous."

So Bat-woman took the colored feathers from the sky and made herself beautiful. But she got vain and flew over the Earth while Sunflower grew angry.

"Feathers are not for you," he said, and he made a Magic.

At once all the feathers dropped off Bat-woman's wings and flew away as little birds. We call them Orioles, and that is why they are colored like the sunset.

Those who are vain will lose what has made them vain.

OUR BOYS AND GIRLS

Dear Uncle Ned:—Wonder if you would mind if I asked for permission to join your merry circle? I thought maybe if I wrote on Christmas day, my letter might have a better chance of escaping the wastepaper basket. What do you think about it? I certainly hope everyone has had one of the merriest Christmasses. This day always makes me think of the Christ child in the manger, and the angels words, "Glory to God in the Highest, On earth peace, and good will to man." There has been speeches of patriotism, wonderful, and eloquent sermons, but I do not think, in all the world, there has ever been any words more beautiful than those spoken by the Herald Angel Gabriel, at the birth of Christ, except maybe, the words He Himself spoke just before his death. I expect I'd better be describing myself, or you won't know what to think about me. I'm four feet eight inches tall, rather dark blue eyes, and hair that is about the color of a ripe chestnut, (rather curly), fourteen years of age, and sticky just now with Christmas candy. Uncle Ned, why could we not have a poetry contest? I have composed some verses, but I cannot draw worth anything. I'd much rather sit down and compose a piece of poetry, or read a good book, than get Algebra! (I happen to be in the ninth grade). Is there any that disagree with me? Uncle Ned, please tell me what you think of the Campfire Girl movement, won't you? I should be very much pleased if some of the cousins would write and give me their opinion upon it. Will answer all letters received. Will close, wishing to everyone the very happiest of New Years.—Iola Hardy, Mayville, Mich.
—I think we can have a contest on poetry composed by the cousins, if there are many interested. We'll try one in the near future. As to the Campfire Girls, I think it is a very nice organization and any girl, city or farm, will benefit by belonging. There are many readers of our page who belong and will write you all about them. Come again, Iola.

Dear Uncle Ned:—Oh, no, I am not a new one. I have written before, but it has been two or three years since. I love to read the Children's Hour and say, Uncle Ned, you have a lot of interesting Cousins, haven't you? I like to read about those trips some of the cousins take and am sorry I haven't one to describe. I would like to know what the cousins are planning to do when they grow up. I would like to be the Governess of small children or else play in some orchestra in a theatre. Uncle Ned, I'd like your job too. I am just sweet sixteen, (?) going on seventeen. Oh, yes, the answer to Lloyd Laubaugh's riddles are: 1. A watch. 2. Wet. Am I right Lloyd? Well Uncle, my letter is going to take up too much room if I don't stop soon so will say "So-long" 'till next time.—A Girl from Greenville, Michigan.

Dear Uncle Ned:—My father has taken the M. B. F. for about three years now, and this is the first time I have attempted to write, so please don't discourage me the first time. I guess I had better describe myself, but don't anyone get scared! I am—well I guess I won't tell my age. I'll let you guess that, but I am between the age of 12 and 20 years. I am about five feet three inches tall, and I am a blonde, but I haven't bobbed hair, although I have nothing against it. Anyone guessing my correct age will receive a letter from me. I am attending high school and I am in the tenth grade. I like typewriting and shorthand the best of all subjects. I went through Mt. Clemens this summer when I was going to Canada. We drove through to Canada with an automobile and we also drove up in the northern part of Michigan, but I don't want to take the space to tell you about it. I have a brother in Honolulu. He is in the U. S. Army. He sent us some pictures from there and they sure are some lovely scenes. Well if I don't stop there won't be any room for anyone to write, that is, if this letter is printed, which I hope it is. Will some of the boys and girls write to me? I will try and answer all letters received. From your niece,—Sadie London, 66 Hanover St., Battle Creek, Michigan.
—Come again Sadie, and do tell us about your trip. The cousins will be interested I am sure.

Dear Uncle Ned:—I have been thinking about joining your merry circle for a long time, but have never found time to write, for I love books, as I see lots of the cousins do, and most of my spare time is spent in reading. My favorite authors are Zane Gray and Mary J. Holmes, and lots of others of which I could not tell which I like best. I would like to hear from Josephine Dannon very much, and would answer her letters if she would care to write, and the others too. Perhaps I had better tell you how I look. Well, I am about 5 ft. 11 in. tall, weigh about 82 pounds, have brown bobbed hair, brown eyes, and fair complexion. I am very small for my age, for I have a sister who is exactly as tall as I am and she is only 11 while I was 14 the 13th day of May. Have I a twin? If I have tell me, and I will write to him or her. I know the answer to Ermalee Lockwell's riddle, it is a threshing machine. I am glad you said we might put in poetry Uncle Ned, for I like it. I will put in some riddles, and the one who guesses the most will receive a letter. Why is a schoolmistress like the letter "C"? Why is a policeman like a rainbow? What is the difference between stabbing a man and killing a pig? I am in the 8th grade, and live a half a mile from school in the country on a 205-acre farm. I have three brothers and two sisters alive and one dead. Her name was Cora May. I think it was quite pretty, don't you, Uncle Ned? Hoping to hear from some of the cousins soon, I will close. Your loving niece,—Bernice Brockway, R. 3, Jackson, Michigan.

Dear Uncle Ned:—I have just finished reading the Children's Hour and decided to write a few lines. I read Helen Limmer's letter and she said her birthday was the 31st of May, just two days later than mine. I think it is very nice in putting a puzzle in our part of the paper every issue. As I have written before I will not have to describe myself. I'm a freshman this year, but I do not like school. It is raining here tonight, and as I was lonesome, thought I would write. Hope this escapes the waste paper basket. I must close, hoping to hear from the boys and girls. I will answer all the letters I can. Your niece,—Lena M. Ables, R. 3, Box 33, Montgomery, Michigan.

Dear Uncle Ned:—May I join your merry circle? I live on a ninety-eight acre farm. As other children describe themselves, I will also. I weigh sixty four pounds and am four feet nine inches tall. I have brown bobbed hair, blue eyes. I will be eleven the 1st day of February. Have I a twin? I wish you all would write to me as I am glad to receive letters. I have not read the Children's Hour very long, but found all the old papers I could. I hope this will miss the waste paper basket. I will give a riddle. If a cord of wood comes to $10, how much will a ton of coal come to? This is getting pretty long for the first time. Your loving niece.—Reva Covert, R. 5, Ionia, Michigan.

Dear Uncle Ned:—I have been reading the M. B. F. for quite a while. I am 13 years of age and weigh 135 pounds, and my height is five feet ten inches, and have dark brown bobbed hair, and my eyes are gray. I am in the seventh grade. My birthday is October 18th. I hope my letter escapes the waste paper basket. I have written once before but it wasn't in print. For pets we have six pigeons, six cats, and one dog. We are getting ready to have a Christmas program. I will close.—Mae E. Jury, St. Johns, Michigan.

Martha Curlylocks' Party

By Helen Gregg Green

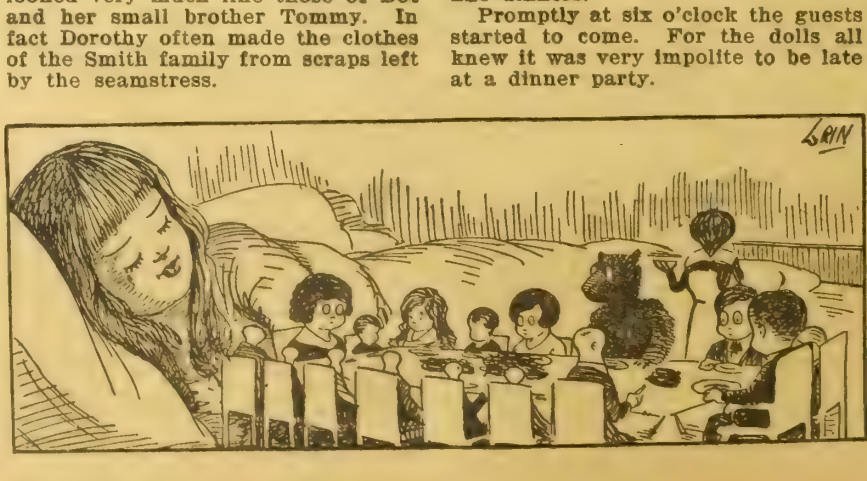
LITTLE Dorothy Thomas owned the lovliest families of dolls. They were the Kewpie family, the Curlylocks family, the Pody-Wodies and a family who looked so much like real people, Dot called them the Smith family.

In the Kewpie family were Mr. and Mrs. Kewpie and four small Kewpies. The Curlylocks family consisted of Mother and Father Curlylocks and one beautiful daughter, Martha, who had long golden curls and big blue eyes; the Pody-Wodies were funny little dolls made out of clothes pins. There were Mr. and Mrs. Pody-Wodie and five Pody-Wodie children. Mrs. Smith, who was a widow, had two sons and a daughter, who wore clothes that looked very much like those of Dot and her small brother Tommy. In fact Dorothy often made the clothes of the Smith family from scraps left by the seamstress.

Dorothy enjoyed playing with her families of dolls; but on the day I am going to tell you about, my dears, she was a very tired and sleepy little girl. So she had not played long till she fell fast asleep.

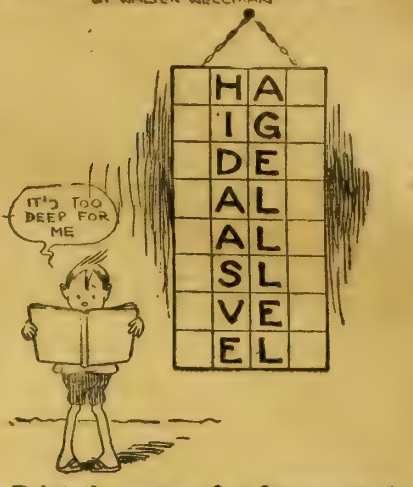
And while she slept, all the dolls decided to have a birthday party for Martha Curlylocks who was that day two years old. So invitations were sent out by Father and Mother Curlylocks to all the other dolls. The party was to be a dinner party, so the dolls were very eager to go. Because Mrs. Curlylocks was noted for having a good cook, whose name was Mamie Stocking Face, because she was made out of an old black stocking. Mamie had a daughter, Sally, who served Mrs. Curlylocks' fine dinners.

Promptly at six o'clock the guests started to come. For the dolls all knew it was very impolite to be late at a dinner party.



FAMOUS AUTHORS

BY WALTER WELLMAN



Print the name of a famous poet in the first upright column, and the name of a famous writer of prose in the last column and have eight correct words of four letters as a result. Who are they?

Answer to puzzle in last issue: G plus SPEAR plus BLIND plus ACE plus TON minus SEAL minus BAG minus D=PRINCETON.

Mr. and Mrs. Curlylocks and Martha greeted the guests after Sally Stocking Face had met them at hte door and sent them to Martha's pretty blue and white room to lay aside their wraps and hats.

Mr. and Mrs. Podie-Wodie brought a friend of theirs, Mr. Teddy Bear from Bearville. Mr. Teddy Bear was introduced to Martha Curlylocks. He had met the other guests at a party given by Mrs. Podie-Wodie in his honor. Martha had been ill and could not go.

"Mr. Teddy Bear", said Mrs. Curlylocks, "I want you to meet my daughter, Martha". Mr. Teddy Bear and Martha cordially shook hands, and Mr. Teddy Bear told Martha how glad he was to know her. To which Martha replied, "And I am happy to meet you, Mr. Teddy Bear." And began asking him about Bearville, for she knew to make a stranger feel at home, you should talk to him of the things and places he knows about.

Soon the dinner bell rang and all arose to go to the table. The gentlemen dolls stood back and the lady dolls went first. At the table the gentlemen dolls seated the lady dolls.

First Sally Stocking Face brought in a cup of bouillon for each guest. The guests all waited for the host and hostess to start eating. When they began, the guests took up their bouillon spoons and put the side of the spoon farther away into the cup and sipped the good bouillon Mamie Stocking Face had made, always from the side of their spoon. For, my dear children, they were very polite dolls, I assure you.

The next course was very good and the dolls ate heartily. They all kept their knives on the edge of their plates, except Timmy Podie-Wodie, who was a very impolite doll. He even put his knife in his mouth, which made his poor mother nearly ill with shame.

The dolls held their knives and forks correctly when cutting the good meat, by placing the first fingers on the knife and fork and keeping the prongs of the fork down. The thumbs and the three other fingers remained at the side of the knife and fork. And the elbows were kept close to the dolls' sides. Mr. Teddy Bear's paws could not hold as well as the fingers of the dolls.

Only one piece of meat was cut at a time by the dolls and Mr. Teddy Bear, and only one bite of bread was spread with butter at one time. But Timmy Podie-Wodie cut all his meat at once, and children, would you believe it, he spread a whole slice of bread and even made a terrible noise when he ate. But you could not hear the other dolls eat their dinner, they ate so quietly.

When they wanted anything at the table, they said, "Please pass the celery", or whatever they wanted. And when it was passed, they said "Thank you", very politely.

Mr. Teddy Bear told them of Bearville and was very pleasant and entertaining. He said he had two fine children and a pretty wife. Mr. Teddy Bear noticed the nice table manners of the dolls. He saw that they unfolded half of their large napkins and that the young dolls asked the older dolls if they could have food before they served themselves. He also saw that the young dolls sat erect and did not handle their knives and spoons or drum on the table, or fidget, until served.

So Mr. Teddy complimented the dolls, and when told by the mothers of the dolls, they ate just as nicely at home, he said, "That is right. I read once, 'Eat at your own table as you would eat at the table of a king', and that is the way I have taught my little bear children to do."

After the meat course was served, a pretty big salad was passed. All the dolls knew to use the salad fork for this but Timmy Podie Wodie who used his spoon. And who did not know to eat with his mouth shut as much as possible.

Next the most wonderful pink and white ice cream and cake was brought in by Sally Stocking Face. All the dolls liked this course thein best. As perhaps you would, too, children dear!

When the dinner was over, Sallie Stocking Face passed the finger bowls. The dolls dipped their fingers into the bowl and dried them on their napkins. Poor Mr. Teddy Bear got his paws quite damp and had a hard time getting them dry.

After dinner the dolls played games and Martha Curlylocks sang a beautiful song, "I Love to be a Doll". Mibbsie Smith played the piano and the small children were quiet and good, for they knew to talk while any of the dolls was playing or singing would be very impolite.

At ten o'clock the guests left, after thanking Mr. and Mrs. Curlylocks for the pleasant evening. As the dolls were going out the door, Dot awoke, and rubbed her eyes and looked about her. She expected to see the dolls walking out, talking and laughing. Instead, they were just as she had left them and not dressed party clothes at all!

FRUIT AND ORCHARD

Edited by FRANK D. WELLS

FALL BEARING STRAWBERRIES FOR THE HOME GARDEN

WHILE the ordinary summer varieties of strawberries must be cared for over a year before a crop has been harvested, the so-called everbearing or fall-bearing varieties can be fruited within four months after the plants are set, and will remain in bearing for two or three months and sometimes afford a strawberry shortcake for Thanksgiving even in Michigan. The same plants will produce a crop of fruit the following June, and with a little care will bear the second fall.

Although the variety known as "Progressive" seems to be best adapted for general cultivation, the "Superb," "Francis," and other sorts do well under favorable conditions.

A fairly heavy and moderately rich sandy loam seems best adapted for everbearing varieties. If too rich, the plants will run to vines, instead of fruit; while if too light and poor, a weak growth will be made. A soil that is naturally moist should be chosen, or arrangements made for watering the plants in dry weather.

The plants may be set two by four feet, if to be worked with a horse; or as close as one by two or three feet in a small garden. In very close culture, they may be set so that there will be three rows with the plants one foot each way, with a wak two feet wide between the plants.

The plants should be given frequent cultivating and hoeing, taking pains to stir the soil after every rain. As the blossoms appear, they should be pinched off, and this should be kept up until the plants have made a strong growth. This may be as soon as the middle of July with early set plants; or as late as August 15th when they are planted late. In three to four weeks after the picking of the blossoms has stopped, the berries will begin to ripen, and can be picked two or three times each week until November 1st, or even later in some seasons.

The following spring they will need cultivation and hoeing, cutting out some of the plants, if too thick, and they will produce a very satisfactory crop in June. They will again fruit during the fall months, but it is more satisfactory to start a new plantation each spring for the fall crop.

While it is desirable to set out the plants as early in the spring as the ground can be worked, the plants will do well if put out any time before June first.—L. R. Taft, State Inspector of Orchards.

FLYPAPER AS A SUBSTITUTE FOR GRAFTING WAX

I have been advised that tanglefoot flypaper is a satisfactory substitute for grafting wax.—V. C. S., Paw Paw, Mich.

—Anything which will keep the cut surfaces from drying out and oxidyzing tends to increase the chance of a graft to this extent, then tanglefoot flypaper would be valuable, in as much as it is more or less waterproof. In the same way a bottle of clay such as was used by the old timers is also helpful.

In the case of tanglefoot, however, I have seen serious injury to bark from the use of this material. It is my recollection that the manufacturers advise that the trees be wrapped with paper before the tanglefoot is applied. Consequently, I should expect unfortunate results were any of the tanglefoot material to come in contact with cut surfaces and any graft to which it were to be applied should have a preliminary wrapping of some other material. Consequently I can see no reason for using tree tanglefoot either with or without the paper as a wax for grafting. Undoubtedly, there have been cases where it has been used and the grafts have lived. I have also seen grafts live without any wax or any protection. However, that is not a sign that they should be treated that way.—F. C. Bradford, Department of Horticulture, M. A. C.

NOTES AND COMMENTS

A cranberry bog is profitable, but expensive to make. The turf must be removed and the ground covered deep with sand. Besides, there must be some means of flooding. Now is the time for some wizard to envolve a plant that will grow without these conditions. Then this fruit may be brought within the reach of all.

Interest in the huckleberry seems to be on the increase. Suitable localities are limited, so at present there is no liability of an over supply of cultivated product. At the same time the marshes are disappearing. The future for this luscious fruit looks bright.

A nursery man some years ago ran short of blackberry stock, so dug up a quantity of wild plants and filled his orders. In due time he began to receive letters from his customers, all pleased with the size, quantity and quality of the fruit, best they had ever seen. It is a matter of common opinion that the blackberry has not been benefitted by improvement, so called.

In days of old, not so very ancient neither, the owner of a Duchiss apple orchard was reaping a harvest. Now he is lucky to give the fruit away. There are two reasons for this. One is overproduction. Too many trees have been planted. The other reason is discrimination. The fruit is not of high quality and better varieties are taking its place. The public is learning.

The Wildgoose is the name of a family of plums native to America, comprising many varieties. It is also the name of one variety in this group, which is unfortunate, since it has resulted in much confusion. The Wildgoose is hardy in Southern Michigan. The fruit is early and highly colored, but these are insufficient reasons for growing it in place of the later, but really good varieties.

A late spray for the apple and pear should not be overlooked. During the last of August the Bodling moth is busy laying her eggs for the late brood. These eggs are deposited on leaves as well as fruit, but the worm crawls from the foliage to the apple, feeding on the way. An application of lead arsenate will settle its stomach for all time and will keep the fruit free from scab, unless there is already some present. These late sprays are of more importance than many seem to suppose. There is no economy in neglecting them.

ISBELL'S SEEDS

Isbell's Seeds DO Yield More

For forty-five years our customers' successful money-making gardens and bumper crops have proved Isbell's Michigan Grown seeds more hardy, better yielding and more dependable. Isbell's seeds yield more for the same reason that thoroughbred stock pays better—breeding tells in anything that grows.

For 45 Years

For nearly a half century Isbell's has been improving seeds—developing better strains, increasing hardiness, and yield and improving cleaning methods. Every ounce of Isbell's seed is grown under strict supervision, sorted and cleaned in our perfectly equipped plant and then tested for germination. Every precaution is taken to make certain that all the seed we ship is **true to strain, adapted to soil and of high germination.**

Pure Bred Seed

Be sure of your seed. If you are to have big crops and make more from garden and field, seed must be pure bred. This year, particularly, because of a shortage in some kinds of domestic seeds, you must beware imported seed, not adapted to our soil and climate. Do not take chances—be certain by planting only Isbell's Pure Bred Seed. Then you know you have the best seed that 45 years of selection, experimentation and development can produce.

The 1924 Seed Annual is Ready for You

This book—which has become the buying guide for more than 200,000 of America's most progressive farmers—is even more helpful this year. It tells you how to determine what crops are best for each purpose—what strains are best for your soil—how to prepare the soil—how to plant for best returns—how to care for the different varieties. It tells you how to select seed. And it **quotes you money-saving, direct-from-grower prices,** on Isbell's Pure Bred Seeds.

This Book Means More Money for You

Send for your copy today! It's Free! This book—examined at your leisure in your own home—gives you time to plan your crops and to select the right varieties. It means less money for seed and more profit from your farm and garden. It costs you nothing but may add many dollars to your income. **So send the coupon now.**

The Farm Home
A Department for the Women

Edited by MRS. ANNIE TAYLOR

DEAR FOLKS:—Here we are at the beginning of a New Year. What are you going to do as the woman of the household? Are you going to make the home life more cheerful and full of love and help solve the financial problem with John and for all concerned? It has always been said that woman's intuition is uncanny. If you feel you possess any of this virtue, assert it this coming year. Help in every way by schemeing and planning the future for you and yours somehow. This is a woman's job after all. I hardly feel it is necessary to remind you of the wonderful value companionship and partnership means to every married couple and their home. The women on the farm are close to their husbands in work, more so than in any other work in life, and I can hardly say more, but if there is any chance for improvement, let us resolve this year to make it a better world to live in. Any problem that you feel I could help you with or answer, do not hesitate to write me. I am willing and ready to help you. What I do not know I can find out. Hoping to hear from you often and wishing you all the happiest and most prosperous year, I am,

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

MY MOTHER-IN-LAW

MY Mother-in-law came to live with us
Upon one cold winter day.
We told her she need not work
To wear herself away.

But Mother with a willing hand
Would work to "beat the band,"
And soon we both forgot ourselves,
As young folks oft-times do,
And we just kept mother busy
Working from morning until two.

She carried in the water,
And she carried in the wood,
So we just kept Mother busy
Doing everything she could.

Until Mother grew old and feeble
And her hair has turned to gray,
And upon her death bed,
We saw her pass away.

So upon the following years,
As they passed day by day,
We never knew what Mother did—
Until she had passed away.
—Written for The Business Farmer by Chas. Hewlett.

THE NEW YEAR

EACH of us is sentenced to death. The time and the place is the only mystery.

Recently there were two men prominent in public life who received their doom and a definite time limit.

One of these was a distinguished surgeon who served in the war and then gave his best to scientific laboratory experimentation. The day came when he knew that he had probably three months longer to live. Through the X-ray he was relieved of suffering, and this is what he did with all that was left to him of life:

He sent a note to his friends saying: "My wife and I are retiring. Do not come to us unless we send for you."

They measured the value of every hour. They lived not as one dying, but in the resolution to make each day count for all that it could hold. Favorite operas and concerts were attended—good plays they both would enjoy. They read together the verse and essays which both of them had loved. Occasionally they entertained the friends who really counted, and they visited the homes of those who were dear to them.

A lifetime was enjoyed in those weeks. It was a little less than three months, but every day had been used to its utmost.

It takes a high soul and a strong character to face the end of the road this way. It is a lesson for each of us who is tempted to waste priceless time.

The other man who knew that his days were numbered accepted his fate as a good soldier, but without the philosophy which triumphed over death. He couldn't tell his wife; he was afraid to hurt her. He kept it a secret from his associates. Only his physicians and two friends who met him in the weak hour of his first shock knew the limit of his life.

This man plunged into his work with renewed effort, resenting any suggestion of illness. He projected plans for his corporation and worked intensely on programs which would not come to light until long after he had passed out of life.

In his work he lived as one whom death could not touch. His one desire was that no one should treat him as a dying man, but that he should live with the living on an equal footing. When death came his business affairs were in order. Life had been a day's work well done.

With the surgeon life had been a day's work—and then a happy evening before night came on.

What would you do if you knew how long you had to live?

The New Year is at hand. January first is almost any other Winter day—except that it is a beginning. It is a reminder that we too may begin.

What will we do with this New Year: live it every day and every hour, or work it, or loaf it along?

Have you though what a wonderful place the world might be if we all lived each day as if it were our last chance to make memories for those we meet and those we love?

EATING FOR HEALTH—WINTER VEGETABLES

ENTHUSIASM for vegetables, although well cultivated and highly developed during the Summer months, may wane with the coming of Winter and the passing of the garden and market supply of fresh lettuce, chard, tomatoes and other vegetable favorites. Lest this happen, one may well adopt the truck-growers' highly educational slogan, "Eat vegetables for vitamins," as a motto for the Winter's diet.

A safe rule to follow is to serve two vegetables other than potatoes daily. In laying the foundation menus for a month, canned tomatoes may be slipped in at least as often as twice a week without fear of wearying the family appetite.

Fortunately the supply of leafy vegetables does not stop with the passing of Summer. Such leafy vegetables as cabbage and celery and onions keep well in storage and afford valuable minerals as well as vitamins.

In order to preserve as much as possible of their valuable food elements, these vegetables should be cooked only enough to make them tender. Cabbage, for instance, requires only twelve to twenty minutes of cooking in uncovered salted water. Vegetables of any kind possess most value when eaten raw. Cabbage shredded or shaved is an excellent salad vegetable and may be eaten as cole-slaw or combined with other foods in salad mixtures. It adds bulk and crispness as well as minerals and vitimines tó the diet, and a cabbage salad of some kind might well occupy a place on the menu as often as twice a week.

Carrots, beets, turnips and squash are other Winter vegetables, with carrots probably in the lead as far as food value goes. These vegetables may be used to fill in the odd days in the menu. Carrots are particularly healthful if eaten raw. They are easily digested if grated or finely ground and may be used in salad in combination with other vegetables or with pineapple or grated cheddar or American cheese or cottage-cheese.

One excellent way of serving Winter vegetables without great loss of value in cooking is to grind or chop finely the raw vegetables such as carrot, onion, cabbage or turnips and add them to a clear soup made of chicken or beef stock. When finely ground, the vegetables need only a few minutes' cooking, ten or fifteen being sufficient.

The knowledge of successful methods of food preservation has made a variety of commercial or home canned vegetables available for food throughout the year. It is especially important that the use of canned vegetables as "greens" be included in the diet.

All vegetables contain many of the tonic and laxative properties included in that dosage that in former years was a harbinger of spring. As a sign of the times and a better knowledge of nutrition and right eating for health, it is interesting to note that "You need a spring tonic for that tired feeling" has changed to "Eat vegetables for vitamins."

FOOD CALENDAR FOR JANUARY

This is a good month to—

Use citrus fruits and cranberries plentifully.

Begin making or using whole-wheat bread.

Use canned vegetables to alternate with those from winter storage.

Serve canned tomatoes twice a week.

Have stewed dried fruits often.

Use fireless cooker for hot breakfast cereals.

Add a few chopped dates to the porridge just before serving.

Think of all the hot desserts you know—rice pudding, bread pudding, apple betty, warm gingerbread, fresh pies—and get some fruit into them if possible.

Make puddings or muffins of left-over breakfast cereal, adding a few nuts, raisins or currants.

Keep up the salad habit. There are dozens of cabbage, carrot, celery, apple and other winter salads.

Remember a hot dish for the children's school lunch.

Take time to measure ingredients accurately, follow directions carefully and improve the standard of the home-made products.

FOR THE HOME-SEWER

WHEN making buttonholes in very soft or thin material, rub a little library paste on the wrong side of the goods and let it dry before cutting the buttonholes. This gives a firm surface to work on, and the paste will not discolor the most delicate fabrics.

In working an eyelet leave the end of the thread long enough to go around the eyelet hole and work over it. It thus pads and makes a firm, even eyelet.

When you wish to put wide lace on a luncheon-cloth or a large centerpiece, try rolling your lace, beginning at one end and rolling very tight. Now tie with a clean cord in three or four places, wet thoroughly one inch at bottom. When this dries, you will find your lace will fall in a graceful circle ready to be sewed on your centerpiece.

Long narrow belts are easily turned by a small safety-pin stuck in one end and run through to the other end.

If the inside belting of your skirt has lost its stiffness, try dipping it in cold starch and press with a hot iron. It will renew it.

To iron a round centerpiece so that it will not pucker in the center, always iron from the center to the outside edge.

At the extreme right end of the ironing-board fasten a tiny writing-pad, a pencil and a paper of pins. As an article is ironed, record missing buttons and tears on a slip and pin to the upper side of the garment when it is finally folded. No need to unfold any article to see if it needs mending.

OUR PRAYER FOR 1924

Keep us, of God, from pettiness; let us be large in thought, in word, in deed.
Let us be done with fault-finding and leave off self-seeking.
May we put away all pretense and meet each other face to face—without self-pity and without prejudice.
May we never be hasty in judgement and always generous.
Let us take time for all things; make us to grow calm, serene, gentle.
Teach us to put into action out better impulses, straightforward, and unafraid.
Grant that we may realize it is the little things that create differences; that in the big things of life we are at one.
And may we strive to touch and to know the great, common woman's heart of us all, and, oh, Lord God, let us forget not to be kind!
—Mary Stewart.

The above "Collect" has been adopted by the National Federation of Women's Clubs.

THE RURAL LIBRARY IN WINTER

NOW is the time for the teacher to make the very best use of the rural school library. It is useless to expect much reading in rural communities during the active farming months but in the long evenings of winter there are two or three hours after supper that country folks have for leisure. Parents and children will welcome good books and magazines. The many fine books of animal stories are especially interesting and appropriate now. The hunting seasons are on and through the natural interest roused in wild life, there is an opportunity to teach the boys and girls about the animals of their own and other countries, kindness to all folk of forest and filed, and a better way of treating our wild friends than killing them.

The holiday seasons bring with them special and charming editions of old books that will tempt children to read when they otherwise would not, as well as large numbers of new and worthwhile books and stories. In the winter, too, the Congress is usually in session and people's minds are more easily turned toward questions of national and State-wide interest. There is better opportunity to teach good citizenship, patriotism, and loyalty through well-selected timely articles on current thought and movements. Moreover, in rural sections such local governmental activties as grand jury and town meetings, sessions of county courts, and meetings of tax-levying bodies are usually held in the winter months when the farmers are not so busy, and the rural library may be well used to give help and information along these lines of civic duty.

Personal Column

Playing Checkers.—Will you please publish or send me directions for playing checkers, as some people say when you put a checker in the king row, you have the privilege of jumping right out again before the other person moves, and I would like to know if that is right or not. Thanking you in advance.—A subscriber.

—I have played checkers a great deal and never knew that any player could move more than once at any play of the game.

The Duty of Casting an Intelligent Ballot.—Every country citizen should aid in the arousing of men and women to a full sense of their duty as good citizens, in casting the ballot, and in such manner and unity as shall result in securing good and efficient government, such that statemen will rightly interpret and politicians will not regard.

One of the leading questions, at this present time, is that of temperance and prompt and efficient expressing of public sentiment, regarding this important matter is essential if temperance is to be made to continue effective.

Woman has been given the franchise and with it is coupled the duty for its proper use but it is much to be regretted that so large a portion of American womanhood fails to recognize their duty in the matter of casting the helpful ballot whenever the opportunity is presented.

History tells us that the neglect or wrongful use of the ballot-box has resulted in recourse to the terrible cartridge-box but no such sad condition will be ours if you and I, with all of our fellow citizens do our full and fearless duty in support of right and righteousness. Will you do this? What say, you fellow citizens? The fact is, patient as a people, we are too much "wrapped up" in securing financial possessions and well for us, will be, if we give more thought and heed to our duty, as good citizens of our state and nation.

The present troubled condition in Europe should cause every American, who has true love of country, to most carefully consider the obligations which accompany citizenship and then loyally decide to perform those obligations.—J. T. Daniells, Ex.-Pres. of Michigan State Association of Farmers' Clubs and 83 years old on this pleasant "Christmas Day."

Superfluous Flesh.—In the women's department of the Business Farmer I saw where Mrs. F. is asking for some information regarding the reduction of superflous flesh. I have been dreadfully afflicted too and could find no relief until a couple of months ago and now I am losing steadily, and feel fine. Please either send me Mrs. F's. address or publish this in the woman's department.

Everyone knows that milk is a perfect food so will not be afraid to try this remedy. One day eat anything you wish and as much as the appetite desires. It is best, however, to avoid sweets and starches though not positively necessary. Do not lunch between meals. The next day take three meals (positively without lunching between meals) but make those three meals entirely of skimmed milk. Take all one wishes but be sure that all cream is removed. In doing this every alternate day, eating one day and the next day using skimmed milk, a gradual reduction will take place. The milk furnishes all the body needs except fat and what is needed of that must be used from the surplus of the body. I am losing from one-half to one pound a week. This is better than a rapid reduction as the waste is more easily removed and one will feel better during the period of reduction than with a more rapid loss. —An Interested Reader.

Burned Out.—I have several old quilts that are worn quite badly, and as I have not pieces enough to make tops to cover them, I thought perhaps you could help me out, by putting a notice in our Business Farmer. I am a reader of it. I have not been able to get what quilts I need since I burned out, so wish the readers of the paper could send me anything that will make a patch for a top. I can use old worn out wool dress skirts or waists by cutting out the best of it. I wish to send my many thanks in advance for what anyone may send me.—Mrs. Pearl Cook, Roscommon, Mich, R. 2.

—if you are well bred!

Children and Table-Talk.—"Out of the abundance of the heart the mouth speaketh" is a saying which has no application to the child at the table. Self expression on the part of the child is one of the cardinal education principles in the child-training of our day but, as a rule, the table is not the place for it. The child cannot expect to share with table-talk of its elders as an equal. Hence it should, as a rule, speak only when spoken to. A careful mother, of course, who keeps an eye on her little ones during the meal, can easily see if the child is very eager to contribute some little conversational item. A kindly, questioning glance will suffice to grant the permission desired and—away from the table, for the children should not be corrected at the table, either before members of the family or guests—the child may easily be taught that what it has to say must be brief and to the point.

The Runner's Bible

(Copyright by Houghton-Mifflin Co.)

Thou shalt have no other gods before me. Ex. 20:3.

For all the gods of the peoples are things of nought. Ps. 96; 1, e. R. V.

We never fear a person, or thing until after we have ascribed power to it, which is to make of it "a god". Where you find yourself in fear turn with deep gratitude to the truth that all power comes from the one true God. (Rom. 13:1). Firmly deny that this thing which frightens you has any power whatsoever, and you will be free from fear and from danger—freed by Truth.

RECIPES

Celery and Cheese Bake.—Six stalks celery, one-fourth cup grated cheese, butter or substitute, salt and white pepper, one-half cup white sauce, buttered bread crums.

Clean the celery, cut into inch lengths, and cook in enough slightly salted water to cover. When tender remove and drain, add the white sauce and the grated cheese and season with salt and pepper to taste. Place buttered crumbs in bottom of bake-dish, add some of the celery mixture, more crumbs, the remainder of celery, and top with the crumbs. Bake about fifteen minutes in oven and serve at once.

Apple-Whip Cake.—One-fourth cup butter or substitute, two eggs, two cups sifted pastry flour, one large tart apple, one orange, two cups sugar, one-half cup sweet milk, three teaspoons baking-powder, Red raspberry or currant jelly, one teaspoon vanilla.

Cream together the butter and one cup of the sugar, add the egg-yolks, and beat up until light, add the milk, and the flour to which the baking powder has been added; add the juice and grated rind of orange. Beat up and bake in two layers.

Just before ready to serve spread with the jelly, and heap up on top the apple-whip. To make this grate the large, tart apple. Whip until stiff the whites of the eggs, fold gradually the sugar and the apple. Beat up until very white and light, flavor with the vanilla or a little orange extract.

WOMEN'S EXCHANGE

IF you have something to exchange, we will print it FREE under this heading providing: First—It appeals to women and is a bonifide exchanges, no cash involved. Second—It will go in three lines. Third—You are a paid-up subscriber to The Business Farmer and attach your address label from a recent issue to prove it. Exchange offers will be numbered and inserted in the order received as we have room. —MRS. ANNIE TAYLOR. Editor

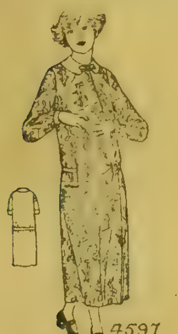
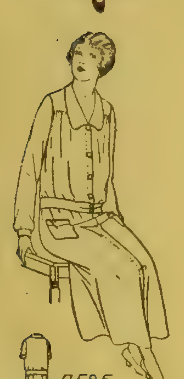
AIDS TO GOOD DRESSING

SEND IN YOUR SIZE

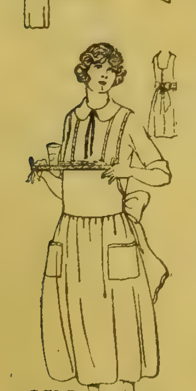
Lately some of you ladies have been sending for patterns without giving size. This means expense and delay for both of us. I hope you all realize the importance of sending in your size when asking for patterns.



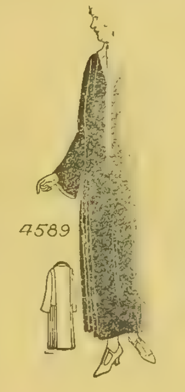
4597



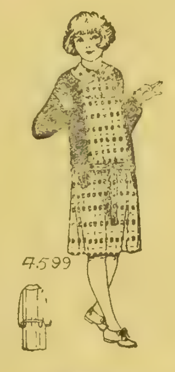
4585



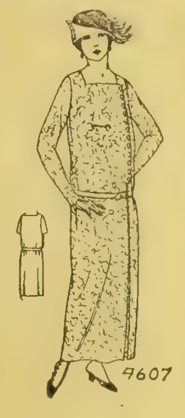
4584



4589



4599



4607

4585. A Good House or Morning Dress.—This model is comfortable and practical. It is suitable for a nurse's uniform, or for a house dress. Linen, repp, drill, percale, gingham and flannelette may be used to develop the dress. The Pattern is cut in 7 Sizes. 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38 inch size requires 4 ⅝ yards of 36 inch material. The width at the foot is 2 yards.

4583. A Popular Style with New Features.—This is a very pretty model. It is suitable for silk, alpaca, flannel and jersey cloth, as well as for wash materials. The shoulder and sleeve portions are combined. This Pattern is cut in 6 Sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38 inch size requires 2 ½ yards of 40 inch material.

4589. A Splendid Style for Mature Figures.—Velvet or satin, would be very attractive for this model. It is finished in slip on style. The plait portions afford becoming fulness at the sides. The facing and collar are new features. This Pattern is cut in 7 Sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38 inch size requires 5 ¾ yards of 40 inch material. For collar and facings of contrasting material ¾ yard is required. The width at the foot is 3 ⅜ yards.

4598. A Pretty Frock for "Party" or "Best Wear."—Figured silk with facings of crepe in a contrasting color, made this attractive model. One could use taffeta or printed voile. The sleeve may be finished with or without puff. This Pattern is cut in 4 Sizes: 8, 10, 12, and 14 years. A 12 year size requires 4 yards of one material 40 inches wide. To trim as illustrated requires ¾ yard of contrasting material.

4599. A Pleasing Model for School or "Afternoon" Wear.—This dress is in slip on style. It has lines that are becoming and girlish. A combination of cloth and velvet, or plaid suiting and serge would be very desirable for this stlye. The Pattern is cut in 4 Sizes: 8, 10, 12 and 14 years. A 12 year size requires 3 yards of 40 inch material of one kind. To make as illustrated requires 1 ¼ yard of plain material and 1 ¾ yard of checked material.

4597. A Smart Frock for the Growing Girl.—New features and becoming lines are expressed in this pretty one-piece model. The right front is slightly draped at the side closing. The sleeve may be in wrist or elbow length. Figured crepe, or twill or serge could be used for this design. The Pattern is cut in 3 Sizes: 12, 14 and 16 years. A 14 year size requires 2 ¼ yards of 54 inch material. To make collar, band cuffs and a narrow belt of contrasting material will require ⅝ yard of 40 inch material.

4581. A Jaunty Coat for a Tiny Tot.—Brown velours was used for this model. The collar and cuffs are of chiffon velvet trimmed with soutache braid. This style is good also for velvet, velours, kasha and twill. The Pattern is cut in 3 Sizes: 2, 4, and 6 years. A 4 year size requires 2 ¼ yards of 40 inch material. To make collar and cuffs of contrasting material will require ½ yard.

4584. A Pretty Apron.—Comfort and daintiness are expressed in this model. One could use unbleached muslin and trim it with bias banding of cretonne or gingham, or, one could use satin or percale with a contrasting color for binding. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A Medium size requires 4 ½ yards of 27 inch material.

4604. A Popular and Seasonable Style.—Bolivia cloth, duvetyn or broad cloth could be used for this model. The fronts lap in double breasted style. The collar is convertible, and may be turned up high, or rolled low with the fronts of the coat open. This Pattern is cut in 4 Sizes: 4, 6, 8 and 10 years. A 6 year size requires 2 ½ yards of 40 inch material. To trim with fur cloth or pile fabrics requires ¼ yard 54 inches wide.

4607. A Simple,. Stylish Frock.—French serge, kasha or jersey weaves are good for this model. It has graceful lines, and becoming plait fulness at the left side of the front. The sleeve features the new fitted model. This Pattern is cut in 7 Sizes: 34, 36, 38, 40, 42. 44 and 46 inches bust measure. The width at the foot with plaits extended is 2 yards. For a medium size 2 ⅝ yards of 54 inch material will be required.

4602. A Good Style for a School Dress.—This model is finished in "wrap style" and has the new flare effect in the skirt portions. As illustrated plain and contrasting material may be effectively combined or, one could use wool crepe with wool or yarn embroidery for decoration. It is also a good style for velvet. The Pattern is cut in 4 Sizes: 6, 8, 10 and 12 years. A 10 year size requires 3 ¼ yards of 27 inch material of one kind. If made as illustrated it will require 1 yard of figured material and 1 ½ yard of plain material 36 inches wide.

4595. A Stylish Skirt Model.—Here is a splendid version of the popular "side drape." One may use any of the soft materials now in vogue for this model. The width of the skirt at the foot is about 1 ⅞ yard. The Pattern is cut in 7 Sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. A 29 inch size requires 3 ½ yards of 40 inch material.

Aspirin

Beware of Imitations!

BAYER

Demand

Unless you see the "Bayer Cross" on the package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians over twenty-three years for

Colds Headache
Toothache Lumbago
Neuritis Rheumatism
Neuralgia Pain, Pain

Accept "Bayer Tablets of Aspirin" only. Each unbroken package contains proven directions. Handy boxes of twelve tablets cost few cents. Druggists also sell bottles of 24 and 100. Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid. (1

Reaches Deep Colds Immediately!

Rubbed on, Vicks Has a double effect

HERE is the last word in treating cold troubles—rub Vicks well in over throat and chest. Get into bed and leave the coverings loose about the neck. All night long you breathe in the healing vapors of camphor, menthol, eucalyptus, turpentine, etc. The application also acts like a heating liniment or plaster—almost sure to loosen the cold before morning.

Vicks is just as good, too, for inflammations, such as cuts, burns, bruises, sores, stings and skin itchings

Write to Vick Chemical Co., Box B-82 Greensboro, N. C., for a test sample.

RHEUMATISM

A Remarkable Home Treatment Given by One Who Had It.

In the year of 1893 I was attacked by Muscular and Sub-acute Rheumatism. I suffered as only those who are thus afflicted know, for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely, and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatsim, to try the great value of my improved "Home Treatment" for its remarkable healing power. Do not send a cent; simply mail your name and address and I will send it free to try. After you have used it and it has proven itself to be that long-looked-for means of getting rid of such forms of rheumatism, you may send the price of it, one dollar, but understand, I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer when relief is thus offered you free? Don't delay. Write today.

PLAN CO-OPERATIVE FARM MARKETING

(Continued on Page 2)

will be chairman ex-officio of the committee.

The program and policy sought to be established for the Grange, Mr. Taber said probably will include both legislative and administrative activities. "Some legislation may be necessary," he said, "but what the farmer needs is more team work, not more legislation."

Mr. Tabor said indications are that plans may be worked out along lines of the federal farm loan system and that the out-standing purpose of any program will be to "improve the economic condition of the farmer."

TWO COUNTIES JOIN FOR CO-OP CHERRY CANNERY

THE cherry growers of Oceana and Mason counties plan a co-operative cannery and already $20,000 of the necessary $60,000 has been subscribed. The movement was launched at a meeting of growers of the two countries held at Hart last week and resulted in the naming of a committee to proceed with the organization. The subscriptions already obtained were volunteered.

The proposed plant probably will co-operate with the Grand Traverse Packing Co., another co-operative concern, which has been successful during the three years of its operation.

The movement for a co-operative plant is the result of the strike of cherry growers here this year when they refused to sell to local canneries because of the price offered.

In the Grand Traverse plant 250 barrels of 50 gallons capacity are frozen daily during the canning season. In the storage plant, 5,000 barrels can be stored at zero temperature.

The Grand Improvement Association has donated a site for the plant.

OVER 5,000 FARMERS EXPECTED DURING FARMERS' WEEK

FARMERS' Week at the Michigan Agricultural College, which has grown to be the biggest conference of farmers of the state held during the year, will be staged February 4-8 this winter, according to the announcement of A. M. Berridge, chairman of the Farmers' Week committee at the college.

More than a dozen of the leading agricultural organizations of the state will hold their annual meetings at M. A. C. during this week. A program including some of the leading men and women in the agricultural and business life of the nation is being prepared. Special agricultural exhibits on various phases of farming and rural life will feature the week.

Last year more than 5,000 farmers and their families attended the gatherings, and the committee is making plans to care for an even greater number this year.—R. C. Groesbeck, M. A. C. Correspondent.

CALIFORNIA MAN ADVOCATES CO-OPERATIVE MARKETING

(Continued from Page 3)

strong and truly cooperative bean marketing association. We believe such an organization would be of material benefit, not only to the Michigan bean farmers, but to many of the Michigan bean elevators, to the bean growers and dealers in other states; to the bean jobbers and the whole grocery trade handling various varieties of beans, and to the consumers who eat these beans.—R. L. Churchill, Secretary and Manager, California Lima Bean Growers Association, Oxnard, Calif.

Base Ingrate

Zeke: "Wall, how ye feelin', Jed?"
Jed: "Oh! purty good."
Zeke: "What? Purty good, after me walkin' four mile to see ye?"—Brown Bull.

Simplification

The following is an example of the simplicities of "pidgin" English, as set forth in a bill rendered by a Jap taxi driver in Hilo, Hawaii:

"10 comes and 10 goes at 50c a went, $5.—Washington Star.

It was a mathematician's son who, in class, when asked what a fortification was, answered: "Two tentifications."

Cured His Rupture

I was badly ruptured while lifting a trunk several years ago. Doctors said my only hope of cure was an operation. Trusses did me no good. Finally I got hold of something that quickly and completely cured me. Years have passed and the rupture has never returned, although I am doing hard work as a carpenter. There was no operation, no lost time, no trouble. I have nothing to sell, but will give full information about how you may find a complete cure without operation, if you write to me, Eugene M. Pullen, Carpenter, 59-K Marcellus Avenue, Manasquan, N. J. Better cut out this notice and show it to any others who are ruptured—you may save a life or at least stop the misery of rupture and the worry and danger of an operation.

FUR DEPARTMENT

HOME TANNING OF SKINS

WHEN it is desired to preserve the skins of wild animals which have been shot or trapped, these may be tanned either with the hair on or off, as desired. Hair can be removed from hides by soaking them in tepid water made alkaline by lye or lime. The following recipe for a tanning liquor is furnished by the Biological Survey of the United States Department of Agriculture: To each gallon of water add one quart of salt and one-half ounce of sulphuric acid. This mixture should not be kept in a metal container. Thin skins are tanned by this liquor in one day; heavy skins must remain in it longer. They may remain in it indefinitely without harm.

When removed from this liquor, the skins are washed several times in soapy water, wrung as dry as possible, and rubbed on the flesh side with a cake of hard soap. They are then folded in the middle, hung lengthwise over a line, hair side out, and left to dry. When both surfaces are barely dry, and the interior is still moist, they are laid over a smooth, rounded board and scraped on the flesh side with the edge of a worn flat file, or a similar blunt-edged tool. In this way an inner layer is removed and the skins become nearly white in color. They are them stretched, rubbed, and twisted until quite dry. If parts of a skin are still hard and stiff, the soaping, drying, and stretching process is repeated until the entire skin is soft. Fresh butter, or other animal fat, worked into skins while they are warm, and then worked out again in dry hardwood sawdust, or extracted by a hasty bath in gasoline, increases their softness.

RACCOON RAISING

I wish to know in what way it is possible to raise raccoon and what I should feed them?—A Reader, Suttons Bay, Mich.

—They should be kept in an enclosure say 10 by 20 feet for each raccoon. Thus if you had a dozen animals the enclosure should be about 50 by 50 feet. There is a wire manufactured for fur farming purposes and for coon about 14 gauge is right size with a 2 inch mesh. Such wire can be had of B. F. Tarman, Quincy, Pa., I think. Coon are very fond of sweet milk and bread: they also eat table scraps, meat, etc. The raising of raccoon will soon become much more of a business than now altho there are numerous ones now raising.—A. R. Harding.

WIDEN ROAD BETWEEN DETROIT AND PONTIAC

THE 'most dangerous" improved road in the country will soon be the safest. Work was started early this winter which, when completed, will form a 200 foot right of way between Detroit and Pontiac, Mich. This stretch of highway is reputed to be the most traveled strip of road in the world.

The history of this highway graphically illustrates the growth of automobile travel and the rapidity with which road conditions change. Only six years ago the last strip of concrete connecting these two cities was laid. At that time it was looked upon as an achievement, and it was predicted that here was a good road for a generation at least. Today it is less adequate for the demands put upon it than was the dirt road it succeeded.

About 10 years ago a short strip of concrete was laid on the road in what is now Detroit. The next improvement started in 1915 when another section of the Pontiac end was concreted. Additional strips were laid in the two following years, the final piece of concrete being completed late in 1917.

The completed road averaged 16 feet in width. There was one section 18 feet wide and another 15 feet. The new road was not more than a year old when it became apparent that it was too narrow to care for the ever increasing traffic. During the past two years the urgent requests of motorists to have the road widened were emphasized by a large number of fatal accidents, many of them due to automobiles being crowded off the road and onto tracks of an greater portion of the right of way. This year the state legislature passed necessary laws to permit the improvement.

When the new highway is finished it will consist of two shoulders of gravel road, each 38 feet wide, at the extreme right and left. These will be for the use of slow-moving vehicles and for parking purposes. Next will come two concrete roadways, each 40 feet in width, automobiles. These will be separated in the center by a 44-foot space for the interurban tracks from the automobile highway.

SPECIAL WINTER COURSES AT M. A. C. OPEN JANUARY 7

A NUMBER of special winter courses in various phases of agriculture, including dairy, poultry, horticulture, and farm mechanics, as well as "general agriculture," will open at the Michigan Agricultural College on January 7, according to the announcement of A. M. Berridge, director of winter courses.

The work in all the courses is designed to be of the greatest value to the practical farmer who has not the time for the regular four year courses. It is limited to practical material of value to the man actually engaged in agricultural pursuits.

Every citizen of the state over sixteen years of age is eligible for admission, there being no educational requirements placed on the courses, although a good grade school education is advised for those who would gain the greatest advantage from the special classes.

The list of courses which open January 7 include: general agriculture, eight weeks for each of two years; dairy production, twelve weeks; dairy manufactures, eight weeks; horticulture, eight weeks; poultry, four weeks; farm engineering, eight weeks.

The first of three special four week courses in trucks and tractors opened December 31.—R. C. Groesbeck, M. A. C. Correspondent.

NEW LEADERSHIP FOR THE NEW YEAR

(Continued from Page 13)

boat had gone, and then it went to sleep again. Many churches are metamorphosed into mausoleums and have written over their doors, "Death sleeps here." Why? Not thru lack of men, money, or machinery; but thru a need of a warm and vital connection with the great Antecedent Life, Christ. Sadis, "Thou has a name that thou livist but—." "He that hath ears to hear, let him hear what the Spirit saith to he churches" in his year that is just now new.

BIBLE THOUGHTS

TASTE AND SEE:—O taste and see that the Lord is good.—Psalms 34:8.

SECRET OF PROSPERITY:—As long as he sought the Lord, God made him to prosper.—2 Chronicles 26:5.

CURSING or BLESSING?—Cursed be the man that trusteth in man, and maketh flesh his arm, and whose heart departeth from the Lord.

Blesseth is the man that trusteth in the Lord, and whose hope the Lord is.—Jeremiah 17:5, 7.

OBEDIENCE:—If ye love me, keep my commandments.—John 14:15.

FULLNESS OF JOY:—Thou wilt shew me the path of life: in thy presence is fulness of joy; at they right hand there are pleasures for everymore.—Psalm 1:11.

GOD'S DAILY BENEFITS:—Blessed be the Lord, who daily loadeth us with benefits, even the God of our salvation.—Psalm 68:19.

BETTER THAN SILVER AND GOLD.—Godliness with contentment is great gain. For we brought nothing into this world, and it is certain we can carry nothing out. And having food and mainment, let us herewith be content.—1 Timothy 6:6, 7, 8.

SOW BOUNTIFULLY:—He which soweth sparingly shall reap also sparingly; and he which soweth bountifully shall reap also bountifully.—2 Corothians 9:6.

VICTORY SURE:—Greater is he that is in you, than he that is in the world.—1 John 4:4.

Priceless Service

Despite fire or storm or flood, a telephone operator sticks to her switchboard. A lineman risks life and limb that his wires may continue to vibrate with messages of business or social life. Other telephone employees forego comfort and even sacrifice health that the job may not be slighted.

True, the opportunity for these extremes of service has come to comparatively few; but they indicate the devotion to duty that prevails among the quarter-million telephone workers.

The mass of people called the public has come to take this type of service for granted and to use the telephone in its daily business and in emergencies, seldom realizing what it receives in human devotion to duty and what vast resources are drawn upon to restore service.

It is right that the public should receive this type of telephone service, that it should expect the employment of every practical improvement in the art, and should insist upon progress that keeps ahead of demand. Telephone users realize that dollars can never measure the value of many of their telephone calls. The public wants the service and, if it stops to think, cheerfully pays the moderate cost.

Double *the* Net Dairy Profit!

— and stop dreading cow diseases, at one stroke —

One cent a day

per cow is the average cost of using Kow-Kare as a preventive of disease and aid to increased milk yield.

Most dairymen feed a tablespoonful twice a day one week out of each month Fed two weeks before and two weeks after calving, Kow-Kare strengthens the cow over this critical period.

The best dairy authorities say that, on the average, an increase in milk yield of only 10% will double the net profit. This is a goal so moderate that it can be attained in almost every dairy.

Cows are pretty hardy creatures, but their genital and digestive organs—always hard worked in the function of milk making—are prone to break down. The milk-yield at once suffers.

These milk-making functions of nearly every cow, need frequent aid to keep them toned up to top-notch production, and to ward off disease. Kow-Kare accomplishes just this purpose. Acts directly on the organs of production. Thus strengthened, you need have little fear of such cow diseases as Barrenness, Abortion, Retained Afterbirth, Scours, Bunches, Milk Fever, Lost Appetite.

The milk-flow, too, is surprisingly increased by the general conditioning action of Kow-Kare. A cow may have no sign of disease, yet show a substantial increase in yield when Kow-Kare is fed moderately.

Start now to get 10% more milk from your cows. Our free book, "The Home Cow Doctor" tells how to use Kow-Kare successfully. Write for your copy.

Feed dealers, general stores and druggists sell Kow-Kare; $1.25 and 65c sizes. If your dealer is not supplied, we will mail postpaid upon receipt of remittance.

DAIRY and LIVESTOCK

DETAILS COUNT IN DAIRYING

IN our eagerness to make every dollar possible we often overlook some of the smaller and seemingly lesser important things in the dairy, and by doing so are often unknowingly the losers. There are innumerable little things which cost practically nothing but which make a decided increase in the butterfat yield and consequently in the financial yield.

They are such simple things as regularity in time of milking, having the same person milk the same cows, quietness and gentleness while working around the cows, seeing to it that the cows are thoroughly milked clean and making it a practice to brush or clean the cows at intervals. These are some of the things that every cow keeper knows. Some may admit that they are all right for the man who has an extra large dairy or who gets a large price for his milk, but they think that they have no time to pay attention to all of those details.

Now the very fact that one is not getting the highest price for his produce or does not have a large dairy, should make him all the more anxious to get all the profit out of his cows possible under the existing conditions without the expenditure of too much extra capital. It is important to milk the cows regularly, or, in other words, as nearly at the same time as possible. And in order to obtain the best results they should not be milked hurriedly one time and then quite slowly at another. Neither should milking be stopped every few minutes. After the cow is started the milking should be steady until finished.

It is also essential that the same person milk the same cows, as a cow will never yield as much nor will she be as consistent if milked by different persons. Being noisy and rough around the cows is expensive. These things will probably not affect the yield as much as the test. I know this by actual observation in a herd that had been chased by a dog during the day. After testing the cows in the evening the average test was found to be just a trifle over 2.30 per cent, while ordinarily the average test of these cows was about 4.10 per cent. But the number of pounds of milk given was about the same. It is a well-known fact that cows when nervous or frightened will not yield the fat even though the quantity may not change materially.

There is a loss in two ways in not milking clean. Not only does the owned lose the milk, but the cow will soon have a swollen udder, which may result in the loss of a quarter or ruin the whole cow as far as milking is concerned. And besides, if a cow testing 4 per cent butterfat be milked and the first fourth of the milk be tested it will probably only test about 2 per cent and it even may be a little lower. The second fourth will test between 3 and 4 per cent and keep on increasing, and the very last milk or strippings sometimes tests as high as 12 and even 15 per cent. Hence the importance of getting the strippings.

On the majority of farms now the cows are kept in a fairly sanitary condition, but unfortunately there are some who are careless about the sanitary condition of the animals. In some cow stables the brush and curry comb are unknown articles. This is certainly not because the expense is too great. Keeping the cows clean is important and stables can be built in which the cows will keep quite clean with practically no expense.

Where a gutter is kept in back of the cows the error is so often made in giving the cows too much room between the feeding trough and the litter gutter. The littler will not drop in the gutter and consequently the cows are dirty. Where stanchions are used from 4½ to 5 feet is ample room between the stanchion and the gutter, varying of course with the size of cows. An ordinary sized Jersey or Guernsey will easily stand on 4½ feet. If, however, the cows are tied to a high trough they must have a little more room than I have mentioned in order to lie comfortably.

Every dairyman should have a Babcock tester of his own, or at least himself and a neighbor or two own one between them. There are, however, some who haven't got a tester nor have their cows been tested by someone else. By the following simple method they may test their cows so as to get a comparative idea of their value.

Get as many small-necked bottles as there are cows in the herd and after milking each cow perfectly dry weigh her milk to get the number of pounds. Then stir or pour it from one vessel to another until it is thoroughly mixed, and from the milk of each cow fill one of the bottles full and set away in a cool place until the cream has risen. The amount showing in the neck of the bottles will show at once which cows give the richest milk. The bottles should all be of the same size and make. Bottles in which catsup has been packed for sale in stores will make good test bottles for this purpose. A label should be pasted on each bottle on which is written the name or color of the cow from which the milk came. You know how many pounds each cow gives and which one gives the richest milk. Keep the milk from the best cow and that from the poorest one and take it to a creamery and have it tested, being sure to mix the milk well from each cow before taking samples for testing.

If a dairyman closer than the creamery has a tester the samples can be taken to him. The Babcock tester will show exactly what each cow is doing and from observing the difference in the various test bottles a very close estimate can be made of what any cow in the herd is doing. The man who takes the trouble to make a careful test of his cows often meets with a surprise in finding that some of his cows are getting their board without having to pay anything for it. When this is found to be true no time should be lost in getting rid of them and putting better ones in their place.—H. C. Warren.

CLINTON CO-OPERATIVE CREAMERY GREAT SUCCESS

EIGHT years ago a group of one hundred sixty-five men in and about Westphalia, a small town in Clinton county, elected to form a small co-operative creamery by each purchasing a ten dollar share-thereby raising $1,650.00. With this money a small plant and equipment was secured.

Had anyone prophesied the returns which this small investment would mean to those men over a period of eight years, it is doubtful if the phrophecy would have received very much consideration.

However, during the eight years just passed $14,673.64 in patronage dividends has been declared besides purchasing a house and lot valued at $2,000.00 an paying for cream on the same basis with other creameries and cream buying stations.

The fact that during the last year their total business of $34,035.00 shows an increase of approximately $7,000.00 demonstrates that there is a considerable element of satisfaction in its management which during the past year decreased expenses $600.00.

Mr. Theodore Bengel, who has been secretary for a number of years prepares each year a detailed statement assembled on a sheet of paper, which this year was nearly fourteen feet long and two feet wide, showing each patrons name, each check sent out, a total at the bottom of this column and also his patronage dividend figured out. This gives neighbor an opportunity to see just how they stand and also an opportunity to review their years work with the creamery.

Mr. Bengel also states that it also gives a very graphic record of the stability of patrons; that is, it is easy to note the blank column and weeks in which no check were sent to certain patrons showing that some were shopping around, which of course, tended to decrease the patronage dividend and this in some cases amounted to as much as $40.00 which makes a splendid Christmas present for the loyal members.

The success of the creamery is reflected in the agricultural prosperity of the community and one has but to drive through to know that some force is behind the well kept farms and farm buildings.—H. V. Kittle.

BREEDS OF DAIRY CATTLE

No. 5—AYRSHIRE

THE Ayrshire breed originated in the county of Ayr, in southwestern Scotland. In that region, which borders on the Irish Sea, the surface is rolling and has much rough woodland. Pastures therefore, are somewhat sparse and it is necessary for animals to graze large areas in order to obtain sufficient feed.

It is only within the last hundred years that Ayrshires have had a type well enough established to be entitled to the designation of breed. No exact account of the different infusions of blood of other breeds into the native Scotch cattle to form the Ayrshire breed is at hand. It is probable, however, that the Channel Islands, Dutch, and English cattle were all represented.

Importations and Distribution

The first importantion of Ayrshires to this country was made in 1822, since which time there have been frequent importations into both the United States and Canada. New England, New York, and Pennsylvania probably contain the largest number of representatives of the breed. There is a small distribution in the other Atlantic States and the Pacific Northwest. In Canada Ayrshires have had great popularity and the breed seems well able to withstand the rigors of the Canadian climate. The merits of the breed have not been advertised widely; consequently it is not well known in many sections of the United States.

Characteristics

The colors of Ayrshires may vary from medium red to a very dark mahogany brown and white, with either color predominating. Of late years among breeders there has been a decided tendency toward white with red markings. A black muzzle and a white switch are desired, but are not necessary for registration. Perhaps the most picturesque feature of animals of the breed is their long horns, which turn outward, then forward and upward. Another point of which breeders of the Ayrshire are very proud is the uniform, square, level udder with long body attachment which is common among the cows.

Quick, brisk actions are characteristic of the animals, which seem always to have an abundant store of energy and to be exceptionally alert. Ayrshires have a highly nervous disposition, which is useful for both production and self-support. Probably none of the other dairy breeds can compare with the Ayrshires in ability to obtain a livelihood on scant pastures. Their ability as "rustlers" has made them very useful in sections where there is much rough land in pasture.

In weight the cows may vary from 900 to 1,300 pounds (average about 1,000 pounds); bulls weigh between 1,400 and 2,000 pounds (average about 1,600 pounds). The animals are noticeably compact in body, with a tendency to smoothness over all parts. Formerly they were criticized for their short teats, but that fault has been removed largely by careful breeding. As a breed Ayrshires are generally very hardy and show great constitutional vigor.

At birth the calves weigh from 55 to 80 pounds, are very vigorous, easy to raise, and make rapid gains. Heifers reach maturity of frame at an age between the Holstein and the Jersey.

Production

Milk from Ayrshire cows contains comparatively little color and has the fat in uniformly small globules which average smaller in size than in any other breed. For these reasons the milk sometimes fails to show a distinct cream line, by which the consumer often judges the quality of the milk. Ayrshire milk, because of the small fat globules, stands shipping well without churning, and in other respects it is well adapted to the market-milk trade. The percentage of the butterfat in the milk is medium, and consequently there is no difficulty in conforming to local or state butterfat standards.

Families

On account of the comparatively recent origin of the breed few families have been developed. The more prominent in the United States are the Brownie, Auchenbrain, Finlayston, White Cloud, Jean Armour, and Robin Hood.

MICHIGAN JERSEY QUALIFIES FOR SILVER MEDAL

VARIELLA'S Creampot 538801, by producing 8,214 lbs. of milk and 507.05 lbs. of fat in 365 days, at 2 years, 2 months, becomes a Silver Medal cow in the herd of Mr. H. F. Probert of Jackson, Michigan. This fine cow is out of Champion's Creampot 377815 and by Variella's Flying Fox 168-679 having two Register of Merit daughters to his credit.

BREAKING AND TRAINING COLTS

IF a horse is to reach the stage of full value and usefulness possible for an animal of his type and class, he must be carefully broken and well trained when young, results which frequently are not accomplished by many horsemen. The best methods and practices for making a good work horse out of a good colt prospect are described in Farmers' Bulletin 1368, Breaking and Training Colts, a revision of a former bulletin, which has just been prepared by the United States Department of Agriculture.

Since horses do things largely through habit, it is essential, says the bulletin, to establish good habits and to prevent colts from doing things which might develop into bad habits. It is of primary importance here that the colt should never be permitted to have his own way. If he can not do the one thing asked of him, the trainer immediately should make him do something else which he can do. In this way the colt is soon impressed with the fact that man is his master. Once this impression is firmly fixed in the colt's mind he is well on his way toward becoming a good, safe work horse.

The bulletin takes up in separate chapters such subjects as the age to break, gentling the colt, breaking to lead, handling and trimming the colt's feet, breaking to drive, stopping, backing, driving double, driving single, sights and sounds, breaking to ride, correcting bad habits, throwing a horse, harness, and the importance of a good mouth.

Copies of the bulletin may be had free as long as the supply lasts by addressing the Department of Agriculture, Washington, D. C.

USING CULL BEANS IN BALANCE RATION

I have corn silage with a very little corn in it though. I figure to feed it twice a day with hay, corn stalks, or bean pods for roughage. Then for grain I buy cull beans and boil them, feed each cow about two quarts twice a day with a tin cupful of cotton seed meal. Is this anywhere near a balanced ration or not? If not, what would you advise me to add?—L. R. Whittemore, Mich.

—It is very difficult to say whether you are feeding a balanced ration or not from the measures that you use for feeding your cattle, that is, a tin cup might hold anywhere from a quart to two pounds of cottonseed meal.

Since you wish to feed cull beans, I would suggest this ration: 40 lbs. ground corn, 40 lbs. ground oats, 20 lbs. ground cull beans, 10 lbs. oil meal, 10 lbs. cottonseed meal.

If you feed alfalfa hay at the rate of 12 to 15 pounds per day instead of corn stalks, the ration would be satisfactory if the cottonseed meal were left out. However, you undoubtedly wish to utilize the feeds at hand and I would suggest for roughage that you feed 30 to 40 pounds of silage and 12 to 15 pounds of hay, which I assume contains a

With the NEW

DE LAVAL

Cream Separator

A Better De Laval

For Fewer Pounds of Butter

In 1913 it took 231 lbs. of butter (average price for the year) to pay for a popular size De Laval Cream Separator. In 1923 (average price for the first ten months) a De Laval of the same size can be purchased for 206 lbs. of butter, 25 lbs. or 11% less than in 1913. In addition, the De Laval of today is a very much better machine, having 10% more capacity, a Bell Speed-Indicator, self-centering bowl, a bowl holding device, and other improvements and refinements.

You Lose Money by Not Having a *New* De Laval

With high-priced butter-fat, you lose money by using an inferior or worn-out cream separator. There are hundreds of thousands of cream separators in use today wasting the price of a new De Laval in from six months' to a year's time. There is enough butter-fat being wasted in this manner to keep several factories the size of the De Laval Plant, the largest in the world, running full force.

$6.60 to $14.30 Down
$3.96 to $8.58 per Month

If you want to buy a cream separator on the installment plan you can now get a De Laval on extremely easy terms. Practically all De Laval Agents sell them that way. For $6.60 to $14.30 (depending on the size) you can start using a high-quality, long-life, cream-saving De Laval; and then for $3.96 to $8.58 per month you can easily pay for it out of cream checks or butter money. (Prices slightly higher on Pacific Coast and in Canada.)

The De Laval Milker

If you are milking ten or more cows by hand you need a De Laval Milker. Like the De Laval Separator it will soon pay for itself, and is a quality product. There are already more than 15,000 in use giving remarkable satisfaction. A De Laval Milker not only saves a great deal of time and drudgery, but because of its pleasing and uniform action usually causes cows milked with it to give more than by any other method of milking. It also produces cleaner milk. Send coupon for complete information.

The new De Laval Separator, which has now been on the market for over a year and of which there are already more than 100,000 in use, is acclaimed on all sides as being the best De Laval ever made. That is saying a great deal when it is considered that De Laval Separators

—have millions of users who regard them as the finest machines made;
—have won more than 1100 prizes for superiority of operation and construction;
—are overwhelmingly endorsed for efficiency of service by cow testers, who reach over 6000 farms;
—are used and approved by creamerymen, college and dairy authorities;
—and have the longest record of use, as proved by the life of the thousands of machines in the "Oldest De Laval Users Contest," which averaged over 20 years.

With such remarkable achievements a new De Laval must be very good indeed to be better—and it is. Convince yourself. Ask your De Laval Dealer to show you the new De Laval. Try it alongside of any separator made and you will be convinced of its superiority.

The new De Lavals have all the good features of the old, plus:

1. Self-Centering Bowl. The De Laval Bowl is so designed as to center itself when it attains separating speed, eliminating vibration, which adds to its efficiency and life.
2. Light Running. The De Laval Bowl is so designed as to shape, height, diameter and distribution of weight as to afford the least possible resistance in being revolved, which together with the automatic oiling system, and superior design and construction of the driving mechanism, requires the least power (per pound of capacity) to drive.
3. All-Around Superiority. A combination of the foregoing features, together with superiority of De Laval design, workmanship and materials, enables a De Laval to separate more thoroughly under all conditions of use, delivering a smoother and richer cream.
4. Greater Convenience is also obtained in the new De Lavals through the use of a bowl holder which is attached to the machine.

No Cows

Make Your MILKERS PAY

Every cow in your herd can be made to produce up to her full capacity

—if you look well to her ration, her health, her appetite and her digestion.

Balance the ration. Feed bran, oats and corn, or their equivalent, cottonseed or linseed meal, clover hay, alfalfa, silage—pasture in season.

Remember, the better the appetite the greater the food consumption, the greater the milk production.

DR HESS
STOCK TONIC

DR. HESS STOCK TONIC

Keeps Cows Healthy *Makes Cows Hungry*

It conditions cows to turn their ration of grain, hay and fodder into pails of milk.

It contains *Nux Vomica,* greatest of all nerve tonics. *Quassia* produces appetite, aids digestion. *Salts of Iron* keeps the blood rich. There are *Laxatives* for the bowels, *Diuretics* for the kidneys, to help throw off the waste materials which so often clog the cow's system.

Excellent for cows at calving. Feed it before freshing. Good alike for all cattle.

Tell your dealer how many cows you have. He has a package to suit. GUARANTEED.

25-lb. Pail $2.25 **100-lb. Drum $8.00**

Except in the far West, South and Canada.

Honest goods—honest price—why pay more?

considerable amount of timothy, and allow the cows to have such corn stalks and bean pods as they wish to pick over. The grain mixture should be fed at the rate of one pound of grain for each three and one-half pounds of milk produced.—J. E. Burnett, Assoc. Prof. of Dairy Husbandry, M. A. C.

Veterinary Department

MARE NEEDS GOOD FEED AND CARE

My brood sows will root one another in the side and then suck till they take the hair off. My young pigs are doing the same thing. I have put rings in their nose, but it isn't long until the rings are out. They don't root as long as the rings hold. I have them in clover pasture and feed corn and separator milk, fresh from the separator.

I have a young mare 6 years old that has been worked hard and half fed this last year or two. When I first got her about 6 weeks ago she was poor, had no life, and sure was hard looking. She is fattening up now though and looks lots better, but when I was plowing with her lately she would go along with her head down and if you spoke to her to go any faster, she seemed to pay no more attention than if she had not heard me. If you stop her when she is working, she drops her head and seems to go to sleep. If I hit her with the line she seems to have all kinds of life, but soon forgets.—L. R., Whittemore, Mich.

—I do not know what is the matter with the brood sows. I would not like to make any suggestions without first having an opportunity to make a physical examination of the sows.

The six-year-old mare in all probability needs plenty of good feed and care more than anything else. Put her on a full feed of oats, corn and bran making the ration about one-half oats and the other half equal parts of corn and bran. A small handful of oil meal added to the ration night and morning would also be very good. Clover hay would be better than timothy. The addition of one teaspoonful of artificial carlsbad salts to the feed night and morning and continued for about one month would do very well. It may take all winter for your mare to get in good condition.—John P. Hutton, Division of Veterinary Medicine, M. A. C.

MILK THICK AND STRINGY

Would like to know what to do for my cow. Her milk is thick and stringy. She calved August 7th. Was not so bad when she came fresh as she is now. Her udder swells and she only gives half the milk. Last winter she tried to jump the fence and was hung on the fence. We think she might have gotten hurt.—A. P., Onaway, Mich.

—This cow is suffering from one of the forms of mastitis and I would suggest that you consult your local veterinarian relative to treatment and put the case in his charge. I would be glad to prescribe treatment but is very unsatisfactory to prescribe treatment for a case of this kind without first having an opportunity to make a physical examination of the patient. If you do not have a veterinarian in your community and will write me a letter giving as best as you can all the symptoms of the case I will be very glad to prescribe as best I can.—John P. Hutton, Assoc. Prof. Surgery and Medicine, M. A. C.

REMOVE BOTH HORNS WITH DEHORNING CLIPPERS

I have a cow that lost part of one horn last fall, just the inside is left. She did not seem to mind it at the time, but I don't think she looks as well as she did last year. Do you think losing the horn would have any effect on her health? She has had the same care this year as last year. It is one of my best cows, and I would like to keep her well. She just freshened in October. Would it be necessary to cover the horn with something? And what? I should also like to know why some cows like so well to lick a persons clothes, and if there is anything to do for it. The same cows do not drink water so well as the others. They sip it very slowly, stop drinking and start in again until they at last get to the bottom of the pail, even when the water is not very cold. They seem to be in good health otherwise.—C. J., Leelanau County, Mich.

—I think it would be best for the cow to have both horns removed using the dehorning clippers. It is a habit that many healthy cows have to want to lick a persons clothes.—Prof. John P. Hutton, Division of Veterinary Medicine, M. A. C.

COW SWEATS

I have a three year old cow that sweats. Will be standing in the barn and be all wet with sweat. Seems to be well, eats hearty, and in fair condition, and is to freshen in March. She still seems to have her old hair, doesn't look as tho she had shed as she should. I have only owned her about six weeks.—A. S., Fremont, Michigan.

—I think that the sweating is due to the heavy coat of hair that the cow has. Groom the cow good twice daily, put her on a good balanced ration. The addition of a heaping tablespoonful of Glauber salts to her feed night and morning would be very beneficial.—John P. Hutton, Asso. Prof. Surgery and Medicine, M. A. C.

DOES YOUR SON WANT TO BECOME A VETERINARIAN?

(Continued from Page 8)

veterinary science is nothing more nor less than science applied to the solution of the problems of disease prevention and cure in the lower animals, and veterinary practice is only the legally sanctioned and protected method of effecting this application in every-day life. There may be some better way—we doubt it—of applying the science of the veterinarian but there is certainly no substitute for the science itself. It is not a problem that is vital alone to the veterinarian—he can find other work to do. A well educated veterinarian is a well educated man and as such he can look after himself. But without veterinary service our animal industry would be ruined. The effect on agriculture and consequently upon the general welfare is obvious. We beseech a thoughtful consideration of the veterinary problem on the part of your readers.

Appreciate Company

Two farmers met after church and had this conversation:

"I hear you've sold your pig?"

"Yes, sold him last Thursday."

"What d'ye get?"

"Eight dollars."

"What did it cost ye to raise it?"

"Paid three dollars for the shote, and five more for the feed."

"Didn't make much, did ye?"

"No, but I had the use of the pig all summer."—Exchange.

Why Not a Butcher Shop

Party on the phone—Have you any nice round steak?

Dispr Zachry—No, madam.

Party on phone—Have you any nice loin steak?

Dispr Zachry—No, madam.

Party on phone (much exasperated)—Well, for goodness sake, why haven't you?

Dispr Zachry—This is the dispatcher's office and our trains have not killed any cows lately.—A. C. L. News.

The Only Way

"The women of today are able to meet any situation," said a clerk in the general manager's office at Detroit.

"If I were to kiss you, how would you meet the situation?" asked her friend.

"Face to face," she replied.—Exchange.

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

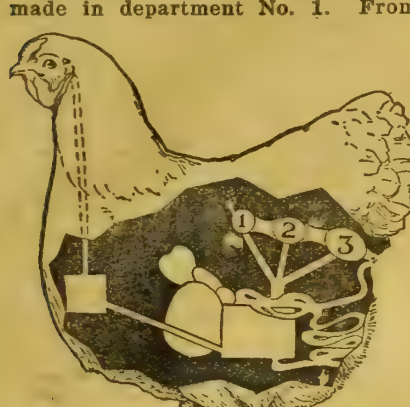
The inventor, A. R. Johnson, 609 W. Lake St., Chicago, Ill., is offering to send a lamp on a 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him to-day for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month. (Adv.)

Poultry Department

HOW TO MAKE A HEN MAKE EGGS

A HEN'S egg factory is departmentized. The egg she lays is made by piece work in three departments—just like Henry Ford makes an automobile, according to L. J. Brosemer of the Sears-Roebuck Agricultural Foundation, who shows that inside a hen is a plant that works with the system and regulation of an up-to-date automobile factory.

"There are three departments in the egg making plant," said the Foundation's expert. "The yolk is made in department No. 1. From this department it moves through a passageway into the next department where the yolk is coated with white. When the coating job is completed in department No. 2, it is moved into department No. 3, where the egg is encased with a layer of the purest form of carbonate of lime, forming the egg shell. Then the egg is passed on to a hungry world—fresh, sanitary and sealed. These three departments of the egg making plant might be compared with an automobile factory. First, the engine is made, like the hen makes its yolk, then the chassis, as the chicken encases its yolk in white, finally, the auto body covering the whole, just as the hen puts a covering of lime over its product in the form of a shell.



Sometimes the egg plant fails to work. That is not due to laziness or labor unrest or strikes, but because the egg making material furnished the hen is not of the proper sort. The average American hen lays 72 eggs a year. She should manufacture twice that number. The reason she makes so few is because, as an honest manufacturer she refuses to manufacture anything but a whole and complete egg. Farmers and other poultry keepers are to blame, because they unknowingly do not provide the food material the hen requires to keep all three egg making departments working full time. When a hen is fed the right foods in the proper amounts so as to secure the greatest efficiency in her plant she has to make eggs or she'll burst.

"Hens must be given a balanced ration. If they are fed a mixture that produces 100 yolks for every 50 whites, then the egg making plant can only turn out 50 normal eggs. The same situation in an automobile factory would cut down the output, for what could be done with 100 engines if the auto maker had only enough material to manufacture 50 chassis? He is up against it the same as the hen's egg plant."

After working over gizzards and test tubes for years expert poultrymen are agreed that each particular kind of poultry feed contains a definite amount of yolk and white making material. A balanced ration that contains exactly the right proportions that will enable the egg making plant to turn out an equal number of yolks and whites and keep the hen's factory working full time is given below:

Kind of Food	Yolks	Whites	Shells
12 lbs. beef scrap	12	133	0
50 lbs. cracked corn	128	67	0
50 lbs. wheat	122	91	0
25 lbs. bran	39	51	0
25 lbs. shorts	51	53	0
30 lbs. corn meal	78	40	0
10 lbs. ground oats	20	15	0
Free access to oyster shells	0	0	450
	450	450	450

"The above ration fed to the average flock of fowls practically will double the egg yield of the hen's factory," concluded Mr. Brosemer.

CHICKEN FRIENDS

ANY chicken that varies enough from its mates to be remembered as an individual may well be called a chicken friend.

The first chicken we remember was an exceptional layer. Her egg had pinkish spots entirely different from any other hen's egg. Also she was a pepper and salt type of plumage a hen grown by one of the children from a chick, and distinctive in appearance so she was never mistaken for another hen. We put a leg band on her to give her a number. One day in September we saw she was beginning to molt; then we lost sight of her until one night while looking over the chickens preparatory to choosing some for exhibition, we found a snowy white hen with the legband of "Speckles." It didn't seem possible that she had molted pure white, but she had; it was Speckles all right as she proved by her eggs with the pinkish spots.

There was a Silver Laced Wyandotte pullet which showed from the time she was hatched a disposition to be friendly. She would follow us to the house and up on the porch if allowed. The coal chute was under the dining room window. One day Silver hopped up and looked thru the window. Not long after on a lovely October day, the screens were taken down, and Silver flew thru the window. No one noticed her coming in; when discovered she was making a nest of the corner of the couch, which she didn't leave until she had laid her first egg; then how she did cackle! The doings of the live stock the coming of the calves and pigs and chickens make up much of the excitement of the farm; the family were all curious as to where Silver would lay her next egg. When we saw her picking her way daintily towards the house, we opened the window. In she flew and laid another egg. In time the novelty wore off and we shut her up, but Silver was persistent so long as she was on range. She would fly up against the window until she was let lay in her first nest. As everyone knows, hens have favorite nests. Sometimes there is a regular line-up waiting to lay in one nest.

Beauty was another chicken friend. She was the prettiest White Wyandotte we ever saw. In her second year she took sweepstakes as the best bird in the show of 1,500. She was good tempered and prepotent as well as beautiful; her grand daughter took sweepstakes pullet in the American class at the state fair.

Beauty liked to pose; she would stay put in any position she was placed, but she would not go into a coop head first. Put her in backwards, and she was still: but let her see the coop before her body was in, and there was trouble.

We had two splendid cockerels one year, full brothers. We wished to use them alternately in the pen, and to separate them from the pullets gave them a yard to themselves. Sometimes they were peaceable; and again they would fight. Finally we took to tying them together at the first sign of trouble. With a wide strip of flannel we tied one leg of each about two feet apart. After an hour of being tied, they wouldn't look at one another. This is a good remedy for fighting males of all ages.

Strangers to chickens may say that they have no intelligence, that they are not temperamental, but anyone who has worked with chickens will tell a different story. Some chickens are sweet tempered, some are cross, some are jealous, some are cranky. One good breeder finds it well to humor his hens.

HATCHING DUCK EGGS

I wish to hatch my duck eggs in an incubator, and do not know how to go about it. Is it the same way as chicken eggs? Would you advise hatching duck eggs in an incubator?—J. O., New Haven, Michigan.

—The large commercial duck farms in the East hatch practically all of their eggs in the hot water type of incubator and secure very satisfactory results; in fact these hatches

My Engine Will Do the Work of 6

"I set out to build a farm engine that would have every feature the farmer wanted and none he didn't want. It has now been on the market six years. Thousands of satisfied users tell me I've succeeded. I'm proud to have this engine bear my name."
—A. Y. EDWARDS

EDWARDS FARM ENGINE

Try This Remarkable Engine FREE

There is no other farm engine like it. Simple in construction and easy to operate. It is only one engine, yet it takes the place of six engines. It will give from 1½ to 6 H. P., yet it is so light that two men can carry it easily. Set it anywhere and put it to work.

Change Power as Needed

It is a 6 H. P. when you need 6, or 1½ H. P. when you need only 1½, or any power in between. Fuel consumption in proportion to power used and remarkably low at all times. Adjustment from one power to another is instantaneous.

Burns Kerosene

Operates with kerosene or gasoline. Easy starting, no cranking. The greatest gas engine value on the market. And you can prove all of these statements to your own satisfaction.

What Users Say

Ivan L. Blake, of Hannibal, New York, says: "Only engine economical for all jobs. I run a 28-inch cord wood saw, a 24-inch rip saw, a washer, a pump, and a grinder, and it sure runs them fine. It has perfect running balance, and it sets quiet anywhere."

Clarence Rutledge, of Manitoulan Island, Ontario, says: "Have given my Edwards four years' steady work and like it fine. It uses very little fuel. I run a 28-inch cord wood saw, also a rip saw, 8-inch grinder, ensilage cutter, line shaft for shop, churn, washer, separator and pump. Have had ten other engines and the Edwards beats them all."

Frank Foell, of Cologne, New Jersey, says: "It's a great pleasure to own an Edwards engine. I run a wood saw, cement mixer, threshing machine, etc. Do work for my neighbors. Easy to move around and easy to run. I would not have any other."

Free Trial Offer

Now—I want to prove my claims to you. I want to send you an Edwards Engine for absolutely free trial. Just write your name and address on coupon and mail. I will send at once complete details about my farm engine and about my free trial offer. No cost or obligation. Mail coupon now.

compare very favorably with those secured from the domestic hen. As a rule the hot water type of machine is preferred. Most varieties of ducks require about twenty eight days of incubation, but the Muscovy variety requires a period of about five weeks. It is a good practice to sprinkle the eggs with warm water by means of a whisk broom several times during the hatching period. About the 26th day it is also advisable to moisten a flannel cloth and lay it over the top of the eggs for a few hours. This of course is practiced primarily to provide additional moisture at the time of hatching. If you have a limited number of eggs to hatch it would probably be advisable to hen hatch them entirely.—E. C. Foreman, Professor of Poultry Husbandry, M. A. C.

NO CURE FOR WHITE DIARRHEA

I would like to know a cure for white diarrhea in poultry, especially baby chicks. Also a stimulant to feed hens for winter eggs. I would like a formula I could make.—E. O. D., Prescott, Mich.

—There is no cure for bacillary white diarrhea in adults or baby chicks. If the party concerned will correspond with the Veterinary Department of the Michigan Agricultural College, they can give them detailed information as to the handling of this disease.

As to stimulants to feed hens for winter eggs, I would say that this is a vicious habit and anyone who is at all interested in the continued well-being of their flock should abstain from such agents. Proper feeding and proper housing is the best means by which to obtain high production for any length of time. —H. J. Stafseth, Res. Assoc. in Bacteriology, M. A. C.

BABY BEEF PLAN INSURES GOOD CASH MARKET

(Continued from Page 4)

small farm or the large one, he is positive in his assertion that Michigan can produce Herefords more economically and more profitably than any other location in the world, while Michigan beef raising eliminates western mortality losses, compares favorably in land investment; the proximity to the population centers and the great markets eliminate loss from shrinkage in transportation and cut freight costs. Nor does Michigan fear terrible drouths when the profits of a season are wiped out, or losses from animal pests. Many are the advantages of Michigan over the so-called cattle country.

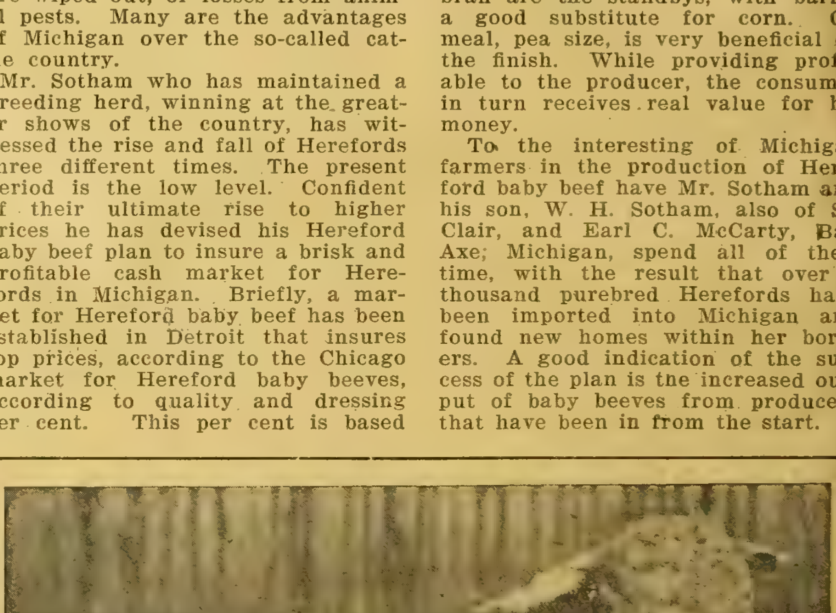
Mr. Sotham who has maintained a breeding herd, winning at the greater shows of the country, has witnessed the rise and fall of Herefords three different times. The present period is the low level. Confident of their ultimate rise to higher prices he has devised his Hereford baby beef plan to insure a brisk and profitable cash market for Herefords in Michigan. Briefly, a market for Hereford baby beef has been established in Detroit that insures top prices, according to the Chicago market for Hereford baby beeves, according to quality and dressing per cent. This per cent is based reasonably and Michigan producers have had little difficulty in making it. Some have even dressed more, demanding a premium, while others that do not make the base per cent receive a lesser sum for each one per cent less dress.

Purebred Hereford cattle are used because at present they can be purchased very reasonably, because they are more thrifty and make bigger gains, thus arriving at the desired weight more quickly, so much so that it more than offsets the difference in interest on investment. And then purebreds have two markets—breeding and beef; while the grade has one—beef. Not all the produce of these purebred Hereford breeding cattle are used for beef. The outstanding individuals are raised the same way but are kept for breeding purposes. They are disposed of privately or by auction sale. As the breeder is sure of his baby beef price he knows that a purchaser in the sale must pay more than he is worth for beef. As a result eight successful purebred Hereford sales have been held in Michigan during the last eighteen months, the breeders realizing a substantial profit over and above baby beef prices.

The production of these beeves requires the least possible amount of labor necessary to any method of stock feeding. Cows are preferably run loose with their calves in the winter, a creep being built in one end of the barn that enables the calf to get in but keeps the cow out. In this creep is built a self-feeder, allowing the calf to have what grain he wants when he desires it. Good silage with either clover or alfalfa hay will keep the cow in a good condition throughout the winter. Oat straw in addition is an economical change. In the summer a creep built in the field where the calf comes for water or salt lets the calf have what grain he wants while on grass. In other words, the calf is pushed from date of birth until ready for market. Full benefit of his growth is taken. He is castrated while from two to three months of age, lessening the grief caused when older. Thus at from ten to fourteen months of age a mature baby beef is produced and realizes extreme top prices.

Whole oats and whole cornmeal are used in feeder for calves that are just beginning to eat grain. This is kept up until incomplete digestion requires grinding, unless hogs run with cattle. Corn, oats, and bran are the standbys, with barley a good substitute for corn. Oil meal, pea size, is very beneficial on the finish. While providing profitable to the producer, the consumer in turn receives real value for his money.

To the interesting of Michigan farmers in the production of Hereford baby beef have Mr. Sotham and his son, W. H. Sotham, also of St. Clair, and Earl C. McCarty, Bad Axe; Michigan, spend all of their time, with the result that over a thousand purebred Herefords have been imported into Michigan and found new homes within her borders. A good indication of the success of the plan is the increased output of baby beeves from producers that have been in from the start.



Straight Edge, No. 1169786, herd sire owned by T. F. B. Sotham, of St. Clair, is the only living bull sired by Perfection Fairfax and out of a Disturber cow.

How Banks Act Under Federal Farm Loan

(Continued from Page 7)

They are not hypercritical as to title, but Abstracts must show at east a good title in the name of the borrower. There is nothing in these loans which hinders the borrower from selling his farm. As a matter of fact, a farm which has a mortgage of this type on it will sell for a better price than if the purchaser had to pay the entire sales price in cash or to obtain a loan for himself. The fact that the land is permanently financed is always an inducement to the purchaser. In case of a sale, of course, the bank must be notified that the sale has taken place and must give its sanction as to the loan being assumed by the new owner.

The cost of making a loan from one of these banks is small but varies somewhat on account of the different manner in which the Federal Land Banks and the Joint Stock Land Banks transact their business. These banks are limited to loans not to exceed $100 an acre and only take into consideration the agricultural value of the security. They do, of course, take into consideration the location value insofar as it adds to the agricultural value in the way of marketing farm products, school facilities, etc. However, loans are not made on the basis of suburban valuation.

This System of financing has made available money at low rates of interest and on convenient time, and any system which has done this can help the farmer who wishes to finance himself, and this is what the Federal Farm Loan System was intended for and is doing. The men, who undertook to develop this System of financing the farmer properly and in a manner adapted to the needs of agriculture, began by accepting the first principles in order to eradicate the abuses and difficulties surrounding the business of supplying capital for agriculture.

The first step in properly financing agriculture was to arrange for securing capital investments in land on convenient terms—terms which would give the farmer an opportunity to make the farm help pay for itself over a period of years out of the money earned in actual operation. Land Banks give the man who heretofore has been renewing his mortgage every five years, dabbling along and paying the highest rate of interest, or at least a good stiff one, and paying a commission every time he renewed a loan, a chance to get on his feet by giving him thirty-three years in which to pay the loan and at a rate of interest not to exceed 6 per cent. While there is no such thing as an easy way of paying a debt, the fact remains that the type of loan made by these banks is a very easy loan for the farmer compared with the one he used to have to carry.

There are no more than enough funds in the average country community to take care of the seasonable demands for loans from farmers who wish to use the funds for operating capital. Naturally, the country banker is interested in an outlet or a connection which will furnish him adequate funds to properly finance land purchases or to refinance existing mortgages, and in doing this, with the farmer, is interested in several matters. One is the type of contract, another one is the rate of interest.

The farmer who is permanently financed on a loan such as these banks make is head and shoulders above the man who is temporarily financed, and who has signed a large obligation for a short term knowing that he cannot meet it at its maturity. This, in itself, is unsound business and when this man goes to a local bank to borrow money for a short time for buying cattle, equipment, fertilizer or any improvements on the farm the banker must take into consideration the fact that he has a large obligation maturing within a short time which he knows that he cannot meet at its maturity, and about which there may be uncertainty of cost of renewal. The banker, as a good credit man, must take this into consideration in extending credit. On the other hand, the man who is permanently financed on a contract such as these banks offer can go into the local bank to borrow funds for operating purposes or for improvements and be taken care of, if his general reputation entitles him to credit.

The interest rate of these banks is about the same as charged by loan companies on desirable loans, but the borrower saves the commissions charged by the agents of these companies and also gets permanent financing. The real cost of a Land Bank Loan is much less than in other loans on good security.

The agencies have been provided by the United States Government to properly take care of the farmers needs for capital for the purchase of land for refinancing existing farm loans and for other long time farm investments and every farmer who needs and entited to this service should for his own interests familiarize himself with this service.

JAPAN INDEPENDENT OF OTHER NATIONS FOR SUGAR SUPPLY

THE last country to build up a home sugar industry of sufficient size to render it independent of the world for its sugar supply is far away Japan, the dream of whose statesmen long has been to make the Empire as nearly self-supporting as possible.

For two centuries small quantities of crude sugar have been produced in primitive bull-power mills in Japan, but until recently the bulk of her sugar requirements was imported from other countries.

After acquiring the island of Formosa, the Japanese government set to work vigorously to develop sugar production wherever sugar could be produced in the Empire. It levied a protective duty on sugar; established a sugar bureau; sent students to Germany, Hawaii, Lousiana, Java and other countries to study and report on their sugar industry; imported beet seed and new varieties of cane; established experiment stations; set aside large tracts of land for new sugar companies; granted an annual subsidy of 6 per cent for 5 years on the capital invested; purchased and loaned sugar machinery to new companies; furnished manure gratuitously for 5 years and in various other ways stimulated the development of the industry. The early modern mills were entirely equipped with American, German or British machinery, all of which was copied and reproduced until now, only the rolls are imported.

As a result, a hundred of the primitive mills in old Japan have been modernized, 52 new cane mills have been built in old Japan and Formosa 4 beet sugar factories have been erected in old Japan, Manchuria and Korea and 13 refineries have been constructed in old Japan. Several of her mills grind a thousand or more tons of cane per day, while the largest has a capacity of 3,000 tons, one of the largest mills in the world.

The sugar industry of Japan now profitably employs $250,000,000 of private capital and produces four to five hundred thousand tons of sugar annually, about as much sugar as the Japanese people consume. In the event of war Japan will not be made to submit to the rapacity of foreign sugar producers, as were the United States and Great Britain during and after the world war.—Truman G. Palmer, Sugar Statistician, Washington, D. C.

THE CORN'S IN THE SILO

THE corn is in the silo
  And the wheat is in the bin
And the frogs way down the meadow
  Are losing of their vim.

The air is keen and snappy
  And the eaves are falling down
And where the wood once was green
  Now 'tis a russet brown.

Now every one's preparin'
  For the winter's coming on
The frost has glazed the pumpkin
  But it cannot touch the corn.

FOR

The corn's packed in the silo
  And the wheat is in the bin
It took a year in making
  Thank God we've got it in.

Mr. T. O. Kraenel,
Park Avenue Hotel,
New York City.

Father's Blow to Mother

"Poor Broome! He's gone over to the silent majority."

"Why—I—when did he—is he dead?"

"Well, no; but he's married."—Tit-Bits.

CHANGE
OF
NAME

EFFECTIVE January 1, 1924, the name of this Company was changed to The Michigan Bell Telephone Company.

The Michigan Bell Telephone Company is a Michigan corporation, organized in Michigan for the purpose of furnishing Michigan people with Universal Telephone Service.

Change in name was made in order to identify this Company in name with the Bell System, of which it is a part. Through the Company's association in the Bell System, telephone users in Michigan are assured the highest standard of service—Bell Service.

MARKET FLASHES

MARKET SUMMARY

Wheat steady. Corn and oats show some activity. Receipts of beans small and demand slack. Hay easy with large supply. Butter firm. Large supply of eggs. Potatoes steady. Demand for poultry greater than supply. Cattle active and higher. Hogs average higher. Sheep trade strong.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

Increase in Business

THAT American farmers are regaining in part at least their old time purchasing power is an undeniable fact, and perhaps the most striking index of improvement in the agricultural situation is the renewed business reported by the mail-order houses. The year's combined sales of the two large Chicago mail order firms for the year just closed aggregated around $350,000,000, an increase of about $83,000,000 over 1922. Farmers because of over production have been forced to sell their wheat and hogs at such reduced prices as to make big inroads in their profits, but lambs have been highly profitable, as have well fattened cattle. Dairy interests have been extremely prosperous, and farmers have made good money on their eggs, poultry, milk, etc. Wages paid to farm hands are far higher than before the war, and so are railroad freight rates, and the entire scale of living has had the biggest kind of a boom, workmen's wages having soared to figures never deemed possible ten years ago. In the production of wheat the enormous farms of the Canadian western provinces stand a good show of coming out ahead over the little farms of the United States, with their enormously powerful sowing and harvesting implements, and this is bound to become even greater in the future. Legislation to solve the problem of our vanishing forests is expected to be enacted in the near future, and "keep the fires out and the taxes down" is one of the popular ways of expressing the sentiments of owners of forests. For nearly a year a committee appointed by the United States Senate has been traveling all over the country studying the forestry and lumber question. The foreign commerce of this country has been large in volume, and enormous exports of lard and cured hog meats have been brought about through much reduced prices.

Advice to Farmers

Strange to say, after all the painful experience of wheat farmers during the past year in finding an unsatisfactory market for their crop on account of enormous overproduction in exporting countries, there looms up what looks very much like danger of a repetition of the same thing, the decrease in the winter wheat acreage as reported by the Department of Agriculture being much less than it should be. It remains for the spring wheat farmer to take a hand in the game and devote less acreage to that grain than they did last year. Wheat is an easy crop to raise, and farmers are apt to let the other fellow do the reduced area line and fail to do so themselves. As has been pointed out many times, farmers have made a serious mistake by keeping up the wheat acreage to the huge requirements of war times, and now it looks like a continuance of low prices indefinitely or until much less land is sown to wheat. The world's wheat crop for 1923 amounted to 3,461,000,000 bushels, or 500,000,000 bushels in excess of the pre-war era, exclusive of Russia, and that country furnished in the past only 164,000,000 bushels to importing countries. As estimated by the Department of Agriculture, the reduction in the winter wheat acreage amounts to less than 13 per cent, which is much less than it should be to bring about a sufficient rise in prices to allow fair profits to farmers. Talk of outside help in advancing prices had died down, the crops is much needed, and it has future appears to lie in the hands of wheat growers. Diversification of been suggested that in some districts raising flax seed might be a good substitute for part of the wheat acreage.

The Grain Markets

Within a short time cash wheat has declined on the Chicago Board of Trade to $1 a bushel, comparing with $1.26 a year ago, with a poor domestic demand for consumption, although recent exports attained very good proportions. Speculators in wheat evidently lack faith in its higher value, and the visible supply is much larger than a year ago. Corn in sight, on the contrary is far less than is usual at the beginning of a year, the crop of 1922 having been pretty closely used up when the 1923 crop began to move to market, and very little is being exported. Corn prices have fallen below those of a year ago, with late sales on the Chicago market around 70 cents a bushel, but it looks high when it is recalled that a little more than two years ago it sold down to 47 cents. Much corn was saved for marketing by the unusually mild weather extending into the winter period, giving live stock a chance to remain in pastures. Rough feed is abundant, and farmers have plenty of corn. Oats have sold around 41½ cents, being slightly lower than a year ago; while May rye sold as low as 73½ cents, comparing with 90½ cents a year ago. With rye so cheap, it seems strange that exporters do not buy more liberally.

The Chicago Live Stock Exchange announces that, effective Jan. 1, the Union Stock Yard and Transit Company will reduce the price of corn fed live stock on this market from $1.35 per bushel to $1.25 per bushel.

This saving to the shippers to this market of 10c per bushel on corn is the result of the agreement between the stock yard company and the committee of the exchange.

An Object Lesson

To improve the standard of the live stock in Colorado the Burlington Railroad has traded evenly fifty-eight purebred bulls and boars for the same number of scrubs. All of the scrubs were killed immediately. The total value of the pedigreed animals was $10,000, while the scrubs were valued at about $500, or an average of $250 for the good stock and $17 for the poor ones.

The Cattle Industry

Most of the time there is an excellent demand for well fattened beef cattle, the times being good and labor well employed throughout the country at extremely high wages. The demand was curtailed temporarily during the holidays, however, when poultry was largely substituted for beef, pork and mutton, and despite much smaller receipts of cattle in the Chicago market than usual, prices suffered sharp reductions. Even the better class of cattle shared in the declines, and killers discriminated to a marked degree against heavy long-fed steers. Occasionally there are upward spurts in prices for weighty steers, but most of the time the local packers and eastern shippers buy them much less freely than the choice light weight yearling steers and heifers. Fancy fat cattle were pretty closely marketed several weeks ago, and few or none are arriving on the market now. Many of the offerings grade rather poorly, and only a small percentage sell near the top figures. There is a moderate demand for stockers and feeders, with low prices for the poorer lots and not many of the choicer kinds on the market. Plenty of cattle are being fed in the corn belt states, and there is no danger of a beef scarcity. The supply of cattle offered in Chicago for Christmas week was so unusually small that desirable light cattle, especially yearlings, sold higher, but heavy steers were neglected and lower. The bulk of the beef steers offered brought $8 to $10.75, the choicer yearlings going at $10.75 to $11.75 and the best heavy steers at $10 to $11, with no heavy lots going later above $10.75. Common steers sold down to $6.25 to $7.25, and inferior little steers brought $4 to $6. Butchering cows and heifers sold at $3.25 to $7.50 mostly, and limited numbers of stockers and feeders sold at $4 to $7.50, not many going above $6.50. Calves were scarce and higher at $5 to $13.50.

The Hog Problem

In answer to farmers who ask what course to follow in breeding sows and maturing pigs until suitable for marketing, it may be said that this is a big country, and it is not easy to predict the future. Even the Bureau of Agriculture sometimes makes blunders in its estimates. However, late reliable advices indicate a considerable lowering of the number of sows that were bred for spring farrowing, and this would naturally have a marked effect on future markets. A well informed authority estimates a reduction of 25 per cent in the number of sows bred, but this seems an over estimate. At the same time, whether correct or otherwise, it is never wise for farmers to stay out altogether of hog breeding, while at times it is advisable to lower or increase operations. The rush to get hogs marketed is likely to be kept up for several weeks more, and then there will be, probably, a let up and advance in prices. Low prices greatly stimulate the consumption of hog products, and the exports of lard and cured hog meats for the past year mounted up to nearly two billion pounds, being much larger than for the previous year and about twice as much as before the war. Chicago received unusually small supplies of hogs during Christmas week, and the best lots advanced 20 cents. Late sales were at $6.30 to $7.25, with heavy butchers at the top and bringing 20 cents more than the best bacon hogs. A year ago hogs sold at $7.40 to $8.45 and eight years ago at $6.70 to $7.25. Combined receipts in twenty markets for 1923 to late date amount to 31,124,000 hogs comparing with 33,053,000 a year ago.

Good Prices For Lambs

Recent receipts of lambs in the Chicago market were unusually small, and prices had a sharp upward movement, especially for the choicer offerings of fat handy weights, those weighting 90 pounds and over being descriminated against by the packers. Colorado is marketing lambs more freely than is usual so early in the year, and the other day a sale was made of 1,000 lambs which tipped the scales at 77 pounds and brought $13.50 per 100 pounds. Lambs comprise nearly all the receipts, as is usual at this season. Michigan farmers have marketed large numbers of corn-fed lambs.

WHEAT

Wheat had a holiday week last week and made little change in any direction. They are figuring that American wheat must decline part of the way to meet Canadian wheat, it being admitted that the two must come closer together before the end of the crop year. The belief now is that a great deal of Canadian wheat will be needed on this side of the line in order to fill the needs of bakers who use spring wheat flour. It is said that the spring wheat production here has been too small to meet the needs of consumers and the Canadian grain will be used as a blend to bring up both the quality of the flour and the quantity. The market shows not hurry about slumping although everything in the line of statistics points in a declining direction. When the market appears easy and ready to slump some buying power comes into the market and the offerings are absorbed. This has happened so often that bears are afraid to follow a decline with more selling and it becomes an easy matter to stop the decline and give the market an upturn. The buying is always credited to eastern dealers who are the chief owners of the American visible supply and willing to continue accumulating supplies in order that wheat may not decline. The holiday week developed nothing of importance in the deal. Stocks continue heavy and there is still no sign of activity in foreign buying. Domestic demand is slow, which is usually the case at this time of year.

OATS

Oats were active last week and prices advanced slightly although buyers were scarce.

Rye

Rye advanced slightly last week in sympathy with other grains.

BEANS

Demand for beans was slow at Detroit and the market was called steady at the close of last week. There was a dull tone to the market in general as there always is during the holiday period. At this time of the year, a great many dealers cut down orders on account of their practice to take inventories and naturally want as little stock possible. It is observed, however, that dealers are not anxious to sell when concessions are demanded.

POTATOES

Potatoes are strong to quiet. At western points they are strong while in the east there are some markets that report trading dull. Eastern dealers stocked up rather heavy previous to Christmas expecting a heavy demand during the holiday period and they find they purchased more than they needed so they are not going to buy any more until they get rid of their present stocks.

HAY

Holiday dullness continued in all markets last week. Reciepts are not heavy at present but the demand is limited. There is a good demand for the best grades of all sorts, but low grades are very slow. Bad weather in the west is restricting the movement of hay and this is keeping those markets from becoming overstocked under the light demand.

CORN

Trade in the corn market was a little more active at Chicago last week. Commission houses were buying on a larger scale, and report demand showed some improvement. An active feeding demand in the west is reported. Receipts are not large and bulls feel very confident about future prices. The Detroit market closed firm last week.

Week of January 6

LIGHT rain or snow flurries are probable in Michigan during first part of the week of January 6 but before the middle of the week there will be sunshiny days and clear skies. Following the middle part of the week we look for renewed storminess with an addition of gales and some sleet. At the close of the week temperatures will be somewhat colder.

Week of January 13

Clear, cold weather is expected for the early part of the week of January 13 but by the middle of the week there will be a decided moderation in the temperature. There will be thawing conditions in some parts of this state and winter rains but the change to lower temperatures during end of this week will change the rain to snow flurries.

1924 to Average Warm

The year 1924 as a whole will average warmer than normal with the summer and early fall months producing rainfall above the average. These statements, while correct from a statistical standpoint, should be taken advisedly by the average farmer whose use of such a forecast is naturally limited to his own fence line. We mean by this there will be many extremes and that each locality will have its own modifying effect. These changes will be considered from week to week in this column.

We forsee a mild winter but with numerous temperature extremes during January and a cold spell from about two weeks before to two weeks after the solar eclipse in March. We look for quite a little snow and cold close to the eclipse date.

Fall Forecast Verified

Our forecast of a mild, dry fall as written last June has been verified. This weather not only hindered the holiday trade and probably made hundreds of dollars of difference in the northern states but also upset the wool garment trade and many other commercial enterprises depending upon cold and snow. On the other hand, the weather added hundreds of dollars to the farmer's next year's profits because he was able to get a lot of next springs work done this last fall.

Our prediction of a "White Christmas" was also verified in most counties of the state.

Some Trip

Motorist: "Say, buddy, how far is it to Bingville?"

Schoolboy: "Well, mister, the way you are headed now it is just 24,996 miles; but if you turn around it is only four miles.—Exchange.

Olde Tan Harness

Metal-to-Metal Construction

$7.50 DOWN Puts it on Your Horses!

WRITE TODAY for the Free Olde-Tan Metal-to-Metal Harness Book which tells you how, for only $7.50 down, you put this Olde-Tan metal-to-metal harness on your horses. You don't need to send any money. We send the harness before you pay a cent. After the harness reaches you, make the first payment. The balance may be paid at the rate of a few dollars each month.

Metal-to-metal construction is not a new thing. We just put in practice the time-old knowledge that nothing can wear like metal. Everywhere there is wear or strain we have placed metal against metal. The harness is as light as any other harness, yet every point of contact is protected with tough, high quality metal shaped and fitted so that rounded steel parts take away all corner strains and pulls. First there is the finest leather that can be tanned then metal to protect the leather.

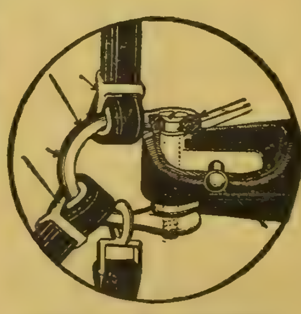
The superior quality of the leather in Olde-Tan Harness is recognized throughout America. 70-year-old tanning skill is behind it. It is tanned by a tanner-manufacturer and then made into Olde-Tan Harness. The tanner-manufacturer carefully supervises every step through the tannery and the factory until the harness is ready for your horses.

When you buy Olde-Tan Harness you don't have to worry about the quality of the leather. You are sure of the best. The high grade leather and metal-to-metal construction insures at the very least double harness wear.

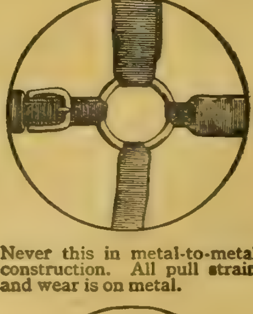
Did your last harness last 30 years? There are hundreds of Olde-Tan Harness in use today that old and older. What is more, they have required almost no patching — no mending during all those years. There are positively no places for Olde-Tan Harness to wear out. We give a guarantee which protects you during the entire life of the harness.

Besides the unequalled wearing qualities, Olde-Tan Harness has every adjustabte feature. While Olde-Tan is practically a buckleless harness we have placed buckles in a very few places to give greater convenience in putting on and taking off the harness.

But no place on Olde-Tan where there is excessive strain will you find a buckle because buckles cut down the strength of a strap 30%. So it is from beginning to end—every item having received such practical and common-sense consideration that you instantly appreciate its all around superiority. Our free book tells you all about these many special features of Olde-Tan Harness. Be sure that you don't make a mistake on your next harness. Write for and read this harness book before you buy.



Metal-to-metal construction. Metal brushing. Leather held tight without play or friction. Note special riveted metal extension in breeching.



Never this in metal-to-metal construction. All pull strain and wear is on metal.

THE WORLD KNOWS WHAT METAL TO METAL DOES HERE

Servant of the Millions

FOUNDED on the principle that a business earns the right to exist only as it serves, the Ford organization has grown to be more than a business.

It is an institution that serves its millions.

Through 29,000 service stations in America its stewardship reaches out to every one of the Ford Cars, Ford Trucks and Fordson Tractors on every street, highway and farm the length and breadth of the land.

The nearest service to every farm is Ford service—a very potent reason for standardizing on Ford equipment.

College Making Big Plans for Farmers' Week

Meeting, Speeches, Parades, Exhibits, Concerts, Shows and Sales Will Make It a Busy Week for Farmer Visitors

By R. C. GROESBECK

(Special Correspondent of The Business Farmer.)

THE annual Farmers' Week program, to be staged at the Michigan Agricultural College from February 4 to 8 this year, is to be filled with the largest list of special features and attractions of particular interest to the farmers of the state that has ever been offered.

Men and women of prominence in the agricultural, business, and professional life of the state and nation have been engaged for addresses on subjects of vital interest to the "practical" farmer. These speakers will make up the greatest array of platform talent ever offered Michigan farmers.

The list of speakers includes: Walton Petite, secretary of the National Council of Cooperative Associations, Chicago, Illinois; L. J. Tabor, Master of the National Grange, Columbus, Ohio; H. R. Smith, National Livestock Commissioner, Chicago, Illinois; Dr. Hugh Cabot, dean of the School of Medicine, University of Michigan; F. G. Ketner, Ohio State Farm Bureau, Columbus, Ohio; L. Whitney Watkins, State Commissioner of Agriculture, Lansing; Robert S. Shaw, Acting-President of M. A. C.; W. T. Hartman, Director of the Bureau of Markets, Foods, and Standards, State Department of Agriculture, Lansing; Verne Branch, Director of Municipal Markets, Detroit; J. W. Nicolson, Michigan State Farm Bureau, Lansing; O. E. Reed, head of the M. A. C. Dairy Division; J. T. Horner, Associate Professor of Economics, M. A. C., and many other specialists from the Michigan Agricultural College.

Thirty different state agricultural organizations and associations will hold their annual meetings at the college in connection with Farmers' Week. These will include practically all of the larger agricultural societies in Michigan.

Among the associations to hold their annual meetings will be: the Michigan State Farm Bureau, Michigan Crop Improvement association, Michigan Breeders and Feeders association, Michigan Potato Producers association, Michigan Beekeepers association, Michigan Soils association, Michigan Poultry Producers association, and various other special groups.

The annual livestock parade, more than a mile in length, will be one of the features of the week. At this time the registered blue bloods owned by the college, which won state, national, and international prizes, will be displayed to the farmers of the state. The visitors will also have the opportunity of inspecting these animals in the college barns and stables throughout the week.

Special agricultural exhibits on various phases of rural life will be shown in the agricultural show iin the new library building. The entire first floor of the new structure will be devoted to this display.

The annual fruit and flower show, promoted by the M. A. C. student horticultural club, will be another feature of the week. Prize Michigan apples and fruits as well as flowers are being brought together for the annual display, which is always one of the most attractive displays shown during the week. All Michigan farmers are eligible to compete, and entries may be made until noon on February 4, the opening day of Farmers' Week.

Something new in livestock judging will be staged this year. A special livestock judging contest for the practical "practicing" farmer is to be held, open to everyone, and of the informal type.

College students, high school students, boys and girls club members, and practically all other classes of novices at the farming game have been engaged in livestock judging contests for years. Teams have met at county, state, national, and international events to decide the best pickers of blue ribbon stock, but the events have always been listed for students.

This year, working on the idea that the farmer himself knows something about livestock, this special feature will be staged. The event will cover many classes, and any farmer particularly well acquainted with one class of livestock may try his hand at picking the blue ribbon winners in that class. Winners at last year's International Livestock Show will be included in the list of stock to be judged.

Other livestock judging contests for high school students will be held during the week. More than 500 Smith-Hughes high school agricultural students from the state, representing more than seventy schools, will be at the college for these contests.

An auction sale of registered cattle owned by the college will be held during the week. At this time Michigan farmers will have an opportunity to purchase purebred cattle at their own prices. These annual sales of registered cattle have been very popular with the state farmers, and it is expected that many thoroughbred cattle will be taken out in the state from these sales.

Individual conferences between farmers who have special problems and college specialists will be held throughout the week. Various college staff men, including specialists in every branch of agriculture, will be in their offices during the week to meet the farmers and confer with them on their individual problems. These conferences will give the farmer an opportunity for expert advice without cost to him.

A number of entertainment features have been provided for the crowds. Motion pictures, debates, plays, and band concerts will be provided. The annual Michigan Aggie-University of Michigan basketball game will be staged in the college gymnasium on Wednesday evening, February 6. A special block of re-

(Continued on Page 31)

PROGRAM OF FARMERS' WEEK

GENERAL SESSIONS

(College Gymnasium)

Monday, February 4
1:00 P. M. Sale of Holstein cattle (Pavilion, Agr'l. Bldg.).
6:30 P. M. Motion Pictures.
7:30 P. M. Musical Program.
8:00 P. M. Debate: College teams.

Tuesday, February 5
1:30 P. M. Band Concert.
2:00 P. M. Address—F. G. Ketner, Ohio State Farm Bureau.
2:45 P. M. Address—H. R. Smith, National Livestock Com'r.
3:30 P. M. Music.
3:45 P. M. Address—O. E. Reed, Prof. Dairy Husbandry, M.A.C.
5:30 P. M. Formal opening of new Home Economics Building and reception.

Wednesday, February 6
1:30 P. M. Band Concert.
2:00 P. M. Address—J. W. Nicolson, State Farm Bureau.
2:45 P. M. Address—Walton Petite, Sec. National Council of Coop. Assn's.
3:00 P. M. Music.
3:15 P. M. Address—L. J. Tabor, Master, National Grange.
7:30 P. M. M.A.C.-U.of M. basketball game. Motion Pictures in Home Economics building.

Thursday, February 7
1:00 P. M. Parade of college Livestock.
1:30 P. M. Band Concert.
2:00 P. M. Address—W. P. Hartman, director, Bureau of Markets, Foods and Standards.
2:45 P. M. Address—J. T. Horner, Assoc. Prof. of Economics, M. A. C.
3:00 P. M. Address — Verne Branch, Director, Municipal Markets, Detroit.
6:30 P. M. Motion Pictures.
7:30 P. M. Music.
7:45 P. M. Address—Robert S. Shaw, Acting-President of M. A. C.
8:30 P. M. Music.
8:45 P. M. Address—Dr. Hugh Cabot, Dean, School of Medicine, U. of M.

Friday, February 8
10:00 A. M. Sale of registered Shorthorn cattle (Pavilion, Agr'l. Bldg.).

HOUSEWIVES' CONGRESS

(Auditorium of New Home Economics Building)

Tuesday, February 5, 9:00 A. M.
Recital—Music Department, M. A. C. "Value of Salads in the Diet," with demonstration, Miss Adele Koch, Ass't. State Leader of Extension. "What Hats Make of Us," Miss Emma P. Garrison, Assoc. Prof. of Home Economics. "Financial Arrangements," A Play by the Columbine Players.

Wednesday, February 6, 9:00 A. M.
Recital—Music Department, M. A. C. "How to be Wise when One Buys," Miss Julia Tear, Assistant Prof. of Home Economics. "Step-Saving Suggestions," Miss Marion Rogers, Extension Specialist in Home Economics. "Arrangement of Furniture and Furnishings," Miss Winifred Gettemy, Assoc. Prof. of Home Economics.

Thursday, February 7, 9:00 A. M.
Recital—Music Department, M. A. C. "Rickets, the Most Universal Disease of Infancy," Dr. Marie Dye, Assoc. Prof. of Home Economics. Play—"From Danger Valley to Healthy Hill."

Friday, February 8, 9:00 A. M.
Recital—Music Department, M. A. C. "Fancy Work vs. Art Needle Work," Miss Eunice Ryan, Extension Specialist in Clothing and Textiles. "Home Economics Here and There," Mrs. Louise Campbell, State Leader of Extension. "Round Table Discussion."

Valuation of State is Increased Over One Billion and a Half Dollars

ONE of the outstanding features of the state tax situation in 1923 was the increase in the equalized valuation of the state for the purpose of levying the direct state property tax from $5,000,000,000 to $6,540,000,000. This increase was authorized by the state board of equalization, composed of the three state tax commissioners, the auditor general and the director of the department of agriculture.

By thus making this big increase in the valuation, the board practically accepted the recommended valuation of the state tax commission, which was $5,545,065. In former years the equalization board has greatly reduced the actual assessed values fixed by the tax commission. The year's work relating to taxation has been summarized by the board of state tax commissioners in the following statement:

"The primary purpose for which the board of state tax commissioners was created is to see that the provisions of the tax laws of the state are enforced and that all property subject to taxation under that law shall bear its just proportion of the tax burden. To that end the board is given supervision over all local assessing officers throughout the state, and each year greater efforts are made to secure the full and hearty co-operation of these officers in bringing all property to the assessment rolls at its true cash value as required by the constitution and laws of the state. During the assessment period the entire force of appraisers is at the disposal of local assessing officers, and great assistance is rendered by appraising for them property with which they are unfamiliar and whose actual value they are therefore unable to determine. Assistance of this character has been of special value in the assessment of public utilities, manufacturing establishments, and stocks of merchandise. This service is greatly appreciated by local assessing officers and the board each year receives an increasing number of appeals for help of this character.

Review Local Assessments

"The board, in order that it may act in more than an advisory capacity, is given power by the law to review any assessment made by a local assessing officer. In the exercise of this power, many reviews are held each year and the scope of these reviews extends from that of a single assessment to reviews of all the property within a county. During the past year complete reassessments were made of the counties of Macomb and St. Clair. The review of the assessments of an entire county requires the examination and appraisal of every piece of property within the county subject to assessment under the provisions of the tax laws of the state and in the two counties named the examinations and appraisals covered many thou-

Harvesting Crop Farmers Do Not Have to Plant

Farmers will Find It to Their Advantage to Work Together in Harvesting and Storing Their Ice

By EARLE W. GAGE

THE ice crop is the only one the farmer harvests that does not rob his soil of fertility and, considering the advantages of a good home supply of ice, no improvement is more satisfactory than a good ice supply.

"Keep cool" is good advice to the farm family on hot summer days when the thermometer registers around ninety in the shade, when fruits and vegetables must be preserved, when cool drinks are so delicious, and when there is the milk and cream to be cooled and kept cold until ready for market.

Eighty per cent of the dairy products of the farm require artificial cooling before they are ready for market or home use, while 30 per cent of the value of dairy products is lost through failure or inability to cool to a low temperature quickly. Abundant testimony can be given by the manager of a milk plant, cheese factory, or creamery, as well as buyers of cream and eggs.

Ice on the farm is not a luxury; it is a money saver and, at the same time, adds to the comfort of living during at least three months of the year. Six months is a long time to look ahead and these winter days do not suggest the added heat of June, July, and August, but now is the time to "can next summer's cold."

When Jack Frost snaps away in January or February, it is a sign for the farmers to prepare for next summer's heat and the ice season is at hand. There is no crop that is produced as cheaply and brings as high returns as the ice crop. Instead of depleting the pocketbook it enriches the farmer and makes life more attractive to his family, because it supplies a wider variety of high-grade foods in summer.

Cooperation in ice harvesting is more important perhaps than the common community get-together at threshing time. It is best that the ice be cut and hauled to the storage house as soon as possible to permit the ice to form while it is yet cold and prevent waste if freezing weather is passing. Then, too, the work can be done much more efficiently when there are enough men and teams to do all the operations at the same time.

To harvest ice efficiently a few ice tools will be needed. A steel scraper is desirable; some types of road scrapers can be used for this work or a very good home-made scraper may be fashioned of wood and faced with an old crosscut saw. An iceplow is almost essential if any great quantity of ice is to be harvested. This facilitates the removal of the porous surface ice and simplifies greatly cutting into blocks. Half a dozen pike poles, bearing vertical points and horizontal hooks, are needed in floating the ice to the loading platform. An ice saw may be useful, or an ordinary crosscut saw may be used by removing one handle.

Ice cutting is best conducted by three squads of men, each with a team. The first squad removes the snow or spongy ice from the surface of the field and plows, saws, and cuts the ice into blocks of a size most convenient to handle. If the ice is more than twelve inches thick blocks two feet square on the surface would be most convenient; if it is thinner than this, blocks three feet square can be packed conveniently into the house. But thick ice should be cut in proper size blocks so as not to call for undue lifting.

The second squad of men cut loose the blocks and float them to the side of the open water where they are ready to be loaded on the sleigh or wagon. Here a tramway with a pair of hooks attached to a rope will make loading a relatively easy task. Let the ropes extend across the load from the tramway; hitch a horse to it and drag the blocks from the water onto the load.

The third gang of men should be at the ice house to place each load in position and pack sawdust around it as rapidly as possible. Eight men with three teams can work rapidly fields, especially if the snow is deep, in harvesting a crop of ice by this cooperative method.

Where the ice is not quite thick enough to meet the need the snow should be scrapped off the surface the day before cutting is started if indications are that the night will be severely cold. The snow acts as an insulation and retards freezing, and when it is removed not only is the entire mass of ice better frozen but a few inches in thickness is added.

On small ponds the snow may be removed to the shore but on large it is impracticable to scrape the snow entirely off the field. It becomes necessary, therefore, to pile it in windrows.

After the snow is off the field is ready to be marked for cutting. The marking must be done carefully so that all cakes will be rectangular, which aids in economical handling and packing in the ice house. It the proper start is made in marking off the field no trouble will be experienced; otherwise subsequent cuttings will be difficult.

Success in marking depends largely on getting the first line straight, which may be done by placing a stake to serve as a guide at each end of the proposed line. A straightedge, consisting of an ordinary board about 14 feet long, is then aligned with the two stakes and the cutting tool or hand plow run along its edge, after which the board is pushed forward and again aligned with the stakes. This is continued until the entire distance between the stakes has been covered. Another way is to stretch a line between the stakes and do the marking with a handplow although this is not so satisfactory as the handplow can not be operated in so straight a line with the board. After the first line has been cut it can be used as a guide for the horse marker if this is used.

After the ice field has been lined off in one direction, the crosslines should be made. Care should be taken to have these at right angles to those first drawn, which is accomplished by the use of a square. A suitable square may be made easily by first nailing the ends of two boards together with a single nail. Measure a distance of eight feet on the outer edge of one board and six feet on the outer edge of the other board, then nail a third board diagonally across the two, adjusting it until the two marks are exactly ten feet apart on a straight line. Nail the boards securely, forming the desired square.

To estimate the amount of ice needed on a dairy farm, use as the basis the number of cows kept. If the average cow produces 3,500 pounds of 3.7 per cent milk per year (which is equal to 431 pounds of 30 per cent cream) it will require 431 times 1.16 pounds or about 500 pounds of ice, to cool the cream produced by each cow and keep it in good, sweet condition until delivered to market. In addition, it is best to store 500 pounds of additional ice, or a total of 1,000 pounds per cow. This is sufficient to cool the cream needed for household uses and allow for reasonable waste. Therefore, the 20-cow dairy should have 100 tons of ice stored. These figures are for cream; if the milk is to be cooled it will take between two and three times as much ice, or about 30 tons for the 15-cow dairy.

It is necessary to store more ice than is seemingly needed, as there is sure to be a waste, even in the best houses. Sometimes this averages 25 per cent of the whole amount of ice put up.

The number of square feet of ice required per ton of ice in blocks 22 inches square, and of various thickness, is shown in the following table:

Thickness of ice inches	No. Cakes required for one ton	Cutting space required per ton—sq. ft
4	31.3	105.4
6	20.3	70.2
8	15.6	52.6
10	12.5	42.1
12	10.4	35.1
14	8.9	30.1
16	7.8	26.3
18	6.9	23.4
20	6.3	21.1

Not only will you save much space, but ice as well, by properly packing the ice in the house. You can get only 35 to 40 pounds of ice in a cubic foot of space when the ice is thrown in at random, while about 50 pounds can be packed in the same space with a little care. This means also that the air cannot circulate through the ice and melt it, therefore pack it carefully.

About a foot of sawdust should be placed on the floor of the ice house, with less in the center to permit the cakes to lean inward. The sides of the ice should be smooth. Any projecting pieces should be trimmed off before insulation is put on. If sawdust or mill shavings are used a space of at least twelve inches should be left between the outer walls and the ice stack.

It is easy to calculate how much ice the house will hold. Allowing 45 cubic feet per ton, an uninsulated house 18 by 12 by 10 feet, with one foot around for insulation, will hold about 38 tons, while the same sized house if insulated, will hold about 43 tons.

Jackson Livestock Man Honored by France

THERE are many tillers of Michigan soil that won medals of honor from the French government for bravery on the battlefield during the World War but there is perhaps only one from our fair state that has been honored for helping that country get back on its feet. This man, known from one end of the state to the other, Corey J. Spencer, Jackson, owner of Grand River Stock Farm and breeder of some of the finest pure bred Holsteins in Michigan.

It was a little over two years ago that Mr. Spencer learned that agriculture in France was suffering from the lack of high quality dairy sires. During the war the livestock in the war zone was driven away, an, while the Germans had to make restitution with respect to cows, the farmers of France were without good herd sires. Mr. Spencer, wanting to help in the post-war reconstruction, shipped overseas two choice pure-bred herd sires, authorizing the French government to dispose of them as it saw fit.

Time passed and his time and mind being taken up with other matters about forgotten his gift when he received a letter from Paris. The letter was written in French and Mr. Spencer not being able to read it, placed it in his pocket planning to call on a friend within a few days who could translate it for him. Three or four days later the letter was still in his pocket unread. And then he received another letter written in French, but it came from Antoine Barthelemy, the consul at Chicago. This was the straw that broke the camel's back. He could not restrain his curiosity no longer and he immediately called upon his friend Lewis Atherton, a former major in the U. S. Army who had fought during the recent war in France, and could speak and read the French language. The letters contained the information that Mr. Spencer had been awarded the Croix de Chevalier du Merite Agricole, in gratitude for his generous act.

"I was amazed," he said in relating the incident. "I could not believe it at first. When I sent the two sires overseas, I was simply trying to help a little. I never dreamed the gift would be esteemed so highly."

Formal presentation ceremonies will be held in honor of Mr. Spencer after the badge arrives, it is announced by C. E. Linabury, secretary of the Jackson Chamber of Commerce. A. Barthelemy, French consul at Chicago, and Joseph Belanger, consular agent at Detroit, as well as Gov. Groesbeck and state agricultural leaders will be invited.

Mr. Spencer was recently elected a member of the board of directors and vice-president of the newly organized Farmers' and Workingmen's Savings Bank in Jackson. He is also president of the Jackson County Holstein-Friesian Association.

Mr. Spencer was born on a farm in Ontario. He was the eldest of six children. He came to Jackson at the age of 18 to enter business college. Afterwards he entered high school at 21, paying his expenses by odd jobs. He spent several years in California and returned to Jackson in 1915. He bought the farm at Eaton Rapids in 1918. In the summer he lives at the farm and drives to his office in Jackson each morning.

Holding A Community Fair in a Small Town

Ladies' Aid Society Puts On Community Fair in Brethren, Manistee County, On Rainy Day With Great Success

By GRACIA POTTER

UP in Manistee county, in the little town of Brethren, the people wanted to build a church, one where all might go, and they had about exhausted their supply of ideas for making money to start the building, when one of them thought of the community fair. Only a few believed it could be done. The others said, "It's a good idea all right, but Brethren isn't large enough to make it a success." However it was finally decided to make a try at it anyway. Did they succeed? Over 250 people attended the fair and the Ladies' Aid Society served dinner to 110 of them. The ladies back of the fair reported a profit of $100.00 for the church building fund. And they would have done better if it had not rained all day.

BRETHREN is a "2x4 town" up in the Cutover with three or four stores, a big consolidated school that half her people think she can't afford, with no more "spirit of co-operation" than the average, with no factions on opposite sides of Main Street, and the usual allottment of knockers.

With all this to contend with, she has held a Community Fair, on a rainy day, with howling success. The moral, for the benefit of villagers moved to do likewise, is—"Nothing is impossible"!

Two years ago Brethren had a fair, sponsored by a committee of farmers and business men. No prizes except ribbons were given, but the farmers came in out of the choppings with their big pumpkins and cabbages, their wives and children, and that fair was so much of a success that there was talk at the time of making it an annual event. But a year passed, and another, and no plans were laid.

In the meantime 25 women of the community had organized a Ladies' Aid Society, and were stopping at nothing legitimate to earn the where-with-al to build Brethren a church where all good people can freely commune together. Farm sale dinners, chicken suppers, oyster stews, and outdoor pageants had followed each other in rapid succession.

"If Brethren would have a fair," some member suggested, "we could serve dinner to the crowd."

"If we have our own fair," was the final decision, "we can keep out the concessions discountenanced by church folks, and we can keep all the profit."

Four committees of women were appointed, a dinner committee, a prize and premium committee, a program and a White Elephant committee.

Using the premium list of the county fair as a pattern, the premium committee drew up our premium list, and then solicited and collected premiums for over 100 awards. These prizes ranged all the way from a pearl handled carving set donated by a merchant for the best rooster, a sack of flour donated by another merchant for the best loaf of bread, to a pint of pickles for the homliest man, and a carton of rolled oats for the best fried cakes, and a pair of socks for the largest pumpkin.

THE BUSINESS FARMER and several other publishers gave us from 10 yearly subscriptions to several six month's subscriptions to be used as premiums. These we put on the grains and poultry exhibits.

The local merchants all gave merchandise for premiums, the farmers gave half bushels of winter apples, strawberry and raspberry plants. Aid members gave dahlia bulbs, needlework, and dishes, and a sugar shell for the best plate of candy.

The county paper printed the prize list, and the calls for entry tickets, there was no charge, began to come in.

The committee women requisioned the men-folks and an implement shed behind the town hall, built to house the road graders and other road tools, was cleared out and used for fruit, vegetables and poultry. The parsonage a few rods from the town hall, was filled with needlework, and cookery.

The White Elephant committee had spread broadcast a small card bearing the outline of an elephant. This asked the people to give us their White Elephants for our White Elephant booth at the Community Fair, and explained that a White Elephant is anything which is too good to throw away, but which the owner does not want or need.

As a result of this publicity White Elephants began to accumulate; Suits of men's clothing, shoes, dishes, bed-quilts, apples, aprons, Indian baskets. A local auctioneer gave his services, and when the sale began many of the people who had brought in produce gave that to be sold. There were feather clad carnival dolls from the last city carnival, cooking utensils, books, things new and second hand.

In the meantime the dinner committee had planned a dinner of chicken and noodles, mashed potatoes, baked beans, pickles, coffee and pie, and set the price at 25 cents per plate.

So the day was set, and a week of fine fall weather preceeded it. "What if it rains?" inquired the pessimists.

"But it won't rain," said the boosters, "At least it never has rained when we have had suppers, or sale dinners, ever."

But it did rain. Beginning the night before with lowering clouds, it rained all night and was coming down steadily at 7:00 a. m.

"They can't have it!" said the knockers. "Will they try?" enquired the doubtful ones.

The chairman on premiums, perched in a farm wagon, under an umbrella, with her private collection of needle-work in a suit case, and her house plants in behind, with her pies and noodles and potatoes for the dinner carefully protected from the weather, arrived in the village at 7:30 to answer the question.

"Certainly!" she said decidly and led the way to the parsonage needlework show room.

"We've got to," said the dinner chairman, and went after another batch of noodles with her rolling pin.

"Surest thing you know," said the Chairman on Poultry and Farm products, he was an Aider's husband, and he fell to tacking building paper on the rainy side of the Implement shed.

"But nobody'll come!" said the head shakers.

Two farmers from four miles out were already unloading their exhibit out of their Fords. Two cars from the County seat, a newspaper reporter, two Fair judges, and a wagon load of sightseers were already there.

One hundred and ten people sat down to dinner. Some of them had not the heart to eat it all and pay only 25 cents, so we received fifty cents and a dollar for many plates. There were more than 250 people on the grounds. The exhibits were of excellent quality and fair quantity. The dinner and White Elephant Sale netted better than $100.

The county agricultural agent was present and acted as a judge, and the day was so full that there was no time for a musical show scheduled for the afternoon.

Everything was carried out as planned except the baby show, and that was cancelled because the schools were closed the day before when a dyphtheria scare had developed.

Disease, knockers, and inclement weather, and the Fair was a success. "I'm so glad it rained," said a tired dinner committee lady at the end of the day, "Because if it hadn't we never could have fed the crowd. The dinner was eaten up clean."

Next year the Ladies' Aid hopes to plan for a two-day Fair, with prizes for field athletics as well as farm crops and will plan to feed twice as many people.

Everybody was most kind. None whom we asked for prizes refused to help. But the real success of the

(Continued on page 19.)

Some Helpful Information on Making Out Your Income Tax Return

THIS is a story of informative value to Business Farmer readers in the preparation of their income tax returns for the year of 1923. Taxpayers, any part of whose net income regardless of the amount was derived from farming, are required to use the larger form 1040, which heretofore was used only for reporting net income in excess of $5,000. The article explains how to figure your income and exemptions so that you can file a correct report.

TO the farmer the problem of correctly making out an income tax return for the year 1923 should present no unusual difficulties, notwithstanding he is required to use the larged form, 1040. Careful study of the instructions on this and the accompanying form 1040F—schedule of farm income and expenses—will be of material aid in this connection.

Heretofore Form 1040 was used only for reporting net income in excess of $5,000. Its use for reporting net income for the year 1923 is required when the net income, regardless of the amount, was derived from "a business or profession, including farming," and in all cases where the net income was more than $5,000. The smaller form, 1040A, heretofore used for reporting net income of $5,000 and less from whatever source derived, is to be used for reporting net income for the year 1923 of $5,000 and less derived chiefly from salaries and wages. Taxpayers will receive both forms, it being impossible for the Bureau of Internal Revenue to determine at this time the class of form desired.

The farmer who keeps his accounts on the cash receipts and disbursement basis—which means a record of the amount actually received and the amount actually paid for expenses—must file his income tax return for the year 1923 on that basis. He must include in his gross income for the year the amount of cash or the value of merchandise or other property received from the sale of live stock and produce, which were raised on the farm, profits from the sale of live stock or any other items were purchased, profits from the sale or rental of farm lands, and profits from all other taxable sources. The farm expenses will be the amount actually paid out during the year.

For farmers keeping their accounts on the accrual basis, inventories at the beginning and end of each taxable year are necessary.

For those reporting on the accrual basis, the gross profits are obtained by adding to the inventory value of live stock and products on hand at the end of the year the amount received for the sale of stock and products and other miscellaneous receipts, for hire of teams, machinery, etc., during the year, and deducting from this sum the inventory value of stock and products on hand at the beginning of the year plus the cost of stock and produce purchased during the year. The farm expenses will be the actual expenses incurred during the year, whether paid or not.

Farmers who keep their accounts on the cash receipts and disbursement basis are required to file a schedule of farm income and expenses on Form 1040F, which must be attached to the individual return on Form 1040. With farmers who keep their account on the accrual basis, the filing of Form 1040F is optional.

All necessary expenses paid or incurred during the year 1923 in the operation of a farm as a business enterprise may be deducted from gross income in ascertaining net income, upon which the tax is assessed. These include the expense of harvesting and marketing of crops and the cost of seed and fertilizer used. Amount expended for the purchase of feed for live stock may be deducted, but the value of a farmer's own products used for such purpose is not a deductible item. The farmer may deduct the cost of small tools used up in the course of a year or two, wages paid to farm hands (other than domestic servants) and rent paid for farm land and buildings (other than the dwelling) cost of repairs to fences, wagons and machinery, also bills paid for horseshoeing, stock powders, rock salt, veterinary service, insurance (except on the dwelling), gasoline for operating power, and sundry minor expenses.

The value of produce raised on the farm and used in the board of farm laborers may not be deducted as an expense. The farmer may, however, deduct the cost of food purchased for his laborers. The value of the services of the farmer, himself, his wife or dependent minor children cannot be deducted unless the amount is reported by the recipients as income on Form 1040.

The purchase price of an automobile even when used wholly in farm operation may not be deducted, as it is regarded as an investment of capital. The cost of gasoline, repairs, and upkeep of an automobile, if used wholly in the business of farming is deductible as an expense; if used partly for business and partly for the pleasure and convenience of the taxpayer or his family, such cost may be apportioned accordingly, and that proportion of cost attributable to business deducted.

General deductions such as for taxes, losses, interest on indebtedness, bad debts, contributions, etc., are explained in instructions on the forms.

Every single person whose net income for 1923 was $1,000 or more or whose gross income was 5,000 or more, and every married couple whose net income was $2,000 or more, or whose gross income was $5,000 or more must file a return.

The exemptions for the year 1923 are $1,000 for single persons, $2,500 for married couples whose net income was $5,000 or less, and $2,000 for married couples whose net income was in excess of $5,000. In addition the taxpayer is allowed a credit of $400 for each person dependent upon him for chief support, if such person is under 18 years of age or incapable of self-support because mentally or physically defective.

The return, accompanied by at least one-fourth of the amount of tax due, must be filed with the collector of internal revenue for the district in which the taxpayer lives, or has his principal place of business. The filing period is from January 1 to March 15, 1924.

DO YOU KNOW THIS MAN?

DEAR EDITOR:—Find enclosed post office money order for one dollar to renew my subscription for two years. Now, dear M. B. F., I am going to ask a favor of you. Will you try and find Garva Jones and his wife, Jessie, whose address on May 14th was 229 E. Wall Street, Lansing, Michigan? If any person knowing their address would write to me I would thank them very much as I wish to correspond with them on important business.—Chas. M. Pierce, Charlevoix, Mich., R. 2.

OPERATING MOTOR TRUCK FREIGHT LINES

Will you please give me the facts as to how a person can obtain a franchise on a certain road, for trucking for service or for hire? A man has obtained such a franchise here, but his rates seem to be extra high. He tells us we cannot hire any other truck. Is this legal? If so, where are our rights?—A. R., Acme, Mich.

Anyone desiring to operate motor truck freight lines for hire over fixed routes or between fixed termini, may be permitted to do so upon proper application to the Michigan Public Utilities Commission and complying with the provisions of Act 209 of the Public Acts of the State of Michigan for the year 1923. —Clare Retan, Deputy Attorney General.

EIGHTEEN PATRONS ON ONE TELEPHONE LINE

Is there anything that can be done about the way the telephone company does with its patrons? Several years ago when they first raised the rates they promised to give us party lines with only 8 on a line, four on each side, but they now have as high as 18 and 20 on these lines. Our line has nine rings on the W-side and the same on the J-side. Only instead of ringing nine rings on the J-side, they ring 1 long and 1 short, and call it one-one. Some of the other lines have what they call one-two (rings one long and two short). It is almost impossible to get the line if you want it in a hurry.—M. B., Flint, Mich.

This Commission has made an order and it has been the general practice not to place more than ten telephones upon one country line. However, there are places in which the parties insist that they ought to be on a general line and they are willing to be put to the inconvenience of having a large number of persons on the lines in order to visit with their neighbors without going through the central office. Usually where there are eighteen or twenty people upon a line it has been customary for the company to install a separate wire for taking care of them, because it is not regarded as good telephone practice to have eighteen or twenty telephones on a line, and on complaint the Commission has usually so ordered.—Mich. Public Utilities Commission.

CANNOT MAKE ADDITIONAL CHARGE

Can any officer collect for car hire for serving civil case summons besides his ten cents a mile travel to serve same?—H. F., Moran, Mich.

—The Michigan statutes provide that a sheriff shall be allowed 10c per mile for traveling expenses in the service of sommons. An additional charge for car hire would not be authorized.—Asst. Legal Editor.

INTEREST RATE TOO HIGH

What can I do if a banker charges me over 7 per cent on a note? Is there any law to protect a farmer? Can the bankers charge ten to sixteen per cent on notes?—A. T., Flint, Mich.

—We assume that you refer to the interest rates which may be charged by state banks. Under the provisions of Section 1970 of the Compiled Laws of 1915, a state bank may charge seven per cent interest, with a minimum charge for interest or discount of fifty cents. If a bank charges more than the interest hereinbefore stated, it cannot collect any interest on its loan, if the borrower raises that question.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

Section 5998 of the Compiled Laws of 1915 provides that where usury is charged on notes, commercial paper, etc., the party making the loan shall lose all his interest and can only collect the principal. Of course persons or associations loaning money under the provisions of Act 317 of the Public Acts of 1921 in sums of not more than $300 may collect interest up to three per cent a month. We take it, however, that you are not referring to associations of this character.—Clare Retan, Deputy Attorney General.

HUNTING AND POSTING

1. Can hunting be prohibited on your own farm? 2. How should signs read? 3. How close should they be posted? Is more than one notice or sign necessary? 4. What course of action if offenders are found? 5. What if offenders refuse to leave if ordered off farm? 6. Are offenders liable for trespassing or only if damage has been done?—R. D., Ada, Michigan.

—1. Hunting may be prohibited on your own farm.

2. "No hunting," or whatever words will best inform the public that you do not want anybody to hunt on your farm. 3. They should be posted close enough to be easily read, and as many used as required.

4. An action for damages could be brought against the trespasser, or he could be prosecuted in a criminal action. 5. Report the matter to the prosecuting attorney. 6. Nominal damages might be awarded where there were no actual damages, in the descretion of the court.—Asst. Legal Editor.

ENTITLED TO HALF OF STRAW

I am working on shares a farm which adjoins my own. My contract reads, "each to get one-half the proceeds derived from the sale of all grain, produce, etc., taken off said farm." Have I a right to bring half the straw down on my farm when I thrash? First party did not reserve straw. The only thing first party reserves is the house. Please let me know as soon as possible. I always supposed that straw was personal property the same as the grain. I enjoy reading your paper very much.—J. C. P., Concord, Mich.

—Straw would be considered personal property as well as the other crops, such as grain, etc. If the leasor did not reserve the straw, I am of the opinion you would be entitled to one-half the straw along with the other produce.—Asst. Legal Editor.

CAN THEY INSTALL FURNACE IN SCHOOL?

We have always had stoves in our school house and one has broken, so the school board bought another, and the county commissioner has forbidden us to put it up. Is there any law compelling us to buy a furnace for the school?—G. F., Tawas City, Mich.

—According to the law, all school buildings and repairs over $300 in value, must be approved by the superintendent of public instruction. I do not know of any law that would compel you to buy a furnace, although that would probably be the best way of heating your building, especially if it is of any size.—Dept. of Vocational Teacher Training, Michigan Agricultural College.

LEGAL WIDTH OF SLEIGHS

Would you please tell me if there is any new law concerning the widths of sleighs? Have they got to be 4-feet wide or more?—E. M. S., Dryburg, Mich.

—The last legislature enactment for standard gauge for vehicles is Act number 73 of the Public Acts of 1919. This Act fixes the standard gauge, except such vehicles as are inches from center to center of tread and makes it unlawful to use on any of the public highways of this state any vehicle other than standard gauge, except such vehicles as are used for extraordinary purposes. For the purpose of construing the act, motor trucks, moving vans, logging sleighs with a wider draft than fifty-six inches, cutters, and light delivery sleighs are conclusively presumed to be vehicles used for extraordinary purposes.

Therefore, in direct reply to your inquiry, you are advised that sleighs that may be classed as "light delivery sleighs" need not be of standard gauge.—H. Victor Spike, Assistant Attorney General.

IS DOG TAX LAWFUL?

I would like to know if dog tax is lawful and if you don't pay your tax could they kill your dog and imprison anyone for any length of time? What is the value on a dog? —D. G. M., Harrison, Mich.

—Yes, a tax on dogs is lawful, the same as a tax on automobiles, farms, or other property, and if you did not pay the tax, they could come and take your dog and imprison him for life, or kill him, by giving him gas. But they could not imprison you. tho perhaps if they took your dog you would want to go too.

You ask what is the value on a dog, and that is a very difficult question. Dogs are like men; their value is not easily determined. I know of a dog whose life is insured for $10,000. Obviously a very high priced dog. Many a small boy would not take that much for the little yellow mongrel that pals with him, and is found with him wherever he goes. Some women are very devoted to little wooley dogs, and value them more highly than children. On the other hand, the farmer's faithful shepherd or watchdog that guards his property could probably be bought and sold for the small sum of five to ten dollars.

A United States Senator once made a famous speech in the Senate on the virtues of the dog. Much has been written about the value of dogs, and much more will likely be written, and after you have read it all you won't know any more about how much your dog is worth than you did before. But if you have a good faithful dog and he doesn't chase chickens or kill sheep, you would better pay the tax and keep him. Every boy ought to own a good dog. There are many things he can learn from a faithful dog, which will make him a better man when he grows older.—Asst. Legal Editor.

ASSESSING BANK STOCK

I have a few share of bank stock of a bank in a nearby village, but I live in a township located in an adjoining county. Is this stock assessable in the village where bank is located or in the township where I live?—R. A., Lakeview, Mich.

—Sub-division 3 of Section 4008 of the Compiled Laws of 1915 is as follows: "All shares in banks shall be assessed to their owners in the township, village or city where the bank is located: Provided, That the shares owned by a person residing in the county where the bank is located shall be assessed in the township or city where he resides." If you reside in another county from that in which the bank is located, it is clear that your stock should be assessed in the village in which the bank is located.—Clare Retan, Deputy Attorney General.

ARE BUYERS GIVING A FAIR TEST?

Will you please inform, if in your opinion, a price of 64c can be paid for butter fat, together with 1½c hauling, a total of 65½c, when New York extras quoted at 54c and given an honest test? In other words, would not a 65½c price on a 54c market indicate a condition quite out of the ordinary? Frankly we believe this situation means that something is being taken out of the test to admit this price.—F. A., Sears, Mich.

—The question as to whether a creamery can pay 65½ cents for butterfat depends entirely upon what price he is selling his butter. I don't know as the price he pays for butterfat necessarily has to be based upon what New York extras are worth. This is generally true but we happen to know of several creameries that are getting a much better price than New York extras for their butter. I know of one creamery that has sold butter at 50c a pound and has paid the patrons better than 60c a pound for butterfat, but they had a big volume of business and their overhead was very low.

In the instance that you mentioned here, if a creamery is making 40,000 pounds of butter a month and paying 65c for their butterfat and selling their butter at 54c, they will get approximately $800 more for their butter than they will pay for their butterfat. In a small creamery this will take care of the overhead, but if they didn't have this volume this margin would be very close.

But answering your question to the point, will say that we would have to know what the creamery in question is obtaining for their butter before we could tell what their spread was between their buying and selling price. But even on the figures that you have given here we would hesitate very much and think any one should hesitate to say that the buyers are not giving an honest test.—Prof. O. E. Reed, M. A. C.

MICHIGAN CROPS

GOING TO SOW SOY BEANS

I would like to sow some soybeans, some with corn and some broadcast. How many should I sow and when? What is their average yield? Also price? When sowing alfalfa on light sand should I sow with or without nurse crops?—M. A., Minden City, Mich.

—When planting soybeans with corn it is usual to plant six quarts per acre with six or eight quarts of corn. Soys should be planted through a special soybean planting attachment on drill, if corn is drilled. When planting soys broadcast, from two to three bushels per acre should be used.

In southern or central Michigan the Manchu soys are advisable, and in northern Michigan, the Early Blacks. Planting should be made from the middle of May to mid-June. May plantings give best results.

Present prices on soybean seed are as follows: Certified—1 to 10 bushels—$3.50; Certified—10 bushels and over—$3.25.

When planted with corn, soybeans usually increase the yield by one-half ton to one ton of green material. The average yield of hay from soys broadcasted ranges from two and one-half to three tons of air dry hay.

When sowing alfalfa on sandy land, it is usually advisable to use a companion crop in order to prevent injury as a result of blowing. Buckwheat, planted at the rate of one or two pecks per acre, or barley at the rate of three pecks, furnishes excellent nurse crops for spring planted alfalfa on light soils.—J. F. Cox, Professor of Farm Crops, Mich. Agricultural College.

SHREDDED CORN FODDER SWEATS

I would like to know what to do wih my shredded corn fodder. Was shredded a week ago. This A. M. I discovered it was getting hot. It is about 15 feet deep in the center. Have not much chance or room to turn it over. Would like to save it with as least work or trouble as possible, as I am alone with three small children.—Mrs. McC., Breedsville, Mich.

—Corn fodder when first shredded usually goes through a sweat and heats. If the fodder was reasonably dry when shredded, it is not likely that it will heat sufficiently to cause decomposition. On the other hand, if it was quite wet, it will become hot and decompose.—C. R. Megee, Assoc. Prof. of Farm Crops, M. A. C.

Oh Money! Money!

by ELEANOR H PORTER

THE STORY TO DATE

MR. STANLEY G. FULTON, 50-year old bachelor and possessor of twenty million dollars, calls on his lawyer and they discuss the disposition of this large fortune after its owner's death. The lawyer is in favor of giving the money to colleges or charities while Fulton is opposed to these ideas. He remembers that he has some distant cousins and decides to leave the money to one of them, but first he determines to learn which one will use it to the best advantage. To find out who is the worthy one he, through his lawyer, gives, each cousin $100 000 to use as they will. Before giving them the money grows a beard and, using the name of Mr. John Smith, goes to the town where they live to find out what kind of people they are. Upon arriving in town he visits James Blaisdell, one of the cousins, where he tries to hire board and lodging. While there he meets Miss Flora Blaisdell, another cousin who is a dressmaker. They decide they cannot rent a room to him and supply him board and refer him to Frank Blaisdell's, the third cousin. He gets a room there and, passing as a writer gathering material for a book on the Blaisdell family in this country, he starts out. He calls on all of the Blaisdells and as they all talk of a relative by the name of Miss Maggie Duff he decides to call on the lady. He finds her living with her father, an old man who seems to have soured on the world. He secures what information he can from her and her father. He then writes a letter to his lawyer discussing the various relatives he has met. The members of the Blaisdell family that each cousin of Stanley G. Fulton has fallen heir to $100,000 and there is much excitement.

(Continued from January 5th issue)

"FOR shame, Bessie!" spoke up Miss Flora, with unusual sharpness for her. "I think your mother is just right. I'm sure the least we can do in return for this wonderful gift is to show our respect and appreciation by going into the very deepest black we can I'm sure I'd be glad to."

"Wait!" Mrs. Harriet had drawn her brows together in deep thought. "I'm not sure, after all, that it would be best. The letter did not say that dear Cousin Stanley had died—he just hadn't been heard from. In that case, I don't think we ought to do it. And it would be too bad—that Gaylord dance is going to be the biggest thing of the season, and of course if we were in black—No; no the whole, I think we won't, Bessie. Of course, in two years from now, when we get the rest, it will be different."

"When you—what?" It was a rather startled question from Mr. Smith.

"Oh, didn't you know? There's another letter to be opened in two years from now, disposing of the rest of the property. And he was worth millions, you know, millions!"

"But maybe he—er—Did it say you were to—to get those millions then?"

"Oh, no, it didn't say it, Mr. Smith." Mrs. Harriet Blaisdell's smile was a bit condescending. "But of course we will. We are his kinsmen. He said we were. He just didn't give it all now because he wanted to give himself two more years to come back in, I suppose. You know he's gone exploring. And, of course, if he hadn't come back by then, he would be dead. Then we'd get it all. Oh, yes, we shall get it, I'm sure."

"Oh-h!" Mr. Smith settled back in his chair. He looked somewhat nonplused.

"Humph! Well, I wouldn't spend them millions—till I'd got 'em, Hattie," advised her brother-in-law dryly.

"I wasn't intending to, Frank," she retorted with some dignity. "But that's neither here or there. What we're concerned with now is what to do with what we have got. Even this will make a tremendous sensation in Hillerton. It ought to be written up, of course, for the papers, and by some one who knows. We want it done just right. Why, Frank, do you realize? We shall be rich—rich—and all in a flash like this! I wonder what the Pennocks will say now about Mellicent's not having money enough for that precious son of theirs! Oh, I can hardly believe it yet. And it'll mean—everything to us. Think what we can do for the children. Think—"

"Aunt Jane, Aunt Jane, is ma here?" Wide open banged the front door as Benny bounded down the hall. "Oh, here you are! Say, is it true? Tommy Hooker says our great-grandfather in Africa has died an' left us a million dollars, an' that we're richer 'n Mr. Pennock or even the Gaylords, or anybody! Is it true? Is it?"

His mother laughed indulgently.

"Not quite, Benny, though we have been left a nice little fortune by your cousin, Stanley G. Fulton. And it wasn't Africa, it was South America."

"And did you all get some, too?" panted Benny, looking eagerly about him.

"We sure did," nodded his Uncle Frank, "all but poor Mr. Smith here. I guess Mr. Stanley G. Fulton didn't know he was a cousin, too," he joked, with a wink in Mr. Smith's direction.

"But where's Aunt Maggie? Why ain't she here? She got some, too, didn't she?" Benny began to look anxious.

His mother lifted her eyebrows.

"No. You forget, my dear. Your Aunt Maggie is not a Blaisdell at all. She's a Duff—a very different family."

"I don't care, she's just as good as a Blaisdell," cut in Mellicent; "and she seems like one of us, anyway."

"And she didn't get anything?" bemoaned Benny. "Say," he turned valiantly to Mr. Smith, "shouldn't you think he might have given Aunt Maggiie a little of that money?"

"I should, indeed!" Mr. Smith spoke with peculiar emphasis.

"I guess he would if he'd known her!"

"I'm sure he would!" Once more the peculiar earnestness vibrated through Mr. Smith's voice.

"But now he's dead, an' he can't. I guess if he could see Aunt Maggie he'd wish he hadn't died 'fore he could fix her up just as good as the rest."

"I'm very sure he would!" Mr Smith was laughing now, but his voice was just as emphatic, and there was a sudden flame of color in his face.

"Your Cousin Stanley isn t dead, my dear,—that is, we are not sure he is dead, spoke up Benny's mother quickly. "He just has not been heard from for six months."

"But he must be dead, or he'd have come back," reasoned Miss Flora, with worried eyes; "and I, for my part, think we ought to go into mourning, too."

"Of course he'd have come back," declared Mrs. Jane, "and kept the money himself. Don't you suppose he knew what he'd written in that letter, and don't you suppose he'd have saved those three hundred thousand dollars if he could? Well, I guess he would! The man is dead. That's certain enough."

Well, anyhow, we're not going into morning till we have to." Mrs. Harriett's lips snapped together with firm decision.

"Of course not, I'm sure I don't see any use in having the money if we've got to wear black and not go anywhere," pouted Bessie.

"Are we rich, then, really, ma?" demanded Benny.

"We certainly are, Benny."

"Richer than the Pennocks?"

"Very much."

"An' the Gaylords?"

"Well—hardly that"—her face clouded perceptibly— "that is, not until we get the rest—in two years." She brightened again.

"Then, if we're rich we can have everything we want can't we?" Benny's eyes were beginning to sparkle.

"Well—" hesitated his mother.

"I guess there'll be enough to satisfy your wants, Benny," laughed his Uncle Frank.

Benny gave a whoop of delight.

"Then we can go back to the East Side and live just as we've a mind to, without carin' what other folks do, can't we?" he crowed. "'Cause if we are rich we won't have ter keep tryin' ter make folks think we are. They'll know it without our tryin' "

"Benny!" The rest were laughing; but Benny's mother had raised shocked hands of protest. "You are incorrigible, child. The East Side, indeed! We shall live in a house of our own, now, of course—but it won't be on the East Side."

"And Fred'll go to college," put in Miss Flora eagerly.

"Yes; and I shall send Bessie to a fashionable finishing school," bowed Mrs. Harriett, with a shade of importance.

"Hey, Bess, you've got to be finished," chuckled Benny.

"What's Mell going to do?" pouted Bessie, looking not altogether pleased. "Hasn't she got to be finished, too?"

"Oh, I don't know what I'm going to do," breathed Mellicent, drawing an ecstatic sigh. "But I hope I'm going to do just what I want for once!"

"And I'll make you some pretty dresses that you can wear right off, while they're in style," beamed Miss Flora.

"But what are you going to do, Flo? Here you've been telling what everybody else is going to do with the money."

A blissful sigh, very like Mellicent's own, passed Miss Flora's lips.

"Oh, I don't know," she breathed in an awe-struck voice. "It don't seem yet—that it's really mine."

"Well, 't isn't," declared Mrs. Jane tartly, getting to her feet. "And I, for one, am going back to work—in the kitchen, where I belong. And—Well, if here ain't Jim at last," she broke off, as her younger brother-in-law appeared in the doorway.

"You're too late, pa, you're too late! It's all done," clamored Benny. "They've got everything all settled."

The man in the doorwoy smiled.

"I knew they would have, Benny; and I haven't been needed, I'm sure—your mother's here."

Mrs. Harriet bridled, but did not look unpleased.

"But, say, Jim," breathed Miss Flora, "ain't it wonderful—ain't it perfectly wonderful?"

"It is indeed,—very wonderful," replied Mr. Jim.

A Babel of eager voices arose then, but Mr. Smith was not listening now. He was watching Mr. Jim's face, and trying to fathom its expression.

A little later, when the women had gone into the kitchen and Mr. Frank had clattered back to his work downstairs, Mr. Smith thought he had the explanation of that look on Jim's face. Mr. Jim and Benny were standing over by the fireplace together.

"Pa, ain't you glad—about the money?" asked Benny.

"I should be, shouldn't I, my son?"

"But you look—so funny, and you didn't say anything, hardly."

There was a moment's pause. The man, with his eyes fixed on the glowing coals in the grate, appeared not to have heard. But in a moment he said:—

"Benny, if a poor old horse had been climbing a long, long hill all day with the hot sun on his back, and a load that dragged and dragged at his heels, and if he couldn't see a thing but the dust of the road that blinded and choked him, and if he felt as if he couldn't go another step, in spite of the whip that snapped 'Get there—get there!' all day in his ears—how do you suppose that poor old horse would feel if suddenly the load, and the whip, and the hill, and the dust disappeared, and he found himself in a green pasture with the cool gurgle of water under green trees in his ears—how do you suppose that poor horse would feel?"

"Say, he'd like it great, wouldn't he? But pa, you didn't tell me if you liked the money."

The man stirred, as if waking from a trance. He threw his arm around Benny's shoulders.

"Like it? Why, of course, I like it, Benny, my boy! Why, I'm going to have time now—to get acquainted with my children!"

Across the room Mr. Smith, with a sudden tightening of his throat, slipped softly into the hall and thence to his own room. Mr. Smith just then, did not wish to be seen.

CHAPTER X

What Does It Matter?

The days immediately following the receipt of those three remarkable letters by the Blaisdell family were nerve-racking for all concerned. Held by Mrs. Jane's insistence that they weren't sure yet that the thing was true, the family steadfastly refused to give out any definite information. Even the eager Harriet yielded to Jane on this point, acknowledging that it would be mortifying, of course, if they should talk, and nothing came of it.

Their enigmatic answers to questions, and their expressive shrugs and smiles, however, were almost as exciting as the rumors themselves; and the Blaisdells became at once a veritable storm center of surmises and gossip—a state of affairs not at all unpleasing to some of them, Harriet in particular.

Miss Maggie Duff, however, was not so well pleased. To Mr. Smith, one day, she freed her mind—and Miss Maggie so seldom freed her mind that Mr. Smith was not a little surprised.

"I wish," she began, "I do wish that if that Chicago lawyer is coming, he'd come and get done with it! Certainly the present state of affairs is almost unbearable."

"It does make it all the harder for you, to have it drag along like this, doesn't it?" murmured Mr. Smith uneasily.

"For—me?"

"That you are not included in the bequest, I mean."

She gave an impatient gesture.

"I didn't mean that. I wasn't thinking of myself. Besides, as I've told you before, there is no earthly reason why I should have been included. It's the delay, I mean, for the Blaisdell's—for the whole town, for that matter. This eternal 'Did you know?' and 'They say' is getting on my nerves!"

"Why, Miss Maggie, I didn't suppose you had any nerves," bantered the man.

She threw him an expressive glance.

"Haven't I!" she retorted. Then again she gave the impatient gesture. "But even the gossip and the questioning aren't the worst. It's the family themselves. Between Hattie's pulling one way and Jane the other, I feel like a bone between two quarrelsome puppies. Hattie is already house-hunting, on the sly, and she's bought Bessie an expensive watch and a string of gold beads. Jane, on the other hand, insists that Mr. Fulton will come back and claim the money, so she's running her house now on the principle that she's lost a hundred thousand dollars, and so must economize in every possible way. You can imagine it!"

"I don't have to—imagine it," murmured the man. Miss Maggie laughed.

"I forgot. Of course you don't. You do live there don't you? But that isn't all. Flora, poor soul, went into a restaurant the other day and ordered roast turkey, and now she's worrying for fear the money won't come and justify her extravagance. Mellicent, with implicit faith that the hundred thousand is coming, wants to wear her best frocks every day. And, as if she were not already quite excited enough, young Pennock has very obviously begun to sit up and take notice."

"You don't mean he is trying to come back—so soon!" disbelieved Mr. Smith.

"Well, he's evidently caught the glitter of the gold from afar," smiled Miss Maggie. "At all events, he's taking notice."

And—Miss Mellicent?" There was a note of anxiety in Mr. Smith's voice.

"Doesn't see him, apparently. But she comes and tells me his every last move! (and he's making quite a number of them just now!), so I think she does see—a little."

"The young rascal! But she doesn't—care?"

"I think not—really. She's just excited now, as any young girl would be; and I'm afraid she's taking a little wicked pleasure in—not seeing him."

"Humph! I can imagine it," chuckled Mr. Smith.

"But it's all bad—this delay," chafed Miss Maggie again. "Don't you see? It's neither one thing nor another. That's why I do wish that lawyer would come, if he's coming."

"I reckon he'll be here before long," murmured Mr. Smith, with an elaborately casual air. "But—I wish you were coming in on the deal." His kindly eyes were gazing straight into her face now.

She shook her head.

"I'm a Duff, not a Blaisdell—except when they want—" She bit her lip. A confused red suffused her face. "I mean, I'm not a Blaisdell at all," she finished hastily.

"Humph! That's exactly it!" Mr. Smith was sitting energetically erect. "You're not a Blaisdell—except when they want something of you!"

"Oh, please, I didn't mean to say—I didn't say—that," cried Miss Maggie, in very genuine distress.

"No, I know you didn't, but I did," flared the man. "Miss Maggie, it's a downright shame—the way they impose on you sometimes."

"Nonsense! I like to have them—I mean. I like to do what I can for them," she corrected hastily, laughing in spite of herself.

"You like to get all tired out, I suppose."

"I get rested—afterwards."

"And it doesn't matter, anyway, of course," he gibed.

"Not a bit," she smiled.

"Yes, I suspected that." Mr. Smith was still sitting erect, still speaking with grim terseness. "But let me tell you right here and now that I don't approve of the doctrine of yours."

" 'Doctrine.'?"

"That 'It-does-n't-matter' doctrine of yours." I tell you it's very pernicious—very! I don't approve of it at all."

There was a moment's silence.

"No?" Miss Maggie said then, demurely. "Oh, well—it doesn't matter—if you don't."

He caught the twinkle in her eyes and threw up his hands desparingly.

"You are incorrigibie!"

With a sudden businesslike air of determination Miss Maggie faced him.

"Just what is the matter with that doctrine, please, and what do you mean?" she smiled.

"I mean that things do matter, and that we merely shut our eyes to the real facts in the case when we say that they don't. War, death, sin, evil—the world is full of them, and they do matter."

(Continued in February 2 issue.)

MAPLE-SUGAR MAKERS, DO YOUR TAPPING EARLY

MAKERS of maple sugar have lost half and even more of their crops many seasons by not being prepared for the first runs, says the United States Department of Agriculture. It is a good policy to tap early in the season, not only in order to obtain the earlier runs of sap but also because these early runs are generally the sweetest and therefore the best sugar producers.

All sugar makers are familiar with "sugar weather." In general, the season is ready to open during the middle or last part of February in the southern sections and later in the northern ones, when the days are becoming warm, the temperature going above 32 degrees F., and the nights are still frosty. If the days are very bright, warm, and sunny, the sap starts with a rush, but soon slackens. A high wind, warm spell, or a heavy freeze checks the flow, but the return of seasonable weather causes it to start again.

Records of opening and closing dates kept in an Ohio sugar camp show the opening season as early as February 13 in 1891 and 1906. The latest opening date recorded was March 27 in 1885. The number of days of flow varied from 9 to 50, the average being about 30 days.

All Bargain Prices Smashed in this Greatest January Clearance Sale

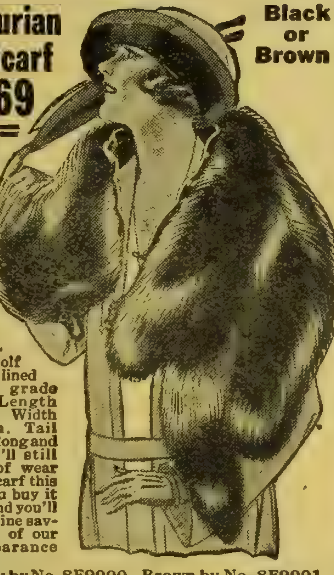
Save Big Money Now by ordering everything you need during this January Clearance—the Most Daring Sale ever attempted by any concern, anywhere! Sharood has knocked the very bottom out of prices—everything sacrificed to make room for the incoming spring stocks. Here is the very cream of bargains in things to wear right now—guaranteed the biggest values in America today! Order on approval and judge for yourself.

Satisfaction Guaranteed or Money Back

Merely give name and number of each article you want. Also state size, and write your name and address plainly to avoid delay. Send only the amazing bargain price and few cents postage mentioned in each description. When goods arrive, examine them carefully. If not delighted with your bargains, return goods and we refund your money instantly. Order Now—Today! Shipment positively goes forward within 24 hours of time we receive your order.

Manchurian Wolf Scarf $3.69

Black or Brown



Rare Value

Luxurious in appearance, yet very economical in price is this soft, warm Manchurian Wolf Scarf. It's lined with high grade messaline. Length about 44 in. Width about 12 in. Tail about 13 in., long and bushy. You'll still get plenty of wear out of this scarf this season if you buy it right now, and you'll make a genuine saving because of our special Clearance Sale Price.

Order Black by No. 8F9000. Brown by No. 8F9001. Send Sale Price, $3.69, and 6c for postage. Satisfaction Guaranteed or Money Back Instantly.

How Federal Land Banks Help Farmers Get Ahead

THROUGH membership in a mighty cooperative loan system, nearly 300,000 farmers are paying off their mortgages. Through the twelve Federal Land Banks these farmers are securing better terms and lower interest rates. Besides, every borrower shares in the profits earned Already, more than $7,000,000 has been paid as dividends.

Money for these mortgage loans is gotten through the sale of Federal Land Bank Bonds. Money invested in these Bonds helps to build up the farming business by providing needed capital.

Federal Land Bank Bonds have all the safety of good farm mortgages, plus additional guarantees.

Federal Land Bank Bonds are free from all taxes, except inheritance taxes. Interest received from them is free from income taxes.

You can turn Federal Land Bank Bonds into cash on short notice or use them as security for a bank loan.

Federal Land Bank Bonds yield a regular income, payable twice a year. Price and interest rate on request.

Federal Land Bank Bonds may be had in denominations to fit your bank account: $40, $100, $500, $1,000, $5,000 and $10,000. Your choice of coupon or registered form, delivered by registered mail. Correspondence confidential. Remember, the words "The Federal Land Bank" appear at the top of every bond issued by a Federal Land Bank.

Should you desire a Federal Farm Loan, apply to the Secretary-Treasurer of the nearest National Farm Loan Association. Your County Agent can give his name and address.

Buy Federal Land Bank Bonds

Write today for free pamphlet, "Getting Together To Get Ahead." Address the nearest Federal Land Bank or the Fiscal Agent at Washington, D. C. Support your only national cooperative lending and investing system, by putting your surplus funds into Federal Land Bank Bonds.

The Greatest Clubbing Offer Ever Made

The Michigan Business Farmer
(Bi-Weekly)
AND
Detroit Times
(Daily Market Edition)

BOTH ONE FULL YEAR

$3.25

Regular Price $6.00

WE believe this to be the greatest offer ever made to residents of rural routes in Michigan. It gives you a great metropolitan daily, keeping you abreast of state and international news of the day and Michigan's only home-owned and edited farm magazine, to keep you posted on farm news, the trend of the markets and what farmers and farmers' organizations are doing. This is an offer that should appeal to all real business farmers and we are proud to be able to make it at this time.

GEO. M. SLOCUM, Publisher

This phenominal low price is made to R. F. D. addresses only. Use this order blank and send check, money order or registered letter to

What the Neighbors Say

REGULATING SPEED OF AUTOS

EDITOR of the Business Farmer: Why is it that so often the simplest questions considered by the public or our representatives are made the hardest? It is most always caused by the interests of some privileged class. The question of how to regulate the speed of automobiles has been chewed and chawed for years by the public and lawmakers and laws have been passed for that purpose but all attempts have been a total failure. Now, let us lay aside all desire to favor any particular class and by so doing we find the remedy very simple and that is by imposing a reasonable fine for the first offense of violating the speed limit, for the second offense take away their driving license for six months; for the third offense disqualify them for driving any kind of a motor vehicle for the balance of their life and for violating the latter ten or fifteen years imprisonment. This would be fair to all and special privileges to none. Each one would decide his own fate and the public would be much safer and would soon see a great reduction in lives lost and the hospital bills. Excepting the speeder I would like to know who would object to such a system. Years ago we tried to prohibit saloons by high license which favored the man that had the price. We have had the same experience with the automobile.

With the experience we are having trying to regulate the speed of automobiles I think it is time that we applied something more effective. Therefore, I have submitted the above remedy and believe it might be a benefit to the public.—E. R., Greenville, Mich.

MORE ON RECORDING LAND TRANSFERS

IN a recent issue the Caro party says he does not like the present system of recording land transfers. I have never talked to a practical farmer that did! When J. W. Helme was a legislator he tried hard to have a state-wide system of land registry adopted by general law, along the line of "state guaranteed land titles" much in use in other states and Ontario—optional with interested owners whether or not used. What happened? Every abstract clerk and most of the registrars with their whole office force, half the real estate men, all the tax title beneficiaries in the state, took issue with the claimed advantages in the bill, caused its defeat and have ever since taken a fling at Mr. Helme.

Since, a Mr. King of Escanaba proposed a change by the indexed register route, so simple that a grader from High School could drop in the Register of Deeds' office and tell the parents what was to be found on such a page, of such a date, of the property they had need of knowing, just a matter of public history,—a text-book, if you please. What was the result? He fared the same as Mr. Helme before him, and the same afterward! He has had no friends among abstractors.

In another issue of THE BUSINESS FARMER, a Michigan man complains of our line fence law, the issue being "The obligation of a non-stock-grower, a non-poultry-raiser is under to maintain half a division fence," when said owner cannot possibly benefit. This is a very natural feeling just now when fence material is so costly and so perishable, (light wire and thick sap posts lasting but 12 years here) every person in the state with like experience can so testify with sympathy. Our general laws are the cause of this injustice—a state wide law used to govern owners of real estate where a local act should be used. The reason for this backward condition of government of Michigan is largely owing to our extreme conservatism. We regularly elect politicians holding fast to tradition of the past even as far back as the Constitution of 1854 (see Supreme Court decision regarding counties legal right to establish land title registry — the case was Wayne County). Don't attempt anything new is the slogan of the would-be legislator! And he is the party elected nine times out of ten.

Case after case in all courts decided every term convinces us that the Constitution of 1909 and the Judicature Act of 1915 are out of date with modern system of earning—"Wresting a living from the miserly grasp of the soil."

If there are any practical, wisely progressive men and women still owning and earning a good living from farm and orchard land in Michigan (the other class of farmers are always radical or progressive) to such do I appeal for a remedy, offering a few suggestions:

Amend the Constitution, where it conflicts with progress, to-wit: We write our franchise act in Constitution, why not write our primary and registration act as well in basic law! Require prospective electors from other states to register with precinct clerk, giving full particulars and taking a transcript of same to be produced wherever they desire to vote one year afterward, instead of six months; this measure would greatly aid police. Provide for a public service draft law instead of a nominating petition. The party of first choice to qualify under his party choice within a specified time, or automatically leave the name in column first at left of ticket,—all to be done at spring election. No separate primary! Leave the necessary elimination to the party or parties listed. Provide for a larger township unit for governing locally by consolidating two or more townships of like topography and habit of farming with more power to enact by-laws than now. Provide for a vote of interest on petition for public work having for its object special or frontage taxes for benefit. Provide official ballot at all school meetings with voters registered by director at taking census thirty days prior to annual school meeting with but two classes of voters eligible: those with children and those with property assessed. Also official ballot at Township primary for nomination; after the annual report of the Township is read instead of before, as now. Give local boards of review more consideration in determining what is land value for taxing purposes, and eliminate state tax from agricultural and forest lands.

You now have specific tax on canines,—an honest tax! Why not on all animals including fur-bearers? This would be a boon to assessors and Boards of Review. If you would save the roads, tax the tires instead of the gas! If you would save the woods don't tax them—tax the second growth logs at the licensed sawmill.

A good dispensary law would beat our present beverage control,—it might put the bootlegger out of business with legal competition and take the money into the public till. We have not stopped effectually the consumption of alcohol—just changed the vendors, taken them from behind the screen and placed them behind the bush near the road.—E. R., Port Hope., Mich.

True Chivalry

The genius of a certain Arkansas editor showed itself recently when he printed the following news item in the local column of his paper:

"Miss Beulah Blank, a Batesville belle of twenty summers, is visiting her twin brother, age thirty-two."—Arkansas Taxpayer.

Lawless Proceeding

The teacher was giving the class a lecture on "gravity."

"Now, children," she said, "it is the law of gravity that keeps us on earth."

"But please, teacher," inquired one small child, "how did we stick on before the law was passed?"—The Tattler (London).

Also Like a Fish

Bella—"Dick's awfully poetical. When I accepted him he said he felt like an immigrant entering a strange country."

Donna—"Well, so he was!"

Bella—"An immigrant, why?"

Donna—"Wasn't he just 'landed?' "—London Mail.

The Easy Sex

"I wonder why it is a girl can't catch a ball like a man."

"Oh, a man is so much bigger and easier to catch."—Baseball Magazine.

MICHIGAN RANKS HIGH AMONG STATES IN PRODUCTION

THE various crops, not including live stock or live stock products, produced in Michigan during 1923 have a total estimated value of $242,472,000, as compared with $214,899,000 in 1922, and $183,685,000 in 1921. This represents a gain of nearly 13 per cent over 1922 and 30 per cent over 1921. The valuations were computed on the basis of the December 1 price except for such fruits as were out of season. In those cases the price was that received in the marketing season. Wheat, barley, rye and beans commander lower prices on December 1 than on the same date in 1922, all other crops showing a higher price. Corn, oats, hay, beans and apples brought a larger total monetary return than in 1922, and winter wheat, corn, buckwheat, potatoes and hay returned a larger value per acre than in 1922. These larger returns were mainly due to better prices rather than larger yields as only winter wheat, barley, beans and apples showed a greater production, as shown by the annual report prepared by L. Whitney Watkins, State Commissioner of Agriculture and Verne H. Church, U. S. Agricultural Statistician.

Notwithstanding this apparent improvement in the general agricultural situation, Michigan farmers were compelled to pay approximately 20 per cent higher wages for their hired labor than in 1922. On October 15, the average farm price for crops and live stock was 21 per cent higher than in 1913, but the wholesale cost of all commodities was 53 per cent higher than in 1913. Therefore, the purchasing power of farm products on that date was only 75 per cent of that in 1913. This is seven per cent higher than it was at the beginning of 1923 and 11 per cent higher than the lowest point, which was touched in August and September, 1922. The trend being upward, conditions may be said to be improving but the increase has been discouragingly slow especially to those farmers having heavy financial obligations. The farmers that secured better than average yields generally realized a little profit this year, but practically all whose yields fell below the average received no adequate return for their labor and investment, and many suffered a direct cash loss.

The spring was backward and the planting of early crops thereby delayed. A heavy snow covering over the northern half of the State delayed the arrival of warm weather. Freezing temperatures occurred on several dates during May. However, extremely warm weather in June hastened growth and nearly all crops attained a normal development by the middle of July. The low temperatures in May did some injury to fruit in the southwestern counties where a portion of it was in bloom at the time, but practically no harm was done elsewhere in the State and there was a good crop of nearly all kinds of fruit. The season was unfavorable for the development of fungous diseases, and all fruit and roots crops were unusually free from them. Drought was particularly severe in Mason and adjacent counties during July and August, causing considerable damage to crops in that region and lesser injury in other localities. Good rains in September helped late crops, and the absence of a general frost until October permitted practically all crops to mature well. The fall was mild and pleasant which enabled farmers to complete the harvesting of crops and to do more than the usual amount of plowing for next year's planting.

For 1923, the State ranked 17th among the states in the production of all crops. Last year it held 22nd place although it usually holds 18th place.

Vanishing Ancestor

"How far do they trace their ancestry?"

"The grandfather, a City Bank Director, was traced as far as China; there all traces were lost."—London Opinion.

Ins and Outs

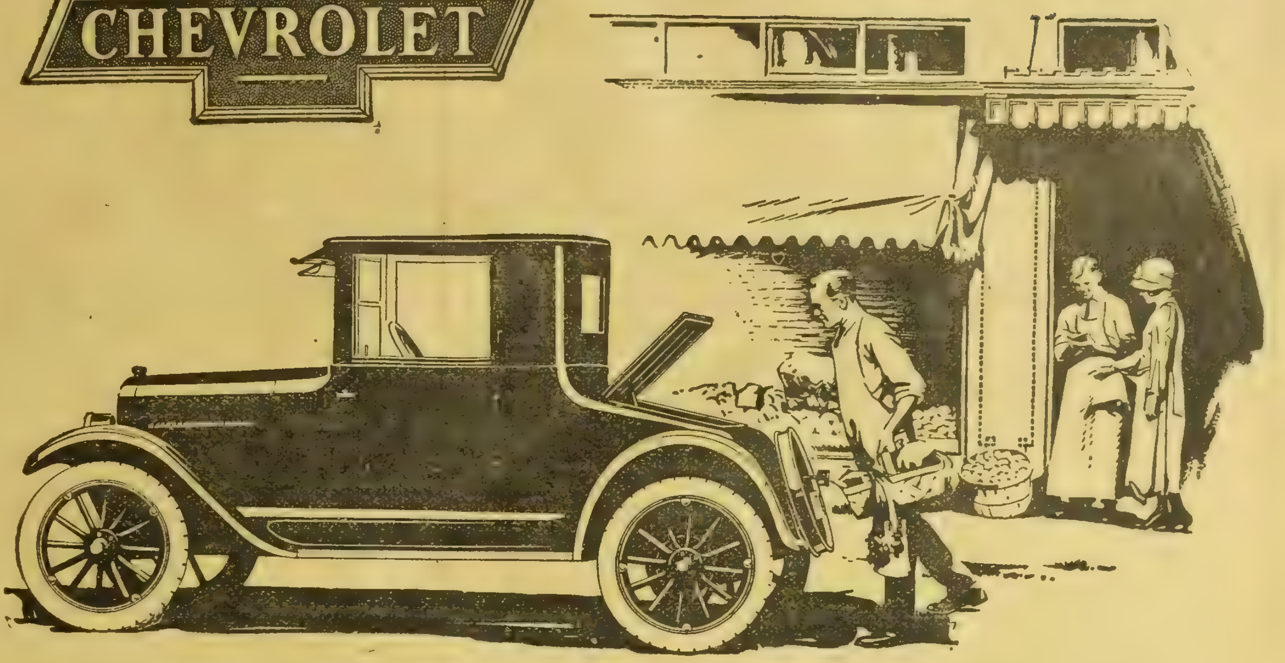
A taxi-driver recently got the worst of a wordy bout.

An old man with a wheelbarrow would not get out of the way, and the taximan shouted: "You ought to be wheeling a pram!"

"And you ought to be in it," replied the old man."—Brisbane Mail.

for Economical Transportation

CHEVROLET



The Economical Quality Car

When low priced cars came on the market, PRICE was the magnet that drew buyers because low price made automobiles possible for millions hitherto debarred from the advantages of motor transportation.

Time and experience have developed the fact that purchase price—although an important factor—must always be considered in connection with operating and maintenance costs.

Chevrolet prices are not the lowest on the market, yet Chevrolet economical transportation averages lowest in cost. This average cost considers the purchase price, interest on investment, depreciation and all operating and maintenance costs.

A detailed comparison with any other car in the low priced field will convince you that Chevrolet is the best buy because of its superior quality and because the purchase price includes full equipment.

More than a million Chevrolets are now in use. Twelve huge plants are now building them at the rate of twenty-five hundred per working day. Nearly one-half million Chevrolets were bought in 1923—far exceeding in number the sales of any other quality car.

Thus, our statements have the strongest possible backing, namely, the faith and patronage of the American people who know automobiles and know practical values better than any other people on earth.

Let any one of our seven thousand dealers show you our seven types of cars and explain how easy it is to get one and enjoy its use.

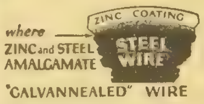
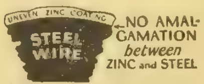
Save 1/2 on your Fence Bill

Use Rust-Proof Fence



"GALVANNEALED" WIRE
Extra thick zinc coating penetrates INTO the steel wire, preventing it from flaking and peeling off.



Ordinary GALVANIZED WIRE
Thin coating of zinc, unevenly applied. Ordinary process of galvanizing merely lays zinc ON, not INTO the wire.

WE GUARANTEE "Galvannealed"—(newly discovered *rust-proof* fence wire)—to last 2 to 3 times longer by any standard test, and to carry 2 to 3 times more zinc coating than any ordinary galvanized fence wire made.

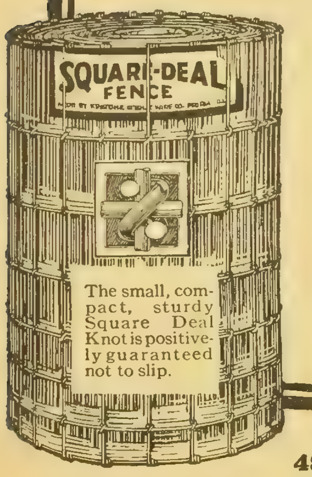
This means "Galvannealed" should last *2 to 3 times longer* in actual use and, therefore, costs *½ to ⅓* as much as you now pay.

In "Galvannealed" wire the extra heavy zinc coating is amalgamated *INTO* the steel body of the wire. In ordinary galvanized wire the thin zinc coating is merely laid ONTO the wire—"Galvannealing" goes IN, galvanizing only goes ON.

Square Deal Fence

is now made up from both "'Galvannealed', the Triple-Life Wire" and from the regular quality of galvanized wire.

Farmers who know how to save money buy Square Deal fence. Stiff, picket-like stay wires make fewer posts necessary; wavy or crimped strand wires provide springiness and keep the fence tight and trim; the famous Square Deal Knot holds stay and strand wires in a vise-like grip, positively guaranteed not to slip.



The small, compact, sturdy Square Deal Knot is positively guaranteed not to slip.

COMING OUT OF THE CRUCIBLE

A SERMON BY REV. DAVID F. WARNER

TEXT: "What is old is gone, the new has come."—2 Cor. 5:17 b. (Moffatt).

THIS new day of 1924 is one of change. It is a day of exit. The old is going and the new is coming. This is a day of scrutiny; of comparison, selection, and elimination. It is a day when the principles of cooperation and coordination are coming under critical observation. This day is seeing the leaven of Christ doing some intense work. We feel that world-wide, universal ideas, plans, and goals are having their birth, tho in great travail. So, we may yet hope that the twentieth century is yet to be blessed thru a religion of international good-will. "Go ye * * * and make disciples of all nations," says the Christ.

When the apostle uttered the words of our text, he was interpreting the realism of Christ. But religion, that is, Christianity, is still in the crucible, because the world has not understood. Faith yet holds, that when we teach and live all things whatsoever Christ has commanded, then tomorrow will have exchanged its provincialism, nationalism, and radicalism, for internationalism and interracialism; for human brotherhood. It will have come up, or got back, to a Gospel that is universal in its reach and adaptation; back to Christ and the apostles, where there is neither bond nor free, Jew nor Greek, Chinese nor African, working-man nor capitalist, klan nor anti-klan, high caste nor low caste, but all are one in Christ. The apostle Paul says, further, that all creation is in travail waiting the revealing of the sons of faith. We all shall be glad to hail the rising star of orthodoxy thru a simple trust in Jesus Christ. This is to be the sole seal of legitimacy in true religion.

What are some of the signs? In the home land there is hope that the give christ of denominationalism is to give way to the Christ of the Gospels. Church federation is growing, and union and community churches are becoming more numerous day by day. In foreign lands, denominational and comity federation are recognized as a fundamental need. National churches are now in the process of formation. S. D. Gordon universalizes and well-nigh unsects the Christian religion by saying that the day is coming when you will not be saked to what church you belong, but what are you doing. (Cf. Matt. 25:31-46). And so it seems that a sacramental religion is to find its only justification in a positive, ethical Christianity.

Now, is the conventional church meeting modern demands? As an instance of failure, the Russian church has all but gone to pieces, spiritually and corporately. A native minister writes that the people looked to her in this day of new demands, "earnestly to direct the life of the nation in new and right channels." But in her conventions the main topic of discussion was: "what form of clothing should the clergy wear?" This formal and ritualistic church once dominated the land. It satisfied the spiritual conception and desires of the masses.

How we have hugged to our bosoms the historical signifance of the Greek church still practicing apostolic ordinances! This is the church, that, not because of these ordinances, but in spite of them, has, in the crucial test, gone spiritually bankrupt. It was a blind leader of the blind. When it ought to have been the spiritual solace and power of Russia's confused masses; when it ought to have been ready to make itself felt and heard, it was helpless and impotent. It was tied down to customs and traditions of the dead past.

And we shall have to continue to wonder for some time yet, how it is that the Christ of Luke 4:18 is not giving us economic comfort and political peace. But the new Christianity is to demonstrate that there is a rational, a spiritual, way to solve human problems. Former President Wilson dared attempt to lead us into this high road in international politics. A magazine writer wrote at the time, "The human family will have to set right about the work of reforming and mastering themselves, getting rid of their prejudices and fixed ideas, and enter upon the task of judging everything by the standards that Jesus laid down, if it is going to fulfill the President's demands." But let old men wail, women be raped, and Smyrna burn; partisian politics and industrial imperialism must have their inglorious reign. Why? Ask denominational church leaders who are content in official smugness. Ask the capitalist who sits in the front pew. What christian is not ashamed of the pacts of Versailles and Lusanne?

It is but reasonable that the church should urge unity, harmony, and justice in all the domains of human living. The Kingdom of God can come on earth only by writing the King's teaching on the hearts of nations, as well as individuals. Today we are living under a nervous peace and civilized humanity is falling back into social disorder and unhappiness. Thus, we may know we are indifferent to a democratic and ethical Gospel. We are to believe in Christian ordinances, worship, and prayer; but the churches have yet to prove that these things are creative of spiritual power and life. Will it take another period of war and red gore of battle to bring the church to her knees?

I wonder if the church has ever had such an opportunity as today,—in China, India, Russia, Japan, and elsewhere? In the great convulsive condition of the world, all peoples are groping for an articulate faith in God. Chas. E. Scott found a Chinese village where they had thrown away their idols, forsaken heathen priests, and had formed a society to seek after the true God. Is Christianity ready enough, united enough, powerful enough, to bring to the heathen world, the only true Mediator of faith, Jesus Christ? Life is being aroused everywhere. Is the church able to direct it so that it will not get lost?

Surely, this is a day of Kingdom opportunity! To save it we must have a church outwardly federated and inwardly generated. The times are demanding vital religion, spiritual religion, spiritual reality. A convention of the South India United Church adopts the following: "We face together the gigantic task of the winning of India for Christ—one-fifth of the human race. Yet confronted by such overwhelming responsibility, we find ourselves rendered weak and relatively impotent by our unhappy divisions—divisions for which we were not responsible and which have been, as it were, imposed upon us from without; divisions which we did not create and which we do not desire to perpetuate." When will we understand that, as another has said, "The mission of Christianity is to transform civilizations, not to transfer them."

Now, the world needs to know that it is on the wrong road, that it is staggering to ruin in its own self-righteousness. This declaration must be the unceasing cry and prayer of the church. And it is, but the world has not minded. Why? Well, on the church's side as an institution, she has not met fundamental human needs and instincts. So, the present crucible of affliction, methinks, is pressing the church to purge religion of unholy divisions and dogmatical bickerings, and to give the world a simple, practical Gospel that meets the needs and longings of a travailing humanity. I wonder if the church could not heal more souls if it would serve more bodies.

BIBLE THOUGHTS

DO WE?—Jesus said unto him, thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind.—Matthew 22:37.

IS NOT THIS THE FAST that I have chosen? to loose the bands of wickedness, to undo the heavy burdens, and to let the oppressed go free, and that ye break every yoke?—Isaiah 58:6.

A LAMP AND A LIGHT:—Thy word is a lamp unto my feet and a light unto my path.—Ps. 119:105.

OVER 500.000 WAYSIDE FARM MARKETS IN 1924

THE summer of 1924 will see more than 500,000 wayside markets in successful operation throughout the United States.

While such a vast number seems almost incredible it is said to be borne out by an investigation made by the National Farm Market Bureau, of Toledo, O., an organization devoted to statistical research and in aiding the farmer in finding a profitable market for his produce of whatever nature.

For the past year the Bureau has has been conducting a campaign of research into the extent and importance of rural roadside markets, and is authority for the statement that 1924 will find half a million front-yard markets doing business thruout Uncle Sam's domain, and—making money.

It bases its enlightening declaration on a thorough investigation made in a dozen scattered states, one of the surprising features of which was that in 90 per cent of the replies received from "wayside farm marketers" the writers credited a large share of their success to the intelligent use of bulletin boards.

"Not only is the bulletin board unfailingly an economical method of advertising for the farmer, but it invariably hits the nail on the head," says the statement. "It is the farmer's 'silent salesman', summer and winter, always on the job, conserving time and money, and indirectly causing a stream of shekels to pour into the coffers of the roadside market merchant, be he farmer or gardner.

"To obtain a bulletin board is the easiest thing imaginable. One way is to take several smooth boards and nail them together. Paint the surface a dull black, and there you have your blackboard bulletin board; or cover the surface with blackboard cloth, which takes chalk rapidly and is inexpensive. Maybe the children have a playroom blackboard, and if so it can be used during the vacation season at least.

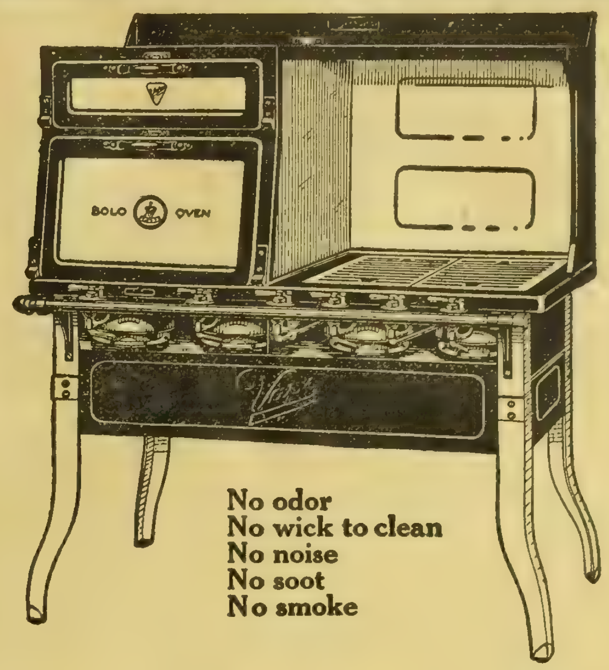
"Yet another way is to purchase a board ready-made 'in town', or have some carpenter make you one. Better yet, in some communities enterprising merchants or banks, or manufacturing concerns, give away neat bulletin boards to their rural friends or patrons conducting wayside markets. These are always excellently made and are preferable to any other sort. So if you want to succeed in the wayside market business use a bulletin board."

Here are some interesting facts in connection with the investigation:

Number of questionnaires sent out, 21,592; replies received from persons conducting bona fide wayside markets, 5,481; percentage reporting financial success, 94; percentage reporting net annual profit of $1,000. 58; $,2000, 41; $3,00, 36; $4,00, 28; $5,000, 19; $5,000 and over, 14; percentage of markets conducted exclusively by women, 21; percentage of markets selling some commodity in winter, 34; percentage farm mortgages raised by profits from markets, 18.

Average number of customers per market daily (estimated), 38; greatest number of customers, reported in a day by any one market, 1,436; earliest crop marketed, strawberries; latest, apples; number buying autos with market profits, 2,214; number installing radio sets, 708; number buying musical instruments, 2,612; number spending winter in Florida or California on market profits, 312; number selling all farm products through the market, 3,168; average selling season, June 15 to Oct. 1.

"It is impossible," states the report, "to make any definite declaration as to the number of markets in operation throughout the country, but we feel confident, from data at hand, that the summer of 1924 will see less than half a million, perhaps more, serving the public."



No odor
No wick to clean
No noise
No soot

Marvelous Oil Stove Converts Kerosene into Gas—Gives Clean Blue Flame

A speedy cooker—bakes, roasts, boils same as a gas range.

This is the range people everywhere are talking about. It created a sensation at the State Fair. Thousands saw it subjected to tests that would cripple any other oil stove. Thousands of hardware and furniture dealers all over the country are now selling it. People everywhere are enthusiastic about it. Go and see it before buying any range. It is an all-year range.

Has Gas Range Advantages because it burns gas

You will like its beauty, its convenience, its cleanliness. It gives you a new and wider range of service. It will enable you to do better cooking, baking, roasting with less effort and no disappointments because you can regulate the heat—you turn the flame up or down with a lever valve same as a gas range.

Each Vapo Burner is a Miniature Gas Plant

It makes hydro-carbon gas from kerosene. It is smokeless, sootless, odorless and wickless. It does not burn a thin film of oil; it burns gas. You get a clear BLUE flame of powerful heating intensity. You get a cooking, baking and roasting ability that is entirely new and unprecedented in an oil range.

32 to 36 hours of heat from 1 gallon of kerosene

—And that by using burner turned on fully. You get 50 to 60 hours' service with burner regulated to simmering heat.

Lever valves of automatic locking type give perfect control of flame. You can tell whether "ON" or "OFF" at a glance. Safety lock prevents accidental altering of flame. Sight feed in our patented valve enables you to see oil feeding drop by drop. Oil tank is conveniently placed for easy filling. And Range sets flush against the wall.

Built-in Bolo Oven Insures Quick Baking

Each Vapo Range with oven has BOLO type oven—Big or Little—made big or little by Bolo plate for slow and fast baking at the same time. Oven is ventilated insuring light pastry, cakes and bread. The Bolo feature cuts down fuel bills as well as insuring quick results. Everything that hampers you in the use of ordinary oil ranges is banished from the Vapo.

Other Important Features

Big Cooking top enables you to speed up meals.

High Shelf does not interfere with use of wash boiler on top.

White Enameled Splasher, oven doors and legs are easily kept clean.

Lever valve easily and surely regulated.

Burners easily cleaned.

Durable construction equal to finest gas ranges.

Very compact: Vapo six-burner type goes in space of ordinary four-burner stove.

Furnished with or without oven in three-burner, four-burner, and six-burner styles. Right or left-hand oven.

Take this advertisement to your dealer and ask him to show you a Vapo range. If he has none is stock, write us and we will see that you are supplied.

"The Farm Paper of Service"

FRIDAY PREDICTS PROSPERITY

DR. DAVID FRIDAY, economist, and former president of Michigan Agricultural College spoke on three occasions in Detroit last week, and in each, predicted that 1924 would see a continuation of the prosperity which commercial centers of the country are enjoying and a distinct improvement in the position of the farmers.

Regarding Michigan and the agricultural situation, he said: "Notwithstanding reports to the contrary, agriculture, outside of the northernmost districts of the wheat belt, has experienced a not unfavorable year. Michigan farmers should have been pretty well satisfied with their returns from sugar beets and beans. The most discouraging outlook is that of the wheat farmers of Montana, the Dakotas and perhaps Nebraska. The process of finding relief in these regions through diversified farming, must be slow, and, unless Canada's wheat crop fails, our wheat growers must suffer from keen competition."

These words are doubly effective coming from Dr. Friday because his reputation as a prophet have been pretty well borne out, since he made his statements at Farmers' Week at Lansing, a year ago, that the year 1923 would see a considerable improvement in farm conditions, especially here in Michigan, and that the exodus of farmers to the cities, could only result in an improved condition for those farmers who remain on the farm. Further that lessened production always resulted in higher prices, whether it be in raw materials, manufactured articles, or in farm produce.

At least most of us will hope Dr. Friday is right about 1924. We believe he is!

HOWARD SAYS SO, TOO!

JAMES R. HOWARD, former president of the American Farm Bureau, is the first agriculturist in the public eye to support our contention that the restriction of immigration is a disadvantage to the farming business in America.

Mr. Howard, however, takes it up from the viewpoint that our restriction of immigration is causing the colonization of many new agricultural territories in other lands which will be competitors of America, if not immediately, in future generations.

It is our contention that if the right kind of emigrants, real workers and their families, are allowed to come into the United States freely and be absorbed by industry and agriculture, they would of themselves offer a sufficient consuming market to more than merit their admittance, and that in the name of humanity there is no reason why we should close the gates to this land of prosperity!

We do not wish to be construed as commending unrestricted immigration, but we do believe that it is possible for the American consuls abroad to separate and segregate undesirable applicants and not to allow any prospective immigrant to set out from his native land without credentials in his pockets which would, when he had proved himself worthy, admit him to citizenship here.

The present situation only means that the demand for labor in the cities has curtailed entirely the supply of labor to the farms and the farmer must look to immigration if he is to be supplied. There are millions of peasants who want to come to America, work on the farms, and accumulate enough to buy farming land for themselves. Certainly this is a worthy object which we, as a nation, have no right to challenge.

THE 1924 ROAD PROGRAM

EVERYONE interested in good roads in Michigan will praise the present plans of the state highway department to complete 500 miles of concrete roads and such additional gravel roads as the state can pay for from the funds derived from license tax receipts and the sale of road bonds, during 1924.

The Governor figures that not less than 100 miles can be built entirely by the prison labor already organized for road work, and in addition, every available prison "trusty" will be applied to the construction of the paved highways if the Governor has his way.

Already the State Highway Department engineers have disclosed that on 10.4 miles of pavement laid on Grand River Avenue by both free and prison labor, the state saved over $36,000, or nearly $4,000 per mile, less than the estimates of the lowest bidders.

THE BUSINESS FARMER has commended from the first the use of prison labor on the roads in Michigan, both for building new roads and the maintenance of the hundreds of miles of good roads we already have in condition. We have also commended the Governor on the establishment of the state-owned cement plant, because the requirements this year are estimated at 1,000,000 barrels of cement for road construction in Michigan alone. This does not mean that the state can make all of the cement they use, but that with this factory in operation it will set at rest any of the many rumors that the state is being gouged by the organized cement manufacturers.

Michigan has a right to be proud of the progress made in road building during the year 1923, but from all indications 1924 will out-distance that record. Good roads are expensive, but in the long run good roads will show a profit to every citizen who helps to pay for them.

THE BOK PEACE PLAN

SOME months ago that public-spirited individual, Edward Bok, former editor, offered under certain conditions a cash prize of $100,000.00 for the best plan submitted for world peace, and the winning plan has just been awarded the prize. The name of the winner has been withheld, however, because it is desired to take a national referendum as to whether the people of this country want a permanent peace plan and whether the suggested plan is satisfactory. It is felt that if the winner's name were announced before the referendum was made it might be construed as a political move from one side or the other and thus the whole value would be lost.

The plan briefly proposes as follows:

I. That the United States shall immediately enter the Permanent Court of International Justice, under the conditions stated by Secretary Hughes and President Harding in February, 1923.

II. That without becoming a member of the League of Nations as at present constituted, the United States shall offer to extend its present cooperation with the League and participate in the work of the League as body of mutual counsel under conditions which

1. Substitute moral force and public opinion for the military and economic force originally implied in Article X and XVI.
2. Safeguard the Monroe Doctrine.
3. Accept the fact that the United States will assume no obligations under the Treaty of Versailles except by Act of Congress.
4. Propose that membership in the League should be opened to all nations.
5. Provide for the continuing development of international law.

This plan would seem to place the United States in the position which we have always felt it should occupy as the leader in the progress of world peace and democracy. It should be obvious to every thinking American that we cannot stand isolated from the rest of the world and serve the useful purpose to humanity for which we are dutybound. If any of our readers have not read the Bok Peace Plan we will be glad to secure for them copies which can be passed on to your local farm organizations or churches, as it to voluminous for reprinting completely in these columns, although we would like to.

A GOOD JOB WELL DONE

SOMETIMES we think the flowers given the living are much more cherished than those placed on the caskets of the dead and a dainty nosegay on our way to work some morning may be more valued than the floral horseshoe you are planning to send us!

All of this is apropos to our saying a good word or two regarding the work during the past year of the Board of State Tax Commissioners, composed of William S. Linton, Saginaw, Nathan F. Simpson, Hartford, and George Lord, Detroit, of which Mr. Linton is chairman and Mr. B. F. Burtless, Lansing, is secretary.

These men have naturally been put in a most hazardous and generally thankless position, and one that we certainly do not envy them. Everyone wants his taxes reduced and yet it is obvious that some taxes are too low and must be raised. You can well imagine the grief that such a job brings with it.

This Commission has worked night and day during the past year trying to relieve the tax situation which exists in Michigan and we have heard few words of commendation.

We hope the Commission will accept this as a slight token of our appreciation of work well done by faithful public servants, in which we hope we will be joined by the many thousands of farmer-readers of THE BUSINESS FARMER.

COREY SPENCER, A CHEVALIER

IF you happen to meet Corey Spencer, of Jackson, owner of the Grand River Stock Farm, at an auction sale in the near future, hesitate before you step up and slap him on the back and call him by his first name.

As told on page 4 of this issue, Mr. Spencer has been awarded the Croix de Chevalier du Merite Agricole and that he should speak to common folks in the future will be only because of his generous good nature and his desire not to show a swollen cranium simply because of the deep honor which the French government has conferred upon him.

Mr. Spencer is famous in Michigan not only for this signal honor but for a good many years of conscientious work in building up the livestock industry in Michigan, particularly in the Holstein breed and for which, we doubt, if he will ever receive any especial badge of merit from our state or government. We are rather lax in this country in acknowledging obligations of this kind and we could well follow the example set by the French government in this regard. There are any number of men who have contributed unlimited advantages to agriculture who have never received a pittance for their toil or any recognition from their government.

We are glad that this signal honor has come to Michigan and particularly to Corey J. Spencer because he deserves it.

HAVE YOU A RADIO?

"THEY don't know what they're missing," said a good farmer friend of mine from whom I inquired as to the reason why so few farm homes are equipped with a radio receiving set.

The second reason which we found for the apparently cold reception which farmers are giving radio was the fear of lightning traveling down the aerial and causing damage to the home. This, however, can be easily prevented either by a knife switch or a special lightning arrester which costs only a dollar or so and offers automatic protection, besides being approved by the insurance underwriters so that it does not affect fire insurance any more than telephone or lighting wires coming into the same house.

It is a fact, friends, that you who are isolated from towns and cities do not know what you are missing by not equipping your home with a radio receiving outfit. You can build a set yourself that will give excellent results or you can buy one at a comparatively low cost when the daily pleasure and profit to be derived from a radio is considered.

Next to the automobile I consider the radio the greatest advantage which the farmer has achieved in our lifetime. Think it over and we believe you will want one!

A DANGEROUS PRECEDENT

SECRETARY of State Hughes set up a very dangerous precedent when he decided to sell arms to the present constitutional government in Mexico and refused to sell them to Huerta and the rebels who are opposing President Obregon.

No matter which side is right we must keep in mind that our own George Washington was a rebel in the eyes of the British monarchy, and while Secretary Hughes and the administration may be perfectly justified in the present situation, there is a precedent being set up here of discrimination on the part of our government which might in time lead to most serious consequences.

If we are sincere in our prayers for world-peace, how can we go into the markets of the world with war-material for sale?

James Couzens, Michigan's fighting senator, says Mellons plan to cut the surtax on profits would have saved him $4,000,000 in taxes he has paid during the past ten years. Some slice of melon, Jim!

PUBLISHER'S DESK

"WE WANT YOUR GOODS"

THIS is a title of a circular which Landon & Werling, 1307 Perry Street, Detroit, Michigan, sent out to a large list of farmers in Michigan, and they were certainly honest about that statement at least, because they not only wanted the goods but after they got them they forgot to pay for them!

Their circular offered fancy prices for dressed veal and hogs and chicken, turkeys and ducks. One of our readers sent them 20 hens, weighing 110 pounds, and another reader shipped two creates of Barred Rock hens, 34 in all, weighing 175 pounds, and they are still "waiting at the church" for their money.

We not only made an investigation, but on finding that we could not locate the parties, turned the matter over to the local post office inspector, who under date of January 10th returned our file stating as follows: "In reference to enclosed correspondence, I have to advise that the concern complained of are out of business, left no change of address, and all effort to locate either of the persons has been without result. It appears to have been a case of a couple of fly-by-night operators who gathered in what they could get and then disappeared.

"It would appear to me that your paper could accomplish great good by advising all of your patrons to not ship products to any strange concern without first making some inquiry regarding their rating. If they would do that there would be fewer losses and complaints."—E. E. Fraser, Post Office Inspector.

The Inspector is quite right and we have for several years pointed out to our readers of this page, that we would be glad to investigate any commission house which offers them an outlet for farm products, at no expense to our subscribers, and advised our readers not to ship to any concern which they have not had previous experience or which was not recommended by this publication or some other reliable source.

Apparently some peole never will learn and all we can do is to keep the facts before those who will.

SHE MAKES IT GO!

I have a heavy simplex auto knitter and I certainly make good with it and when these people complain they don't make good, the fault surely lies mostly with themselves. Just the other day I sold $6.00 worth to one family alone. I wish you would give me the address of the lady having the Auto Knitter for sale. Maybe I could buy the medium or fine cylinders for making medium and fine socks. Also her bobbins and hose boards. The Auto knitter instruction book is just full of various things one can make. The directions are plain yet some I can't pick out. I know its my own fault, not the little machines fault. I tried to make mittens and all at once it seemed clear to me. I stick to one thing, making gentlemen's socks. I bought a 6 cylinder Saxon 1918 car and have a bank account. My car, while not new, runs splendidly and we surely enjoy it. That and little expenses incurred with a car, I have kept up with my knitter. Also numerous other things around the house and dainties for the table. I sell at home, 75c per pair and I take care of a large home, besides cooking for four. I can give you neighbor's names, customers of mine, who are delighted with my socks. Yet I sold another lady a machine who sits down with her hands folded and says she simply cannot learn to knit with it. I tell her she don't apply herself. You, who read this, could not have the responsible position with the magazine if you had sat back and said I simply can't. Now that's the trouble with these unsuccessful Auto Knitters. I quit playing at our little country dances, because I made more and shorter hours, and not out in all kinds of weather. One can average from $2.00 to $3.00 a day. I sold $6.00 worth one day. So you see I made and sold 10 dozen pairs. Paid off our potato diggers, part money; $50:00, sold 3 pair socks to them besides all that the people had me make for their sons living in the cities, for Christmas. Also there was my own dad and brother, one a railroad engineer in Chicago. All say nothing could have been nicer than my socks, even jellies or chickens sent them for Christmas.

From now on I think I shall charge 85c per pair. Even then, at the stores they are $1 per pair.

I was so angry at all the slams directed at this concern. I just had to tell you a few facts in their favor. Respectfully, Mrs. Chas. Cudway, Benzie County, Mich.

P. S. My folks take your paper and I live with them, as they are getting old and need me, so you see usually half days is all the time I have to devote to my machine, and as we all read your paper I feel I am one of the Michigan Business Farmer family, too.

I AM printing the above letter because it seems to prove that the successful operations of these hand knitting machines is largely a matter of the perseverance and dexterity of the operator.

Here is a woman who writes us in apparent good faith that she has a machine and would like to buy another, because she finds that she can make a comfortable living knitting socks at home, a large market for which she finds among her friends and relatives.

Within the past two week I have had an inquiry from a woman with two children and an invalid husband, who would have to borrow part of the $60 or $75 necessary to purchase a knitting machine. She wanted to know if I would advise the purchase, and of course I had to tell her that it would be too great a risk until she had tried the work and that my advice was that she should put her situation up to a knitting machine manufacturer and ask him if he would not ship her a machine on trial, with the understanding that she would purchase it if she found she could operate it satisfactorily, and make a living by so-doing.

There is such a demand in the farm homes for work for the women to do in spare time that it is indeed too bad that there is not some kind of home employment which we can recommend, and it has been our desire to find such employment for our readers which has prompted us to make a state-wide investigation of the knitting machine proposition. We are glad to publish any information on either side of the case which may be of benefit to our readers.

CO-OPERTIVE LAND COMPANY

Do you know anything of the standing of the "Co-operative Land Company, 1328 Chemical Bldg., St. Louis, Mo.?" We received a circular wishing us to list our farm with them and requested a deposit of one-half of the usual fee of $35.00, ($17.50), and they guarantee a sale, or rather guarantee to furnish names and addresses until we make our own sale.—W. V.

WE have had some correspondence regarding the Land Company at St. Louis, you mention. Our advice is to send them no money, as they work on the same scheme that we have written up many times in our columns. Ask them to give you a name and address of any farm owner for whom they have sold a farm, in Michigan, then write or see him, and find out his experience.

Are You Ruptured?

Learn How to Heal It FREE

Ruptured people all over the country are amazed at the almost miraculous results of a simple Home System for rupture that is being sent free to all who write for it. This remarkable invention is one of the greatest blessings ever offered to ruptured persons, and is being pronounced the most successful Method ever discovered. It brings instant and permanent relief and does away with the wearing of trusses forever.

Thousands of persons who formerly suffered the tortures of old-fashioned steel and spring trusses are now rejoicing in their freedom from the danger and discomfort of rupture after a brief use of this remarkable System. There is nothing like it anywhere and hosts of ruptured persons are astounded at the ease with which their ruptures are controlled.

For a limited time only, free trial treatments of this Muscle Strengthening Preparation are being mailed to all who apply. It is an original painless Method. No operation, no danger, no risk, no absence from daily duties or pleasures. Send no money; simply write your name and address plainly and the free treatment with full information will be mailed you in sealed package.

Send now—today. It may save the wearing of a torturing truss for life.

FRUIT AND ORCHARD

Edited by FRANK D. WELLS

HEALTH FACTS ON FRUIT

FRUIT is not concentrated nutriment. Most fruits contain from 75 to 95 per cent of water. The balance is largely woody fiber or cellulose, fruit sugar and minerals. The cellulose supplies the waste which is so frequently lacking in modern diets.

Cellulose furnished no nutriment; it affords simply bulk and a mechanical stimulation to the movements of the digestive organs. They are built to receive this bulk and their proper functioning requires it.

Thus the free daily use of fresh fruit incidentally insures a regular supply of water and a certain bulk to the food which prevents constipation, allays thirst, and, according to some, diminishes the desire for stimulating drinks.

Pure water should of course be taken in addition to that supplied by fruit in the diet.

These reasons alone render fruit a valuable addition to the diet, but there are other equally important reasons for using it.

There are found in fruit, fresh vegetables, fresh milk, fresh meat and whole cereals, certain chemical compounds termed "vitamins." These protective food constituents are not organisms but chemical substances present in minute quantities, but extremely important in maintaining the bodily health. Their absence has been held responsible for such diseases as scurvy, beri, beri, possibly pellagra, as well as lesser degrees of ill health and faulty growth.

Acid fruits, such as oranges, lemons, limes and probably most berries, seem to contain these vitamins in a very stable form. Heating to the boiling point apparently does not destroy the vitamins of such fruits to the extent it does the vitamines of most other foods.

Vitamin deficiency arises from the use of pasteurized or sterilized milk, white flour, milled rice or cereals, sterilized or highly cooked non-acid foods, and cured meats. Fresh meat, even when roasted, appears not wholly to lose its vitamins.

Vitamin deficiency in one of its most pronounced forms, scurvy, is often present in infancy, due to the use of pasteurized or sterilized milk or too little milk. The child at birth apparently has enough vitamins stored in its body to keep it going, but after the first month or two it requires either fresh milk, orange juice, or tomato juice, or other anti-scorbutic food, to supply the deficiency.

Even though adults rarely suffer from scurvy except on Artic voyages, or under conditions of privation, when fresh vegetables, fruit and and fresh milk or meat are not available, it is not impossible that a partial lack of vitamins is responsible for much ill health in those who live largely on sterilized or cured foods, or on a restricted diet.

The daily use of fruit is a safeguard against vitamin deficiency.

There are still other important reasons why fruit is a dietetic safeguard.

It has been found that our foods may be classified into those that on burning or assimilation leave an acid ash, and those that produce bases, or alkalies. All foods are burned or oxidized in the body, and whether their ashes furnishes acid or base is an important matter to know.

The foods most favorable for base-forming purposes are potatoes, apples, bananas, raisins, oranges, cantaloupes and tomatoes.

The strongly acid-forming foods are meats, fish, eggs and cereals.

It is easily possible unduly to decrease the reserve alkalinity of blood by dietetic errors, but not possible unduly to increase it.

The general tendency is to over-acidity, and against this tendency fruit is a safeguard.

Strained fruit juice is often acceptable, both to bowels and stomach when the fruit itself is not.

Fruit should be eaten fully ripe but decayed or moldy fruit should, of course, be avoided. Bananas are usually eaten underripe. They are not fit to eat until the skin is brown and the pulp is mellow like a ripe peach. Their starch is then changed to sugar.

Bananas are more acceptable to delicate stomachs as a puree made by passing through a fine strainer, also when baked.

Cooked fruits, especially peaches and pears, are often more acceptable than raw fruits, and as the acid seem not to lose their vitamins in cooking, one of the most valuable properties is thus retained.

The acid flavor of fruits is rendered much more pronounced by cooking, and thus sugar is required to make them palatable, and increases their fuel value. It is a good plan to cook with sour apples, sweet apples, raisins or other sweet fruits.

The Burden of Tax Exempt Securities

MANY inquiries received from various sources and some articles written for farm papers show that the effect of the proposed constitutional amendment restricting the issuance of tax exempt securities is often misunderstood and the evils of tax exempt securities is not apprehended. I also find that some inquire why it is necessary, and others as to what benefit will result. Some also do not understand what the term "tax exempt securities" covers. To make these matters clear to persons who do not have time or opportunity for independent investigation I have summarized the questions most commonly asked and will answer each separately.

Question. What securities are exempt from taxation?

Answer. The bonds of the National government are exempt both as to principal and income from taxation by the several states or any subdivision of them. Part of them are entirely exempt from any tax by the Federal law which created them, but most of the mare not entirely. Certain issues authorized by the Federal government, such as the farm loan bonds, are also entirely exempt. The bonds of the states or any divisions of them are exempt from Federal taxes, and are generally made exempt from taxation by or within the state that issues them. Other states, however, may tax both principal and interest.

Question. What is proposed by the amendment?

Answer. To permit the National government to tax the income only of the state securities and the states to tax the income from the National securities, in each case only to the same extent as the government or state taxes its own bonds.

Question. Does the amendment apply to securities already issued?

Answer. No, only to those issued after its adoption.

Question. Why ought such an amendment be adopted?

Answer. To equalize the burdens of taxation. As some escape taxation by investing in tax exempt securities this must be made up by increasing the taxes of others. The amount of state and municipal securities in existence is now over ten billion dollars, the income from which is entirely exempt from Federal tax, and about twenty billions of government bonds partially exempt. The loss to the government thereby has been variously estimated at from three hundred millions to four hundred millions a year. The effect is to nullify the provisions of the graduated tax and increase the taxation of the ordinary individual.

Question. Who are most favored by the present system?

Answer. The extremely wealthy who have invested in tax exempt securities. Under our graduated income tax a person having a net income of one million from property like railroads bonds, corporation stocks, farms, or business of any kind, is required to pay a Federal income tax of $550,800 per year, while if he has this amount of income from tax exempt bonds he does not pay a cent thereon. The gain is not large to those having small incomes, hence they seldom buy tax exempt securities. The extent to which the extremely wealthy hold tax exempt securities may be judged from the fact that when William Rockefeller died, it was found that his estate included $43,000,000 in tax exempt securities.

Question. It is sometimes claimed that those who buy tax exempt securities pay enough more for them to buy securities upon which the interest is so low that the government substantially makes up its loss in taxes and the purchaser derives little gain therefrom. Is this true?

Answer. Only to a very limited extent. There is always such a large amount of tax exempt securities being offered that there is little competition for those having heavy incomes. For those having an income of a million dollars the purchase of a tax exempt bond paying 4.50 per cent would net as much as a taxable bond paying 10.00 per cent, but the same bond could be sold at the same price by making the rate of interest slightly higher. The government loses what the buyer of tax exempt securities makes according to his income. Tax experts and political economists all agree that under a graduated system of income taxes the exemption benefit to the wealthy investor is not passed on to the borrowing municipality or state.

Question. Is it necessary to amend the Constitution when we already have what is known as the Income Tax Amendment?

Answer. Yes. Although it was generally believed when that amendment was passed that Congress would have the power to tax incomes from any source, the Supreme Court has since held that it does not extend the objects of the tax, and only made it necessary to apportion the tax among the states.

Question. Will conditions change so as to make such an amendment unnecessary?

Answer. On the contrary, conditions are getting worse as the state and municipal indebtedness is increasing at the rate of about a billion dollars a year. This enlarges the amount of property exempt from taxes and places a heavier burden on the salaried man and the man who has only a small income as well as on all incomes derived from industry, agriculture and commerce.

Question. Does the issuance of tax exempt securities make any difference to the man whose income is not large enough to require him to pay an income tax, such as a small farmer or a laborer?

Answer. Yes, because it increases the cost of living.

Question. How does the exemption of bonds increase the cost of living?

Answer. By withdrawing money from active business, thus decreasing competition, and by increasing the cost of capital to manufacturing corporations, railroads and merchants, thereby raising the cost of manufacturing goods, making freight rates higher, and generally increasing the cost of doing business. Capital for building has been scarce and high, making rents higher, and causing workmen to demand higher wages. When dead capital is tied up in tax exempt bonds live capital must pay for both, and all taxes on property have enormously increased.

Question. Does the amendment permit the Federal government to tax the principal as well as the income of bonds now exempt?

Answer. No. The amendment in express terms applies only to income, and provides that neither the government or the states shall discriminate against the bonds of the other.

Question. Would farmers have to pay a higher rate for land loans if tax exempt securities were not permitted to be issued?

Answer. No. Investments in tax exempt securities have withdrawn immense sums which would have been used for farm loans, and thereby reduced the rates of interest. Many farmers were required to pay their loans when money was hard to get because the holders of the loans wanted to put their money into tax exempt securities. Farm loans were formerly a favorite investment for large estates. These estates are now getting rid of them as fast as possible. If no more tax exempt securities were issued the rate on farm loans would fall for there would be more competition for them. So, also, if no more tax free issues were premitted the Federal farm loan bonds would sell at substantially the same rate. They would enjoy a preference on account of the security, and security has more to do with the market price of bonds than the tax free provision. There are now great amounts of tax free bonds in existence that can not be sold on as favorable terms as some of those which are taxable. Moreover, as before stated, the quantity of tax exempt bonds is so immense that there is more than there is demand for among the large income tax payers. A considerable portion must be taken by those whose income tax is assessed at only a small percent. The price these parties will pay fixes the price of the whole issue and they will pay only a very little more than for a taxable security of the same grade.

Question. Is this a political or local question?

Answer. It is not. Neither is it a question of occupation. Members of both political parties voted for the amendment when the resolution passed the House of Representatives in January, 1923. Two democratic Secretaries of the Treasury and one republican Secretary have recommended the adoption of the amendment. It was approved by President Harding, who earnestly urged its passage, and passed the House in the last session of Congress. So many organizations have approved it that there is no space to mention them all, but among the more prominent are: the National Grange, American Farm Bureau Federation, the American Bankers Association, National Association of Real Estate Boards, the United States Chamber of Commerce, the American Economic Association, and the National Tax Association. Economists and tax experts, with practically no exceptions, favor it, and the legislature of several states have already endorsed it.

How to Make Cooperation a Success

IT is always easy enough to tell the other fellow how to do it, no matter what it is, but the number of failures in co-operative effort would seem to justify the following advice. It is given by Lloyd S. Tenny, who has made a study of the farmer organizations for the U. S. Department of Agriculture. He outlines there seven factors of success:

1. The association must have a definite object in view. Interviews with farmers disclose that they frequently do not know the purpose for which the organization is being formed.

2. The organization must be formed on a commodity basis. Both at home and abroad and the outstanding successes in co-operative marketing have almost invariably confirmed their operation to a single agricultural product or to a group of products very closely allied.

3. There must be a sufficient volume of business to cover operating costs and the business should be controlled or under contract by the association. Many efforts in co-operation have failed because the farmers were willing enough to promise to sell their products through the association but, when the time came to deliver these products, there appeared to be equally good reasons why the promises should not be fulfilled. It is not good business for a commercial organization to attempt to proceed without contracts.

4. No business can succeed without good management. The management is not only concerned with selling the products profitably, but must also recognize the individual member in the association and must function in such a manner as to satisfy this human element.

5. Proper accounting.

6. Educated membership. The members must have complete knowledge of the aims and conduct of the organization.

7. Self-perpetuation. The organization must be established and operated on lines that include and make use of the best thought and experience available; once organized it should be unnecessary to call on outside aid to re-establish policies, to provide a board of directors or management to conduct affairs.

The Children's Hour

A BABY IN A POCKET

THE kangaroo baby is a very tiny creature when he is born. Indeed he is only as big as your thumb, and would get lost if his mother didn't keep him in her pocket until he grew larger. He is born blind, naked, and so helpless that his mother holds him between her lips while she uses her paws to open the pouch so that she can put him inside. She then sticks her mouth into the pocket, being very careful not to let the baby slip, and places his mouth against a nipple. The queer baby clings to it tightly and does not let go for several weeks. Even then he would die of hunger if Mother Kangaroo did not force the milk down his throat.

By working certain muscles in her body, the mother pumps the milk into her baby. Then she closes up the pocket and the queer little mite takes care of himself by clinging to the nipple, his mother pumping milk into him as he needs it. This is all the care he gets for several weeks.

The tiny baby inside the nice fur-lined cradle is slowly growing to look like his father and mother. He can see, hear, and move. He has a soft fur coat on his body. Mother Kangaroo now opens her pocket and finds that the ugly mite has grown to be a very nice baby. He is, perhaps, the size of a big kitten. He looks at her with his beautiful soft eyes full of wonder. It is the first time he has seen his mother, but he isn't afraid of her. She is very proud of her baby and coaxes him to put his head outside the cradle. The little fellow is too shy at first, but at last he grows bolder and peeps at the queer world where his mother lives. He looks very funny with his small head and big ears poked through the pocket.

For weeks he is content to remain in the cradle, poking his head out from time to time. If he attempt to push his way out, however, his mother's paw quickly pushes him back again. He is too small to be allowed outside. Mother Kangaroo, leaping and hopping from place to place, carries him with her, his little head sticking out of her big pocket.

Thus he lives and sees life from his cradle until he is the size of a big hare. Then he is allowed to come out, but if there is the slightest danger, he climbs into the pocket and hides himself.

When Little Kangaroo is seven or eight months old, he is too large to get in his old cradle, but he sticks his head inside to get his milk. He is now learning to care for himself. He hops and leaps and kicks his feet, which are growing big and strong. He uses his claws, and feeds with his mother and others on grass, leaves and herbs. He is no longer a baby.

HUNTING DOG AND SHEPHERD DOG

A SHEPHERD'S dog, one day, at the corner of a wood, met a Hunting Dog.

"Come, Cousin," said the Hunting Dog, "and I will show you some sport. Not far from here, a Wolf has his lair. We will hunt him out, you and I, and chase him over the mountains. Maybe he will show battle. That will be fun, because a Wolf can put up a good fight, even against two Dogs. What! You hang back? You are not afraid, surely?"

"My post is with the flock," answered the Shepherd's dog. "As for being afraid, I have killed several wolves when they came to attack my sheep, and I killed them alone, my Hunting Cousin. Go, hunt for a fight if you wish, I will wait until the fight comes to me."

It is no sign of cowardice to defend instead of attacking

OUR BOYS AND GIRLS

Dear Uncle Ned:—My father takes the M. B. F. and we all like it very much. I am a girl of twelve years of age, and am in the seventh grade at school. I like my studies real well this year. I will describe myself. I am four feet ten inches tall, weigh about seventy pounds. I have light hair, light blue eyes, and am light complexioned. My birthday is the 16th of March. Have I a twin? I live on a 160-acre farm. We have twelve cows, five calves, twenty-nine pigs, six horses, eighty chickens, and two ducks. For pets I have a dog and a cat. The dog's name is Ted and the cat's name is Tony. My sister went hunting with Ted the other day and he chased a rabbit. The rabbit went into a hole and he dug right in after it, and she had to wait about a half an hour before they could get him out. I have two sisters and one brother. My oldest sister is sixteen, and I have a little sister nine years old. My brother is only two years old. I hope my letter isn't too long to be published. Bye-bye, your niece.—Miss Eva Calhoun, R. 4, Lakeview, Michigan.

Dear Uncle Ned:—I haven't noticed any letters from Harbor Springs, which is my town. I am about four feet, five inches tall. I have medium brown hair and blue eyes. I am rather fat. I am between ten and fifteen years of age, and the one who guesses my correct age will receive a letter. I am in the seventh grade. It is storming here today. I like to slide down hill. Well goodbye.—Veda Wheaton, R. 1, Harbor Springs, Mich.

Dear Uncle Ned:—I have written you before and saw my letter in print and I thought I would write again. I thought Christmas day would be without any snow, but I was very much mistaken, wasn't I? Did you have a lot of fun on Christmas? I did and hope you and all the cousins had a lot of fun. There was a program at the school I go to, on Friday night the 21st. I was in a few songs and a dialogue, and had a fine time. Well, Uncle Ned, do you like to go to parties? I do, and go to quite a few of them. I am in the seventh grade at school and was twelve years old the 18th day of December. I was born in the cold and stormy month of December. Well I guess I will close for now. I hope "Old Mr. Wastebasket" does not get this letter. Your nephew,—L. D. Biddle, R. 2, Lake View, Michigan.

Dear Uncle Ned:—I am going to write a letter again. I haven't written a letter to the children's Hour page since last spring. Well, did you have a good time Christmas? I did. We had a tree at home and a tree and program at the church. My little sister Ethel spoke for the first time and she did fine. She is five years old. We all got a bag of candy and nuts at church. My sister, brother and cousin, went to Traverse City today for a couple of days visit, with my aunt and uncle. I guess they will have a good time. I wish I could have gone with them, but I have just been up there recently, so I could not go this time. I will send in a few riddles. Who guesses them will receive a letter from me. If I place a dime on the table in a room full of people, what is the first thing it does? How many peas in a pint? What grows in winter, dies in summer, and grows with its roots upward? I think the answer to Faybella Robinson's riddle is, when you put it in your pocket you double it, and when you take it out, you find it increases. Am I right, Faybella? I will close for this time, wishing Uncle Ned and all the cousins a happy New Year.—Gladys Carlson, Box 49, Omena, Michigan.

Dear Uncle Ned:—I have been a silent reader of the M. B. F. and find the Children's Hour very interesting myself. I have light eyes, black hair (which is bobbed) and weigh 148 pounds. Can anyone guess my age? Try it. There is hardly any snow on the ground in Gladwin county, but we can say we had a white Christmas. I love snow and I think perhaps every boy and girl should. I am very sorry we have no snow and ice for I remember last December we had many skating and coasting parties. We sure enjoyed them. They made our cheeks rosy and our lips red. I noticed my letter is getting somewhat long and the waste basket is wondering, but nevertheless I am thankful and appreciate the privilege of writing. I will close, wishing some of the nieces and nephews would write to me. From your want-to-be niece.—Miss Dorothy Foote, Star Route, Gladwin, Michigan.

Dear Uncle Ned:—I thought I would write a letter to the Children's Hour but I don't want Mr. Wastebasket to get my letter which I think he will. I must describe myself. My age is twelve years. My birthday is February eighteenth. I have bobbed hair and my height is four feet ten and one-half inches. I have six brothers and two sisters. Two of my brothers are married. I am in the seventh grade at school. I go to my brother's school. Both of my sisters teach and two of my brothers. One isn't teaching this year. Did you have a Merry Christmas? I did. I play the piano although I haven't taken any lessons. My sister plays the piano also. Well, I guess I will say goodbye for this time.—Ursula Byrne, R. 5, Lowell, Mich.

Dear Uncle Ned:—I have been a silent reader of the Children's Hour for some time. Well, I must describe myself. I have light brown bobbed hair, dark brown eyes, and am four feet and eight inches tall. I am eleven years of age, and in the seventh grade at school. I have three sisters and one brother. I will close with a few riddles. The person that guesses these riddles right will receive a letter from me. Black upon black and black upon brown, three legs up and six legs down. Upon the hill there is a green house, in front of the green house there is a white house, in that white house there is a red house, in that red house there is a lot of little negroes. Well I must close and leave room for someone else. With love to Uncle Ned and cousins, your want-to-be niece,—Imogene Hibberd, R. 2, Box 22, Remus, Michigan.

Dear Uncle Ned:—I thought I would join your merry circle. My father takes the M. B. F. and we enjoy it very much. I am a girl and am 10 years old, and am in the fourth grade. I live in the country. I go to the country school. Now I will describe myself. I am 4 feet 3 inches tall and weigh 63 pounds. I have black eyes, and brown curly hair. I wish some girls and boys would write to me. I like to get letters.—Miss Jessie Maginity, Millersburg, Michigan.

Dear Uncle Ned:—May I join your merry circle? I have never written to you before. I will try to describe myself and our home. I have brown eyes and light brown bobbed hair. I am four feet six inches tall. Our home is one and three fourths miles east of the village of Westphalia. Our farm contains about one hundred and twenty acres. We have a number of cattle. As a pet I have two cats and one dog. My father takes the M. B. F. and likes it very much. I like to read the Children's Hour. As my letter is getting long I will stop and let the boys and girls guess my age. Good-bye to all.—Margaret Bingel, Westphalia, Michigan.

Dear Uncle Ned:—I have read the page of the Children's Hour many times and was greatly interested in the letters. I guess I will describe myself before I write any more. I am 4 feet 5 inches in height, and weigh 116 pounds. I am 13 years old. I have brown eyes, light hair and I am light complexioned. I am in the 7th grade at school. I greatly love music and I play the piano lots, but only by ear. I have three sisters and they are all married. I am the only one left now. I live on a 120 acre farm and we have 2 horses, 1 cow, 90 chickens, and 4 cats. I was in Muskegan this summer. I have two sisters that live there. I certainly had a glorious time. Well, Uncle Ned, I hope to see my letter in print and would very much like to have some of the cousins write me. I had better leave space for some of the cousins to write, so will close.—Helen Carey, R. 4, Box 149, Traverse City, Michigan.

Dear Uncle Ned:—I have light brown bobbed hair, my eyes are light brown, I weigh 50 pounds, and am in the fifth grade at school, and I am ten years old. I have no sisters or brothers. I live on a 25 acre farm, and I have lots of fun in the summer. Will some of the girls and boys write to me? Write to—Doris Bush, Silverwood, Michigan.

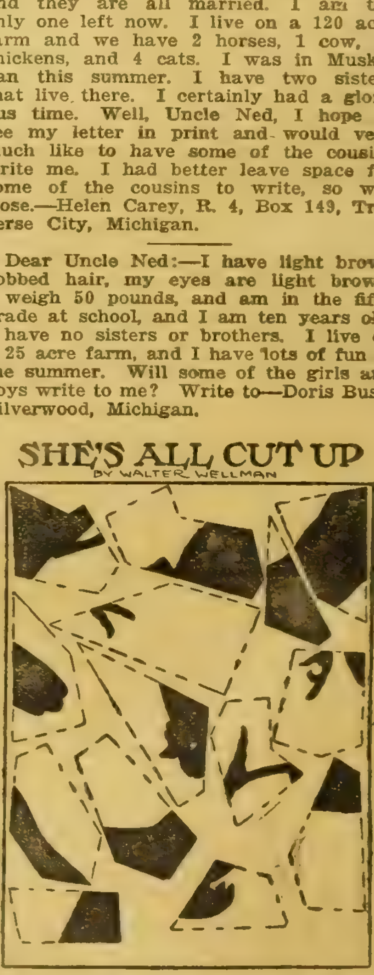
SHE'S ALL CUT UP

BY WALTER WELLMAN



Cut out the pieces along the dotted lines, and then paste them together on a stiff piece of cardboard, and have her as she was. What was she?

Answer to puzzle in last issue: WHITTIER and THACKERY.

Valuation of State Increased

(Continued from Page 3)

sands of descriptions of property. This work was made necessary because the local assessors had not given sufficient attention to the rapidly changing conditions in the counties with the result that the tax burden was not equitably distributed.

"For several years the board, cooperating with the state geologist, has made an appraisal of the iron mines of the state and has communicated the result of such appraisal to the assessing officers of the townships and cities in which such property is located, with the result that no class of property in the state is more equitably or evenly assessed than are the iron mines. A similar appraisal is now being made of the copper mines and it is expected that the result of the appraisal will be reflected in the assessment of this class of property.

Survey Exemptions

"Believing that it will be of great interest to the people of the state the board is now securing information as to the value of all property in the state which is exempt by law from taxation. This information will be made public and it is believed will prove enlightening to those interested in the subject of taxation.

"To the end that the state tax may be distributed to the several counties in proportion to their taxable value, the board is required by law to prepare for each meeting of the state board of equalization an estimate of the true cash value of all taxable property in each country in the state. The preparation of this report demands the utmost care and consumes as much time as any other activity in which the board is engaged. In order to prepare an estimate of the value of taxable property, it is necessary that examinations be made in each county to ascertain whether or not assessments are made in compliance with law, and whether or not all property subject to assessment is actually upon the assessment rolls. In the earlier history of the tax commission the members were not represented on the state board of equalization and its recommendations did not always receive the attention to which they were entitled. Under the present law, however, all members of the commission are members of that board and the result is that the recommendations made are given most careful consideration, and it is confidently believed that the tax burden is now distributed to the several counties of the state more equitably than ever before.

"To insure further the proper distribution of the burden of state taxation, the board was given power in 1913 to review the equalization made by a board of supervisors. When any supervisor believes that his assessing district has been discriminated against by the board of supervisors in equalizing the assessment rolls of the county, he is privileged to appeal to the board of state tax commissioners to review the equalization. In such cases careful investigations are made in every assessing district in the county; and after holding a hearing, at which every supervisor is permitted to give information relative to the assessment of property in his district, a new equalization is made by the board and state and country taxes must be apportioned upon the equalization so made. In this manner, each assessing district in the state is insured against being called upon to pay more than its proper proportion of the burden of state and county taxation. Such reviews of equalization were held during the past year in the counties of Genesee, Lake, Macomb, Oakland, Oscoda, St. Clair and Shiawassee.

"The members of the board of state tax commissioners, together with the governor of the state, constitute the state board of assessors. It is the duty of this board to assess for purposes of taxation the property of railroad, express, sleeping car, private car line, telephone and telegraph companies operating within the state. To make this assessment detailed reports from approximately 1,500 companies must be compiled and carefully studied. Assessments are made on 87 railroads, one express company, one sleeping car company, 240 car companies and 300 telephone companies. Telephone companies whose gross receipts are less than $500 per annum are not subject to assessment. There are 741 companies whose receipts are too small to warrant an assessment. The aggregate value of this property assessed for the year 1922, taxes upon which were payable in 1923, was $213,097,750. The amount of taxes assessed against this property was $8,921,604.02.

Tax Mortgages

"Under the provisions of the mortgage tax law, the board of state tax commissioners is required to determine the amount of tax to be paid in the state of Michigan upon all mortgages covering property in Michigan and other states. Ten such mortgages were submitted to the board during the year and taxes amounting to $47,948.50 were collected thereon.

"In investigating the operation of the mortgage tax law, it was discovered that owners of land contracts, by their failure to place such contracts upon record, were evading the taxes thereon. Inasmuch as all mortgages and land contracts upon which the specific tax is not paid are subject to assessment under the general tax law, the board was obliged to take steps toward forcing the payment of either the specific tax or the general property tax upon this class of property. Owners of mortgages, because of the fact that it is important to record the mortgage to protect the mortgage interest, have almost universally complied with the law and have paid the specific tax; the owner of a land contract, however, still retains title to the property until the payments on the contract have been completed and has therefore, not been interested in placing the contract upon record, thus evading the tax.

"Through activities of the board, thousands of land contracts upon which no tax has been paid have been uncovered and during each of the past two years it is conservatively estimated that $1,000,000 has been paid on these securities which would not otherwise have been paid. One-half of the amount so paid goes to the general fund of the state, and the other half goes to the general funds of the counties in which the taxes are paid, thus relieving the owners of general property from taxation to that extent.

"The members of the board of state tax commissioners are William S. Linton, of Saginaw; Nathan F. Simpson, of Hartford; and George Lord of Detroit. Mr. Linton, being the senior member of the board, is the chairman. The secretary is B. F. Burtless, of Lansing."

HOLDING A COMMUNITY FAIR IN SMALL TOWN

(Continued from Page 6)

venture is due to the women of the Aid. All busy women, several mothers of large families, none rich, all Workers, not one caring a whit for criticism or knocks, or petty jealousies. Everyone with a prayer in her heart and determination on in her mind.

They see already their aim materializing in a large hole on a lot on Main Street. The excavation for the basement of the new Church, the Ladies' Aid kitchen of the new Church if you please.

Can it be done? Certainly. Surest thing you know.

Given a Ladies Aid Society, or a Committee or anything you want to call it, like ours, and any Community can have a Fair, or a new Church or anything.

Going Down

"Oh, yes," said Mrs. Gadgett, proudly, "we can trace our ancestors back to—to—well, I don't know exactly who, but we've been descending for centuries.'—Boston Transcript

The Farm Home
A Department for the Women

Edited by MRS. ANNIE TAYLOR

DEAR FOLKS:—These coming months are the ones that will tell us this spring if our winter has been well spent. Are you trying your best to get the right start? There is a great deal of community work to be done and I know personally that the women of Michigan are trying and are doing a great work. Co-operate with your neighbor. The sewing club should be formed right now. There are so many ideas to be exchanged in this department. Share your knowledge. How about having some lessons in first-aid by the community nurse. I feel sure that every mother would appreciate and enjoy an afternoon spent in this manner. We have a great many shut-in days ahead, and you know how hard it is to plan such a day to make it a happy one for both you and the kiddies. I am sure there are some new ideas for such a day. Let's pass them on. For every letter published I will send $1 to you. Letters should be in not later than February 1st.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

EIGHT YEARS OLD

By Anne Campbell

AT church entertainments
  I mean to be good.
I try to sit quiet
  As little boys should.

I stay by my mother
  And try not to squirm,
An' wish I was baitin'
  A hook with a worm!

I think while I'm sittin'
  Of all kinds o' things.
How funny a snake looks
  With butterfly's wings!

Of shootin' an' skatin'
  An' runnin' all day!
It's awful hard keepin'
  So quiet this way!

I plan that I'll holler
  When they've done their stunt.
My ma wouldn't like it,
  So mebbe I wunt!

They'll put me to bed now,
  But I'll never peep!
That church entertainment
  Was lots worse than sleep!
(Copyright, 1923.)

HOME-MADE SOAPS

SOME time ago one of our readers asked for a good recipe for soap-making. I sent her a book with the information in it. In the meantime I wrote to Washington and they sent me these splendid directions and also a list of reference books that may be obtained at your local or some library near.

When necessary, soaps can be made at home by treating melted animal fats or vegetable oils with a strong solution of caustic soda dye. Originally caustic lye with fresh slaked lime, allowing it to settle, pouring off the clean solution, and concentrating it by boiling. Common lye, which can now be obtained from practically all drug stores, grocery stores, and dealers in household goods, is caustic soda or soda lye and has chemical properties very similar to those of potash lye. Soaps made with potash lye are always soft, while those made with soda lye, under proper conditions and treatment, are hard. Directions for using soda lye in home-made soaps are usually given on the labels or wrappers of the cans in which the lye is sold.

The home preparation of soap is rarely practicable except when inedible, or an excess of edible, fat, grease, oil, or tallow is available and can be disposed of advantageously in no other way. It is largely a hit-or-miss business. As some free alkali or uncombined grease, or both, is usually present in home-made soaps, they are seldom suitable for toilet use. Careful chemical control and special manufacturing equipment are necessary to make soaps having the desirable properties commonly associated with a toilet soap.

Laundry Soaps

A small quantity of laundry soap may be prepared by the so-called "cold process," as follows:

Empty the contents of a small can containing approximately 5½ ounces of household lye (which should be at least 94 per cent caustic soda) into an iron kettle, add 1½ pints of water, stir with an iron or wooden rod until all of it is disolved, and allow the solution to cool.

In another iron kettle melt 2½ pounds of clear grease consisting largely of tallow. After this has cooled, pour the solution of lye slowly into the melted grease; stir for about 10 minutes to mix thoroughly; and then pour into a black-iron pan. Cover and leave it in a warm place for a day or two, after which the soap can be cut into cakes.

The grease used must be clean and free from salt. After being melted over the fire it must be allowed to cool until it is just warm to the hand. The solution of lye must also be just lukewarm. Care must be taken to stir the lye into the grease, not the grease into the lye. If the soap is streaky, with grease layers, showing that it is not thoroughly combined with the lye, put it back into the kettle, with one pint of water, and heat until the soap is melted and clear. Pour into a black-iron pan, cover, and set aside for two or three days.

Because of the glycerine liberated from the grease and the large quantity of water present, the soap made in this way will not be very hard. As it dries out, however, it will harden to some extent.

List of Reference Books

Soapmakers' Handbook, by Wm. T. Brannt, published by H. C. Baird & Co., Philadelphia, Penna.

Modern Soaps, Candles and Glycerin, by L. L. Lamborn, pub. by D. Van Nostrand Co., N. Y.

Textile Soaps and Oils, by C. H. Hurst and Wm. H. Simmons, 2nd Rev. Ed. Pub. by Scott, Greenwood & Son, London.

Simmons and Appleton's Handbook of Soap Manufacture.

Deite's Manual of Toilet Soap Making.

The last two books listed can be purchased from D. Van Nostrand Co., 25 Park Place, New York, N. Y.

GETTING THE BABY TO SLEEP

PROPER habits of sleep are almost as essential to the good health of an infant as is the right diet or sufficient exercise in the open air. Unless a baby gets plenty of sleep, he is certain to be nervous, irritable, and to grow more or less debilitated. During the first year, as a general rule, the more babies sleep the better. During the second year fourteen hours is the ideal amount and, in order to get this in, a twelve-hour night must be supplemented by a nap of two hours during the daytime.

To encourage sleep the infant should be placed alone regularly at the same hour each afternoon and evening in a quiet, partially darkened room or in a protected situation in the open air. Regularity is of the utmost importance. A baby put to bed late one evening cannot be expected to go to sleep promptly the next. Nor should a baby be rocked, fussed over, or otherwise pampered at his bedtime hour. Such a practice, if indulged in, is certain to become habitual and to react to the detriment of the infant.

Not only is it important for a baby to sleep a sufficient number of hours out of the twenty-four, but he should sleep soundly while he is at it. To insure this he should be protested, so far as possible, from loud sounds, strong light and tactile sensation of every sort. Young mothers are liable to make the mistake of disturbing their babies by unnecessary attentions. The less done to a baby while he is asleep the better. Very often babies are kept awake by the mistaken ministrations of solicitious mothers, who fail to appreciate the fact that their babies' whimpering is in reality an appeal for sleep. A point, too, well worth emphasizing in this respect is that water given just before bedtime results in bed-wetting and consequently an unnecessary disturbance.

Altogether, a maxim well worth bearing in mind at bed time is: "Let well enough alone."

EMBROIDERY MUCH USED ON HATS THIS SEASON

EMBROIDERY is used a great deal this season on hats. The hat may be made of embroidered material or it may be constructed first of plain material and then literally embroidered all over. The material used for embroidery depends, of course, upon the ground material, in other words, the goods of which the hat is made. Chenille is a very popular material for embroidery, although nearly everyone knows that chenille has to be couched on. Couching is a sort of occasional going over and over stitch, used to hold heavy braid or cord in position. Couching is employed when the thread cannot be sewed through or into the material. The chenille of the present season is a great improvement over the crawly, perishable material we have been acustomed to heretofore.

Another material used in embroidering hats is a narrow flat braid of artificial silk, which may be easily threaded into a longeyed needle. This is sold under a number of different names, the most common of which are ribbizene, or filo braid. This material may be used in any number of simple decorative stitches in carrying out all-over designs.

Narrow ribbon either plain or shaded in color is also used. The ribbon is first laid over the stamped design and held in place by pins stuck straight in, folding the ribbon neatly at corners, or gathering one edge of the ribbon and drawing up to fit around curves. In some of the narrow ribbons, it is possible to draw up the cord at the edge as in many of the lace edges. In sewing this ribbon onto the hat or onto the hat materials, take occasional tiny stitches over extreme edge of ribbon. The term "occasional stitches" in this case would mean stitches at intervale, near enough together to hold the ribbon to the line of the design, yet far enough apart so that the ribbon will not look as though it were glued to the hat, but instead will have the appearance of being embroidered. Yarn or worsted, and fiber silk are also used for hat embroidery.

Personal Column

Can Anyone Help by Sending In These Songs?—I am a poor girl. My mother died a year ago. My father is alive and I have two brothers and no sisters. I should like some songs that my father and mother used to sing. The songs are as follows: "There'll Come a Time"; "After the Ball Was Over"; "The Little Girl that Played Upon My Knee"; "Break the News to Mother" and "When Maggie and I Were Young."—A subscribers daughter.

Has Anyone this Information?—Will you please publish the following request in your valuable paper? Would like to know where I can purchase the book entitled, "My Opion and Betsy Bobbits" by Josiah Allen's wife or Marietta Holly. Thanking you in advance.—Mrs. Wm. Krause, Jr., R. 1, Box 53, Washington, Michigan.

Home for the Right Boy.—Will you please locate for me through your paper some homeless unfortunate boy who wishes a home. Excellent schooling, opportunity as we live in a district school and also access to a high school free of charge.—A subscriber.

Words Wanted.—I wonder if some reader of the M. B. F. would please send me the words of the song, "I Want to Go to Morrow." The first few lines of it is: "I started on a journey just about a week ago, For the little town of Morrow, in the state of O-hi-o.—Miss Fleeta Burch, R. 2, Dryden, Michigan.

"In School Days", by Whittier.—This poem was asked for by one of our readers and sent to me. It is quite long and felt we could not give it the space at that time. I have tried to find the subscriber and send the poem to her but my letter has been returned. I will thank two of our readers, Mrs. Carl Moeckel and Mrs. Geo. F. Baggett for sending me the poem.

Still sits the school-house by the road,
  A ragged beggar sunning;
Around it still the sumachs grow,
  And blackberry-vines are running.

Within, the master's desk is seen,
  Deep-scarred by raps official;
The warping floor, the battered seats,
  The jackknife-carved initial;

The charcoal frescos on its wall;
  Its door's worn sill, betraying
The feet that, creeping slow to school,
  Went storming out to playing.

Long years ago a winter sun
  Shone over it at setting,
Lit up its western window-panes
  And low eave's icy fretting.

It touched the tangled golden curls,
  And eyes with grief o'erflowing,
Of one who in her steps delayed
  When all the school were going.

For near her stood the little boy
  Her childish favor singled;
His cap pulled low upon his face
  Where pride and shame were minigled.

Pushing with restless feet the snow
  To right and left, he lingered
As restlessly her tiny hands
  The blue-checked apron fingered.

He saw her lift her eyes; he felt
  The soft hand's light caressing,
And heard the tremble of her voice,
  As if a fault confessing.

"I'm sorry that I spelt the word;
  I hate to go above you,
Because"—the brown eyes lower fell—
  "Because, you see, I love you."

Still memory to a gray-haired man
  That sweet child-face is showing.
Dear Girl; the grasses on her grave
  Have forty years been growing.

He lives to learn in life's hard school
  How few who pass above him
Lament their trimph and his loss,
  Like her, because they love him.

—if you are well bred!

Personal Habits.—The power of winning love and friends, which is such a precious possession to all young people, especially girls, will, in connection with good behavior and good manners, depend very largely upon certain personal habits, chief among which are order, neatness promptness, and cheerfulness.

The girl or woman who is personally disorderly and untidy in her room and dress put a great strain upon the patience and affection of all those associated with her who are possessed of refined and cultivated tastes. In fact, I believe there is nothing so disenchanting, so contrary to ideal young womanhood, as a lack of neatness and tidiness in person and dress.

Menu for January

Tomato Bisque
Pickled Peaches Celery
Roast Rabbit Currant Jelly Sauce
Hominy Squares
Riced Potatoes Boiled Onions
Cranberry Salad
Apple Tapioca
Coffee

Roast Rabbit.—6 tablespoons breadcrumbs, 3 tablespoons chopped cooked ham, 3 tablespoons lard, 1 tablespoon chopped parsley, 1 teaspoon grated lemon rind, ½ teaspoon powdered herbs, 3 chopped mushrooms, 3 beaten eggs, 1 rabbit, salt, pepper, and red pepper to taste. Beat up eggs, add mushrooms, lard, ham, breadcrumbs, parsley, and seasonings, and mix well. Wipe rabbit, and season inside with pepper, salt, and powdered cloves. Lay force-meat inside rabbit and sew top; skewer head back and legs on each side; roast 1 hour, basting well with melted lard. Serve hot with currant jelly sauce.

RECIPES

Gingerbread.—1 cup sour milk, 2¾ cups bread flour, ¼ cup shortening, 1 egg, 1 teaspoon soda, ½ teaspoon salt, 1½ teaspoon baking powder, ¾ cup sugar, 1 cup molasses, 1 teaspoon ginger, ½ teaspoon cinnamon.

Mix and sift the dry ingredients. Mix the molasses with the milk and slightly beaten egg. Add the liquid to the dry ingredients, then add the melted shortening. Bake in a large shallow pan 35 to 40 minutes in a moderate oven (375 deg.).

If sweet milk is used, leave out the soda and use 5½ teaspoons baking powder.

Chocolate Fudge.—Two cupfuls sugar, one cupful milk, two squares baking chocolate, one tablespoonfud butter and one teaspoonful vanilla. Boil the first three ingredients together slowly until a soft ball is formed when tried in cool water. Do not stir the fudge after taking it from the stove, but add the butter and let cool. Be sure the fudge is cool in the center as well as on the outside of the pan. When cool add vanilla and beat until the fudge forms a ball and can be rolled out in long strips on bread board or marble slab. Cut in pieces. If when beating, the fudge becomes heavy and quite sticky, add one-half teaspoon of warm water, being careful not to add too much. Good fudge requires a lot of beating.—Margaret L. Millin, Lake Shore Road, Mt. Clemens.

Meat Pie.—1 large bunch of celery, 1 large onion, 1 pint water or meat broth, ¾ pound cooked meat cut up, 1 cup strained tomatoes, 1 teaspoon salt and pepper, 6 tablespoons flour mixed, with ½ cup water for thickening.

Cook the celery and onion in the water or broth, add the meat, tomato juice, salt and pepper, then the thickening slowly and boil five minutes. Pour this mixture hot into a casserole cover with a crust made from the following directions: ¾ cup milk, 2¼ cups bread flour or 2½ cups pastry flour, 6 tablespoons shortening, 4½ teaspoons baking powder, ¾ teaspoon salt.

Mix and sift the dry ingredients, cut in the fat thoroughly with a biscuit cutter, then add the milk slowly. Pat the dough out on a floured board. Make the crust about one inch deep. Place this on top of the mixture in the baking dish. The dish should be deep enough so that the liquid will not boil over the sides. Bake in a hot oven 20 minutes.

Cocoa Bread.—1 cake compressed yeast, 2 cups milk, scalded and cooled, 1 tablespoon sugar, 5½ cups sifted flour, ½ cup sugar, ½ cup cocoa, ¼ cup butter, ½ tablespoon salt.

Dissolve yeast and one tablespoon sugar in lukewarm milk; add 3 cups of flour and beat until smooth. Cover and set aside to rise in a warm place until light —about ½ hour. Add sugar and butter creamed, eggs well beaten, cocoa, remainder of flour, or enough to make a soft dough, and salt. Knead lightly; place in a greased bowl. Cover and let rise in a warm place until double in bulk—about two hours. Mould into loaves; place in well greased bread pans, filling them half full. Cover and let rise again until light —about one hour. Bake 40 to 45 minutes. The oven should be hot first, and then moderate.

Honey Dew Cake—Four yolks of eggs. One white of an egg. Butter size of two eggs. One and one-half cups sugar. Three cups flour. Two and one-fourth teaspoons baking powder. One-half teaspoon salt. Milk. Five teaspoons of extracted honey. Cream eggs, butter and sugar. Add flour, baking powder and salt, sifted together. Add enough milk to make soft batter. Beat in honey and flavor with vanilla, (one teaspoon). Bake in moderate oven. This will make loaf cake 12½x9½ inches. Also six cup cakes. J. B. Pewamo, Michigan.

The Runner's Bible

(Copyright by Houghton Mifflin Co.)

Let each man prove his own work, Gal. 6:4.

In our efforts to be kind we must be careful not to perform another's duty for him, thereby to deprive him of needful experience. Neither must we allow ourselves to dictate by over-advice or undue influence.

Let none of you suffer * * * a meddler in other men's matters, 1 Peters 4:15.

Remember you can shine upon your brother, but not for him.

WOMEN'S EXCHANGE

IF you have something to exchange, we will print it FREE under this heading providing: First—It appeals to women and is a bonifide exchanges, no cash involved. Second—It will go in three lines. Third—You are a paid-up subscriber to The Business Farmer and attach your address label from a recent issue to prove it. Exchange offers will be numbered and inserted in the order received as we have room. —MRS. ANNIE TAYLOR. Editor.

AIDS TO GOOD DRESSING

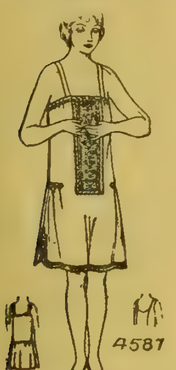
BE SURE AND SEND IN YOUR SIZE

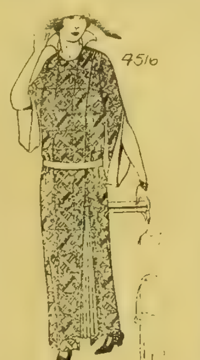
4593. A Popular House Dress for Slender or Mature Figures.—Striped percale is here combined with white pique. This is a good style for ratine, for wool rep, or serge, and also for linen, gingham and voile. The sleeve may be finished in wrist or elbow length. The Pattern is cut in 7 Sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. The width at the foot is 2 yards. A 38 iinch size will require 4¾ yards of 36 inch material. Collar, vest and pocket flaps of contrasting material, require ½ yard.

4587. A Practical Undergarment.—This pretty model comprises a vest and "step-in" drawers. The vest portion may be finished with "camisole" top or with shaped shoulders. If desired a closing may be effected at the side of the panel. Crepe, crepe de chine or nainsook is suitable for this design. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44 and Extra Large 46-48 inches bust measure. A Medium size requires 2⅜ yards of 36 inch material. Panel of Embroidery requires ½ yard 9 inches wide.

4516. A Stylish Gown.—Figured silk was used for this model with crepe trimming. This is a good style for moire or satin or broad cloth. The neck edge may be finished without the collar. Beige and blue would be a good combination for this design. The Pattern is cut in 6 Sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. A 38 inch size requires 5⅛ yards of 40 inch material. To trim as illustrated requires 1⅛ yard of material 40 inches wide. The width of the dress at the foot with plaits extended is 2⅜ yards.

4586. A Pretty Night Dress.—Nainsook, crepe or crepe de chine are attractive materials for this design. Lace or insertion or, a simple finish of hem-stitching will be suitable for trimming. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A Medium size requires 4⅝ yards of 36 inch material. To trim with contrasting material requires ⅜ yard 36 inches wide or 2⅝ yards of lace 3 inches wide if trimmed as illustrated.





4603. A Dainty Frock for a Little Girl.—Figured and plain silk are combined in this instance. The model is also attractive for wool rep, or wool crepe, and for all wash materials. Voile and embroidery would be a good combination. The Pattern is cut in 4 Sizes: 4, 6, 8 and 10 years. An 8 year size requires 2½ yards of 36 inch material. For godet of contrasting material ⅝ yard 27 inches wide is required, cut crosswise.

4534. A Good Style for A School Frock.—Checked gingham in brown tones was used for this model. It is good for wool jersey, twill and serge also for taffeta and velveteen. The Pattern is cut in 4 Sizes: 6, 8, 10 and 12 years. A 10 year size requires 2⅛ yards of 54 inch material. Collar and cuffs of contrasting material will require ⅜ yard 36 inches wide.

4601. A Simple Frock for the Growing Girl.—Wool crepe was selected for this model, decorated with cross stitching in contrasting colors. The lines are simple; the sleeve and neck line are very pleasing. The Pattern is cut in 4 Sizes: 6, 8, 10 and 12 years. A 10 year size requires 2⅝ yards of 32 inch material.

4582. A Smart New "Separate" Blouse.—Long lines and a stylish collar make this blouse as desirable and attractive. It is finished with the popular hip bands, and is becoming to youthful and mature figures. The Pattern iis cut in 6 Sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38 inch size requires 2½ yards of 40 inch material.

CALUMET
The Economy BAKING POWDER

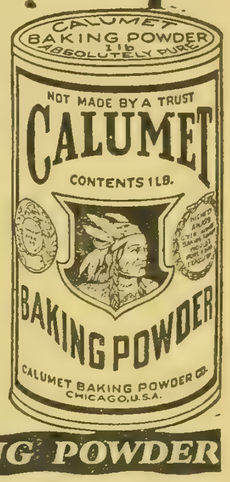
has produced
Pure Foods—
Better
Bakings
for over one-third of a century

Don't try to save money on bake-day by buying a baking powder that costs a few cents less than Calumet —that's the worst kind of false economy—you'll throw out more in spoiled bakings than you save on the price of the powder. And that isn't all—think of the time you lose —the failures— the disappointments.

The unfailing strength of Calumet guarantees perfect results, so join the millions who refuse to accept anything but the "best by test" leavener.

EVERY INGREDIENT USED OFFICIALLY APPROVED BY U. S. FOOD AUTHORITIES

Sales 2½ times as much as that of any other brand



THE WORLD'S GREATEST BAKING POWDER

DELUXE PERSONALIZED STATIONERY

Smart stationery, correct in size. DeLuxe ripple-finish, deckle edged lawn correspondence paper, tinged with silver along the deckled edge. 100 double sheets (10½ by 7½) and 100 envelopes, the new smart size printed with your name and address (or any three lines desired) in rich, royal blue. Choice of white, buff, gray, pink, blue or lavender. Do not confuse with cheap bond paper offers. This stylish stationery sent in neat box to any address for only $2.50—less than you can buy the paper unprinted in any retail store. Order today. You'll be delighted. Money refunded if you are not.

Have You LIVE POULTRY For Sale?

An Ad in THE MICHIGAN BUSINESS FARMER Will Sell It!

Hugh G. Van Pelt says:

"Search for the true secret that has brought success to the best livestock man you know. You will find it is nothing more or less than that his animals are always well, always in good condition, always working, always returning profit; never sick, never in poor condition, never loafing, never running up a large expense for medical treatment."

That Describes a Larro-fed Cow!

People often wonder about the success achieved by Larro users. Mr. Van Pelt's words tell the story.

Larro users succeed because Larro-fed cows are always well, always working, always returning a profit. They produce heavily when fresh and they continue producing heavily for a longer period of time. What's more, they produce economically. One pound of Larro yields from three to four pounds of milk. The exact amount, of course, depends on the kind and quality of roughage and on the length of time the cow has been in milk.

When a cow goes "off feed" you can sometimes bring her back part way, but she will never be the same in that lactation period. Feed Larro and she doesn't go off feed.

The Larrowe Milling Company, Detroit, Mich.

FREE "Feeding the Fresh Cow" is the title of an article that appears in the current issue of the Larro Dairyman. If you are not receiving this excellent, free magazine for cow-owners, fill out and mail this coupon now, or take it to your LARRO dealer.

Cream—Liquid Gold Get More of It

Through the Imported HARP SEPARATOR

Does your separator skim clean? Does it get all the cream? The Harp does. Needs no adjustments. Always in perfect running order. Gets all the cream all of the time under all conditions—the standard in Europe for 22 years.

30 Days' FREE Trial

Send NO Money

Try the Harp at our risk for 30 days. Notice the larger cream checks. Experience the Harp's easier turning—spindle runs on one single frictionless ball-bearing placed right under the bowl—no lower point to wear or get out of order. Easier to clean too—25% fewer parts. Compare the Harp with any and all machines at even twice the price. Comparative tests help the Harp to sell itself.

LOW CASH PRICES OR EASY MONTHLY PAYMENTS

Built in any size up to 700 lb. capacity. Prices from $33.80 upward. You save from $25 to $50 on each machine depending on the size you buy. Easy monthly payments as low as $4.25.

FREE! Write Today Write for illustrated bulletin containing prices and complete description of all sizes. Before buying any separator, you owe it to yourself to try the Harp 30 days free. Remember no money down—no deposit—and no obligation to buy. Write today.

DAIRY and LIVESTOCK

GOOD WOOL DEMAND APPARENT

THOUGH the United States is the third country in wool production and has produced an average of 300,000,000 pounds a year for the last 35 years, it has never met the home demand. Imports for some years prior to the war averaged 200,000,000 pounds. They reached a peak at 453,727,000 pounds in 1918. Probably a normal annual amount which must be imported is around 300,000,000 pounds. American sheepmen have therefore no need to be afraid of overshooting the home demand for wool. Since 1921 wool prices have more than doubled. The problem of selling wool is not to create a market but to take the best advantage of the one that exists.

This has been attempted in the last few years by considerable extension of cooperative marketing. Great quantities of wool are now assembled annually by wool pools and held at central points for inspection by wool buyers. Cooperation, however, has seen its greatest development in the farm flock regions. On the range, cooperative marketing is comparatively new, and effects only a small portion of the wool sold by large ranching outfits. It has, however, achieved some success. Results indicate that cooperative selling stimulates competition among buyers, facilitates business-like transactions, and tends to check overloading of markets.

The ratio of the number of sheep to population in the United States has declined since 1884. From 1899 to 1903 there were about 5 sheep for every 8 people. Ten years later there were only 4. From 1919 to 1923 there were only 2.8 sheep for every 8 people, or about 1-3 of a sheep per person. Nevertheless the total production of wool has remained practically constant owing to increase in the weight of the fleeces. Per capita consumption of wool has been maintained by great increases in imports.

REPORT OF NEWAYGO COW TESTING ASSOCIATION

THE Newaygo county cow testing association, oldest association of its kind in the United States, has just completed a very successful year, with 223 cows completing their records for the entire year, 25 cows having been sold as undesirable, 16 purchased and four pure bred sires purchased during the year.

The results of the work show a great improvement over that of 1922 according to figures below:

The average production of all cows in the association for 1923 is 6,755 lbs. milk, 321.0 lbs. butterfat, while that for 1922 is 7,112 lbs. milk, 302.3 lbs. butterfat. Also the average profit per cow in the association was $104.61 over cost of feed for 1923, while the average profit for 1922 was $53.87 over cost of feed. The average cost for feed in producing 100 lbs. of milk was $00.99, and $00.24 per lb. for butterfat.

Forty-eight cows in the association made over 365 lbs. of butterfat during the year, while seventeen out of the twenty-seven herds averaged over 300 lbs. and four over 400 lbs. of butterfat.

The high cow in each herd averaged 8,482 lbs. of milk and 404.3 lbs. of fat, returned $140.18 above feed cost, and produced milk for $00.80 per 100 lbs., butterfat for 18c per lb. for cost of feed, and the average return for every dollar expended for feed was $3.14.

The low cow in each herd averaged 5,159 lbs. milk and 238.6 lbs. butterfat, returned $67.55 above cost of feed, produced milk for $1.116 per 100 lbs., fat for 26c per lb. for feed, and the average return for every dollar expended for feed was $2.11.

Pure bred cows have appeared in the "high ten" each month 2.1 times as often as did the grades, and "Grandfather's Pride" (the scrub with no pure bred breeding) has not appeared once.

Six members have completed records for two years and their average production is 547 lbs. of milk and 32.7 lbs. of butterfat above that of one year ago. This demonstrates the fact that the cow testing association is a benefit and a business proposition for the dairyman even if he thinks he knows what his cows are doing after one year's membership in the association.

The high cow in the association for 1923 is a registered Jersey owned by A. C. Nelson, of Holton, and is one of the most efficient cows in the association, her average production for the year being 8,787 lbs. milk and 587.7 lbs. butterfat which is 932 lbs. milk and 131.7 lbs. of fat above her production for 1922. During the past year this cow consumed $41.28 worth of roughage and $59.72 worth of concentrates, or grain, and produced at a profit of $234.95 above cost of feed. Mr. Nelson's neighbors have predicted disaster for the practice he has been following, stating that he would burn out his cows by overfeeding, and that he could not make money by feeding so heavy, while as a matter of fact he has at no time fed over one lb. of grain to three lbs. of milk, and his cows have not been "off their feed" once during the year. His herd average on five cows is 8257 lbs. milk and 464.5 lbs. fat, with an average profit of $173.65 above cost of feed, which is the highest in the association.—Clair Taylor, County Agr'l. Agent.

HOLSTEIN MEET DURING FARMERS' WEEK

IN our last issue we published a short item regarding the meeting of the members of the Michigan Holstein-Friesian Ass'n. during Farmers' Week at the Michigan Agricultural College, February 4th to 8th. For the benefit of those who might have overlooked it we are publishing something about it again in this issue.

The annual banquet will be held at Lansing on the night of Monday February 4th. The annual meeting will be held the following day, Tuesday, February 5th, at the M. A. C., East Lansing. William Moscrip, of Minnesota, probably the best known dairy cattle judge of the U. S. A., will be present to demonstrate Dairy Type and to hold a judging "school." The fourth annual sale of selected Holsteins will be held Monday afternoon, February 4th.

MICHIGAN'S SECOND 40-POUND HOLSTEIN COW

ONLY three other junior four-year-old Holstein cows in the United States have exceeded the seven-day production record of Eco-Sylv Belle Pietje of the Carl E. Schmidt herd at Oscoda. Under the constant supervision of the Michigan Agricultural College this cow recently produced in one week 682.2 pounds milk and 33.014 pounds butterfat—equal to 41.267 pounds butter, according to the advanced registry department of The Holstein-Friesian Association of America. Among the three other cows with higher records is Michigan's champion producer in this class, Wandamere Belle Hengerveld, whose record is 42.65 pounds butter. This cow is owned by E. L. R. Pelletier of Pontiac.

Eco-Sylv Belle Pietje dropped her second calf at the time of her last freshening. She is a large cow, weighing around 1900 pounds shortly before freshening a few weeks ago. Her sire is Avon Pontiac Echo and her dam, Belle Model Pietje 3d. Albert E. Jenkins, manager of the Schmidt herd, states that she is being continued on strictly official test under the supervision of the state college representatives and is producing over 100 pounds milk and around 4.2 pounds butterfat daily.

CASTRATING AND DOCKING INCREASE PRICE OF LAMBS

PRODUCING desirable lambs for the market is dependable to a large extent on the three following principles of management, namely, good breeding, proper feeding, and castration and docking of the lambs. Of these three factors the latter is probably more abused than any of the others, especially when it is considered that docking and castrating are easily done and add much to the desirability and value of the lamb carcass. The most desirable, and thus the most profitable, lamb carcass can not be produced from lambs which have not been docked and castrated, says the United States Department of Agriculture.

The farmer does not market his bull calves as bulls, nor his boar pigs as boars, says the department. Why, therefore, should he market his male lambs as ram lambs rather than as wethers? The correction of this neglect by castrating and docking the lambs is vital, and upon a more general observance of the practice in the farm flocks hinge the real profits and more general success. It is conservatively estimated that 80 per cent of the native lambs—those marketed from farm flocks—which reach the markets come undocked and uncasterated, and that the percentage of ram lambs among the offering during the last year has been as large as ever before.

On the other hand, the custom of docking all lambs and castrating the males is almost universal in the range flocks, and to this practice in a large measure may be attributed the fact that lambs produced on our western ranges outsell native or farm-raised lambs at the market on the average of from $1 to $1.50 per 1000 pounds. These operations have been found profitable, and that is the big reason that they have become so commonly practiced on the western range. They are likewise applicable to the farm flock and just as necessary for the production of the best lambs and consequently the most profit.

IT PAYS TO CONTINUE TESTING OF DAIRY COWS

As a result of the study of records of cow-testing associations in all parts of the country, the United States Department of Agriculture has shown that in well-managed associations there is a gain in the average yearly production of cows from year to year. In other words, even though the poor cows are culled out at first, it pays to keep everlastingly at it, as there is always an opportunity for profitable improvement.

To illustrate this, figures of butterfat production for three associations one each in Michigan, Ohio, and Pennsylvania, show that for the first year the average per cow was 237 pounds, for the second year it was 255 pounds, for the third year 278, for the fourth 292, and for the fifth year 305 pounds. The last year in the series showed an average production of 68 more pounds of fat than the first year. At 40 cents a pound this amounts to $27.-20 a head, and for a herd of 20 cows the increased value would be $544 a year.

Production records of 17,405 purebred, grade, and scrub cows showed that in milk production the purebreds and grades excelled the schubs by 12.42 per cent, and in butterfat production by 17.86 per cent.

NEW STATE HOLSTEIN BUTTER CHAMPION

Michigan's new Junior two-year-old champion Holstein cow for 30 days production of butter is Charlevoix Ormsby Zwelle, owned by Loeb Farms at Charlevoix. Her official record as announced by the advanced registry department of The Holstein-Friesian Association of America, is 1,842.2 pounds milk and 82.395 pounds butterfat equal to 102.9 pounds butter.

This cow displaces the former champion in this class, Traverse Edio Sylvia Walker, of the State Hospital herd at Traverse City, whose record is 100.5 pounds butter.

KEEPING MILK GOATS

Recently I read an article from a lady in Colorado on raising goats for milking, and the ready sale, and profits from this industry. Will you kindly give me your opinion on the advisibility of my going into it in this section? What breed should I get? What is the prospect of selling milk in cities like Bay City, Saginaw and Detroit? I could ship to any of these places. What is the usual price per quart? How could I work up a market? I have an ideal place to keep them. What is the usual price for them?—C. F., Grayling, Mich.

—In many sections of the country

Cream Separator Facts Worth Thinking About!

It is not enough to buy a cream separator that skims *fairly* clean and that runs *fairly* easy—you want one that gets *all* the butterfat down to the last drop and that runs so easily that a child can turn it. In addition, you must get construction that makes many years of good service possible.

In recent tests, the Illinois Cow Testing Association found it a common occurrence, on average farms, for *out-worn, poorly constructed, poorly cared-for separators to waste $25 worth of butterfat every month.* Think of it, *$300 wasted in a single year!* If the machine you are using is failing you in such a manner, you cannot afford to operate it a single week longer, regardless of the so-called "bargain price" you may have paid for it.

It is unnecessary for you to suffer such butterfat losses. You can escape them by throwing out the wasteful machine now and replacing it with a new, efficient McCormick-Deering Ball-Bearing Cream Separator. These modern, easy-running separators represent genuine economy. From the viewpoint of long life, easy-turning, and close-skimming, they outrank all others. You need one on your farm!

If ready cash is not plentiful, ask our dealer for his liberal terms. Let a McCormick-Deering Primrose earn bigger cream profits for you and apply the extra dollars on the easy payments the McCormick-Deering dealer will offer you.

There are five popular sizes—all of standard McCormick-Deering ball-bearing design. Ask the McCormick-Deering dealer about the size best suited to your herd.

FOR COWS ONLY
KOW-KARE
DAIRY ASSOCIATION CO., INC.

A penny a day is the average cost per cow for the use of Kow-Kare as a preventive of disease and aid to big milk yield.

Nearly Every Cow Can be made a Big Milker

Cow owners have learned that no effort on the farm pays so handsomely as the drive for ***more milk.*** Over 90% of the so-called poor milkers are capable of much better results than is obtained from them. An improved health standard is a sure booster of milk profits.

No wonder. Dairy experts say that under average conditions a yield-increase of only 10% will double the net profit of dairying. The fixed cost per cow of feed and care is about the same regardless of yield. After this cost is met, every pint of milk is added profit.

Perfect health has more to do with big milk yields than breeding or feeding. "Forcing" the milk-making organs to greater efforts ends disastrously unless extra demands are met with extra support of the cow's vitality.

Kow-Kare is invaluable to cow owners. It increases the activity of the milk-making function by promoting vigorous health in the genital and digestive organs. It prevents or relieves cow diseases and disorders by helping these organs to function as nature intended. Its benefits are widely recognized for the treatment of Barrenness, Abortion, Retained Afterbirth, Scours, Bunches, Milk Fever, Lost Appetite.

Let Kow-Kare help you to greater milk profits. Your feed dealer, general store or druggist can supply you—large size can $1.25; medium size 65c. Order direct from us if your dealer does not have Kow-Kare. We pay postage.

Write for copy of our free 32 page book, "The Home Cow Doctor." It will show you the way to greater profit from your cows.

DAIRY ASSOCIATION CO., Inc., Lyndonville, Vt.

On thousands of farms KOW-KARE is "Standard equipment"

Here are just a few extracts from letters such as we receive in every mail from cow owners:

Wm. E. Starkey, Austin, Ind: "I have found KOW-KARE is the best medicine for milch cows that there is. I found that it always paid to feed it whenever my cows went down on the quantity of milk they were giving. I have cured several cows that were down and could not get up.

James H. McClintick, Solon, Me.: "I had a cow that retained the afterbirth for five days, when I decided to try your Kow-Kare. Three doses removed the afterbirth completely and she is now all right. After that I decided to feed KOW-KARE to two other cows for experiment. It increased the flow of milk of one of them nearly one-half; the other gave more milk than formerly and gained in flesh. KOW-KARE is all that is claimed for it.

Joseph Stott, Norwich, Conn.: "I find that by giving a few doses of KOW-KARE it will keep cows in a healthy state, and the result will be more milk—just what we want.

milk goats have become quite popular, either as a fad or because of their real value in furnishing milk where cows' milk will not answer the purpose. In some experiments carried on in western experiment stations it was shown that goats are very economical milk producers. In some cities goats' milk finds a ready demand for infant feeding and use in invalid diet. This is because of the composition of the milk of the goat. It is claimed by some to be nearer that of human milk than any other animals.

Before one establishes a business of raising goats it is necessary to find out something of the requirements and demand for the milk. It is not safe to count on making a success of milk goats in your section of the state simply because success was made by a lady in Colorado. Some people make a success of anything if they apply themselves and have enough enthusiasm and energy to carry out well defined plans. I believe that this is quite true in raising goats.

There are several breeds of milk goats. Perhaps the most important one and at least the oldest and best known is the milk goat that originated in Switzerland. Other breeds are the Nubian and Maltese.

We do not know of any great demand for milk in the cities that you mention, but it would seem that the demand for special milk of this kind would came naturally from the larger cities and in this event it would be much better to engage in this business closer to the place where you expect to find a market than to engage in it at such a great distance. We have records showing that goat milk has sold at from 25c to $1.00 a quart. The price of milk goats would depend to a great extent on how well bred, if pure breds, and if grades, how much milk they will give. We cannot tell you the average price of milk goats at the present time.—O. E. Reed, Professor of Dairy Husbandry, M. A. C.

Veterinary Department

HORSE EATS SAND

I have a horse six years old that I have trouble with. He has been eating sand. I have given him linseed oil and turpentine. There has been considerable of sand passed from him. He eats and drinks good, but every two or three days has a running of the bowels. I would like to know what causes this and what would be good to give him.—A. A. H., Emmet County.

—I would suggest that you place your horse in charge of your veterinarians for treatment as it is suffering from a serious condition that requires skillful treatment and can best be administered by the veterinarian who has the privilege of making frequent examinations of his patient.—John P. Hutton, Division of Veterinary Medicine, M. A. C.

DISABLED SOLDIER BECOMES WATCH REPAIRER

TO make a watch repairer out of a laborer is not only a super accomplishment for the instructors effecting this transformation but if proves that a man with initiative and confidence is a big factor in making such a change possible.

That such an accomplishment can be made a fact has been brought to light by the case of Joseph Kinnick Jr., a disabled ex-soldier living at 1080 Concord Ave., Detroit.

Before entering the service Kinnick was a laborer. But while serving on the Chanpagne sector in France he was wounded in the chest by a machine gun bullet. The nature of this wound incapacitated him from returning to the heavy work of a laborer. So, after spending six months in the hospital, he was discharged. Knowing that it would be foolish for him to attempt to "carry on" at his pre-war occupation, Kennick applied to the U. S. Veterans' Bureau for a course in vocational training, which was given him.

For thirty-one and a half months he received "replacement training," training on the job, in one of Detroit's large jewelry shops. At the end of this period he had become proficient, whereupon he was given suitable employment and declared rehabilitated.

Kinnick is doing well at his new vocation. Furthermore, he is now earning a wage which is 35 per cent in excess of his pre-war income.

PAPEC
The Biggest Value in Ensilage Cutters
Throws And Blows — Saves One Man

THOUSANDS of farmers agree that the Papec is the biggest value in ensilage cutters—simple, rugged, long-lived. Fills the highest silo without plugging the pipe. Light of draft; costs less to operate. Every part is easy to get at.

The Papec is made in four sizes: R-10; N-13; L-16 and K-19. A gasoline engine, developing 3 h.p. or more, will operate the R-10 size. Any tractor can be used with the medium sizes. For heavy tractors use a K-19 Papec—capacity practically unlimited.

Write for free catalog and U. S. Gov't Bulletin "Making and Feeding of Silage." Every silo owner should read them. Mention size of your silo.

UNCLE RUBE SPINACH SAYS

A SUNDAY FROLIC

MY good friends, this seems to be Sunday night an' yet I have jest come from a dance. Went down into "hunkey town" this evenin' an' things wuz goin' wild down there. An' say, good folks, while I'm kinder glad I'm American, like Andy Gump, 100 per cent for myself an' the rest for the folks, yet—well, the hunkies ain't so bad—everybody wuz havin' a good time. Elderly ladies weighin' 'round 200 pounds, younger wimmin not so heavy but good an' plump, little kiddies from 3 to 5 years of age—all an' everybody danced. Folks, it wasn't just a regular two, one or three-step, it wuz a dance. The music wuz stringed instruments, all 'ceptin' one, bein' played by pickin' with the fingers. One feller sawed a bow 'cross a fiddle. Mebbe you like the name of violin better. No matter, that's what the feller fiddled onto, an' taken here an' there, the music wuz purty durn good.

They wuz a policeman there to keep us—well, to keep the crowd quiet, so must of us kept still. It sure wuz a great dance. I ain't a "hunkey" yet, but, well, seein' how happy they wuz—little kiddies not mor'n 4 or 5 years old, hoppin' in an' havin' just as good a time as anybody? Folks, friends, why don't we, you an' us, have just such times? We used to heve 'em. We liked 'em, didn't we? But now you know if we heve a dance or party we've got to fix up for it. Men has to overdress, you know what I mean, put on a lot of things he don't like, high collars, cuffs an' whatnots, what ever they may be, an' wimmin heve to take off a lot of things they should ort to wear. I don't hardly know jest how to name the things—but corset strings an' sich, an' other things—you know how it is an' when you go to a dance it ain't a dance but it's a ball—"bawl" maybe would hit it nearer. An' so that's why I'm writin' this little letter. I went to a dance—jest a reg'lar dance—yes, Sunday night, too. Folks, there wuz jest as much religion there as you or I can find in any church anywhere.

Everybody wuz sober an' everybody seemed glad. There were no long faces, you do see long faces in church sometimes, don't you? Well I didn't see any of 'em there tonight an' so if you hear that I've come to be a "hunk" it's 'cause I've joined the dance—I've shed the sour face, heve learned to live the life! Cordially yours,—UNCLE RUBE.

MUTTON CONSUMPTION INCREASES

IMPROVED methods of slaughter and the development of artificial refrigeration and refrigerated transportation have greatly increased the consumption of mutton in the United States in the last 30 years. It is, however, considerably lower than in many other countries. Average annual per capita consumption of lamb and mutton for the ten-year period 1912-1921 in the United States was 6.2 pounds. This compares with a per capita consumption of 9 pounds in Canada in 1910; 26.7 pounds in the United Kingdom from 1895 to 1908; 9 pounds in France in 1904; and in Germany of only 2.2 pounds a year for 1904-1913.

In these periods the consumption of lamb and mutton in these countries constituted the following percentages of the total meat consumption: 4.35 per cent in the United States; 5.57 per cent for Canada; 22.25 per cent for the United Kingdom; 11.25 per cent for France; 1.91 per cent for Germany.

A Low Down Dog

The garage keeper's little daughter never had happened to see a dachshund before.

"Look, papa," she exclaimed, "See what a long wheel-base that dog's got."—Selected.

Your Stock
needs help now!

Use

Dr. LeGear's Stock Powders

The beneficial effects of these powders at this time of year are especially remarkable.

Mid-winter is the meanest time for stock. Indoors! Inactive! On dry feed; no pasture.

The whole system gets out of condition—bad digestion, poor assimilation, impure blood. All stock are affected, but some show it more—spiritless, hide-bound, run-down, wormy. No wonder feed is *wasted*, flesh gains are slow and milk yields *low*.

This condition is costing you money. Don't lose another day in getting DR. LEGEAR'S Stock Powders in their feed daily.

The laxatives will correct bowel troubles. The diuretics will regulate the kidneys. The tonics will sharpen appetite, aid digestion and purify the blood. The vermifuges will drive out worms. The minerals build bone and blood tissues.

Results are *more* milk, *faster* growth and sleek, strong, well-conditioned animals.

For 30 years this personal prescription of DR. LEGEAR has been "first aid to farm stock."

Get it now. Satisfaction guaranteed or money refunded.

Small, medium and large packages. 25 lb. pails. 100 lb. drums.

Convince Yourself
See it Work
Try it

The New DE LAVAL

SKIMS CLOSER-RUNS EASIER-LASTS LONGER

Examine the new De Laval Cream Separator thoroughly. Compare it with any cream separator made. Then try it in actual use, and convince yourself that it is superior in every respect—that it will skim cleaner under all conditions of use and is easier to handle and operate. Your De Laval Agent will be glad to arrange such demonstrations—if you do not know who your De Laval Agent is, write us.

This new De Laval has been on the market more than a year, and already there are over 100,000 in use; and from the enthusiastic reports received concerning it there is no question but that it is the best De Laval Separator ever made. And that is saying a great deal when it is considered that De Laval Separators

—have millions of users who regard them as the finest machines made and the best money-makers on the farm;
—have won more than 1100 prizes for superiority of operation and construction;
—are overwhelmingly endorsed for efficiency of service by cow testers, who reach over 6000 farms;
—are used and approved by creamerymen, college and dairy authorities;
—and have the longest record of use, as proved by the life of the thousands of machines in the "Oldest De Laval Users Contest," which averaged over 20 years.

In spite of the fact that the new De Laval is much improved, yet in terms of butter it costs much less. In 1913 it took 231 pounds of butter to pay for a popular-sized De Laval. Now it requires only about 188 pounds (average prices for years 1913 and 1923) to pay for the same machine—43 pounds or 18% less butter. In addition, the present-day De Laval is at least 20% better, having 10% more capacity, a bell speed-indicator, a self-centering bowl, and many other improvements and refinements.

There are many worn-out and inferior cream separators in use today, wasting enough cream to pay for a new De Laval in less than a year. If you are losing money in this way, stop it by getting a new De Laval. You can get one on such easy terms that it will pay for itself while you are using it.

See your De Laval Agent or write us.

FREE VITA GLAND TABLETS STARTS HENS LAYING IN TWENTY-FOUR HOURS

Hens have glands just like humans and also require vitamines. Because they directly stimulate organs involved in egg production the mysterious newly discovered VITA GLAND tablets, crushed into hen's drinking water, turn winter loafers into busy layers almost over night. Science has discovered how to control egg production with essential vitamines, and gland extract that works directly on the OVARIAN or EGG producing gland of the hen. The wonderful effect of gland stimulation is shown by a simple test. Gov't experiment stations report that hens properly fed vitamines, etc., lay 300 eggs as against the sixty of the average hen. "Leg weakness of baby chicks due to insufficient Vitamine B" says The Official Bulletin. Also says: "Hens start laying at an average age of 139 days when fed vitamines."

Try This FREE BOX

EGGS, EGGS, EGGS and fine healthy chicks, prosperous flocks without fuss or bother or drugs or expensive feeds can be had. Just drop these tablets into drinking water. So simple to double your profits. Chickens now full of pep and life. Nests full of eggs. Summer production at winter prices. So confident are the Alexander Laboratories the manufacturer of the original and genuine VITA GLAND tablets that you will be amazed at results that they offer to send a free box for your own use. This is how. Send no money, just name. They will mail two boxes, each regular, one dollar size, a generous supply. When they arrive deposit only a few cents postage and one dollar with postman. When your neighbor sees the wonderful increase of eggs in your nests let him have one box for a dollar, and thus your box has cost nothing. $5000 in big Kansas City bank guarantees your satisfaction or money back without question, so write today and get dozens of extra eggs this simple easy way. Write ALEXANDER LABORATORIES, 9035 Gateway Station, Kansas City, Mo.—(ADV.)

BOWERS Colony Brooder

Burns any fuel—costs less

This brooder raises more and better chicks at lowest cost. Stove is sturdy, safe, air-tight, self-regulating—best in world to hold fire. Burns soft coal—cheapest brooder fuel—perfectly. Also hard coal, wood, etc. Automatic regulator maintains uniform heat night and day. Canopy spreads heat evenly over chicks; gives pure air, ample room. 500 and 1,000 chick sizes. Guaranteed. Lowest prices. Express prepaid E. of Rockies. FREE—$3.00 stove pipe outfit sent free with brooder if you order NOW.

WHY BABY CHICKS DIE IN THE SHELL

LITTLE chicks dying in the shell, I believe, is one of the most discouraging troubles the amateur chick raiser has to face, and apparently the one which mystifies him most. Yet there are several causes for even the strongest chicks dying in the shell.

First, take the case of eggs set under hens. It often happens that hens will sit well until the last twenty-four hours, then get nervous and fidgety. Often Biddy gets hungry or thirsty and leaves the nest. This is often the case when the hens are allowed to set in the chicken house or steal their nest around the farm buildings. But if no one happens to notice them when they come off to feed, they may go back to their nests with only a half-filled crop on the nineteenth or twentieth day, which will force them to leave the nest again before the hatch is completed. Then as the warm weather advances in the spring, vermin may worry a hen into leaving her nest. Rats very often scare a hen into leaving her nest when she is sitting outside, or another hen may frighten her while trying to claim the nest to lay in. In fact, there are numerous accidental causes for the hens getting off the nest in the last forty-eight hours, when she should sit undisturbed.

Perhaps the most frequent cause for chicks dying in the shell when eggs are set under a hen, is the owner's anxiety to help things along. During the last thirty-six hours, it is most imperative that all the warmth and moisture generated by the developing chicks and the body of the hen should be retained in the nest, and if someone is perpetually lifting the hen partly from the eggs to take away the hatched chicks or to see what is going on, much of the moisture is allowed to escape, therefore, the last two or three eggs fail to hatch, though they often contain fully developed chicks. An extremely dry season generally causes lots of chicks to die in the shell. The best way to combat adverse conditions is to remove broody hens from the chicken house or shed and set them in clean nests which can be closed so that a quantity of whole corn and clean water can be left in readiness for Mrs. Biddy, to feed herself with when she comes off the nest. I keep a shallow box of fine coal ashes in the house where the hens are sitting, so that they can dust themselves every time they leave the nest. If it is a dry season, it is a good plan to sprinkle water on the floor of the house every two or three days.

Watch the dropping of all chickens, both brooder and those under the hens, and at the slightest indication of looseness of the bowels, remove drinking water and replace with cold tea, or rice water. I find it a good precaution to feed boiled rice two or three times a week while the chicks are little, and if they develop any serious trouble, keep them under cover; or if with a hen, keep the hen shut into the brooder coop, for then she is much more likely to brood than if allowed to run at large.

How to Avoid Leg Weakness

Leg weakness rarely develops if the chickens are properly fed. Green food and animal food must form part of their ration. It is usually better for the ordinary farm to depend on curd cheese and an occasional hard-boiled egg, chopped up fine without removing the shell. And for green stuff I don't think there is anything as good as young sprouts of onions, of course, fine enough for the little chicks. Beef liver is mighty good. It is the best of all animal food when about half boiled and chopped fine and fed in small quantities. An old rusty nail or two, or a few drops of tincture of iron in the drinking water, is a good tonic, especially if the chicks commence to look pale around the bill, or droopy in any way.

Stale wheat bread crumbled fine and mixed with hard-boiled egg, shell and all, is hard to beat; about two tablespoonfuls of the latter in a cup of crumbs; the combination just moistened with scalded milk and fed for breakfast and supper. When about a week old have a mash made of hulled oats, ground coarse; corn meal and wheat equal parts of each, steamed for three to four hours. To each cupful of this add just before feeding a teaspoonful of bone meal and mix well. I feed three times a day all they will clean up in five minutes. If you haven't a steamer, a very good substitute may be made by getting a two-quart tin pail with a close-fitting lid—a lard pail will do; put the meal in it, pour in sufficient boiling water to just moisten it; close down lid and stand in four or five-quart pail with a tight-fitting lid; put in enough boiling water to reach half way up the sides of the smaller one. After the little chicks are about two weeks old the hen may be allowed to wander with them, after the dew is off the grass in the morning, until about 4 in the afternoon. The pan of mixed seed can be removed, and bone and meal omitted (except at supper time, when it is best to continue the bone for another two or three weeks); vary this at noon by feeding pot cheese and boiled liver chopped with green onions. It you have very few chicks and they are allowed free range with a mother hen they will be able to pick up all the animal food they want in the way of grubs and other insects.—Farm and Ranch.

WANTS TO GO INTO POULTRY BUSINESS

We have ten acres of land a quarter of a mile east of OxBow Lake, about four of hard ground, the rest marsh. The Huron River is the north line. There is an old house and a chicken coop, and old shed or two. What I want to know is do you think it would pay to remodel the house, buildings and fence. We think we can do it all for $2,000, and plant berries. There is a very small huckleberry marsh. Could we make a living—by a living I mean, comfortable clothes, plenty to eat and the expenses one incurs. We have no children to educate and we are not extravagant, our society is our church. We are nine miles from Pontiac on improved road, nearly everything could be sold at the door. We would also keep chickens and geese.—Mrs. H. C., Pontiac, Mich.

—It is rather difficult to make a definite answer with only the information at hand. However, if you are experienced in the care of poultry you, no doubt, could keep a flock sufficiently large enough to make a living with what garden stuff you will be able to grow.

As to spending $2,000 on improvements it will depend on the future possibilities in the way of expansion and increasing the income. If you have not had any experience in poultry raising, I would suggest that you rent some small place well located that has adequate buildings and start in gradual. In this way you can find out whether you like the work and can make it a profitable business or not. Then if you feel satisfied you could go ahead and improve your own place or buy one perhaps better situated.—F. T. Riddell, Research Asst. in Farm Management, M. A. C.

FEEDING COOKED POTATOES TO POULTRY

Are potatoes good for chickens? If so, which would be the best cooked or raw one for laying hens?—Mrs. W. T., Romeo, Mich.

—Experienced poultrymen find that excellent results can be obtained by feeding cooked potatoes to their laying stock. The cooked potato is more palatable than the raw, and the most practical method of feedin them is in the form of a moistened mash. The potatoes should constitute 40 per cent of the mash mixture. Ordinarily the standard dry mash which consist of equal parts by weight of bran, middlings, corn meal, ground oats, and meat scrap can be mixed with the boiled potatoes and excellent results secured. The cooked potato usually contains sufficient moisture to give the proper consistency to the entire mash.—E. C. Foreman, Professor of Poultry Husbandry, M. A. C.

Marketing Poultry Requires Care in Handling

CARE in marketing poultry will greatly increase the profits of the poultry producer, says the United States Department of Agriculture. Losses occur from crowding, rough handling, improper packing, failure to time shipments advantageously, and other causes. Attention to a few simple rules, says the department, will eliminate many of these troubles.

Live poultry should be graded by age and kind, and the different classes shipped in separate coops, it is pointed out. Dressed birds should never be scald picked for a market which prefers them dry picked. They should be chilled to remove body heat before shipping, and should be packed in barrels or boxes lined with clean paper, and farm dressed birds in warm weather must be packed with alternate layers of cracked ice.

The best time of day to forward a shipment depends on the length of the journey and the time the shipment will arrive on the market. Live poultry should never arrive late Saturday afternoon, for they may be held over until Monday, and in that case will suffer heavy shrinkage. It is always desirable to have shipments arrive on the market early enough to be weighed the same day. Actual shrinkage on poultry shipments varies according to the condition of the birds, the weather, and the length of the journey. Several lots of broilers which were on the road 6 to 8 hours showed a shrinkage of 5 to 15 per cent, and a general average of 11 per cent.

Producers are advised not to feed poultry before shipping unless the birds will not arrive until the following day. It is desirable to have poultry arrive with empty crops. When it arrives with full crops, it is said to be "croppy" and the receiver may hold it overnight before weighing or may make a deduction in the weight to allow for the croppy condition. In marketing dressed poultry, says the department, it usually pays to fatten the birds before marketing.

In cooping poultry for shipment, the birds should be graded so that each lot is as uniform in color, size, grade and class as possible. Uniform lots, says department specialists, are more attractive, and sell more readily and for a better price. Culls, weaklings, and cripples should not be mixed with better quality stock, because they may die en route, and in any case will lower the appearance of the entire lot. Crowding should be avoided not only to prevent killing of the birds, but to prevent bruising, which causes poultry to dress out poorly.

Raising market poultry is not yet much specialized in this country. There is some specialization in producing chickens near Philadelphia and Boston and on Long Island, but the great bulk of market poultry is a by-product incidental to the production of eggs. On general farms, poultry is kept to supply eggs and poultry for the table, and to produce eggs for sale. Poultry is likewise a secondary consideration on specialized egg farms.

Chickens are reared and marketed in considerable numbers in various areas in the East and on the Pacific coast, but the greater supply is produced on general farms in the East North Central and West North Central States. According to the census of 1919, Iowa led in the number of chickens raised, with 31,076,91, followed in order by Illinois, Missouri, Texas, Indiana, Kansas, Ohio, Oklahoma, Nebraska and Pennsylvania. Total value of the poultry raised in this country in 1922 was $381,178,000, of which amount chickens accounted for $354,199,000.

Since the States of the Middle West not only raise more poultry but have a greater surplus above their own needs than any other section, the poultry marketing problem is one of moving birds from the sources of production to the consuming centers in the best possible condition and at the lowest cost. In the shipment of poultry to New York there is an average haul of 1,000 miles. For efficiency and economy in handling, the poultry sold in small lots from individual farms must be assembled at central points and shipped, either alive or dressed, in large lots, often car lots. This end of the business is chiefly in the hands of dealers.

EASY TO PREVENT DIRTY EGGS AND SUCH EGGS CUT PROFITS

DIRTY eggs on the market sell for a low price. Usually they do not bring more than half the price of fresh clean eggs. Dirty eggs, which have been washed, are considered by the trade poorer in quality than dirty eggs, due to the fact that in washing the protective albuminous covering on the egg is destroyed causing the egg to dry out more rapidly.

A few soiled eggs in a case of fresh eggs detract greatly from its appearance, and appearance is one of the most important qualities in the sale of any food product.

Very frequently eggs, which are only slightly soiled, can be cleaned with a stiff brush. Others can be cleaned by wiping the soiled part of the egg with a damp cloth, and allowing it to dry naturally. Eggs which are very dirty, or badly stained, should not be shipped. Such eggs should be used at home, or sold locally.

The most important thing, however, is to produce only clean eggs. Eggs become dirty generally because the hens' feet are dirty. The hens' feet become dirty because they are not provided with sufficient clean litter, when they are allowed out in muddy yards on wet and stormy days, and when the dropping boards are not cleaned off and the hens are allowed to track over them on their way to the nests. The lack of nesting material and too few nests cause eggs to become broken and other eggs smeared.

How to overcome most of these conditions is obvious. To keep the hens off the dropping boards, poultry wire may be tacked on the under side of the roosts, and out to the edge of the drooping board, a scheme frequently used by commercial poultrymen.

Since eggs are the principal product that poultry keepers are trying to produce, it is essential, as a business proposition that they be produced under conditions which will insure their full value.

DO HENS GET TOO FAT?

IF first-class layers, no! Not infrequently owners get worried about their hens, particularly Leghorns, getting too fat. We have yet to see any considerable number in a given pen that could be considered overfat for egg production. As a matter of fact, the moderately fat hen is most always the laying hen. And more often than not the prime cause of a low egg yield is the excess number of underfat hens in the flock. There is no use expecting or trying to get a satisfactory lay from thin hens or those not well supplied with surplus body tissue. The egg is an overproduction and not formed where the body requires for maintenance all of the nourishment supplied through the daily food stream.

Unhappily we are too apt to deal in excesses. We get the idea that if a little is good a whole lot must be better, and vice versa. Some one started preaching that fat hens don't lay and then the idea spread like wildfire even to the feeding and management of the young stock and pullets. True, one might feed a lop-sided ration and lay on a soft, flabby fat, but it is not commonly done. We have found the lop-sided ration at times, but usually thin stock rather than fat on account of it. There is a great difference in flesh that is worked on the frame by exercise and liberal feeding and the flabby fat accumulated by heavy pen feeding. The former is very much to be desired—fine, solid, plump bodies, with a good blanket of fat just under the skin does much to make comfort and egg records during winter months. Haphazard pen feeding is not the way to profitable poultry keeping.

A hen is much like a machine geared up to a certain production. It takes enough feed in the hopper to enable it to turn out quantity. We are pretty well sold to the proposition that there are far more good

(Continued on Page 28)

Dr. HESS POULTRY PANACEA

Get Winter Eggs!

See to it that there is song and cackle, scratch and action, going on in your poultry yard.

That's when the eggs come.

Feed

Dr. Hess Poultry

PAN-A-CE-A

See them get busy. It gives hens pep.

Nux Vomica is what does it—that greatest of all nerve tonics. A Pan-a-ce-a hen can't hold still. It's her good feeling that makes her hop around.

Pan-a-ce-a has Quassia in it to make hens hungry. Great combination! One makes them eat—the other helps them digest what they eat.

No dormant egg organs when that combination gets to work on a hen's system. You just get eggs—eggs.

A Pan-a-ce-a hen is always a hungry hen—an industrious hen. She gets off the roost winter mornings, ready to scratch for her breakfast.

Tell your dealer how many hens you have. There's a right-size package for every flock.
100 hens, the 12-lb. pkg. 200 hens, the 25-lb. pail
60 hens, the 5-lb. pkg. 500 hens, the 100-lb. drum
For fewer hens, there is a smaller package.

I spent 30 years in perfecting Pan-a-ce-a.

If Ruptured Try This Free

Apply it to Any Rupture, Old or Recent, Large or Small and You are on the Road That Has Convinced Thousands

Sent Free to Prove This

Anyone ruptured, man, woman or child, should write at once to W. S. Rice, 529C Main St., Adams, N. Y., for a free trial of his wonderful stimulating application. Just put it on the rupture and the muscles begin to tighten; they begin to bind together so that the opening closes naturally and the need of a support or truss or appliance is then done away with. Don't neglect to send for this free trial. Even if your rupture doesn't bother you what is the use of wearing supports all your life? Why suffer this nuisance? Why run the risk of gangrene and such dangers for a small and innocent little rupture, the kind that has thrown thousands on the operating table? A host of men and women are daily running such risk just because their ruptures do not hurt nor prevent them from getting around. Write at once for this free trial, as it is certainly a wonderful thing and has aided in the cure of ruptures that were as big as a man's two fists. Try and write at once, using the coupon below.

Free for Rupture

W. S. Rice, Inc.,
529C Main St., Adams, N. Y.

You may send me entirely free a Sample Treatment of your stimulating application for rupture

DO HENS GET TOO FAT?

(Continued from Page 27)

hens than there are good feeders. And the conviction applies even more strongly to pullets. Too many pullets start into production with the severe handicap of being under weight, with not enough surplus fatty tissue to maintain bodily requirements, energy and heat, and make eggs at the same time. As they come into maturity a certain reserve is stored up and this enables egg production to begin, but unless the feeding program is such as to maintain this reserve the task of completing growth, feathers and laying eggs is so great that they cannot carry the entire load. Self-preservation is the first law of nature, therefore egg production stops, and usually a molt begins, the extent of which depends on how severe the strain on the system has been—or, in other words, how deficient the feeding schedule.

One might as well attempt to build a house on a foundation of sand and expect it to stand as to try to maintain production with undeveloped or under nourished pullets. It can't be done.

While we accept a good mash as the maturing feed, it can be and frequently is used with lack of judgment. A narrow ration will tend to force the flock and may develop some that will lay in four, to four and one-half months, but it does not supply the frame and foundation to stand the strain of heavy production. Feed a dry mash one that has plenty of ground grain so that they learn to eat large quantities of it, but also remember the whole grain. The old-fashioned homily still works wonders. "Take one pail of feed and two pails of hard common sense into the poultry yard and feed both at the same time."—Joseph E. Davis in the Utah Farmer.

ADVANCE IN FARM WAGES DURING YEAR

FARMERS were required to pay higher wages to male farm labor during 1923 than in the two preceding years, the United States Department of Agriculture reports. The average rate per month with board in 1923 was $33.18, in 1922 it was $29.17, and in 1914 the rate was $21.05. The average monthly rate without board in 1923 was $46.91, in 1922 it was $41.79, and in 1914 the rate was $29.38.

Day wages for harvest labor, with board averaged $2.45 in 1923, as compared with $2.20 in 1922 and with $1.55 in 1914. For farm labor other than at harvest time the rate per day with board was $1.93 in 1923, as compared with $1.65 in 1922, and with $1.13 in 1914.

The peak year in wages of farm labor in recent years was 1920, the department points out. The deflation of general prices then began and farm wages continued to decline until the fall of 1922, when an upward trend developed.

RADIO DEPARTMENT

INFORMATION ON AERIAL

I am planning on purchasing a radio receiving set soon and am writing to you for information on the aerial. I have read that one should have 100 feet of wire in their aerial and I have noticed that some fellows have four wires, others three, still other two and many only one. Which do you consider the best? Can one use insulated wire? Can more than one set be operated on one aerial?—R. B., Saginaw County, Mich.

—There is some misunderstanding about aerials. Some believe that an aerial composed of four wires 25 feet long is just as good as one wire 100 feet long. This is not true, the latter being by far the best, and for the average set the one wire 100 feet long is better than an aerial of two, three or four wires of that length. The single wire permits of more selective tuning. Yes, you can use insulated wire and get as good results as you can from a bare wire. Two receiving set cannot be used on one aerial with any degree of satisfaction as tuning one set puts the other out of tune; also the signal strength is reduced when two sets are used on one aerial. We have heard of cases where two sets have given good results on one antenna when near a powerful sending station. However such results are to be classed as freakish.

RADIO AN IMPORTANT FARM IMPLEMENT, SURVEY SHOWS

THE importance of radio in the production and marketing of agricultural products is brought out in a special survey of about 1200 representative farmers, just completed by the United States Department of Agriculture. More than 50 per cent of the 1200 farmers replying reported that they owned tube sets employing three or more tubes, while approximately 50 per cent of the farmers reporting have homemade sets ranging from simple crystal detectors to tube sets.

More that 75 different makes of seas were found among the manufactured sets purchased, although the bulk of the sets were confined to about 15 of the leading makes that are more or less widely advertised in radio and general magazines. The average cost of the manufactured sets was $172.

Comparatively few of the owners of home-made sets operate crystal receivers, the survey revealed. The average cost of the crystal sets was $11. The average cost of the homemade tube sets was $83.

Eighty per cent of these farmers said they were interested in receiving both weather and market reports. The survey was made in practically every State in the Union, the most numerous replies coming from Illinois, Iowa, Texas, Kansas, Ohio, New York, Missouri, and Indiana.

KEEP AERIAL AWAY FROM ELECTRIC LIGHT WIRES

CHRISTMAS radio sets, given with wishes for health and happiness, may become messengers of death unless care is used in erecting aerials.

Aerials should not be strung across electric light wires, either indoors or out. The ends of the antenna should be securely fastened against wind and also against the added weight of ice-covered wires. One end broken loose, may be carried against a heavily charged electric line and lead a dangerously high current into the house.

A warning similar to this one, sent out last year by the Michigan Committee of Public Utility Information met with instant response but during the past few days the Christmas radio sets have been called upon to provide a means of forgetting real winter weather. Outdoor antennas have been carelessly erected, and in some instances the "Best Wishes" will be enjoyed only by the "heirs and assigns."

DID YOU KNOW THIS?

It is a good idea to mount your tube sockets so that if anyone walks across the room the vibration will not cause your set to ring or get it out of tune. This can be done by mounting each one on a piece of inner tube. Take one of the old tubes you have thrown away and cut out pieces to the same size as the base of the tube socket. You can use two pieces under each tube if you wish but one will do the trick very satisfactorily. If you have no automobile maybe your neighbor will give you a good size piece from one of his old tubes.

* * *

To get the best results from WD-12 tubes it is desirable to use two dry cell batteries connected in multiple for each tube. Thus, in connection with a 3 tube set best results will be obtained when 6 cells are used, all connected in multiple. And it is also cheaper than one cell for each tube.

FREE BOOK ABOUT CANCER

The Indianapolis Cancer Hospital, Indianapolis, Indiana, has published a booklet which gives interesting facts about the cause of Cancer, also tells what to do for pain, bleeding, odor, etc. A valuable guide in the management of any case. Write for it today, mentioning this paper. (Adv

RHEUMATISM

A Remarkable Home Treatment Given by One Who Had It.

In the year of 1893 I was attacked by Muscular and Sub-acute Rheumatism. I suffered as only those who are thus afflicted know, for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely, and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatsim, to try the great value of my improved "Home Treatment" for its remarkable healing power. Do not send a cent; simply mail your name and address and I will send it free to try. After you have used it and it has proven itself to be that long-looked-for means of getting rid of such forms of rheumatism, you may send the price of it, one dollar, but understand, I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer when relief is thus offered you free? Don't delay. Write today.

MARK H. JACKSON
No. 265-K Durston Bldg.
SYRACUSE, N. Y.

Mr. Jackson is responsible. Above statement true.

The Agricultural and Business Situation

Revised Monthly by the Department of Research of the American Farm Bureau Federation.

FARM INCOME:

Cash receipts of farmers in the United States from sales of all products were fourteen billion dollars in the crop year ending June 30, 1920. Two years later the income had fallen almost to one-half this amount. The following year it showed a gain of one and one-half billion dollars and this crop year another gain of one-half billion dollars.

Farm cash returns come from crops, 50 per cent; livestock, 26 per cent; and animal products, 24 per cent. This year cotton is yielding the most money, followed in order by dairy products, cattle, hogs, wheat and poultry.

In the decline from the peak of prosperity crops showed the greatest loss and animal products the least, the decline in crop sales being 53 per cent; livestock, 50 per cent, and animal products, 20 per cent.

WHEAT:

Wheat is the only important product returning less money each year since the break in general prices in 1920. It promises to yield this season only one-third of the income of the peak year. Acreage sown to winter wheat this fall is estimated to be 12 per cent less than last fall. After allowing for probable domestic requirements for the full crop year, and exports to December 1, wheat east of the Rockies remaining for carryover and export is estimated at 65 million bushels. With seven months remaining for exporting, this represents a small amount for this territory which must be supplemented by wheat brought from the west coast or imported from Canada, or domestic consumption must be further reduced. Consumption is already at low ebb, the average per capita for the last three years being 4.22 bushels, compared with 5.06 bushels for the five-year pre-war period.

COTTON:

Cotton shows a small production gain and large price gain, with additional income of something like 30 per cent over last year. Certain states, including Alabama, Mississippi, Georgia and Arkansas, have decidedly smaller crops than last season and the higher price will not make up for the reduced output. Texas and the Carolinas have had big yields.

HOGS:

Marketings of hogs have been 25 per cent larger this calendar year than last. These enormous sales brought in 1 per cent more cash.

Low prices of corn two years ago gave impetus to pork production. Contrary influences now working to check production may be expected to have a marked effect on pork prices by the latter part of 1924.

CATTLE:

The range cattle industry is still confronted with an unprofitable and declining market. Sales of feeders coming mainly from the range make up around 12 per cent of total sales of cattle. Three per cent more pounds of fat cattle have been sold this year than last at slightly higher prices.

GENERAL BUSINESS:

Last spring business was headed toward a boom, which was checked and followed by a small decline. This in turn has been checked. The belief is general that 1924 will be a moderately good business year.

PRICES:

The general price level, as computed by the U. S. Bureau of Labor Statistics, has declined 3 per cent since a year ago. Farm products have gained 2 per cent. Farm purchasing power, on the basis figured by the U. S. Bureau of Agricultural Economics, is 10 per cent above this date last year.

I. Production and Trade.

House furnishings	176	183	179
Miscellaneous	118	120	122

3. Prices of Farm Products at the Farm Relative to 1913:

(U. S. Bureau of Agricultural Economics)

Prices in year 1913 equal 100.

Commodity:	Oct., 1923	Sept., 1923	Oct., 1922
Cotton	232	219	181
Corn	141	144	106
Wheat	121	119	125
Hay	113	113	100
Potatoes	129	156	98
Beef cattle	93	97	93
Hogs	97	104	111
Eggs	198	167	195
Butter	159	153	143
Wool	221	222	193

4. Relative Purchasing Power of Farm Products:

(U. S. Bureau of Agricultural Economics)

The quantity of various commodities which a given amount of each farm product would purchase at prices prevailing in 1913 is put equal to 100. The figures given represent the percentage of this quantity which the same amount of farm products would purchase in October, 1923. Prices at the farm are used for agricultural products, and wholesale prices at central markets for other commodities.

	All Commodities	Cloths, etc.	Fuel, etc.	Metals, etc.	Building Mtls.	House Furn'gs
Cotton	152	117	135	163	127	127

MARKET FLASHES

MARKET SUMMARY

Wheat steady. Corn strong. Oats firm. Rye in demand. Beans unchanged. Eggs wanted. Demand for butter greater than supply. Poultry slow and easy. Potatoes unchanged. Dressed calves easy and hogs inactive. Cattle lower. Hog market active. Sheep steady.

(Note: The above summarized information was received AFTER the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

The Year's Business

THE year just closed was a good one for business in most respects, with farmers sharing in the prosperity, but one crop farmers failed to make good, this applying especially to those who devoted most of their efforts to growing wheat and raising hogs. Obviously, what is needed in the wheat states is a diversified system of farming, and it is gratifying to hear that wheat farmers in Iowa and other states are reducing their wheat acreage. The domestic trade of the United States has expended rather surprisingly, largely as a result of employment of labor at high wages and a fair increase in our population through births and immigration, despite the restrictions placed by the government on bringing in foreigners. We exported large quantities of farm products to foreign countries, but the Department of Agriculture announces that for the first time in the history of the country the value of agricultural products imported exceeded the value of exports for the fiscal year ending June 30, 1923. The imports consisted chiefly of silk, sugar, rubber, wools and coffee. It would appear that we should produce more wool and sugar; yet in the year mentioned we imported $396,000 000 worth of sugar and $167,000,000 worth of wool. These are crops which our farmers could raise profitably. While it is not likely that Congress will adopt a course letting in foreigners indiscriminately, it is probable that a law will be enacted by which desirable workers will be allowed to enter the country and allowed in due time to become American citizens. It is extremely unfortunate that affairs in European countries are slow to improve, yet we are exporting large amounts of grains and flour, while, strange to say, our exports of provisions have exceeded all former records. Agricultural production in Europe has improved materially, and the betterment in industry is manifest in the increased volume of foreign goods sold to this country, tending to restore the balance of the world trade. Looking to the future, we are confronted by the credit inflation because of the abnormal gold holdings and by presidential election year. This country holds about half of the monetary gold supply of the world. Farmers who are out of debt and own fertile lands face a promising future, and they hardly need advice, the important things being well maintained, soil, a variety of crops and avoiding unduly spreading of their acres.

Better Feeling in Wheat

While much higher prices than those now prevailing for wheat seems hardly probable in the near future, it must be admitted that the market has got into better shape, with sales at well above prices prevailing several weeks ago, although they appear low when placed in comparison with those paid two years ago. It is evident that advances of a permanent nature must be brought about by enlarged consumption, and this is as yet not sufficiently liberal to cause traders to become bullish in sentiment, although choice wheat is selling at a good premium, with no excessive amounts in store. The export demand is fair, with Manitoba wheat much wanted. Reactions follow decided advances, but they leave prices higher than early in the season, although a short time ago there were 145,377,000 bushels of wheat in the United States and Canada in the visible supply and in bonded stocks in this country. Many farmers are sending in inquiries asking what course to follow regarding disposing of their wheat, and it may be replied that it appears to be good judgment to sell in moderate quantities from time to time, taking advantage of any bulges in values. Later on there will be general interest felt in the spring wheat acreage, and all of us hope that farmers will realize the great importance of curtailing their acreage and thereby help in restoring prices to a profitable basis. Fair interest is shown in the oats and rye markets, oats selling around the prices of a year ago, with a visible supply of 20,591,000 bushels of oats in the Unites States, comparing with 32,122,000 bushels a year ago. Rye is in far larger supply than a year earlier, and with prices far lower than a year back, it is strange that the export trade is not much greater. With 54,613,000 bushels of wheat in the United States and Canada in excess of a year ago, farmers with wheat for sale will see the need of going slow in marketing. Late sales were made of May wheat in Chicago at $1.09, comparing with $1.19 a year ago.

Bull Market in Corn

In former years wheat was usually the big item in speculation, and except occasionally, less interest was shown in corn and oats; but for the last few months corn has come into much greater prominence on the Board of Trade and is now far ahead of wheat in active trading. The advent of winter weather has resulted in much increased consumption of corn on farms, whereas heretofore it was so unusually mild that much less corn and other feeds were required for fattening live stock than in normal winters. Farmers a while ago were apt to take a rather bearish view of the outlook for corn prices, and they were beginning to market their surplus, anticipating much increased sales throughout the corn belt states and a consequent drop in prices. Now, however, they are much more optimistic in their views as a general rule, and this is natural in view of the fact that recent prices reached the highest level of the season. A corn specialist says the grain trade seems to be at last awakening to the fact that the stocks of old corn were exhausted when the new crop started to move, and that it has been filling holes and has disappeared. This is why stocks have not accumulated, the visible corn supply in this country being only about 10,000,000 bushels. Iowa and Illinois farmers have sold little corn so far, but on recent advances they have shown a disposition to sell some, and around 80 cents a bushel for May corn they may be expected to sell more freely. Prices are well above those of a year ago, and far higher than at this time in 1922, May corn having sold at that time as low as 52 cents. Of late the west and southwest have received considerable corn from the Missouri River markets. Late sales of May delivery were made on the Chicago Board of Trade of corn at 77½ cents, comparing with 72 cents a year ago; oats at 46 cents, comparing with 44⅞ cents last year; and rye at 75 cents, comparing with 88⅝ cents a year ago.

Embargo on Grain

A special from Winnipeg to the Chicago Tribune says:—An embargo on grain shipments to Fort William and Port Arthur by the middle of next week is a certainty, according to grain exchange students of market conditions. They argue that the 50,000,000 bushels of Canadian wheat at lower lake ports, 40,000,000 bushels at Fort William and Port Arthur, and 45,000,000 in the country elevators, with, it is estimated, 100,000,000 bushels still in the hands of farmers, will mean virtually paralyzing grain trade. They say Canada will have to export 2,000,000 bushels of grain a day from the opening of navigation to get free of this crop before the opening of the new grain year on Sept. 1 next. Lower lake terminal elevators are crowded to capacity. All rail shipments will have to be stopped, it is said. Upper lake ports have a capacity of 63,000,000 bushels and they cannot take more than 80 per cent of that.

Canadian Wheat Flour

The department of commerce at Washington writes Uhlmann Grain company as follows: "We regret that your suggestion that this department report figures of exports of wheat flour made from Canadian wheat separately from flour made from United States wheat cannot be put into effect. This Canadian flour is entered into a bonded mill for grinding into flour, all of the product of the bonded mill to be exported. Under section 311 of the tariff law, wheat is admitted free of duty. The flour produced is a blended product made partly from United States and partly from Canadian wheat. The flour when exported is regarded as a domestic product because it is made in the United States. Whether the material is of domestic or foreign origin is immaterial. The export declaration filed with the collector of customs at the port where the flour is exported shows only the number of barrels of the flour exported and does not give the proportion or amount of Canadian wheat used in grinding the flour. Separate statistics are kept of the amounts of Canadian wheat entered in bonded mills for grinding into flour for export. During the nine months ending with September 30, 1923, 5,548,193 bushels have been entered. No information is available as to when the flour ground from this wheat or partly from Canadian and partly from United States wheat will be exported. Beginning with January 8, this office will issue weekly statements showing the imports into eight principal northern border districts of Canadian wheat entered for consumption (duty paid) and entered into bonded mills for grinding into flour for export. Those statements will be issued to the press and to interested parties on Tuesday of each week."

Choice Cattle Wanted

The restricted demand for beef cattle at Thanksgiving, Christmas and New Year's has given place to improved conditions, with marked increase in the consumption of beef, pork and mutton. Even rather ordinary cattle have shown advances in prices in the Chicago market at times, and on days when common cattle were not plentiful killers paid higher prices for steers with a little flesh on them than feeders were prepared to pay. While the cattle receipts have increased in numbers, relatively few choice finished lots have been offered, and the bulk of the steers marketed sold at $8.25 to $10.75 per 100 pounds, the better class of the yearlings selling at $11 to $12 and the best heavy long fed steers at $10 to $11.25. Killers have continued to descriminate against heavy cattle, and it does not require a great many to satisfy the trade requirements. Steers grading as good find buyers at $10 and over, and steers selling below $9 do not grade very high. Steers of ordinary grade sell for $6.75 to $7.75, with inferior little steers selling at $4.50 to $6.65 in a small way. Butcher stock has a fair outlet, cows and heifers selling usually at $3.75 to $8.25, while bulls bring $4.25 to $7 and calves $5 to $12.50. The stocker and feeder trade is only fair at $4.50 to $7.85, sales being mainly at $5.25 to $7.50. Milch cows sell at $35 to $90 each. Farmers should market their cattle as soon as ready, but it is not well to let well bred cattle go until properly finished. Ruling prices for fat stock are extremely good.

Surfeit of Hogs

There has been no end to the hog supply, and prices have had many breaks because far more were marketed than needed, despite the unprecedentedly large consumption of fresh and cured hog products, including good exports to European countries. The best strengthened influence all along has been the unusually liberal demand for the better class of hogs offered on the Chicago market to ship to eastern packing points. The hogs offered average well in quality, and the bulk of the sales are within a range of 30 cents, with prime heavy butchers going highest and 25 cents above best bacon hogs. Recent Chicago receipts of hogs have averaged 231 pounds in weight, being four pounds less than a year ago and eleven pounds above the ten year average. Recent markets have changed greatly for the better, due to a marked improvement in the local and eastern shipping demand. Late Chicago hog sales were at a range of $6.50 to $7.50, or substantially the prices of a week earlier.

Active Lamb Market

There has been of late an extremely liberal demand for lambs in the Chicago market at a high scale of prices, although the materially increased receipts have brought about some reductions in quotations. Feeding lambs are particularly active at fancy prices, with sales at $11.75 to $13. The highest priced lambs are taken for a short feed. Numerous sheepmen are marketing lambs only half fed, causing sales at unremunerative prices. Receipts

A. B. COOK APPROVES OF NEW BEET CONTRACT

I BELIEVE the principle of the new sugar beet contract is right. Both parties are, under its terms, interested in the ultimate outcome of the joint enterprise. From the time of the securing of the contracts until the last sack of sugar is sold it should be a joint enterprise. I can see no future for the industry on any other basis. I can see a brilliant future for it on the basis of cooperation and a mutual interest in the final results of the year's operations.

My personal opinion of the contract after a kind of a "once over" was that it was a fair proposition. I submitted it to the gentleman who originated the "50-50" idea and who is a careful student of beet sugar affairs and who while a farmer has the respect of all classes and he said "it is a fair proposition under present conditions."

I think the manufacturers missed an opportunity when they failed to invite in representative growers to discuss with them the terms of the proposed contracts before it was printed. However fair it may be to the grower, had he by his representatives accepted it without ammendment it would have placed the proposition before the growers in a better light. The signing on the dotted line is a much simpler and pleasanter transaction and confidence much more easily secured if the signee has had a part in the preparation of the literature which proceeds that dotted line. If all the growers were of a type mentioned in connection with the 50-50 contract above and all of the manufacturers of the type of the manager of the Owosso Sugar Company the establishment of satisfactory relationship in this industry would be possible of immediate accomplishment.—A. B. Cook.

in the Chicago market recently showed big gains in numbers, but the demand was correspondingly large, and lambs advanced, selling at the best prices since the first of last September. Lambs sold at $11 to $14 and feeder lambs at $11.75 to $13. Twelve years ago the best lambs brought $7.

WHEAT

There is steady tone to the Detroit wheat market. Millers are buying again and receipts show no increase so there is little pressure on the market. Reports come that Canada, our northern neighbor, has a huge supply of wheat on hand. Elevators are said to be full and the farmers are shipping so fast that there will soon be a tieup of transportation if an embargo is not declared on the farm deliveries. This does not seem to have any bearish effect on the Detroit market.

CORN

Demand for corn has improved some during the past two weeks and prices have advanced. Manufacturers are in the market for good corn and some export business reported. Receipts remain about the same; plenty of poor grade but little first class.

OATS

The oat market showed a steady improvement during the week ending January 12th and high price levels for the season were made at some places. Farmers are not active sellers.

RYE

The price of rye at Detroit shows a slight decline over two weeks ago although the market remains steady in tone.

BEANS

The Michigan bean market is steady to strong. Demand is not heavy but enough to keep the crop moving steadily from the state. There is a fair supply coming to market but farmers as a whole are not overly anxious to sell. Foreign beans continue to come into the country but they do not seem to be hurting to market for the Michigan bean. Regarding to future trend of the market The Bean and Pea Journal states: "There are reasons on either side of the market—bullish and bearish factors. The crop was huge, but is going into consumption. Unbaised observers believe present prices will rule for some time to come, with little need to tip the scales either direction, up or down."

POTATOES

Potatoes are fairly steady and the finest grades are moving at firm prices. Receipts are fairly large although extremely cold weather in some parts has caused a slowing up of hauling.

HAY

Receipts at most markets have been light and more strength has been shown both in the east and west under increased activity. The demand for good hay is urgent with offerings of the better grades very small. Accumulations have been cleaned up and there is very little hay unsold at any market. The average of prices has increased, the west showing a dollar increase and the east not quite as much but tending toward more strength. Country loadings are small and weather conditions uncertain.

MARKET QUOTATIONS

Wheat

Detroit—Cash No. 1 red, $1.14; No. 2, $1.13; No. 2 white, $1.14; No. 2 mixed, $1.13.

Chicago—Cash No. 2 red, $1.13; No. 2 hard, $1.09½@1.12½.

New York—No. 1 timothy, $30@32; No. 2, $28@30; light clover mixed, $30@32 per ton.

SUGAR BEET MEN TO MEET AT M. A. C.

SUGAR beet men of the state will gather in conference at the Michigan Agricultural College from January 23 to 25, in the third annual Sugar Beet Institute held under the auspices of the college.

Both manufacturers and growers have been invited to the meeting, and it is predicted that last year's attendance of 250 will be equalled or bettered.

Problems of production, with emphasis on the cultural end, will be discussed at the conference, according to acting-dean E. B. Hill, of the M. A. C. agricultural division, who is arranging details of the institute. Fertilization, disease problems, insect control, and general cultural methods will be taken up.

The list of men who are to lead discussion at the various meetings includes five men from the U. S. Department of Agriculture at Washington, D. C. Prominent state manufacturers and growers, and specialists from the agricultural college, will also take part in the program.

MICHIGAN A LEADER IN PRODUCING WOOL

MICHIGAN, one of the big lamb-feeding states of the nation, produces about 8,000,000 pounds of wool annually.

Official Government estimates placed the Michigan sheep population in 1923 at 1,171,000, a marked increase over the total for the previous year.

In addition there is a decided increase in the number of lambs being fed this winter in Michigan. Many of these will be shorn before leaving the farms, thus helping to boost the Michigan wool clip.

Among the reasons for the present increase in the number and popularity in sheep in Michigan are the following:

The educational activities of the Michigan Division State Grange and of the Extension of the Michigan Agricultural College, the natural economic and labor conditions and the influence of the wool pool conducted by the Michigan State Farm Bureau.

COLLEGE MAKING PLANS FOR FARMERS' WEEK

(Continued from Page 3)

served seats has been held for the Farmers' Week guests, and these will be offered at general admission prices at the registration booth.

The annual Housewives Congress will be held in the new home economics building during the week as a special feature for the women attending Farmers' Week. Talks on various phases of home economics as applied to farm homes will be given by college specialists, and specialists, and special exhibits will be shown.

The new home economics building, the finest of its kind in the country, has just been completed at at cost of $400,000, and will be opened to the public for the first time on Tuesday evening, February 5, as one of the features of the week.

Reduced fares have been granted on all transportation lines in the state for the Farmers' Week crowds. These reduced rates are offered on round trip fares from all points in the state, and have liberal stop-over privileges. Full information can be obtained from local ticket agents in each town.

Last year more than 5,000 farmers and their families attended the Farmers' Week programs, and plans have been made to care for an even larger attendance this year.

The Most Famous Cow In The World

Free to You!

The Most Wonderful DAIRY BOOK Ever Written

Get Yours Now

This magnificent book was written for you. It contains many profitable pointers for dairymen and fourteen full page color illustrations of the World's Champion Cows of various breeds. It is a masterpiece! Each big illustration alone is well worth framing. Only a limited number are left.

Your Copy is Ready

Give us these facts:—the number of cows you own—the name of your local dealer and his address. Then we will forward your copy of this unusual book—free! Every dairyman will prize this volume. Get yours now—first come, first served.

20 Extra Quarts of Milk

Count 'em

From Every Sack of

International Special Dairy Molasses Feed

as compared to using wheat feed or ground grains. We guarantee this increase has been secured in hundreds of actual tests. Both protein and molasses produce milk. International Special Dairy contains both. This great feed is digestible and palatable and is skillfully processed and mixed, thus insuring a big extra gain in milk. Accept no substitute. Inferior brands offered by other mills cannot produce the same profitable results as International Special Dairy. Order some today.

INTERNATIONAL SUGAR FEED CO., Minneapolis, Minn.

Live Dealers and District Sales Agents Wanted

Detroit Beef Company

offers its services to the *Farmers of Michigan* as a high class, reliable commission house for the sale of *Dressed Calves* and live poultry. Write us for information how to dress and ship calves to market. $250,000 capital and surplus. 34 years in business in the same place and same management.

Address

DETROIT BEEF CO., Detroit, Mich.

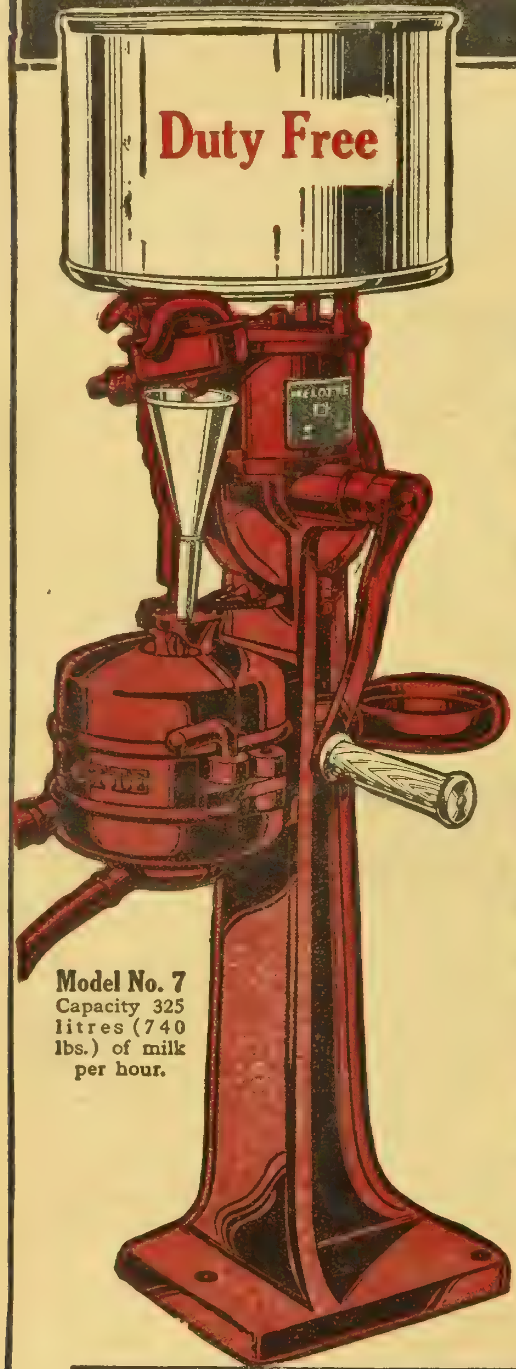
In 30 Years
Not a Single Melotte Bowl Has Ever Been Out of Balance



Model No. 7
Capacity 325 litres (740 lbs.) of milk per hour.

AND not one will be out of balance in another 30 years. That's because the very design and construction of the Melotte Bowl makes it impossible for it to get out of balance. At a conservative estimate, out-of-balance bowls are costing the American farmer, in wasted cream, millions of dollars a year — probably double the cost of all the thousands of Melotte Separators in use in America.

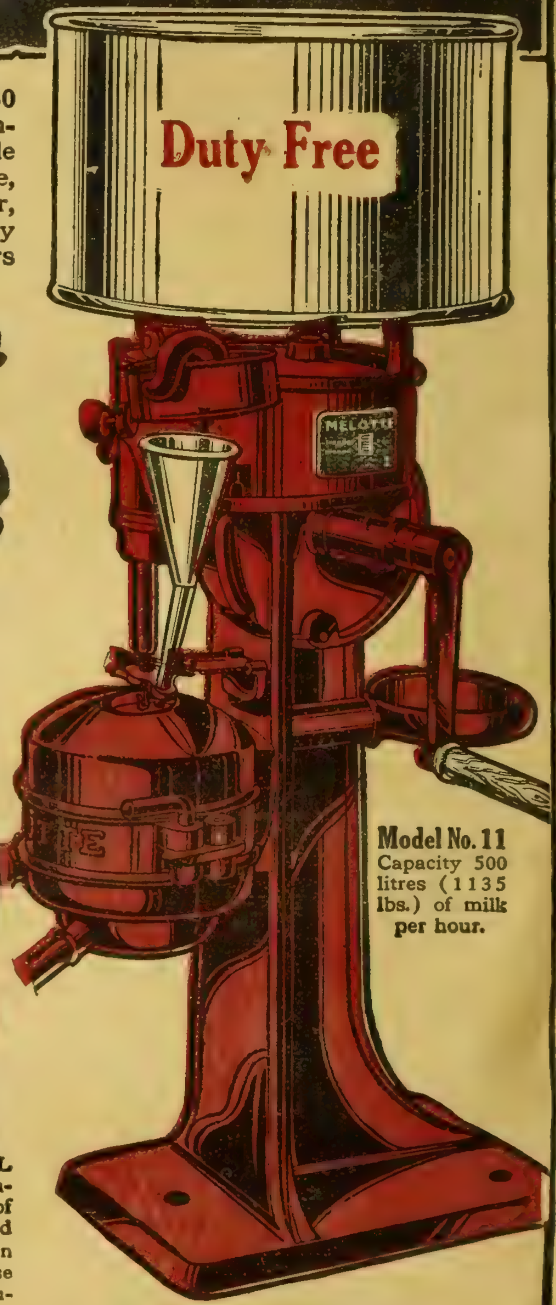
Imported Belgium
Melotte

This patent Melotte Bowl hangs from one frictionless ball bearing and spins like a top. It is *self-balancing.* It skims as perfectly after 30 years use as when new. Positively cannot ever get out of balance—cannot vibrate and thus cause cross currents which waste cream by re-mixing with milk. Send coupon below today. Get the Free Book that tells about this great Melotte.

$7.50 After Trial

Your choice of any model. NO MONEY DOWN —FREE TRIAL —SMALL MONTHLY PAYMENTS—DUTY FREE. This wonderful Belgium Melotte Separator has been picked by a jury of thousands of farmers—picked by dairy experts throughout the world to be the "king" of all separators ever manufactured. It has won every important European contest for Efficiency of Skimming, Ease of Turning, Convenience of Operation and Durability. Send coupon below for Big Free Book.

(Other Models Fully Described in Catalog)



Model No. 11
Capacity 500 litres (1135 lbs.) of milk per hour.

Pine Tree Milker

PINE TREE MILKER
The Cow's Adopted Child

AT LAST! Here is a milker with seven years' successful record back of it. A milker that is as supreme among milkers as the Melotte is among separators. Every owner of 8 or more cows can now afford to buy. Send today for our special Pine Tree small-herd offer.

The Melotte Separator, *H. B. Babson, U. S. Manager*
2843 West 19th Street, Dept. 33-01 Chicago, Ill.
2445 Prince Street, Berkeley, Calif.

Without cost to me or obligation in any way, please send me the Melotte catalog which tells the full story of this wonderful separator and M. Jules Melotte, its inventor and hundreds of letters from American Farmers.

Michigan Bean Growers Plan to Market Crop

Association of Bean Growers Authorize A. B. Cook to Name Committee of Ten to Form Marketing Organization

By R. C. GROESBECK

(M. A. C. Correspondent of The Business Farmer)

AT a meeting of more than three hundred Michigan bean growers, held in the armory at Owosso on January 18, it was voted to appoint a committee of ten men to formulate a plan for the cooperative marketing of beans in this state.

A. B. Cook, of Owosso, who called the meeting, acted as chairman of the meetings, and will work with the committee which he appoints to formulate a definite plan of action.

R. L. Churchill, manager of the California Lima Bean Growers Association, gave the principal address of the afternoon session. He asserted that cooperative marketing was the only remedy to prevent the dumping of the bean crop on the market, pointing out that eighty per cent of the state crop was put on the market immediately after the crop was harvested.

Mr. Churchill said that the object of the cooperative marketing associations was not to increase the price of the commodity, but to produce an orderly system of marketing the product. When successful the cooperative system does not increase the price to the consumer, but obtains a larger share of the consumer's dollar for the farmer, he declared. He said that at the present time the Michigan bean grower is getting forty-two per cent of the consumer's dollar, while in California the members of the growers associations are receiving sixty per cent.

Churchill declared that the cooperative marketing plan had been endorsed by bankers, economists, and business men of the nation as fundamentally sound, and asserted that the methods of the farmers in marketing their products in the past had been in direct violation of the fundamental principles of business. He also pointed out that when the farmer buys anything he must pay the price set by the man who sells the product, while in selling he must accept the price set by the buyer.

The speaker declared that the California Lima Bean Growers Association, over a period of seven years, has returned to the growers and average price of $8.10 per hundredweight for their beans, while the independent bean growers have received considerably less.

In financing Churchill said that the California association advances to the growers within a month after they had delivered the beans, between fifty and sixty per cent of their value, paying the balance later. The beans are stored in public warehouses and are supplied to the market in an even and orderly manner. The association itself is able to obtain large loans with the warehouse receipts as collateral, as the title to the produce passes to the association upon delivery of the beans.

Churchill declared that his analysis of the bean situation in Michigan showed him that:

The market now lacks a stabilizing influence; there are too many small elevators, both privately and farmer owned, each bidding against the other; there are too many farmers selling their bean crops individually, and as a result selling on a buyers' market at the buyers' prices.'

He also declared that there is too wide a margin between what the producer gets and what the consumer pays, citing as an example a case where several cars of beans were sold and resold seventeen times, each buyer making a profit.

Churchill said that the wholesale purchasers of beans would welcome the organization because it would stabilize the market and protect them. The wholesalers would then know when they bought beans in the fall that the price was not going to fluctuate greatly later resulting in heavy losses to them.

In closing his address, Churchill urged that the Michigan bean growers follow the example of the California growers and market their beans through a cooperative association, and stated that the California association would be glad to aid them in any ways possible.

Christian Breise, of Lansing, former president of the Michigan Bean Jobbers Association, told the growers of the efforts made by himself and others to stabilize the bean market, but said that all the attempts had met with failure.

James N. McBride, of Burton, former state market director, declared that the time had come when the farmers must adopt the same tactics that large business concerns used and set the prices for which their products would sell.

He said that he was opposed to government price fixing, but declared that he believed the farmers could fix the price of beans by cooperative marketing. He said that there were all the favorable elements in the state to make bean raising profitable, and that the problem of the Michigan growers was to coordinate these elements into the best plan for orderly marketing.

J. A. Rose, a representative of the Federal Reserve Intermediate Bank of St. Paul, told the farmers of the purposes of the bank and how cooperative associations such as the California Lima Bean Growers Association were able to obtain large loans on crops to finance their marketing of the products.

Mr. Cook's Address

In opening the meeting Mr. Cook gave the following address:

"It affords me pleasure to call this very important representative body of men to order. We are here today representing one industry unique in the agricultural annals of the state.

"Beans are the only staple agricultural crop in the production of which Michigan holds a commanding position and her right to the position is no longer challenged.

"This condition arises from the fact of the peculiar adaptation, both of soil and climate, of about a score of counties here in the central and eastern part of the lower peninsula of Michigan.

"There has been no propaganda by those interested in merchandising this crop or by the manufacurers of machinery used in the production or distribution or consumption or by any other outside agency to encourage the production of beans. Comparatively speaking beans have looked good to the farmer or possibly it would be a more correct statement to say that other crops had looked worse. Beans have been fortunate in being exempted from any form of artificial stimulation. The best and only stimulation needed in agriculture or anywhere is a profitable price. Boosting the production of commodities already underpriced is an economic fallacy. Practically every agricultural product is underpriced today. The vital burning question in agriculture in America is remunerative prices. My next door neighbor and his boy drive 28 miles to Flint and back every day; they help manufacture Buicks. They are farmers born and bred. On every hand the bright and progressive are being driven in the same direction. What are we going to do about it? As patriotic Americans who believe that high standards as to personal and general conditions of our agricultural classes are one of the safeguards of our free institutions, what is it our duty to do?

Credit Is Adequate

"While we do not want to dictate the work of this conference, we do feel that the millions of bushels of beans we are growing indicate that we do not need to discuss the practical side of the growing of beans. Further, we believe the government has done all it can in justice to all by extending credit facilities to producers secured by their product during the 'from farm to consumer' period and in removing the legal barriers to collective bargaining by the producers. We do not believe any of our time need be consumed by appeals to the government for further aid. The use the cotton and tobacco growers and other producers have made of the credit facilities afforded by the government is conclusive proof that ways are at hand so that the grower who needs a substantial payment on his beans can be taken care of, dumping avoided, orderly marketing established. It is little short of a crime the way our bean market year after year is over loaded the first three or four months of the marketing season. It is doubtful if complete recovery ever takes place.

"We do not believe it is necessary to establish new agencies for marketing. We should have a super-organization controlled by the growers, to regulate supply in accordance with demand. By a proper co-ordination of this with the agencies which we now have we believe the desired results can be accomplished. We are here today to investigate and see if some very valuable agencies and opportunities are not being overlooked by us.

Need Orderly Plan

"Would it be unreasonable for us to ask that splendid able body of men in our extension and county agricultural agent forces to assist in organizing us in a way that we may utilize the governmental agencies intended to assist in orderly and remunerative marketing as well as to assist us in increasing production? Increased production should be accompanied by more effective and orderly distribution, or disaster is probable. Any agency assisting in one should in both.

Competition Blamed

"Co-operative marketing has not functioned as a market stabilizer or strengthener. This was needed and expected. It has given us another competitor, in many cases a salutary one, for the business of carrying our products from the producer to the consumer. In the absence of any systematic and comprehensive machinery for orderly marketing, the farmer who feels he must have cash dumps his beans on the co-operative elevator regardless of market conditions. The co-operative elevator does not feel justified in speculating on the future price under the chaotic conditions that exist, its funds and facilities are limited and it in turn pushes the beans onto the elevator exchange or the private jobbing house, when they in turn are placed in a difficult position as the market becomes confused and uncertainty prevails. Day by day the market is put lower in an effort to do business in the face of such unsatisfactory market conditions. Co-operative is underbidding co-operative, private jobber, underbidding private jobber, each against the other, a little lower day by day and week by week, and everyone stands by and wonders where it will all end. Usually it ends when about 80 per cent of the beans are out of first hands.

"So well is the condition recognized year by year that a lot of beans are contracted when they are in blossom at a much lower price than the one prevailing at the time the contract is made. A sold short interest is a burden on the market. This condition is unnecessary and the responsibility for it is on the grower.

Two Dollars Average

"Some injustice has resulted in the public mind, we believe, from the change from the bushel standard of measure to the hundred weight. The hundred weight is the right way and should be adopted for all products. The public hears $4.50 as the price of beans and

INVITATION TO ATTEND FARMERS' WEEK

IN behalf of State Board of Agriculture the Faculty and the Student Body of the Michigan Agricultural College I extend to every Michigan Farmer and Housewife and to all others interested in agriculture, a cordial invitation to attend our Annual Farmers' Week and Housewives' Congress from February Fourth to Eighth. Our new Home Economics Building just completed will be open to the public at this time. The daily meetings of the Housewives' Congress and the Extensive Home Economics Exhibit are to be staged in his building. Speakers of state and national reputation have been secured to appear on the group and general program. All visitors will have excellent opportunities to gain inspiration and information from the comprehensive exhibit and carefully planned speaking program. We invite you to visit us during this week in order also that we may all become better acquainted, that you may visit and see this fine state institution, its herds and flocks and its splendid equipment for educational service to the state.

R. S. SHAW, Acting President, M. A. C.

Muskegon Farmers Put Operation in Cooperation

Farmer-Owned Creamery at Ravenna Made About 400,000 Pounds of Butter Last Year and Over Half of Output Was Marketed by Parcel Post

By CARL H. KNOPF

(Special Correspondent of The Business Farmer.)

Secretary-Manager Harvey Averill, who, stockholders say, deserves much credit for the success of the Ravenna Incorporated Butter Company.

NINE years is a comparatively old age, as cooperative organizations go in Michigan, but such is the length of time that the Ravenna Incorporated Butter Co., has been working on a cooperative basis. This creamery, located at Ravenna, Muskegon county, is a striking example of the way in which quality and cooperation can be combined to form a decidedly successful enterprise.

But there are many other remarkable things about the Ravenna creamery besides its age. For instance, it markets over 60 per cent of its total output by parcel post which means that, each year, tons of the Ravenna butter go to the consumers via Uncle Sam's mail bags—but that is another part of our story.

The Ravenna creamery first started operation away back about 1911. Some 200 farmers formed a co-partnership to finance the venture and for three years everything moved along quite well. Then the creamery burned and, for some reason or other there was no insurance. This, as you may suppose, was a body blow, right to the heart, but the farmers were not disheartened. Instead, they immediately started plans for a bigger and better concern to be organized as a stock company. Each of the 200 members advanced $36 to meet the obligations of the old company and, in return, each received 2 shares of stock in the new organization.

In September, 1914, the Ravenna Butter Company was incorporated as a stock company with a total capitalization of $6,000. This was issued in the form $10 shares, makeing a total of 600 shares. One share was set as the limit which any one stockholder could own. The original members disposed of their extra shares of stock and so, at the present time there are about 587 stockholders, the few additional shares being held by the company itself to be sold as new patrons make application.

These 587 owners of the creamery meet once per year and elect the officers and directors who are made responsible for the business during the following twelve months. The present officers and directors are as follows:

President, S. D. McNitt, Ravenna; Sec'y.-Manager, H. S. Averill, Revanna; Directors: J. Roy Davidson, Nunica; Roy Haas, Coopersville; Carl Kober, Conklin.

Acorn From Which Grew Oak

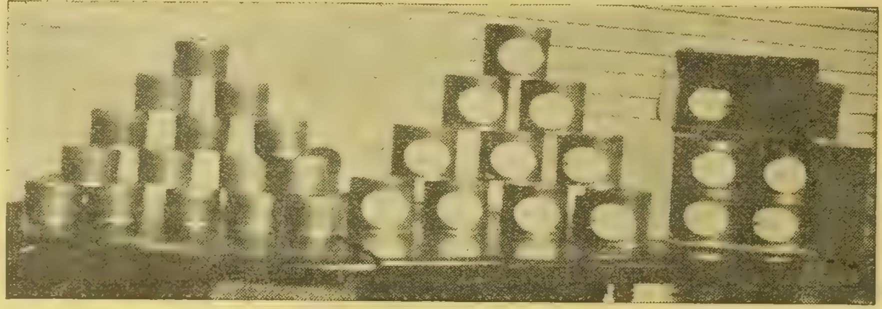
Back in 1914 an employe from the Detroit post office came to Ravenna for a visit. There was nothing unusual about such an occurence but there was something unusual about Ravenna butter. We may conclude that the flavor "lasted" because on his return to Detroit he decided that he must have more of that Ravenna butter. Accordingly he wrote to Manager Averill asking that a couple of pounds be sent him by parcel post. He even sent an empty fiber container for the shipment, the same kind of package which the creamery now uses at the rate of four carloads per year.

From this one shipment has been built up a parcel post business which, this past year, has handled about 400,000 lbs. of butter. And 400,000 pounds is 200 tons so the reader can appreciate that this is "some" butter to be sold direct from creamery to customer. The total sales of butter from the Ravenna creamery in 1922 were 648,018 pounds so the parcel post shipments represent approximately 62 per cent of the total business.

To ship this butter requires over 100,000 of the fiber containers, or four full carloads as mentioned above.

As the reader can well imagine, the parcel post business from this creamery alone amounts to more than the total business done in a year by many postoffices. Something over 17,000 shipments are made each year and the bill for postage amounts to $5,000.00 annually. In fact the business from the creamery promises to boost the local postoffice into the second class group.

The origional list of one customer has grown now to 2,000 customers scattered all over the United States. Butter has been shipped as far west as San Francisco, as far east as New Jersey, and as far south as Florida. Averill relates with pride how, a few years ago, a shipment of butter was made, via parcel post, to Germany. It was reported as being in excellent condition on its arrival.



Containers in which butter is shipped. Left to right: containers holding 2 pounds, containers holding 5 pounds and packages made up for shipment, one containing two 5-pound containers and one holding four 5-pound containers.

While the customers are thus scattered yet the bulk of the butter is used in Michigan. Detroit gets 95 per cent of the parcel post shipments and it is safe to say that the post office force of that city, following the example set by the postal clerk mentioned above, now eat nothing but Ravenna butter.

Butter for parcel post shipment is packed in waxed fiber containers. There are two sizes, one holding 2 lbs. and the other holding 5 lbs. The smallest amount which the creamery will ship is 4 lbs., made up of two 2 lb. containers. Mr. Averill states that the 5 lb. container is the more popular size and the most common shipment is a 20-lb. box containing four of the 5 lb. packages.

Each week many orders are received ranging from 150 lbs. to 400 lbs. each. These orders are mainly Club orders, ie., orders for a number of persons which are grouped together by some individual who charges a small amount to pay for his time. A Club order must be for at least 80 pounds.

Club orders as large as 1,000 lbs. and 2,000 lbs. each are not uncommon. J. P. Bacon, employed in the wholesale stamp department of the Detroit post office, sends in more large Club orders than any other person. His orders range from 2,500 lbs. to 3,100 lbs. each, and practically all of this is used by the employes in the post office.

When asked as to the practicability of making long distance shipments Mr. Averill answered that he does not consider it advisable to ship further than the second zone of the parcel post. He has two reasons for this, one is that the butter is not certain to arrive in the best condition, and the second, that it is not possible to insure shipments of butter sent farther than the second zone.

About one-fifth of the parcel post shipments are made on standing orders, a standing order being one for a fixed amount to be shipped at regular intervals.

A Business Built On Quality

And now you are wondering, as did the writer, just what kind of a costly and extensive system of advertising was used to build up such an excellent business by mail. When the question was put up to Mr. Averill he answered, "We have had practically no advertising except the word-of-mouth kind. When a family uses our butter, they like it and tell their neighbors about it. Then the neighbors order. That's the way our business has been built up. Oh, we send out calendar pads each year, but these go just to our present customers! And occasionally we send a shipment of butter to be used at a church supper or a lodge banquet with our compliments. This is good advertising because when the diner has had a taste of our butter he wants it for use on his own table." There you have in a nut shell the reason for the remarkable increase in the business of selling Ravenna butter by mail—Quality! Quality which the consumer recognizes with the first taste and quality which continues through the weeks, months, and years—that is the secret of Ravenna's success.

Many farmers will argue against attempting to sell quality in farm products, saying that "people won't pay extra for it." This argument seems disproven by the experience of the Ravenna creamery. The price of parcel post butter ranges from 8 cents to 11 cents per pound above the average price for creamery butter and the consumer pays, in addition, the postage and insurance charges.

On the day the writer visited the creamery the price of Standards (90 score) butter in Chicago was 48½ cents. The parcel post price on that same day was 60 cents per pound which enabled the creamery to pay its patrons 63 cents per pound for the butterfat delivered on that day.

Fresh Butter that is "Fresh"

The customers of the Ravenna creamery can well afford to pay a premium for their butter. The churning is done in the morning and the butter churned in the forenoon is packed into containers that afternoon. It leaves Ravenna on the late afternoon train and, in the case of Detroit customers, is delivered to their doors sometime the next day. Butter delivered to your door in from 24 to 48 hours after churning! Contrast this with the usual route followed in the distribution of butter from creamery to wholesaler to jobber to retailer to customer. The Ravenna method not only cuts out the many middlemen and their profits, all to the advantage of the farmer, but it also delivers fresh and wholesome butter direct to the consumer at a reasonable price and without the weeks of delay which are usually interspersed between creamery and consumer.

With each shipment of butter is included an invoice giving the cost of butter and also the amount of postage and insurance charges. The customer is to remit on receipt of the invoice. One might suppose that such a method would cause the losses from non-payment to run quite high. However, according to Manager Averill, the percentage of loss is surprisingly low. On a parcel post business in 1922 amounting to over $160,000 only $613 was charged off for bad accounts and not all of this came from butter sales. The largest losses, according to Manager Averill, were caused by the bankruptcy of grocery stores which were distributing the butter.

"Before shipping to a new customer we require some reference," said Mr. Averill. "Sometimes writing in on the stationery of the firm is sufficient but, as a usual thing, our new customers come to us with the recommendation of some one of our old customers."

On a Strictly Cooperative Basis

The business of the Ravenna creamery is conducted on a strictly cooperative basis. All patrons in the territory within reasonable distance of the creamery are required to be stockholders. However, the cream routes extend out for long distances and cream is purchased from producers outside of the area. No discrimination is made between stockholders and nonstockholders in the matter of price or returns.

No interest is paid on the shares of stock and no dividends are declared. Any benefit which a stockholder derives must come from the cream which he supplies to the creamery. In other words, patronage is the basis of benefits.

Where then, you ask, is the advantage in being a stockholder? Simply as being one of the group of cooperators who are putting across a successful business, and of having a voice in the affairs of the organization. And these advantages are sufficient to cause a demand for all the shares of stock available.

The creamery buildings alone are inventoried at approximately $6,000 which represents the amount which the stockholders have invested in the business. This, together with the land, machinery, trucks, and equipment, makes a total investment upwards of $20,000.

Checks in payment for the cream are issued every two weeks. Payment for cream delivered during one month is paid for on the following month. This gives the creamery about 30 days to manufacture the cream into butter, sell the butter, collect the amounts due, and divide the proceeds among the dairymen.

The cream receipts are pooled for

Thousand Birds in "Gold Medal" Poultry Show

Cash Prizes Totaling Over $200, 800 Ribbons and More Than 100 Special Prizes Distributed at Big Show at Muskegon

By SPECIAL CORRESPONDENT

WITH its well-lighted Armory filled nearly to capacity, Muskegon entertained the aristocrats and the workers of Michigan's world during the third week in January. It was a thousand-bird Show, and then some. There were 662 birds entered in the standard classes and 284 birds in the utility division. This makes a total of 946 birds. Add to this a number of turkeys, ducks, geese, pigeons, and nearly 100 rabbits, and you have one of the largest Shows in the state. For quality, as well as number of exhibits, Muskegon ranks with Grand Rapids and Detroit as one of the three leading Poultry Shows in Michigan for the 1923-24 season.

There were 112 exhibitors at the Muskegon Show. The support given by those outside of Muskegon county is indicated by the fact that 63 of the exhibitors were from other counties. Ottawa, Kent, Newaygo, Oceana, Mason, Wexford, Kalamazoo, Calhoun, St. Joseph, Allegan, Shiawassee and Ionia were among the counties represented by exhibits.

It was essentially a Show made up of small exhibits, the average being less than nine birds per exhibitor. As 18 was the highest number of birds shown by any one exhibitor in the same variety class this indicates that the exhibitors were concerned with quality rather than quantity.

Gold and Silver Medals Awarded

A total of more than $200 was actually distributed in cash prizes to the winners at Muskegon. This in addition to 800 ribbons and more than 100 special prizes, most of the latter being donations from the merchants of the city. The total prizes actually won and distributed amounted to over $500.

The most coveted awards, however, were the medals offered by the American Poultry Association under the direction of its president. Thos. F. Riggs, who designated the Muskegon exhibit as the official "Gold Medal" A. P. A. Show of Michigan for the year. In addition to the splendid championship gold medal which gives the name to the Show, there were 23 silver medals distributed by the American Poultry Association as championship awards in other classes.

A goodly share of the highest honors of the Muskegon Show were won by E. C. Zoeller of Albion who exhibited a wonderful string of White Rocks. The much-coveted Grand Championship Gold Medal, offered by the A. P. A. for the best cockerel in the show, was won by Zoeller on a White Rock cockerel. This same cockerel also won the Association trophy awarded for the best bird in the Show. This Association trophy is a massive silver cup, which has been battled for ever since 1912. During the 12 years of competition this cup has been won by 9 different exhibitors. By repeating his wins of 1918 and 1922, Mr. Zoeller becomes the first three-time winner and now is the permanent, and proud, possessor of the Association cup.

A second silver cup, awarded for the best cock, hen, cockerel, pullet, and pen of any one variety was also won by Mr. Zoeller, making his second winning of this particular trophy.

The special prizes for the best cock, best hen, best cockerel, best pullet, the best young pen, in the Show were won by Mr. Zoeller who, as the reader may imagine, had a good week of it.

There were, however, other winners at the Muskegon Show. Wm. Bassett of Muskegon won a total of 499 points in the White Wyandotte division and was awarded the silver cup trophy given to the exhibitor winning the highest number of points at the Show on any variety. This is the second win for Mr. Bassett on this particular cup.

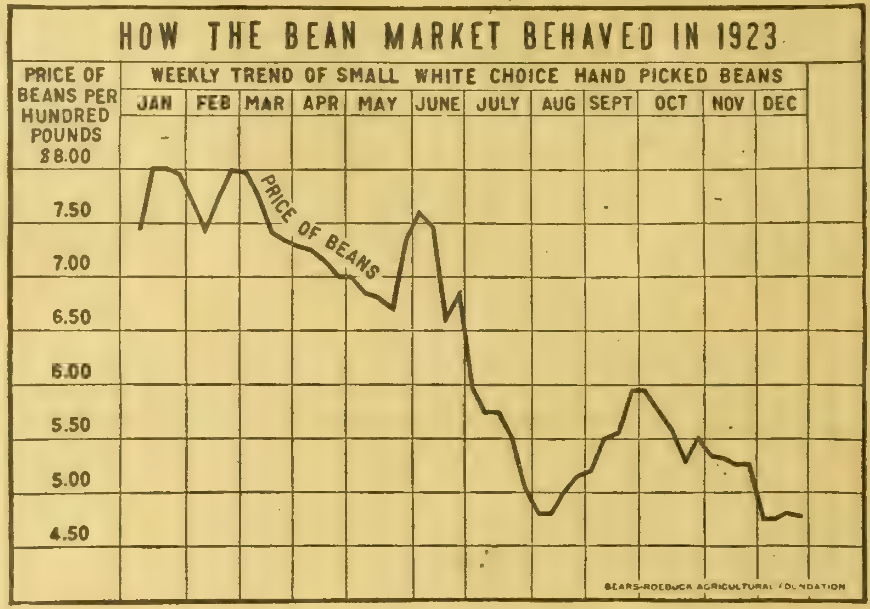
The cup awarded for the best pen in the Show was also won by Mr. Bassett with his White Wyandottes.

Roy Strevel of Muskegon with a pen of Buff Wyandottes, won the cup awarded for the best solid-color pen in the show.

The best pen of parti-colored birds were S. C. Rhode Island Reds, owned by A. M. Wood of Grand Rapids. This trophy is also a silver cup and during its seven years of competition has been won by six different exhibitors.

The Buff Orpingtons owned by H. O. Rieger of Grand Rapids won, for the third time, the cup awarded for the best pen of Orpingtons so Mr. Rieger becomes the permanent owner of that trophy.

L. D. Hyde of Muskegon won, for the second time, with his Himalayan rabbits, the trophy awarded to the exhibitor winning the largest number of points in the rabbit competition on any one variety. According to the rules governing this particular trophy, the second winning gives permanent possession.



The best rabbit in the show was a Chinchilla, owned by Wilkinson and McGee of Grand Rapids, who thereby won a special silver trophy. A second cup was won by this same firm with a Chinchilla buck which was designated the best junior buck in the show.

Awards In Utility Classes

Best Pen, Francis Kent, of Muskegon, on S. C. White Leghorns. Best Old Pen, Francis Kent, on S. C. White Leghorns. Best Young Pen, James DeGroot, of No. Muskegon, on S. C. Mottled Anconas. Best Cock, K. T. Murphy of Muskegon, with a White Wyandotte. Best Cockerel, Peter M. Hansen, of Muskegon, with an S. C. White Leghorn. Best Pullet, Maurice Vanderwater, of Muskegon, with an S. C. R. I. R. Best Hen, Francis Kent, with an S. C. White Leghorn.

The pen of S. C. White Leghorns which won both best pen and best old pen in the utility division, were raised and exhibited by Francis Kent of Muskegon. The judges gave Mr. Kent much commendation on this pen, both for type and uniformity. As expressed by one judge, "The four hens are as like as four peas."

Two additional awards won in the standard classes were as follows:

A. M. Wood of Grand Rapids, best old pen in Show, with S. C. R. I. Reds.

Jas. DeKoster of Holland, second best pen in show, with Buff Rocks.

The competition was keen throughout the show. In the utility class of Single Comb White Leghorn pullets, 23 were entered for competition. This class held the attention of the judge for a long time with awards finally made as follows: First, Royal Bratton of Montague; Second, Bert Denman of Muskegon; Third, Francis Kent, of Muskegon; Fourth, Peter M. Hansen of Muskegon; Fifth, Francis Kent.

In addition to the silver medals awarded by the A. P. A. for the best cockerel in each of 17 different breeds, the following sweepstakes silver medals were also A. P. A. awards:

Best Turkey, L. O. Dawson of Muskegon;

(Continued on Page 19)

Good Care of Brood Sow this Winter Means Strong Litters Next Spring

By W. E. J. EDWARDS

Associate Professor of Animal Husbandry, Michigan Agricultural College

IN order that brood sows farrow strong, thrifty litters next spring, several factors must be given careful consideration this winter. Occasionally sows wintered in a haphazzard manner produce good litters of thrifty pigs, but this is the rare exception.

Several points are of vital importance. The brood sow should be forced to take sufficient exercise; clean, dry, well ventilated quarters should be provided; and the proper food constituents should be given.

Sufficient exercise is very essential in the production of a strong litter of pigs. By no means should the sow be cramped in a small pen where she does not have the run of a lot. If she is so confined, she is very liable to become soft and flabby and usually has considerable difficulty in delivering her young. Under such conditions the pigs usually lack vitality, a larger number of them are liable to die at birth, and those remaining will not get the strong start they need. Sows getting insufficient exercise usually become indolent and often kill several of their pigs by lying on them, whereas sows that have had the run of a reasonable sized lot have much more vitality and heed the cries of their young, getting up when they happen to pinch a little fellow in lying down.

Some brood sows have to be forced to take the exercise they need. This can be accomplished by having the sleeping quarters and the feeding trough some distance apart. this brings up the question of winter quarters.

No doubt the use of the portable cot is the most satisfactory method of housing brood sows during the winter and in fact during the entire year except at farrowing time, when a community house is usually preferred. There are many styles of portable cots, the size to be recommended being six by eight feet. The cot does not need to be warmly built, one thickness of lumber being quite sufficient. In fact, it is not necessary to put on a door. It should be floored, however, and placed in a dry place and by all means should be kept dry and well bedded.

In planning the hog lots it is advisable that they be made long and narrow, rather than square. They can then be plowed without difficulty and by placing the cot at one end and the feeding trough at the other, the sows are forced to take a fair amount of exercise.

A large number of different food constituents are necessary in the production of a healthy litter. Not only must the demands of the sow be met, but the ultimate development of the litter depends to a large extent upon their being properly nourished before parturition. A strong frame with good muscular development should be produced. This can be done only by supplying these growth producing constituents in the ration. Bone cannot be built without mineral matter and muscle cannot be developed without protein. It is, therefore, of paramount importance that there be no lack of these constituents in the feed given.

Most of our home grown grains are deficient in growth producing qualities although oats and rye are fairly well balanced in this respect. Oats as a sole ration are not recommened, as they do not contain the variety of proteins necessary, while rye should be fed in limited amounts as it often contains ergot which may cause abortion. Good, second growth alfalfa hay is rich in substances which produce growth and if sows can be induced to consume considerable quantities, home grown grains such as oats and barley with a small amount of corn makes a satisfactory ration. Sufficient alfalfa is seldom eaten, however, unless it is ground and mixed with these grains to the extent of about twenty-five percent of the ration.

A few well balanced rations which meet the needs of the pregnant sow are:

1. Corn, 12 parts by weight; Tankage, 1 part by weight.
2. Barley, 18 parts; Tankage, 1 part.
3. Ground Oats, 100 parts; Corn, 100 parts; Tankage, 8 parts.
4. Ground Oats, 600 parts; Middlings, 100 parts; Tankage, 5 parts.

Good second growth alfalfa hay should be available with each of the above rations.

Even when alfalfa is fed, additional minerals should be fed to insure proper bone development. Many mineral mixtures are now on the market. Home made mixtures may be used to good advantage. Hard wood ashes and soft coal are very good. Considering cost and results obtained equal parts of acid phosphate, finely ground limestone, and common salt is recommended. This mixture should be placed in a self-feeder and the sows allowed to take all they wish, or it may be mixed with the feed, using about two pounds of the mixture to every one-hundred pounds of the ration.

Goiter or hairlessness has been the cause of very heavy losses among new born pigs in some sections of the country for some time. Michigan has been comparatively free from this trouble but an increasing number of hairless litters has been reported by our breeders the past two or three years.

Pigs affected with this trouble are usually farrowed weak or dead. Many of them are hairless and usually show a swollen neck due to an enlargement of the thyroid gland similar to goiter in humans. This is caused by a deficiency of iodine in the ration.

Highly concentrated foods, such as our common grains, are quite de-

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accomopanied by full name and address. Name not used if so requested.)

MAKING CEMENT FROM MARL

Will you please state how to make cement from marl?—P. C., Ithaca, Mich.

—The marl is first excavated, usually by means of steam shovels and pumped or conveyed by barges to the plant where it is stored in large tanks. It is then mixed with clay and the other ingredients necessary to produce the proper chemical compound and thoroughly mixed, after which it is passed through enormous drums which revolve and are heated to a very high temperature so that the marl is calcined or roasted into clinkers.

These clinkers are then ground in large revolving drums. It then goes through the process of soaking for storage and shipment. This covers these processes in a general way.—H. H. Musselman, Prof. Agricultural Engineering Dep't., M. A. C.

IS GIRL 18 YEARS OLD OWN BOSS

Has a girl at the age of 18 her right to leave home and work for herself or can her parents take her back home? Is she at that age her own boss? Can they draw her pay? Thanking you, I remain.—B. R., Bay City, Mich.

—Until a child has reached the age of 21 years, the parents have the custody and control over it, so long as they properly discharge their duty as parents, unless such child has been emancipated by the parents.

The parents are under legal duty to support and care for the child, and in return they have the right to collect her wages.—Legal Editor.

TAX EXEMPTION LAW

Please inform us if in Michigan there exists a so-called exemption law. If so, to what amount, man having family to support can claim exemption? Also please name the law or article, if such exists.—A. K., Dundee, Mich.

—A house-holder is entitled to a homestead exemption of the value of $1500.00. See Section 12888—12896 of the Compiled Laws of 1915.

Exemption from levy and sale under any execution, or upon any other final process of a Court, of the following property, viz:

1. All sewing machines, not exceeding one such machine for each family, all spinning wheels, weaving looms with the apparatus, and stoves put up and kept for use in any dwelling house;
2. A seat, pew or slip, occupied by such person or family, in any house or place of public worship;
3. All cemeteries, tombs and rights of burial, while in use as repositories of the dead.
4. All arms and accoutrements required by law to be kept by any person; all wearing apparel of every person or family.
5. The library and school books of every individual and family, not exceeding one hundred and fifty dollars, and all family pictures;
6. To each householder, ten sheep, with their fleeces, and the yarn or cloth manufactured from the same; two cows, five swine, and provisions and fuel for comfortable subsistance of such householder or family for six months;
7. To each housholder, all household goods, furniture and utensils, not exceeding in value two hundred and fifty dollars;
8. The tools, implements, materials, stock, apparatus, team, vehicle, horses, harness, or other things to enable any person to carry on the profession, trade, occupation or business in which he is wholly or principally engaged, not exceeding in value two hundred and fifty dollars. The word team in this subdivision shall be construed to mean, either one yoke of oxen, a horse, or a pair of horses, as the case may be;
9. A sufficient quantity of hay, grain, feed and roots, whether growing or otherwise, for propertly keeping for six months the animals in the several subdivisions of this section exempted from execution, and any chattel mortgage, bill of sale, or other lien created on any part of property above described, except such as is mentioned in the eighth subdivision of this section, shall be void, unless such mortgage, bill of sale or lien be signed by the wife (if he have any) of the party making such mortgage or lien.

See Section 12858-12872, Compiled Laws of 1915.

Exemption of wages for the personal labor of a householder having a family is 60 per cent of the amount of said wages, but in no case shall more than $30.00 be exempt and in all cases shall less than $8.00 be exempt. See Section 14,365 of the Compiled Laws of 1915.—Clare Retan, Deputy Attorney General of Michigan.

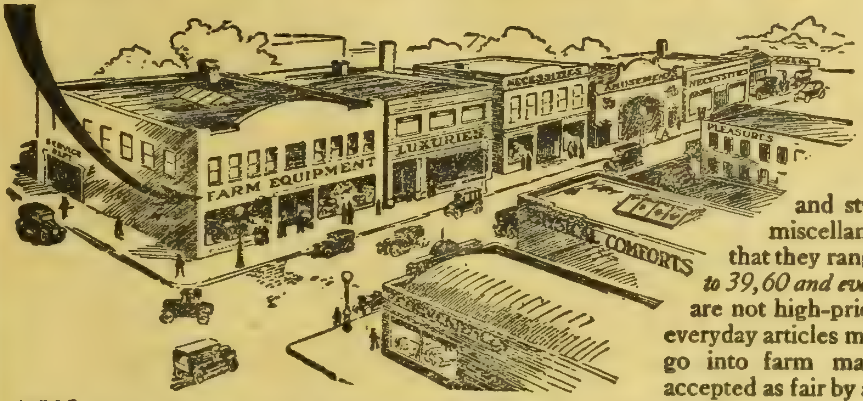
MUST HEIRS SIGN OFF?

If a man dies and leaves a will have all the heirs got to sign off before they can give a clear deed to a farm?—Mrs. J. G., Wheeler, Mich.

—The answer to your question would depend upon what interest the heirs have in the property, which in turn would depend upon the terms of the will.

When a person dies leaving a will, each legatee or devisee receives whatever property or share of property is bequeather or devised to him. Title to the farm would vest in the persons to whom it was devised, and before it could be conveyed all the devisees would have to sign the conveyance. Any person has the right to name what disposition shall be made of his own property at his death, and if he desires to do so and the heirs would receive no interest, and consequently would not have to "sign off." Moreover, he may provide in his will that one heir shall receive all his property and the other heirs nothing, and these disinherited would have no remedy, except to attack the validity of the will in court. If one heir has performed services for the testator, he could not establish a claim for such services unless there was an agreement whereby he was to receive compensation for such services.—Asst. Legal Editor.

Where the Farmer's Dollar Buys the Greatest Value



IN some of the stores of any town the farmer's dollar buys the necessities of life; in others it buys physical comforts; in still others it buys pleasures. *In the farm equipment store the farmer's dollar buys the means to make many more dollars.* It buys the equipment which, like the land itself, is responsible for his progress and prosperity. When the farmer invests in modern farm machines, he is really buying clothing and education, electric lights, automobiles, radio outfits, etc., because these things are purchased with the money made by farm machines.

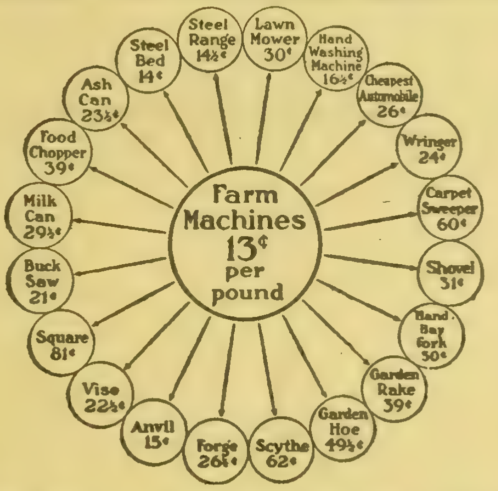
Of all the stores in town, *the farm equipment store is the one where the farmer gets the greatest return for his money.* This is true not only on the basis of the foregoing but it is found true also by comparing the prices paid by the farmer for different articles made of similar materials.

An interesting comparison has been made by the Research Department of the National Association of Farm Equipment Manufacturers. They took, First, a group of eleven basic farm machines: Sulky plow, peg tooth harrow, disk harrow, grain drill, corn cultivator, corn planter, corn sheller, grain binder, mower, hay rake, and grain wagon—and, Second, a list of common articles used on the farm but not classed as farm equipment. Then they obtained the pound prices of these articles by dividing the retail prices by the weights. The pound-price basis is the only practical way to compare these articles and it is entirely fair since the materials go through the same machine shop and factory processes and are handled by the same class of labor. Freight to the dealer's store was not included, since it applies to all articles the farmer buys and varies with the distance from point of manufacture.

The chart below shows the prices per pound of the basic farm machines and other articles the farmer buys.

Ignore for a minute the *low figure* in the big circle and study the pound prices of the miscellaneous articles. You will see that they range *all the way from 14 cents up to 39, 60 and even 81 cents per pound.* Yet these are not high-priced goods; they are ordinary, everyday articles made of the same materials that go into farm machines, and the prices are accepted as fair by all buyers. The articles are of a standard line sold practically everywhere.

Now note the low average retail price per pound of farm machines. The *average* pound price of these basic machines and implements, needed by every grain-growing farmer, is less than the *lowest* in the other group. Some of these farm machines have complicated parts in their makeup and all of them are built to stand years of hard use, yet *the average price the farmer pays for these necessary farm machines is only 13 cents per pound.*



The above comparisons, which can be duplicated in any community in this country, prove the statement that *the farmer pays less money, pound for pound, for the machines that do his work than he pays for any other similar manufactured article he buys.*

This shows what farm machines would cost if they were priced like other articles the farmer buys:

A sulky plow, priced like a wringer, would cost about $45 MORE
A peg-tooth harrow, priced like a forge, would cost about $30 MORE
A disk harrow, priced like a buck saw, would cost about $50 MORE
A grain drill, priced like a food chopper, would cost about $390 MORE
A corn planter, priced like a forge, would cost about $60 MORE
A corn cultivator, priced like a vise, would cost about $40 MORE
A corn sheller, priced like a milk can, would cost about $20 MORE
A 7-ft. grain binder, priced like the cheapest automobile, would cost about $200 MORE
A 7-ft. grain binder, priced like an ash can, would cost about $150 MORE
A 5-ft. mower, priced like a lawn mower, would cost about $80 MORE
A hay rake, priced like a garden rake, would cost about $110 MORE
A wagon, priced like a hand washing machine, would cost about $50 MORE

The National Association of Farm Equipment Manufacturers has issued several bulletins on subjects similar to the above. We will be glad to see that the full set is sent to those interested. Drop us a line.

THE STORY TO DATE

MR. STANLEY G. FULTON, 50-year old bachelor and possessor of twenty million dollars, calls on his lawyer and they discuss the disposition of this large fortune after its owner's death. The lawyer is in favor of giving the money to colleges or charities while Fulton is opposed to these ideas. He remembers that he has some distant cousins and decides to leave the money to one of them, but first he determines to learn which one will use it to the best advantage. To find out who is the worthy one he, through his lawyer, gives, each cousin $100.000 to use as they will. Before giving them the money grows a beard and, using the name of Mr. John Smith, goes to the town where they live to find out what kind of people they are. Upon arriving in town he visits James Blaisdell, one of the cousins, where he tries to hire board and lodging. While there he meets Miss Flora Blaisdell, another cousin who is a dressmaker. They decide they cannot rent a room to him and supply him board and refer him to Frank Blaisdell's, the third cousin. He gets a room there and, passing as a writer gathering material for a book on the Blaisdell family in this country, he starts out. He calls on all of the Blaisdells and as they all talk of a relative by the name of Miss Maggie Duff he decides to call on the lady. He finds her living with her father, an old man who seems to have soured on the world. He secures what information he can from her and her father. He then writes a letter to his lawyer discussing the various relatives he has met. The members of the Blaisdell family that each cousin of Stanley G. Fulton has fallen heir to $100,000 and there is much excitement.

(Continued from January 19th Issue.)

"THEY do matter, indeed." Miss Maggie was speaking very gravely now. "They matter—woefully. I never say 'It don't matter' to war, or death, or sin, or evil. But there are other things—"

"But the other things matter, too," interrupted the man irritably. "Right here and now it matters that you don't share in the money; it matters that you slave half your time for a father who anywhere near appreciate you; it matters that you slave the rest of the time for every Tom and Dick and Harry and Jane and Mehitable in Hillerton that has run a sliver under a thumb, either literally or metaphorically. It matters that—"

But Miss Maggie was laughing merrily, "Oh, Mr. Smith, Mr. Smith, you don't know what you are saying!"

"I do, too. It's you who don't know what you are saying!"

"But, pray, what would you have me say?" she smiled.

"I'd have you say it does matter, and I'd have you insist on having your rights, every time."

"And what if I had?" she retaliated sharply. "My rights, indeed!"

The man fell back, so sudden and so astounding was the change that had come to the woman opposite him. She was leaning forward in her chair, her lips trembling, her eyes a smouldering flame.

"What if I had insisted on my rights, all the way up?" she quivered. "Would I have come home that first time from college? Would I have stepped into Mother Blaisdell's shoes and kept the house? Would I have swept and baked and washed and ironed, day in and day out, to make a home for father and for Jim and Frank and Flora? Would I have come back again and again, when my beloved books were calling, calling, always calling? Would I have seen other girls love and marry and go to homes of their own, while I—Oh, what am I saying?" she choked, covering her eyes with the back of her hand, and turning her face away. "Please, if you can, forget what I said. Indeed, I never—broke out like that--before. I am so--ashamed!"

"Ashamed! Well, you needn't be." Mr. Smith, on his feet, was trying to work off his agitation by tramping up and down the small room.

"But I am ashamed," moaned Miss Maggie, her face still averted. "And I can't think why I should have been so —so wild. It was just something that you said—about my rights, I think. You see—all my life I've just had to learn to say 'It doesn't matter,' when there were so many things I wanted to do, and couldn't. And—don't you see?—I found out, after a while, that it didn't really matter, half so much—college and my own little wants and wishes— as that I should do—what I had to do, willingly and pleasantly at home."

"But, good Heavens, how could you keep from tearing 'round and throwing things?"

"I couldn't—all the time. I—I smashed a bowl once, and two cups." She laughed shamefacedly, and met his eyes now. "But I soon found—that it didn't make me or anybody else—any happier, and that it didn't help things at all. So I tried—to do the other way. And now, please, please say you'll forget all this—what I've been saying. Indeed, Mr. Smith, I am very much ashamed."

"Forget it!" Mr. Smith turned on his heel and marched up and down the room again. "Confound that man!"

"What man?"

"Mr. Stanley G. Fulton, if you must know, for not giving you any of that money."

"Money, money, money!" Miss Maggie threw out both her hands with a gesture of repulsion. "If I've heard that word once, I've heard it a hundred times in the last week. Sometimes I wish I might never hear it again."

"You don't want to be deaf, do you? Well, you'd have to be, to escape hearing that word."

"I suppose so. But—" again she threw out her hands.

"You don't mean—" Mr. Smith was regarding her with curious interest. "Don't you want—money, really?"

She hesitated; then she sighed.

"Oh, yes, of course. We all want money. We have to have money, too; but I don't think it's—everything in the world, by any means."

"You don't think it brings happiness, then?"

"Sometimes. Sometimes not."

"Most of—er—us would be willing to take the risk."

"Most of us would."

"Now, in the case of the Blaisdell's here—don't you think this money is going to bring happiness to them?"

There was no answer. Miss Maggie seemed to be thinking..

"Miss Maggie," exclaimed Mr. Smith, with a concern all out of proportion to his supposed interest in the matter, "you don't mean to say you don't think this money is going to bring them happiness!"

Miss Maggie laughed a little.

"Oh, no! This money'll bring them happiness all right, of course,—particularly to some of them. But I was just wondering; if you don't know how to spend five dollars so as to get the most out of it, how will you spend five hundred, or five hundred thousand—and get the most out of that?"

But Miss Maggie shook her head.

"Nothing. I was just thinking," she said.

CHAPTER XI

Santa Claus Arrives

It was not long after this that Mr. Smith found a tall, gray-haired man, with keen gray eyes, talking with Mrs. Jane Blaisdell and Mellicent in the front room over the grocery store.

"Well—" began Mr. Smith, a joyful light of recognition in his eyes. Then suddenly he stopped and picked up something from the floor. When he came upright his face was very red. He did not look at the tall gray-haired man again as he advanced into the room.

Mellicent turned to him eagerly.

"Oh, Mr. Smith, it's the lawyer—he's come. And it's true. It is true!"

"This is Mr. Smith, Mr. Norton," murmured Mrs. Jane Blaisdell to the keen-eyed man, also, for no apparent reason, had grown very red. "Mr. Smith's a Blaisdell, too,—distant, you know. He's doing a Blaisdell book."

"Indeed! How interesting! How are you, Mr.—Smith?' The lawyer smiled and held out his hand, but there was an odd constraint in his manner. "So you're a Blaisdell, too, are you?"

"Er—yes," Mr. Smith, smiling straight into the lawyer's eyes.

"But not near enough to come in on the money, of course," explained Mrs. Jane. "He isn't a Hillerton Blaisdell. He's just boarding here, while he writes his book."

"Oh, I see. So he isn't near enough to come in—on the money." This time it was the lawyer who was smiling straight into Mr. Smith's eyes.

But he did not smile for long. A sudden question from Mellicent seemed to freeze the smile on his lips.

"Mr. Norton, please, what was Mr. Stanley G. Fulton like?" she begged.

"Why—er—you must have seen his pictures in the papers," stammered the lawyer.

"Yes, what was he like? Do tell us," urged Mr. Smith with a bland smile, as he seated himself.

"Why—er—" The lawyer came to a still more unhappy pause.

"Of course, we've seen his pictures," broke in Mellicent, "but those don't tell us anything. And you knew him. So won't you tell us what he was like, please, while we're waiting for father to come up? Was he nice and jolly, or was he stiff and haughty? What was he like?"

"Yes, what was he like?" coaxed Mr. Smith again. Mr. Smith for some reason, seemed to be highly amused.

The lawyer lifted his head suddenly. An odd flash came to his eyes.

"Like? Oh, just an ordinary man, you know,—somewhat conceited, of course." (A queer little half gasp came from Mr. Smith, but the lawyer was not looking at Mr. Smith.) "Eccentric—you've heard that, probably. And he has done crazy things, and no mistake. Of course, with his money and position, we won't exactly say he had bats in his belfry—is'nt that what they call it?—but—"

Mr. Smith gave a real gasp this time, and Mrs. Jane Blaisdell ejaculated:—

"There, I told you so! I knew something was wrong. And now he'll come back and claim the money. You see if he don't! And if we've gone and spent any of it—" A gesture of despair finished her sentence.

"Give yourself no uneasiness on that score, madam," the lawyer assured her gravely. "I think I can safely guarantee he will not do that."

"Then you think he's dead?"

"I did not say that, madam. I said I was very sure he would not come back and claim this money that is to be paid over to your husband and his brother and sister. Dead or alive, he has no further power over that money now."

"Oh-h!" breathed Mellicent. "Then it is—ours!"

"It is yours," bowed the lawyer.

"But Mr. Smith says we've probably got to pay a tax on it," thrust in Mrs. Jane, in a worried voice. "Do you know how much we'll have to pay? And isn't there any way we can save doing that?"

Before Mr. Norton could answer, a heavy step down the hall heralded Mr. Frank Blaisdell's advance, and in the ensuing confusion of his arrival, Mr. Smith slipped away. As he passed the lawyer, however, Mellicent thought she heard him mutter, "You rascal!" But afterwards she concluded she must have been mistaken, for the two men appeared to become the best of friends. Mr. Norton remained in town several days, and frequently she saw him and Mr. Smith chatting pleasantly together, or starting off apparently for a walk. Mellicent was very sure, therefore, that she must have been mistaken in thinking she had heard Mr. Smith utter so remarkable an examination as he left the room that first day.

During the stay of Mr. Norton in Hillerton, and for some days afterwards, the Blaisdells were too absorbed in the mere details of acquiring and temporarily investing their wealth to pay attention to anything else. Under the guidance of Mr. Norton, Mr. Robert Chalmers, and the heads of two other Hillerton banks, the three legatees set themselves to the task of "finding a place to put it,' as Miss Flora breathlessly termed it.

Mrs. Hattie said that, for her part, she should like to leave their share all in the bank: then she'd have it to spend whenever she wanted it. She yielded to the shocked protestations of the others, however, and finally consented that her husband should invest a large part of it in the bonds he so wanted, leaving a generous sum in the bank in her own name. She was assured that the bonds were just as good as money, anyway, as they were the kind that were readily convertible into cash.

Mrs. Jane, when she understood the matter, was for investing every cent of theirs where it would draw the largest interest possible. Mrs. Jane had never before known very much about interest, and she was fascinated with its delightful possibilities. She spent whole days joyfully figuring percentages, and was awakened from her happy absorption only by the unpleasant realization that her husband was not in sympathy with her ideas at all. He said that the money was his, not hers, and that, for once in his life, he was going to have his way. "His way" in this case proved to be the prompt buying out of the competing grocery on the other corner, and the establishment of a good-sized bank account. The rest of the money he said she might invest for a hundred per cent, if she wanted to.

Jane was pleased to this extent, and asked if it were possible that she could get such a splendid rate as one hundred per cent. She had not figured on that! She was not pleased later, when Mr. Norton and the bankers told her what she could get—with safety; and she was very angry because they finally appealed to her husband and she was obliged to content herself with a paltry five or six per cent, when there were such lovely mining stocks and oil wells everywhere that would pay much more.

She told Flora that she thought she ought to thank her stars that she had the money in her own name, to do just as she pleased with, without any old-fogy men bossing her.

But Flora only shivered and said "Mercy me!" and that, for her part, she wished she didn't have to say what to do with it. She was scared of her life of it, anyway, and she was just sure she would lose it, whatever she did with it; and she most wished she didn't have it, only it would be nice, of course, to buy things with it—and she supposed she would buy things with it, after a while, when she got used to it, and was not afraid to spend it.

Miss Flora was, indeed quite breathless most of the time, these days. She tried very hard to give the kind gentlemen who were helping her no trouble, and she showed herself eager always to take their advice. But she wished they would not ask her opinion; she was always afraid to give it, and she didn't have one, anyway; only she did worry, of course, and she had to ask them sometimes if they were real sure the places they had put her money were perfectly safe, and just couldn't blow up. It was so comforting always to see them smile, and hear them say: "Perfectly, my dear Miss Flora, perfectly! Give yourself no uneasiness." To be sure, one day, the big fat man, not Mr. Chalmers, did snap out: "No, madam; only the Lord Almighty can guarantee a government bond—the whole country may be blown to atoms by a volcano to-morrow morning!"

She was startled, terribly startled; but she saw at once, of course, that it must be just his way of joking, for of course there wasn't any volcano big enough to blow up the whole United States; and, anyway, she did not think it was nice of him, and it was almost like swearing, to say "the Lord Almighty" in that tone of voice. She never liked that fat man again. After that she always talked to Mr. Chalmers, or to the other man with a wart on his nose.

Miss Flora had never had a check-book before, but she tried very hard to learn how to use it, and to show herself not too stupid. She was glad there were such a lot of checks in the book, but she didn't believe she'd ever spend them all—such a lot of money! She had had a savings-bank book, to be sure, but she had not been able to put anything in the bank for a long time, and she had been worrying a good deal lately for fear she would have to draw some out, business had been so dull. But she would not have to do that now, of course, with all this money that had come to her.

They told her that she could have all the money she wanted by just filling out one of the little slips in her check-book the way they had told her to do it, and taking it to Mr. Chalmer's bank—that there were a good many thousand dollars there waiting for her to spend, just as she liked; and that, when they were gone, Mr. Chalmers would tell her how to sell some of her bonds and get more. It seemed very wonderful.

There were other things, too, that they had told her—too many for her to remember—something about interest, and things called coupons that must be cut off the bonds at certain times. She tried to remember it all; but Mr. Chalmers had been very kind and had told her not to fret. He would help her when the time came. Meanwhile, he had rented her a nice tin box (that pulled out like a drawer) in the safety-deposit vault under the bank, where she could keep her bonds and all the other papers—such a lot of them!—that Mr. Chalmers told her that she must keep very carefully.

But it was all so new and complicated, and everybody was always talking at once, so!

No wonder, indeed, that Miss Flora was quite breathless with it all.

By the time the Blaisdells found themselves able to pay attention to Hillerton, or to anything outside their own astounding personal affairs, they became suddenly aware of the attention Hillerton was paying to them.

The whole town was agog. The grocery store, the residence of Frank Blaisdell, and Miss Flora's humble cottage might be found at nearly any daylight hour with from one to a dozen curious-eyed gazers on the sidewalk before them. The town paper had contained an elaborate account of the bequest and the remarkable circumstances attending it; and Hillerton became the Mecca of wandering automobiles for miles around. Big metropolitan dailies got wind of the affair, recognized the magic name of Stanley G. Fulton, and sent reporters post-haste to Hillerton.

Speculation as to whether the multi-millionaire was really dead was prevalent everywhere, and a search for some clue to his reported South American exploring expedition was undertaken in several quarters. Various rumors concerning the expedition appeared immediately, but

(Continued on page 29.)

DO ANY BUILDING IN 1923?

REPORTS have been circulated that the farmers of Michigan did little building during 1923. We want to determine whether this report is true or not and we are coming to you to find out. We will pay $1 apiece for all photos of Michigan farm houses or barns built during last year, that we print in The Business Farmer. Take a picture of that new house or barn—a snapshot will be satisfactory if clear enough—have a good print made and then send it to us stating when the building was put up, and the cost. Also be sure to give your complete name and address. If we can use your photo we will pay you $1 for it but if we cannot you may have it returned if you wish. Try and send your picture in within the next two weeks.

"Buy Early!" says Sharood

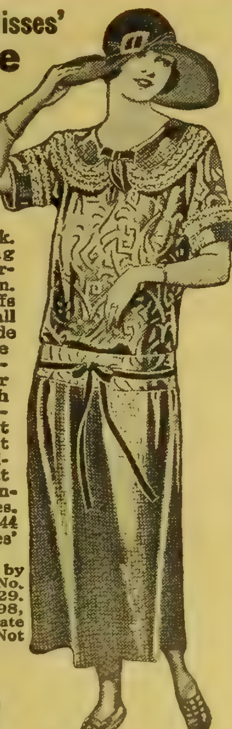
Advance Spring Styles at the World's Lowest Prices

Here is the very first showing of assured spring styles—fashions that are bound to be popular this season—and everything offered at amazingly low introductory prices. Sharood says: "Buy Now!" Buy at Lowest Prices in America—GUARANTEED. Remember, you can order on approval—you can actually see and try on everything you select. If not delighted with the styles and astounded at your saving, return the goods and you will not lose one cent

Satisfaction Guaranteed or Money Back

Merely give name and number of each article you want. Also state size, and write your name and address plainly to avoid delay. Send only the amazing bargain price and few cents postage mentioned in each description. When goods arrive, examine them carefully. If not delighted with your bargains, return goods and we refund your money instantly. Order Now—Today! Shipment positively goes forward within 24 hours of time we receive your order.

Women's and Misses' Silk Crepe Frock



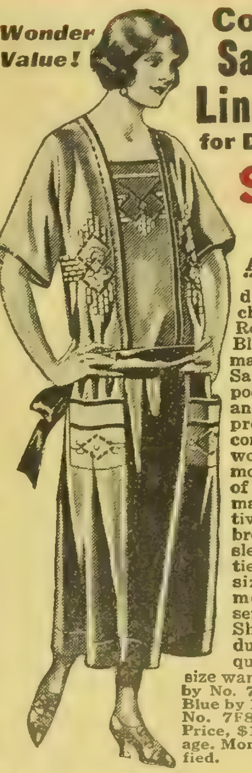
$4.98

You'll be delighted with this lovely frock. It's a new charming style creation and a marvelous Sharood bargain. Skirt, collar, and cuffs are made of heavy all Silk Crepe. Bodice made of silk and cotton crepe in fancy pattern of contrasting colors. Collar and cuffs edged with rows of ecru lace. Slipover style. Finished at neck with black velvet ribbon bow. Black velvet sash with bow at waist-line. Comes in unusually pretty shades. Women's sizes, 34 to 44 bust measure. Misses' sizes, 32 to 38 bust.

Order Copenhagen Blue by No. 5F7525. Brown by No. 5F7527. Grey No. 5F7529. Send Bargain Price, $4.98, and 13c for postage. State size. Money Back if Not Satisfied.

Combination Sateen and Linene Dress for Day-Time Wear

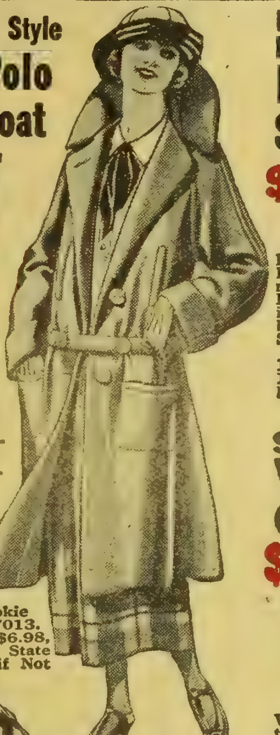
Wonder Value!



$1.98

A very charming and "different" dress for day-time wear, in choice of Tangerine, Rose or Copenhagen Blue top. The skirt is made of lustrous Black Sateen, with large patch pockets of same color and material as waist, prettily decorated with contrasting tops and wool embroidery to harmonize. The blouse is of solid color Linene made especially attractive with wool hand embroidery. Novel Vestee sleeves. All-around belt ties in back. Women's sizes, 34 to 46 bust measure. A simply sensational bargain at Sharood's low introductory price. Order quick! Be sure to state size wanted. Order Tangerine by No. 7F8041. Copenhagen Blue by No. 7F8042. Rose by No. 7F8043. Send Bargain Price, $1.98, and 6c for postage. Money Back if Not Satisfied.

An Ultra-Smart Style All Wool Polo Chappie Coat For Women and Misses



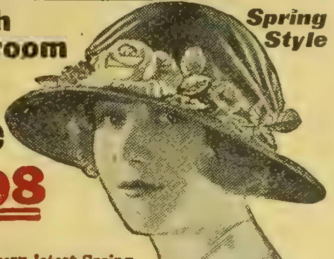
$6.98

Made of fine quality All Wool Polo with mannish collar and reveres, and raglan sleeves. Has 4 pockets, 2 muff and 2 side pockets. Belt all around. Inverted pleat in center of back. Length 38 inches. A very stylish coat and a very practical one for spring wear. Buy it now at our special money-saving price. Women's sizes, 34 to 44 bust. Misses' sizes, 32 to 38.

Order Tan by No. 5F7011. Order Rookie Brown by No. 5F7013. Send Bargain Price, $6.98, and 14c for postage. State size. Money Back if Not Satisfied.

French Mushroom Poke Shape

Spring Style



$1.98

Here's the very latest Spring Hat Style. Fetching French mushroom poke with shirred back. High lustre Baronette satin crown, hand draped. Brim is of the very newest French Visca cloth trimmed with beautiful floral wreath and foliage in many contrasting Spring colors. Made in 3 very popular shades for Spring.

New Book of Latest Styles and Bargains Mailed Every Six Weeks

Your order from this advertisement brings you our beautifully illustrated 120-Page Bargain Book of Early Spring Styles, fresh from the presses, and offering matchless bargains in everything to wear for every member of the family. Not only this, but we will also send you, *regularly, every six weeks,* the latest issues of our Bargain Catalogs as they appear. In this way we will keep you in constant touch with the latest fashions and the most attractive bargains of the moment. You can readily see the advantages of Sharood's plan of sending you smaller books frequently, over the policy of other houses who send you, but once or twice a year, a big catalog that takes many weeks to prepare and often fails to reach you until its styles and prices are entirely out of date. It will take but a glance through this wonderful book to convince you that Sharood's offerings are the very newest—their prices the lowest in America—bar none!

Send Quick! The thing to do now is to supply your immediate needs from this advertisement. These are picked bargains. Order them on approval—even before you get our book, because they are sure to be snapped up quick. Go through these offers—don't overlook a single one. Then, if you don't see here just what you want, your name and address, by post card or letter, brings you the Early Spring Style Book, and also puts you on our mailing list to receive the regular Sharood Bargain Catalog every six weeks. Act Now—take advantage of these phenomenal bargains.

Get Those Extra Bushels per Acre

Every seed is planted to best advantage and fertilizer placed where the growing crop easily gets the additional plant food which makes a bigger yield of better grain from the same field when you use a

John Deere-Van Brunt Grain and Fertilizer Drill

Plants seed properly—the famous Van Brunt adjustable gate force-feed compels seed to flow from grain box in even, continuous streams—no clogging or bridging—no seed or ground wasted. Finger-type feeder wheels handle fertilizer just as positively. Metal seed tubes and closed disc boot delivery protect seed until it reaches bottom of seed furrows of equal depth—an even stand of grain, all maturing at one time is the result.

Covers the seed—tilting lever enables you to set disc boots to plant and cover seed at the desired depth under all field conditions.

The discs pulverize the soil and make a good seed bed because set at the proper angle. They run easily and properly because equipped with dust-proof, oil-tight bearings that are guaranteed to last. Scrapers keep the discs clean.

Standard sizes and styles. Tractor hitch and grass-seeder attachment extra.

Get your share of increased yields per acre this season by using a Van Brunt Drill. Sold by John Deere dealers. Write today, address John Deere, Moline, Ill., and ask for free Booklet VD-633

What the Neighbors Say

SALE OF CHRISTMAS TREES

TO stop the waste of Christmas trees let the State Board of Conservation prepare a bill that can be made a state law, and this law would be that no person could sell or place on the market any trees without possessing and showing a certificate to show his ownership of the trees, whether they were produced on his own land or he purchased them from some other party. Such blank certificates would be obtainable at the country treasurer's office and filled out by the owner of such land where trees were cut naming township and county and giving a description of the land. This would stop the timber thieves. They could not sell or show how they obtained possession of the trees.

This lawless type of men broke all records last December. I own a tract of 200 acres, enclosed with a barb wire fence. Where the fence was in their way they tore it down and took what trees they wanted. They even took some of the trees I had cut ready to load and ship. I caught six in one day and there were some I did not get. I supposed they wished me a merry Christmas in not getting caught.—C. H. Anschulz, Iosco County, Mich.

MAKE CLEAN COW BARNS MATTER OF LAW

DEAR EDITOR:—Might I have the use of a little space in these columns in behalf of the dairy industry?

First let us deal briefly with the tubercular testing that is going on in our state. We hear among farmers that there are threats of what they will do when the tester drives in their yard, others tell you that if any of their cattle are tested out they wont get rid of them and will use the milk of condemed cows and so on.

Having been a loser of some of my best cows in the T. B. test all I have to say for these men is that if they have any reacters they will do just like all the rest of us do.

Second, Mr. Editor, and M. B. F. readers let us turn our attention to the sanitary conditions of the barns and surroundings of the milk producing herds of our state of Michigan.

Where are our laws on sanitary inspection of our dairy business? Have we any laws protecting any herds outside of a few special herds close to the city and town that consume milk from wagons?

What on earth is the matter with our law makers they enact a law that costs the state and farmers a mint of money to clean up the T. B. and in so doing clean up the milk so far as T. B. is concerned which in my mind is all right for if I have a T. B. cow in my herd I am glad to know it so I will be able to get rid of her as soon as possible.

But will it ever dawn upon the minds of our law makers and upon the minds of the consuming public that there is a necessity of cleaning up the milk after it is drawn from the cow? Let me cite one case I know a man that takes his can and pail out to the cow barn in the evening—a barn that to be safe in you must wear rubber boots, filth in a deplorable condition—he sets the can behind the cows, milks and pours, not strains, the milk in the can, lets it set all night, milks the same way in the morning and takes the can to the road for the milk truck. This herd passed the T. B. inspection. Another case close by: here when the cows step around on the plank floor the liquid manure will shoot up between the plank. This man sells milk and his herd passed the T. B. inspection.

Now in my own barn I have always taken pride in its cleanliness. In winter I clean my barn two and three times a day. The manure goes in the spreader and direct to the field; in fact I would rather eat and sleep in my cow barn than in certain houses. The result is that

(Continued on Page 31)

Few Farmers Attend Sugar Beet Meeting

THE third annual meeting of the men interested in the sugar-beet industry in Michigan called and handled by the Michigan Agricultural College during the week of January 21 to and including January 25 was well attended by representatives of factories including men from Canada, Ohio and Indiana. Most factories brought their entire staff of field men and the total number present ran around 400. The total number present last year was 250.

It is a lementable fact that the men that pay much of the taxes in the support of the M. A. C.; those that need the information furnished, the dirt farmer, was not in attendance and on this account the M. A. C. lost a great chance to give to Michigan the real worth of its efforts, which were given throughout the past year. If the farmers and their organizations had participated in this meeting great benefits besides actual knowledge of beet culture could have been gained. One in particular that I have in mind is that the farmers could have met with the factory men and I am sure that had they done so both would come to the conclusion that the other was not after all such a freak of nature.

The first two days, the 21st and 22nd, were given over to meetings of the experts of the U. S. Government and the several states attending.

Wednesday, January 23, saw in attendence a big representation of factory men and their field men, nearly filled room 402 of the agricultural Building. Prof. J. F. Cox, chairman, called the meeting to order presenting Mr. E. B. Hill, M. A. C., who gave the address of welcome. The program was carried out on time and ably handled by the various men having the carious topics in charge.

On account of the actual growers of beets not being represented at this meeting I wish to present a few out standing facts as they appeared to me. First, it appears that Michigan beets are not infested with curly top a plant disease caused by the leaf hopper which causes great damage to beets in the west, the disease not having been seen east of the Mississippi River. About the only serious disease that Michigan beets are infected with is blight or leaf spot which is a fungi or mold growth which is favored in its growth by damp weather condition. This is also true of the disease known as "Black root" which is spread largely thru the seed from year to year. Good culture, good drainage, and early planting securing an early vigorous growing plant is about the only practical solution of these diseases.

It was shown by Dr. Carsen that in the west vast sections had become so infested with curly top and Vematode, a parasite or worm that works in the small beet roots, that the culture of sugar beets had to be given up, The Vematode condition being the worst where beets have followed beets for a period of 10 years or more and the control of which consisted in crop rotation. Very interesting pictures were shown showing the effect of these diseases.

From all experiences in using fertilizers in various quantities, sown in various ways and at various times not much benefit could be seen on the average of the sugar content nor of the purity, Experiments were carried on as to the effect of fertilizers on various soils sown various ways in various amounts from 150 pounds to 1000 pounds per acre, and taken as a whole these tests show that the best results were secured by sowing from 150 to 200 pounds of good fertilizer with the seed, as good or better increases intonage was secured with these amounts as where larger amounts were sown. It was shown that a fertilizer high in vitrogen and Phos. Acid was better than one exceptionally high in potash, and deficient in Nitrogen and Phos. acid.
—C. E. Ackerman.

UNCLE RUBE SPINACH SAYS

HIT AN' MISS ETC.

WELL, now 'at our New Year res'lutions, like the baby's toys is mostly broken, let's git right down to carpet tacks an' talk 'bout other an' less serious things. O' course I know the good res'lutions wuz made in good faith, 'aint no doubt about it, an' so's the promises of our congressmen—both made to be broken. A baby toy, if it last forever would soon put every toymaker in the world out o' buz'ness. They break, more has to be made, an' more is bought. An' so the world goes on. If every good res-'lution made on New Year's wuz kept we wouldn't have to die to get to heaven, an' if there wuz no breakin' of the laws there'rd be no use for prisons or jails.

Its fine an' nice to think of all these things after we've made our res'lutions, promises an' everything. 'Course, we've seen 'em busted up—broken an' smashed all to flinders an' yit we kind'a cherish 'em 'cause we made 'em. An' folks'es we made 'em all in good faith, didn't we now?

Here's some of 'em: no smoke, no drink, no gittin' mad, no steppin' aside from the marriage vows, no gossip (this applies to one sect only—maybe to the insect—no matter). We know there wuz a quite a few things we could of swore off of an' made us no worse. Well, now for instance, we could of cut out congress an' the special session of our own legislatur'—neither has ever cut much figger. An' then a mother-in-law, she could be elim'nated if we didn't git married. Personally now—its jest me you know—some times I think the mother-in-law is the real thing. Mebbe better'n the offspring—'member I sed mebbe.

Oh well, folks, here's a hard thing to write 'bout an' I'm sweatin' awful as I tackle it 'cause its an awful smart man I'm goin' against—Mr. Martin, (If you know who I mean) President of the Common Scoundels—mebbe they call 'emselves Council—no matter, 'sall the same to me.

Any ways an' always Mr. Martin, of Detroit, president of the what every they are, sez, the dry law is plungin' the country into a wave of crime. I agree with him absolutely. If there weren't any laws there wouldn't be any crime. Crime is the breakin' of the laws—always.

Mr. Martin sez, "Either amend or repeal the law." I agree with Mr. Martin, who ever he is. Repeal it sez I—repeal 'em all! There's a law agin murder, broken a dozen times a day. There's a law agin bigamy, agin adultry, agin gamblin'. Oh, there's lots of laws! A law agin robbery, a white slave law, a hold-up law—more laws 'an we know what to do with—all broken a hundred times a day. Let's amend 'em or let's repeal 'em. All of these laws are broken—yes day after day. But the prohibition law, poor little thing—broken, yes, sure its broken. But why jump onto this little law an' call for a repeal or an amendment an' let all the bigger laws go on jest as they are?

I wuz out to Amos Spriggins' a few days ago an' we got talkin'—Uncle Amos likes a little swig you know—an' I sez, sez I, "Uncle Amos, what is your candid opinion 'bout the Volstead law an' how do you like it?" "Well," he sez, "I tell you, Rube, I think ol' Volstead wuz jest gittin' over a drunk when he got that law through but he's made a dry man of me alright."

And then I asked him how he would fix things up, an' he said, "Waal, I'll tell you, I'd repeal all the laws, make whiskey free, set it out in barrels with tin cups onto 'em an' cards invitin' everybody to drink all they wanted." With a little wink in his eye, an' pullin' a few grasshoppers out of his whiskers he sez "Don't you see, Rube, 'at 'uld make dry men of 'em in jest no time at tall.

An' folks ain't it so? More drunkness they tell us then when whiskey flowed everywhere. An' yet it must be in cellars or some place. We don't see it on the street. Let the heart control sez the preachers—some of 'em—set a barrel of liquor out an' let your appetite take you home—Oh—what a task—what a gall a man must have to preach such stuff—By making it plentiful stop consumption. It's to laugh an' laugh hard. Isn't it now? Cordially yours.— UNCLE RUBE.

RENFREW Truck Scales
$17.50 After Trial
The first time the famous Renfrew scales have been offered on such liberal terms.
A portable weighing machine as easily handled as a wheelbarrow, weighs with absolute accuracy anything from one pound to 2000 pounds. Guaranteed to be the equal in capacity and accuracy of any farm scale, regardless of price.

Once Again—at Your Door

The Opportunity for You to Save Money
Ward's new complete catalogue for Spring and Summer is now ready, and one free copy may just as well be yours.
The opportunity for Saving is at your door. It is for you to give the answer. Will you, too, save money this Season on everything you buy?
How Ward's Low Prices Are Made
Over 100 expert buyers have been at work for months finding and making these Ward bargains for you. Fifty million dollars' worth of merchandise has been bought whenever and wherever prices were lowest. Vast amounts of ready cash have been used to make possible for you and your family this great opportunity for saving.
"Ward Quality" is Your Assurance of Reliable Merchandise
Ward's is a money-saving house. We make low prices. But there is one thing always to remember when comparing prices. We sell only merchandise of "Ward Quality."
We sell only the kind of merchandise that will give you satisfaction—that will stand inspection and use. We do not sell "cheap" goods. We sell good goods cheap. At Ward's we never sacrifice quality to make a low price.
And that has stood as our governing policy for fifty-one years.
Everything for the Home, the Farm and the Family
FOR WOMEN: Montgomery Ward's first catalogue contained mostly things for women. So for 51 years our best efforts have been given to the woman's and young woman's needs and wishes. And so in New York our own Fashion Experts live and work to buy the best New York styles for you. You can get at Ward's the best and newest styles in garments with the utmost wearing quality without paying the usual "Fashion profits."
FOR THE HOME: All over America thousands of homes have been made beautiful, comfortable and convenient by articles bought from Ward's. Our experts are practical artists in home furnishing. Here in this catalogue you will find everything new for the home, everything beautiful, and everything at a saving.
FOR THE FARM: We know the farmer's needs. We have studied them for over half a century. And so we can say to everyone on the farm that at Ward's everything for the farm is intelligently chosen with practical knowledge of its use. Fencing, hardware, roofing, tillage tools, tires and everything for the automobile—of reliable quality is offered at a big saving.
FOR MEN: Suits, overcoats, shoes, everything the man, young man or boy wears can be bought at Ward's not only at a saving, but with assurance of satisfactory service in everything you buy.

THE INWORKED LIFE

A SERMON BY REV. DAVID F. WARNER

TEXT: "Have this mind in you, which was also in Christ Jesus." Philippians 2:5.

"THIS mind in you" is our clue. In the context (Phil. 2:1-11), is stressed, MIND; a loving, compassionate, unselfish mind. This teaching has to do with the inward man. This is primary and creative. Jesus insists on the inworked life. "The Kindgom of heaven is within you, " says he. "Be ye transformed by the renewing of your mind," says Paul to the Romans. This is the only rational way to the unselfish life. But the church would be loath to admit what a large field she is tilling in selfish interests. So would individual christians. Our civilization has made rid of the open saloon and other of the large evils; but not yet this corporation getting of gain out of the blood and oppression of our fellow men. All this is cruel and colossal selfishness. But this unrenewed mind breaks out in our local business competition, and in the home and community life, where it is most offensive of all. Bad odors in close and intimate quarters become nauseating. And how possible even, to find a selfish love of one's acts in the kindnesses performed along the dusty ways of life!

Having to do with this innate evil, the apostle sets as the corrective, the person and life of Christ. Unlike the proud Herods and Capernaums of his day, Jesus Christ chose to humble himself as a servant, tho it meant death. So did Ghandi of our own day, and now he languishes in an English prison. Verily, what a price we sometimes must pay, when there is a bold, reasoned purpose of mind to keep to the royal way, "taking the form of a servant!" Yet, the world has forged so far ahead in Christian democracy, that to be loved by the people, is to make oneself their servant: to empty oneself for their sake.

"Have this mind in you, which was also in Christ Jesus." "Christ shall be manifest in my body." This was the apostle's ideal of faith and service. Now, the Philippian church had faith. It believed in Christ; but it was a factional belief. Cf Phil. 1:15-17. Paul would expel this spirit of discord by emphasizing "one accord," and lowliness of mind," which is the mind of Christ. Yes, and the American church believes in Christ. But, shame, what factions! And note all this unholy squabble by the so-called Fundamentalists and Modernists over matters upon which Jesus was silent. How unloving and humiliating! And how foreboding, seeing we need the defense of a united church to hold back the chariots of war which we hear rumbling in the distance! The faith of our churches needs yet to be made perfect thru a united service, and this service made perfect thru a "lowliness of mind."

But, you say, we are doctrinally strong. We have an orthodox belief. Yes, but there is no more dangerous unbelief than that which accepts without question, the Christian doctrines, and yet, the life is slack and idle. A foreign missionary recently reported these words from a "well-educated, Hindu gentleman:" "You (Christians) not only do not practise the principles of Jesus Christ, but have actually forgotten them, while we India people are proud that we are the real Christians of today." And, says the missionary, "Are we too hide-bound on the one hand, and too cowardly on the other, to win these leaders to Christ?" But, I am sure we are too slothful and selfish. We want a system of belief and discipline that requires little thot and no change, and that carries us along easily to the Paradise of God. This is the tragedy of the church today. Her leaders would have God drive off the Canaanites and all the other "ites," while they battle over cemeteries of dead traditions. And, "Like priest, like people."

Take note, that Paul's point of appeal is, to have the mind of Christ, which according to verse three, is "doing nothing thru faction or vainglory." The animating principle of faction is to set ourselves against a brother or neighbor, to delight in contest or combativeness in order to gratify pride. But would you humiliate an opponent? Then don't antogonize. Work into your life the mind of Christ. This mind would pour on "coals of fire." Why, don't you know that heat softens native ores so that the good runs together into one and the slag into its own place? Visit the foundry at once and then fire up the furnace of love, and behold, a miracle has been worked in your "earthen vessels."

"Or vainglory." Don't put too great an emphasis upon yourself. This does well enough for worldlings but not for Christians. Christianity depends for its progress and harmony, upon the carrying out of this principle. Even your opponent has some unseen and unmeasured good. At least it is a precarious thing to get into the habit of judging other folks. Why not wait for a higher judgment? It was the arrogance and high-mindedness in the fair garments of religion that was making trouble at Philippi. And at times today, these things run riot among God's people. It is a terrible thing to thus dissipate the sacred privileges of our holy religion.

Now, the mind of Christ emphasizes unity, "one accord," "one mind." Work these in. But, may we have no honest differences of opinions? Certainly, we have such. Because of differences in temperament and training, differences in opinion are inevitable. And yet, how nearly we might agree were we sincere and loving enough. And this unity is to be brough about by the inworked mind of the Master. The author of our text preserved this ideal for himself even to the last resort of separation. And what were they to do about it? They parted peaceably and understandingly, each to carry out his own plans. They did not break the "right hand of fellowship." See Gal. 2:9. Now, this arrangement was, emphatically, a less offense against Christian charity, than to persist in keeping up bitterness and strife. These men had the mind of Christ inworked.

Whenever and wherever, Christian leaders quarrel over matters of externals, and even to the point of acrimony; then and there, truth is sacrificed, love cools, life dies out, and the world gleefully remarks, "How these Christians hate one another." Instead of spending our energies on useless disputes, let us spend them in behalf of the unsaved masses, who have not yet come into the glories of the Christian day. While sick people are dying all around us, let not the physicians by the bedside, quarrel over the merits of different medical schools.

When the spirit of unity comes into a soul or church, it is inworked. It comes from above. Discord comes from below. The more carnal a Christian is, the more contentious and divisive he is. But the more spiritual he is, the more loving, forbearing, and self-renouncing. Of course, the same is true of a church. When religion is lowest, what happens? Go down to the Atlantic coast when the tide is out. There you will see many little fishes, all snug and content in their little, separate puddles. And so it is when the religious tide is out. There are many sects and divisions—now about two hundred—each counting their communion for themselves as the nearest to the mind of Christ. But the ocean of God's redeeming love is coming in. The tide is flowing. Spiritual unrest is general, and every ripple of influence, and every wave of social progress, is telling us that the great, boundless sea of Christianity is coming in to engulf all the little religious pools, and then all the saints will be at home in the glad waters of eternity. "Where Jesus it, 'tis heaven," says the hymnist. Happy the Christians that are being baptized in the tide of a new love and a new inworking of the mind of Christ.

BE VERY CORAGEOUS:—Only be thou strong and very corageous, that thou mayest observe to do according to all the law. * * * that thou mayest prosper withersoever thou goest.—Johua 1:7.
14:6.

MICHIGAN CROPS

SOYBEANS FOR HAY

We have a clay and gravel soil, and what soys would be best for this kind of soil, and which is the proper way of handling them for hay? At what stage should they be cut for hay? In cutting them for hay should they be raked up before they are cured and put in weather piles to cure or not? Is it best to rake them on windrows to cure? Is it a good feed for horses or for cattle mostly? What is the proper way to sow them for to raise seed flour, drilled or planted in rows? Can they be threshed with a common grain separator? What benefit are they to the soil? Are they as valuable to the soil as red clover? Is there most always an active market on soys raised for seed?—J. A. Y., Burr Oak, Mich.

—Under conditions such as you describe, I am certain that you will find the Manchu soybeans very satisfactory either for hay or seed purposes. In growing for hay, they may be planted at the rate of from two to three bushels per acre with an ordinary grain drill, provided your land is free of weeds, Pigeon grass, or Quack grass. Usually soybeans can be planted in this manner with the greatest success after a carefully cultivated field of corn, potatoes, or beans. On ground which is inclined to be weedy, it is advisable to plant in rows twenty-eight inches apart, cultivating at least twice. A grain drill can be used for planting. Every fourth drill hole only should be allowed to run seed.

The planting time for soybeans ranges from May 15th to June 15th in your locality. The early plantings in that range usually give best results.

Soys should be cut for hay when the pods have formed and are beginning to fill. Soybean hay is cured in much the same way as alfalfa hay is cured. The crop should be allowed to wilt in the swath for from four to eight hours, according to the weather, and thrown into windows before the leaves have had a chance to be come dry and powdery. In good weather curing can be accomplished in windrows with one or two turnings. During threatening weather, it is advisable to throw into small cocks, which can be opened for drying, if wet by rain, and rebuilt.

Soybean hay makes an excellent feed for cattle and sheep and can be fed with success to horses. It is not as good as alfalfa or clover hay for horses, owing to its more stemmy nature. In feeding horses, from one-fourth to one-half of the ordinary hay ration may be made up of soybean hay with good results.

In handling the crop for seed purposes, it should be planted in rows twenty-eight inches apart, giving clean cultivation in much the same manner as corn is cultivated. The crop is cut for seed, when ripe, with mower equipped with buncher attachment. Care should be taken to handle in the early morning when wet with dew and before the pods have become over-ripe and reach the shattering stage. The common grain separator can be used for threshing with proper adjustments. Usually every other concave is removed when threshing beans.

If a soybean crop is pastured off or turned under, the soil is markedly benefited. The value of turning under a crop of soybeans, which would produce a ton and one-half or two tons of dry hay, is practically equivalent to the value of turning under a good crop of red clover.

There is a good demand for Michigan grown soybeans of the Manchu and Ito San varieties, since growers are learning the necessity of getting adapted seed. Yields of from fourteen to twenty-six bushels can be expected, according to the season and fertility of the soil.

Soybeans provide valuable hog feed, particularly when hogging off in connection with corn, or when ground and fed with corn. I am requesting Professor G. A. Brown of the Animal Husbandry Department, M. A. C., to inform you in regard to a ration, including soybeans, for hogs.

Circular 100 of the Michigan Agricultural College gives full information in regard to the growing of soybeans for hay and seed.—J. F. Cox Professor of Farm Crops, Michigan Agricultural College.

A LONG TIME INVESTMENT

Every Dodge Brothers Sedan body is steel built throughout—sills, pillars, panels, frames and all.

This all-steel design—exclusively a Dodge Brothers feature—possesses certain practical advantages which recommend it most emphatically to the closed car buyer.

It reduces cost, assures a structural precision which is particularly evident in the snug fit of doors and windows, and results in a staunchness of construction which guarantees to the owner a long time investment—and a long time satisfaction.

The price of the Type-A Sedan is $1385 f. o. b. Detroit

"The Farm Paper of Service"

THE TEMPEST IN A TEA-POT

JUST now the newspapers are blazing forth in giant headlines the flagrant abuse of high office, even perhaps the betrayal of our government in the leasing of Tea-Pot Dome and other oil reserves to private corporations. From the facts already disclosed it is apparent that the interests of the government which had lent Secretary Fall high responsibility and trust, were made subservient to his personal interests.

Coming as this does at a time when President Coolidge was building by conservative and modest efforts a respect for Washington which it has not occupied in the public mind for many, many years is most unfortunate. That the disclosures will have a marked effect on the forthcoming election must be apparent.

In time of war, if a soldier on sentry duty guarding only a few hundred dollars worth of government property, were to be found asleep, he would be subject to court-martial and perhaps death. Tired and exhausted tho he might be from the day's march, young and unmindful of his responsibility as he might be, none of these things would protect him from the penalty of his neglect of duty. There are soldiers who fought in the trenches in Flanders who have spent long years in our own government prisons for such petty crimes where the effect was no more actually than the possibility of what might have happened to the property they were responsible for.

How then can we bespeak leniency for the man in high-office who betrays his trust to the government in matters that concern millions of dollars?

And are not those who tempt the public official into such a position making themselves equally liable to punishment?

Giving aid or comfort to the enemy is high treason, in time of war. Those who would profit at the expense of the government in times of peace, are they any less guilty of high treason?

GIVING THE FARMER REAL HELP

IF some of the would-be spokesmen in congress would turn their attention to the actual needs of the farmer today and analyze them they would find, we think, that in the real agricultural heart of the United States, which includes the great central section largely east of the Mississippi river, the real need is in labor for the farm, rather than extended credits.

For some weeks back, on this page, we have been pointing out that the present system of restricted immigration has worked a hardship on the farmers of this country which can hardly be measured, it has been so far-reaching.

With industry issuing the siren-call of high wages, and the available supply of farm labor in states like Michigan, is so negligible that the average farmer has almost given up in despair trying to get efficient help at a fair wage to help him in the arduous work of his farm.

It ought to be apparent that the farmer cannot compete with the factory which offers more money and shorter hours, nor can he attract to the farm men or boys who have been educated in city ways.

There ought to be some means of attracting to this country large families of worthy peasants from the agricultural sections of Europe, who pressed by present economic conditions there, are begging for admittance to our shores. The type we refer to would not, contrary to what some would have us believe, settle only in the cities and thus compete only with the laborer in industry. The Department of Agriculture could, it seems to us, work out a plan of distribution of these immigrants which would move them directly from Ellis Island to the farms where they are needed.

Quite recently Philip W. Henry, in an address in New York, pointed out the fact that the United States has actually lost more laborers, who have returned to their native lands, than have entered. "In view of the loss," said Mr. Henry, "that our country has sustained during the last 10 years in the emigration of laborers and of the disinclination of our native population, including children of immigrants, to enter this field, it is evident that the present law should be liberalized.

"It is not generally known how much our immigration has fallen off from pre-war days, when it averaged over a million gross and under a million net per year. For the fiscal year 1922 the net immigration was only 110,844, of whom 76,106 were people of no occupation, including women and children. For the fiscal year 1923 the figures were 441,469 and 166,345, respectively.

These figures ought to prove what has been happening to farm labor, in addition to the other attractions which industry has offered to steal the help needed by the farmer.

The fact is also, that the type of peasant who goes to work on the farm has one ambition and that is to own land in America. He adopts quickly the living conditions which his environment, in daily contact with the American farm family, give him in contrast to the segregation among those of his own kind who form their communities in industrial centers.

His children, growing up in the healthy American environment of the rural school, become the citizens of whom we are proud and never know the call back to the country from whence they came. The peasant who comes to us from the agricultural centers of Europe is the best class of immigrant we can attract to our shores and that some recognition of this fact is not made by our representatives at Washington is the worst crime against the farmer of which they are to-day guilty.

COUNTRY FAIRS PROMISE TO CLEAN-UP

FOLLOWING in the-footsteps of their illustrious leader, the Michigan State Fair, the county fair managers in their recent meeting at Lansing went on record as promising a clean-up of the mid-way which will mean the complete elimination of the "snake-eater," the "Egyptian dance" and the gambling devices which have long attracted the undesirable attendants and been an eye-sore and a contamination to the better element of every community.

THE BUSINESS FARMER led last year in a concerted effort along this line sponsored by George W. Dickinson, manager of the state fair at Detroit and with the full approval of the board of fair managers. The gratifying results were shown at the 1923 fair and the predicted loss of revenue to the fair was far surpassed by the receipts from more worthy sources.

There were fairs conducted in Michigan last year which were hardly more than traveling carnivals of vice and that they should have been supported in any way by the funds set aside by the state for the promotion of agriculture was a shame and a disgrace.

The fair managers themselves are the ones to insist on a clean-up this year and they alone can make it possible. Their complaint of a digression from the self-adopted rules which they have laid down for the conduct of all fairs in Michigan during 1924 should result in the immediate cutting-off of the offending fair association from the funds provided by the state.

The manner of handling and awarding premiums was also discussed and some of the more flagrant abuses will be abolished this year. The fairs are an institution of which the community should be as proud as of its schools and when they cease to be such, they are not worthy of the name they bear.

A MORE NATURAL ALLIANCE

WE have continually predicted that because of their divergence of interests the so-called Farmer-Labor alliance could never be made a success. Union labor has only one object, which selfishly worthy as it may be, has nothing in common with what the farmer must accomplish if he would protect his own industry.

The farmer, altho a worker, is not a laborer or an employee. The farmer is a manufacturer and an employer. He is a capitalist, in that he owns his farm-factory and employs labor to make his business profitable. He must invest in raw material and sell it at a profit above his cost of manufacture for the market.

These facts were given significance by the Farmer-Manufacturer meeting held a week or so ago in Chicago and which, though it may not have accomplished all that its promoters would have had it, still laid the foundation for some constructive work which has never before been possible.

In European countries, where the farmer is a peasant, who tills the soil for the benefit of the land-owning aristocracy, there may be some reason for a union between the men who thus are laborers and the laborers who are employed in factories in which they own no interest.

In America, thank God, we have today, no such conditions and with a continuation of American ideal and the proper cooperation of American institutions we shall never have.

That the farmer and the manufacturer found many points of kindred interest is proven by the resolutions adopted at this meeting, for example:

"We approve of cooperative marketing of farm products as offering the most practicable means of stabilizing agriculture on a profitable basis. We urge American universities and colleges, public schools, and especially our state agricultural colleges and agricultural high schools, to establish regular and special courses in marketing and that courses in farm cost accounting be stressed."

With respect to immigration the convention went on record in favor of a "admission of applicants, limited not by numbers, but by quality and in accordance with our economic needs. If a system of national quotas be retained by the present Congress, we favor such flexibility of administration that in time of agricultural and industrial expansion enough may come in, and in time of depression not too many. Selection should be made at the point of origin."

Other resolutions opposed government fixing of prices of agricultural or other commodities; commended the United States Departments of Agriculture and Commerce for the work they are doing in the foreign marketing field; advocated that in the development of power at Muscle Shoals the production of fertilizer be the primary, but not the sole object; favored reforestation; urged general reduction of taxes by all government units; advocated modification of our laws affecting navigation to enable the American merchant marine to operate successfully in competition with the vessels of other nations; favored the development of the St. Lawrence and Lakes-to-Gulf waterways; opposed government ownership or operation of railroads, mines, public utilities, farms or factories; denounced legislative projects designed to impair property rights; opposed curtailment of the power of the Supreme Court and condemned "the proposal to require more than a majority vote of the court to void any act of Congress, which would give the minority a controlling voice."

GOWDY NEW MEMBER OF BOARD

PARTICULARLY will Berrien county farmers be pleased with the recent appointment of Herbert W. Gowdy, of Union Pier, to the state board of agriculture to succeed Jason Woodman of Paw Paw, who was not a candidate to succeed himself.

Representative Gowdy made a good record in the farmers' interests for himself when he filled that office in the state legislature and there is every reason to expect a continuation of this same fidelity to purpose which guided him in then, in this new opportunity which has been awarded him.

The board today faces grave responsibilities and the infusion of new blood will not be amiss, although we do not wish by this statement to cast the slightest reflection on the unblemished record of Jason Woodman, whose life-long service to the farming business in his home state will not be forgotten by this or coming generations. The fact is, impersonally, that boards, like individuals may become ensnared in a mesh of their own making and where the way out may appear simple to the one from the outside, they who are in cannot see it.

We believe the appointment of Representative Gowdy marks a step in the fulfillment of the full service which the board can render to agriculture during the coming year of rapidly changing conditions and THE BUSINESS FARMER on behalf of its readers, wishes him all success and promises him their loyal support.

The personnel of this board is now as follows: **Dora H. Stockman, Lansing; L. Whitney Watkins, Manchester; J. R. McColl, Detroit; Melville B. McPherson, Lowell; Clark L. Brody of Three Rivers and Mr. Gowdy.**

PUBLISHER'S DESK

FAKE TIRE COMPANY LOSES MAIL PRIVILEGE

THE Rose Tire Company, The United Financing Syndicate, The Dealers Tire Company, The Low Price Tire Company and The Mail Order Tire Company, all of 1526 South Wabash Avenue, Chicago, Illinois, were the subject of a Fraud Order issued by the Post Office Department on January 5, 1924. This action is the outcome of the National Vigilance Committee's campaign against tire companies whose activities tend to destroy the public's confidence in the entire industry.

The representatives of these companies have been advertising extensively in farm papers offering used tires at fabulously low prices which, when delivered, were found to be in such a state of decay as to be absolutely unfit for further use. When complaint was made the purchaser was advised that he could avail himself of the privilege accruing from the companies' guarantee to sell a second tire at half the price if the first tire was unsatisfactory.

Many publications have already been warned regarding the activities of these people but the advertising was continued by a number of rural paper with the result that many persons in rural districts have been mulcted of small sums.

CORRESPONDENCE COURSES IN SCENARIO WRITING

EVERY few days we receive a letter from some reader who is taking a correspondence course in writing scenarios. They have found that "all is not gold that glitters," that they are not making money like they were told they would. They come to us for help. They want to get their money back, as a rule, and some times we can help while other times it is beyond our power to do anything. Others who are contemplating taking up one of these courses come to us for advice. Many of the letters are published in these columns and you readers know how we advise them.

The Authors League of America, an organization composed of the well known authors of this country, has started a fight against "movie schools" and selling agencies, charging that they are worthless, and that they cannot furnish proof that they or any of their "pupils" have ever had a scenario accepted by a motion picture producer. In an article in a recent issue of their official organ of the League it was pointed out that of 42,020 plots or scenarios sent to producers last year, all but four were returned to the senders as unusuable. Of these four no records are available that they have ever been produced.

As a large percentage of the 42,016 useless scenarios had been submitted by "pupils" of movie correspondence schools or by selling agencies they contend that the schools and agencies therefore were merely money-making schemes of the worst type.

According to the article, the art of writing scenarios is not the work of an idle moment, nor does it come of attending a so-called "movie school," where it is charged that none of the information dispensed at fancy prices is in the least helpful to aspiring film writers. Professional scenarists like Peter B. Kyne, Rex Beach, Rupert Hughes and others dominate the writing end of the film field so competely that it is almost impossible for an amateur to have his efforts accepted, or even considered. The fact only one scenario in 10,000 was accepted by screen companies proved this, the article held.

"The maiden lady in straitened circumstances and a small town environment," the article read, "who attempts to compete successfully with such experienced writers as Peter B. Kyne, Rex Beach, Rupert Hughes and many other well-known authors, stands as much chance as the village blacksmith has of defeating Jack Dempsey after a correspondence course in boxing."

While all writing requires talent, the article continued, scenario writing requires "an intimate knowledge of all literary forms" by reason of the fact it is a highly technical branch of expression. Movie schools, despite the fact that they promise to give in a few weeks the training of several years, are deficient even in providing their "pupils" with the most elementary rules of the business, and in no way whatevery fit them to write scenarios which will be found acceptable by film companies. Most companies now do not even read the scenarios sent in to them by amateurs or selling agencies, unless they reflect immediately the specially trained pen.

Thus in a $25,000 prize contest recently conducted by the Goldwyn Pictures Corp. in conjunction with a Chicago newspaper, not a single one of 27,000 scenarios submitted by unknown writers was taken at a $500 premium, as offered by the firm for all scenarios worth production although not winners. Of 15,000 submitted in the course of the year to the Goldwyn company, only one story by an unknown writer was accepted. Famous Players-Lasky accepted none out of 4,000, and the Fox Film Co., was equally restrained in considering the 13,000 scenarios submitted to it. Of 1,100 stories sent to the Al Christie Co., 4,800 to the Universal Film Co., 4,120 to smaller producers, one story was accepted by each of the groups.

The published article is in the form of a report and signed by Grant Carpenter, staff writer with Warner Brothers; Bernard McConville, free lance scenario writer; Eve Unsell, scenario editor of Preferred Pictures; Walter Woods, supervisor of production with Famous Players-Lasky, and Arthur Statter, formerly with Universal and now a free-lance writer. Besides condemning "movie schools," the writers strongly recommended that unless amateurs wish to lay themselves open to unending disappointment, they had better keep out of the scenario field, or else get the essential training with a movie concern.

ONE TRAPPER'S EXPERIENCE

"On the 17th of November I shipped 7 coons, 97 rats, and 1 mink to J. R. Hough Fur Corp., Meriden, Conn. According to their price list they sent me, this fur should have brought $215. They sent me $19.66 for it and called it all summer caught, which I can prove different. They advertised to pay 5 per cent more for anything over 50 skins. This they did not do. Two days after date of their invoice I received their check and returned it to them, requesting the fur be returned. Five days later it came back stating I had not ordered this fur held separate, that it was mixed with other fur and sold, and they could do nothing. Our postmaster saw me tie a letter with the tag on this bag of furs and I saw him put these furs in a mail pouch and bill it to Meriden, Conn. Also insured it. On their price list was a printed contract, if these furs were to be held separate fill it out, and mail to them with the shipment. That is what was in the letter tied to the bag of furs. I sorted out of this bunch of furs eleven rat hides, culls, kits and otherwise damaged, so as to make them all good hides. I sent these to Perceys Fur House and received $8.98 for them. I should have received $144.70 the actual value of this fur here on our local market."

The Collection Box

The purpose of this department is to protect our subscribers from fraudulent dealings or unfair treatment by persons or concerns at a distance.

In every case we will do our best to make a satisfactory settlement or force action, for which no charge for our services will ever be made, providing:

1.—The claim is made by a paid-up subscriber to The Business Farmer.

2.—The claim is not more than 6 mos. old.

3.—The claim is not local or between people within easy distance of one another. These should be settled at first hand and not attempted by mail.

Address all letters, giving full particulars, amounts, dates, etc., enclosing also your address label from the front cover of any issue to prove that you are a paid-up subscriber.

NEW YORK CENTRAL LINES

An engine terminal on the New York Central Lines in midwinter. Railroad men must keep the heavy traffic moving through all kinds of weather.

Achievement

THE American railroads in 1923 hauled the largest tonnage in their history—and with an efficiency of operation never before paralleled. To this achievement the New York Central Lines contributed a notable measure of public service.

The very heavy program in rehabilitation inaugurated by the New York Central Lines immediately following the termination of Federal control—involving the expenditure of many millions of dollars for new equipment and larger facilities—placed this railroad system in a position to meet the growing traffic demands of the great territory it serves.

While car loadings throughout the country for 1923 showed an increase of 26.7% over 1921, and 15.3% over 1922, the New York Central Lines gained 42.7% over 1921, and 16.8% over 1922.

The New York Central program of expansion—in anticipation of the greater traffic demands of the coming years—is going steadily on.

RADIO DEPARTMENT

EDITED BY J. HERBERT FERRIS

WE WILL HELP YOU

THERE are many of you who would like to build your own sets, yet will hesitate because you are afraid that you will not buy the correct parts to assemble into a complete set. In fact that is a possibility if you should go to a certain class of dealers who think because you are a farmer they can sell you anything. Also some of you who assemble sets may have a little difficulty in making the set work.

To avoid all this, The Radio Department will purchase for you any or all of the parts necessary to build a set. Just write us telling us what you want, enclosing the amount necessary and a few cents postage to cover the mailing charge and we will buy the article for you and send it to you. In this way you will know that the part you buy will work in your receiving set.

We will test out any set that you may build or have bought and make what adjustment is necessary to make it work and return it to you without any expense to you except the postage or expressage for transportation.

USE THIS DEPARTMENT. IT IS FOR YOU.

HOW TO BUILD EFFICIENT AND CHEAP RECEIVING SET

NOW that winter is here at last, and we are confined to the house a little more than we are in good weather, our thoughts have time to turn to the more entertaining and instructive subjects of world happenings.

Radio will bring the voice of the President of the United States to you, music from the best musicians, dance music for those who like it, and many interesting talks from well known people. You can get the market reports and weather forecasts as well.

The chief difficulty in the average farm home is to find the member who has enough spare money to buy one of the expensive receiving sets. Sometimes such sets have been bought and because the one who was operating it did not understand it the results have not been satisfactory or the set did not work at all.

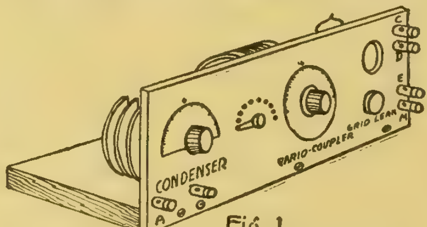

Fig. 1

The following described part if bought and assembled will enable any one with a screwdriver, soldering iron and a piece or two of wood to build a receiving set that will bring in clearly and loud many of the broadcasting stations within 500 miles night after night, and under favorable weather conditions bring in stations from greater distances.

The apparatus listed can be bought from any radio dealer or from the large mailorder houses, and the price given after each article is the price of a cheap but serviceable article that will give years of satisfactory service. More expensive parts can be bought if desired and the set can be mounted in a fancy or plain cabinet or on a plain board as desired. Remember that looks are not what make a receiving set operate. The simpler the assembly the better the results.

In assembling this receiving set follow the diagram given herewith carefully, and be sure that connections are made to the parts just as marked.

If you have not already put up an aerial, a single wire aerial about 100 to 150 feet long, and about 30 feet high will do.

List of Parts and Prices:

150	feet No. 12 or 14 bare copper wire	$1.00
2	strain insulators	.20
1	8-inch by ½-inch porcelean tube	.05
1	lightning arrestor (inside)	1.25
1	Vario-coupler	3.00
1	23 plate variable condenser	2.50
1	switch lever and 10 contact points	.50
1	grid condenser and leak	.25
1	socket for WD-11 or WD-12 bulb	.75
1	WD-11 or WD-12 bulb	6.50
1	set 2000 ohm telephone receivers	4.00
6	binding posts	.50
1	22½ volt B battery	1.50
1	No. 6 dry battery	.50
		$22.50

I Piece of smooth board ¾-in.x10-in.x6-in.

I Piece of board ¼-in.x10-in.x6-in.

Soak both pieces of wood in hot parraffn till they will absorb no more, let cool then smooth down with fine sand paper. These are for the base and panel. If the wood is thoroughly dry two or three coats of shellac well sanded will do as well.

The condenser, the vario-coupler, the switch and 10 contact points and the grid leak and 6 binding posts are mounted on the thin piece of wood as shown in Fig. 1. After mounting these parts screw this panel to the thick piece so that it is vertical, Fig. 1.

Now study Fig. 2 carefully, and connect the wires as shown by the heavy lines, be sure that the wires from the outside of the vario-coupler are connected in turn to the contact points. From the switch lever connect a wire to one side of the small grid condenser, and from the other side of the grid condenser to the binding post on the socket marked "grid" or "G." Now from one side of the grid condenser run a short wire to one side of the grid leak, (which is mounted on the panel) also a wire from the other side of the grid condenser to the other side of the grid leak.

Now connect one side of the variable condenser to contact No. 1, the other side of the condenser to binding post on the panel marked "A" (for aerial) Now connect on the back of the panel, binding post "G" (for ground) to binding post "C"

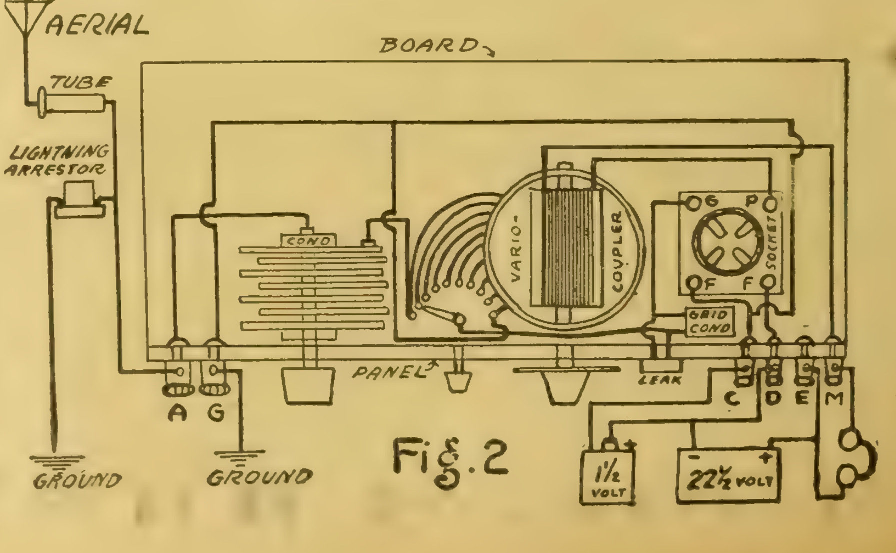

Fig. 2

RADIO PROGRAMS

Station WRC, Voice of the Capital, Washington, D. C.,—8.00 P. M. Wave length, 469 meters.

February 4—"Road Building a Federal and State Obligation," by W. C. Markham, Secretary, American Association of State Highway Officials.

February 11—"Balancing Uncle Sam With His Cities," by Elmer O. Fippin, Chief of the Fippin Agricultural Consulting Service.

February 18—"Financing Agriculture With Special Reference to Long-Term Farm Mortgages," by Robert A. Cooper, Chairman, Federal Farm Loan Board.

---

which in turn is connected to the binding post on the socket marked "F." Also connect binding post "C" to contact No. 10 or the last wire from the outside winding of the vario-coupler. Connect the other binding post on the socket marked "F" to binding post "D." You will find 2 wires that come from the rotor (moving part) of the vario-coupler, these wires are connected, one to the binding post on the socket marked "P," the other to the binding post marked "M."

Having put up your aerial, bring in one end into the house thru the porcelean tube and connect to binding post "A," also connect the aerial to one of the binding posts on the lightning arrestor, the other post of the lightning arrestor is connected to a wire which in turn is connected to a water pipe or well, now connect a wire to your water pipe or well casing and connect that to post marked "G."

Connect the single dry battery (No. 6) to posts marked "C" and "D," be sure that you connect the positive or carbon to the post marked "D." Then connect your negative (-) side of the "B" battery (22½ volt) to post "D" and the positive side to post "E," connect your telephones to posts "E" and "M," You are now ready to tune in, but try it at night after 7 p. m. the first time.

To tune, set switch lever on contact 3 and with one hand turn the condenser back and fourth slowly, with the other hand turn the rotor of the vario-coupler slowly back and fourth. Listen for a slight whistling, when you hear the whistling sound make your turning movements of the condenser very slowly, and you will hear the music or talking. When you have once found it adjust very carefully till you get the clearest and loudest music. Do not be discouraged if it does not come in at first, but first trace out your connections and then keep on trying till you hear the music.

Just as soon as you finish listening-in, be sure and disconnect your "A" battery which is the single No. 6 battery.

We will tell how to add amplifiers to your set in a future issue of this paper so that if you wish the additional loudness and are willing to spend the money a whole room full of people can hear the music.

BLIGHT PROOF "SPUDS" LATEST

TWO years ago, when his potato crop was almost a complete failure, W. R. Smith, soldier settler of Byron, Ontario, Canada, discovered a hill of potatoes which had not died down from blight. The balance of the crop was as brown as a berry, and the one hill, which stood green among the desolate looking field of "spuds," showed no trace of late blight.

Believing that he could raise seed from this potato which would be immune from blight, Smith saved the potatoes from this hill, and next spring cut them up into small sets and planted them apart from his other potatoes. Last fall he had over two bags of the seed, and by cutting these into small sets was able to plant a considerable plot.

The potatoes in this field have reproduced exactly the same "blight-resistant" qualities that he found in the lone hill two years ago. Smith now feels he is on his way to the realization of a dream he has entertained for two years, that of being able to produce blight-proof potatoes.

Government field crop experts have visited the field of potatoes at Rayburn farm and declare them to be bypical Dooleys, and furthermore, say that it is the healthiest crop of potatoes which they have every seen. In the whole field not one leaf shows any signs of blight, or any other disfigurement. Some of the vines, when held at full length, measure over 38 inches, and are of a dark green color.

In the feeding of pigs an acre of clover or alfalfa pasture will save 1,149 pounds corn and 468 pounds of tankage as compared with dry-lot feeding, research in the Animal Husmandry Division of the United States Department of Agriculture shows.

New York Girl Wins Grange Essay Contest

THE winner of the Grange Highway Safety Essay Contest, Miss Mildred Soper, the 14-year old daughter of E. G. Soper, Lecturer of Seneca Castle Grange, near Seneca Falls, N. Y., was presented to President Coolidge at the White House on January 16, accompanied by National Master Louis J. Tabor of Columbus, Ohio, and a number of the Masters of State Granges who were in Washington at the same time on other business. President Coolidge presented a certificate of this award to Miss Soper in the presence of several Senators and Congressmen, officials of the National Automobile Chamber of Commerce, the Highway Education Board and the National Grange.

The essay contest was conducted by the Grange in co-operation with the National Automobile Chamber of Commerce and the Highway Education Board on the subject of increasing the safety of highway traffic and preventing the loss of lives.

This is one of three contests conducted annually, one for children of the Granges, one for all children of elementary school age, and one for teachers. Children of the Granges are also eligible for the elementary school contest. There are local and state prizes and a national prize which includes a trip to Washington for the first prize winners.

Anybody interested in this contest can get further details by writing the Master of the National Grange, L. J. Tabor, 970 College Ave., Columbus, Ohio, or the National Automobile Chamber of Commerce, New York City.

This picture was taken in front of the White House after Miss Soper had been presented to the President. Front row, left to right, E. A. Eckert of Illinois, National Master Louis J. Taber, Miss Mildred Soper, Mr. E. C. Soper, Dr. T. C. Atkeson, and Mrs. T. C. Atkeson; Back row, J. F. McMullen of Kansas, J. A. McSparran of Pennsylvania; W. J. Thompson of Maine; Arlando Martin of Vermont, A. S. Goes of Washington State, David Agans of New Jersey and A. M. Loomis of Washington, D. C.

Kodak on the Farm

Winter sets the stage for picture stories you will be glad to get with a Kodak. That's pleasure.

But Kodak plays part in the business side of life on the farm, as well. There are pictures that *sell* cattle, horses, sheep, hogs; there are pictures that *record* crops, equipment, buildings—pictures worth the making, all of them.

And the Kodak way is the easy way and one that's fun from the start.

The Children's Hour

DEAR girls and boys:—A whole month of the new year has passed and we have just crossed the threshold of the second month, February. And the birthday of Abraham Lincoln is on the 12th. Whenever I think of Abraham Lincoln I am reminded of the story of the little girl. She had been told that Mr. Lincoln was a very homely man, and one day her father took her to see him. Mr. Lincoln took her upon his knee and chatted with her for a moment in his merry way, when she turned to her father and exclaimed: "O, pa! He isn't ugly at all; he's beautiful!"

Yes, he was beautiful. It is true that his features were irregular but after the first glance they passed unnoticed. It was his eyes that immediately told you that he understood human nature, that he was sympathetic and kind, and then you forgot his irregular features. I hope you all study about Abraham Lincoln and his life. Mr. Lincoln was an example of what a poor boy, with many handicaps, can do if he wills.—UNCLE NED.

OUR BOYS AND GIRLS

Dear Uncle Ned:—May I join your merry circle? We take the M. B. F. enjoy it very much. I am in the 8th grade at school. Now I will describe myself. I am 5½ feet tall and have blue eyes, and brown bobbed hair, and am 13 years old. I live only 25 miles from Mt. Clemens. I live on the main road from Detroit to Port Huron. I have been in Mt. Clemens and think it is a pretty place. I saw Helen Darr's letter and I think she is 15 years old. I hope she will see my letter in print, that is, if it does not reach the waste paper basket. I also hope she will write to me and describe her place, for I never was in that part of Michigan. I have no sisters or brothers and my mother died when I was 10 years old. Uncle Ned, please excuse me for using so much of your space for this letter. I remain, your niece,—Marie Wagner, Memphis, Michigan.

Dear Uncle Ned:—May I join your merry circle? My father takes the M. B. F and likes it very much. I read the Children's Hour and enjoy it. This is the first time I have written and I hope to see this in print. We live on a farm of fourteen acres, one mile from Caro, and we have 2 horses, 3 cows, and a dog named Trixie. The river runs past our place and in the summer we go boat riding and bathing. I am going to describe myself. I have blue eyes, blonde hair, and a light complexion, and am four feet three inches tall. I am ten years old. My birthday is the sixteenth day of August. My name is Edna but my father calls me Pete. I guess I will close, hoping some of the boys and girls will write to me. From your loving niece.—Edna Rickwalt, R. 4, Caro, Mich.

Dear Uncle Ned:—I decided to start the New Year by catching up on my correspondence, but when I went through my address book, I nearly gave up in dispair. They are nearly all answered now, though I haven't thanked you for your lovely pencil case yet. I'm sure you knew when you picked it out that I'd be wonderfully pleased with it. A gentleman in northern Michigan wrote to me and asked if I had ever heard of a man by a certain name, because he was his uncle who had disappeared some 20 years ago and his name was Adolph and he saw my name with my drawing, he wondered if I might be of kin to the lost uncle. I never heard of such a man and so let the matter drop, until a short time ago, a lady in West Virginia wrote to me stating that she had seen my drawing and wondered if I had ever heard of a man by the name given, as the gentleman in Michigan had inquired for. She said that this was her father and that he had never mentioned of having any relatives or parents, and she wondered if I had ever heard of him. I sent both people each other's addresses and hope that I shall soon hear from them saying that they are lost cousins. I think that it is very strange and amusing that I should hear from both, don't you? Daddy just came in and sat down on the puppy. I think that's very amusing too, don't you? Our puppy is a French Bull dog, and its name is Vanity Fair. (Please don't blame me, my sister named it). Among my many lovely Christmas gifts I received a basket ball and a "Mah Jong" set. Has the "Mah Jong" craze struck you yet? I love to play both. I have a sister who teaches geography in Detroit and a brother who teaches agriculture in St. Clair. I am the baby of the family. I've been corresponding with several girls and boys thru the M. B. F. and I'll certainly enjoy corresponding with many more, if they can stand the strain of reading my letters. Now don't heave a sigh of relief for finishing reading this letter, for if you don't publish it I'll write another. (I probably will write anyway.) Your loving niece,—LaVendee Adolph, Union City, Michigan.

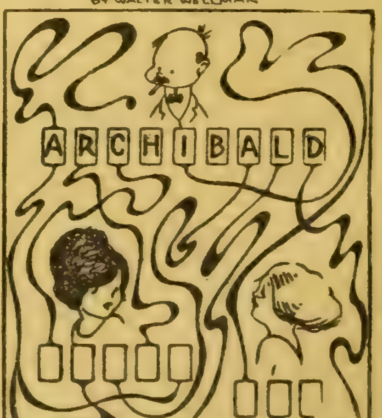
Dear Uncle Ned:—Well, now don't faint, because I've made another attempt. I wrote to you a few months ago, but guess Mr. Waste Basket was somewhat of a pig and ate it up, but here's hoping he won't be as hungry when this arrives. I am a girl 15 years old, have brown eyes, brown bobbed hair and am 5 feet 4 inches tall, and weigh 119½ pounds. Am taking the 8th grade again this year. There are about 28 pupils in our school. My birthday is August 22nd. Have I a twin or triplet? Ha! Ha! I live up in northern Emmet county, near Petoskey, Mackinaw City, Harbor Springs, and many other very pretty places. I saw Elsie L. Mahler's letter and she sure gave a perfect description of the scenery around here. I got my hair bobbed about a week ago and like it fine. For a long while I couldn't decide if I wanted it bobbed or not, but finally I did, and am not sorry. I once wrote to a girl whose name was Wilma Olmstead, of Sherwood, but for some unknown reason we drifted apart and never wrote again. I also correspond with a boy right along. Well I will close now with a few tongue twisters: Doris does daddy's daily dinner dishes daintily. Fred fried fresh fancy fat fish for Fan. Bob bought Brother Bill's bicycle by Benson's. Selma stopped sewing silk stockings Saturday. Must stop now and leave room for the rest. I hope Mr. Waste Basket won't get this letter. Will try to answer all letters I receive if the cousins will write to me. With love and best wishes to all.—Miss Ruby E. Fletcher, R. 1, Pellston, Michigan.

Dear Uncle Ned:—Here is another farmerette who wants to join your merry circle. May I come in? How are all the cousins? Well, I hope. I better describe myself before I go any further. I am about five feet two inches, weigh 98 pounds. Have light brown hair (which of course is bobbed) light blue eyes and in the eighth grade at school. I am not going to tell my age but the one that guesses it will receive a long letter from me. My age is between 11 and 16. I think the answer to Helen S. Janetski's riddle is: It's time to get a new pair. Have you ever been up north to Roscommon? If you haven't you certainly ought to go. It is a nice drive. Will all the boys and girls write and I will answer all letters received [illegible] Miss Louise Fergusen, R. 1, Birch Run, Michigan.

Dear Uncle Ned:—I am very much interested in the M. B. F. and would like to join your merry circle. I am a farmer's girl and am thirteen years old, and am a blond. I like the country life very much. I have always lived on a farm. We have a large woods, in the spring I love to go flowering. I love to write stories. I would enjoy it very much if we could have a story contest sometime, Uncle Ned, and I am sure that some of the other merry circlers would too. Well my letter is getting long so I will close for this time, with a riddle: What is round at both ends an [illegible] middle? Will some of the other boys and girls writ [illegible] all letters I receive. Goodbye, from a friend.—Leone Cadwallad [illegible] [illegible]leman, Michigan.

RIVALS

BY WALTER WELLMAN



The handsome man at the top is ARCHIBALD. No wonder there are two pretty young ladies after him. What are their names? Simply trace each letter to a vacant square, and print the letter there, and you will have the names of the blonde and the brunette. What are they?

Answer to last puzzle: A HEN.

OVER THOUSAND BIRDS IN GOLD MEDAL POULTRY SHOW

(Continued from Page 6)

Best Duck, Russell Kampenga of Muskegon;

Best Goose, Bert Denman of Muskegon.

Club Boys Win Many Prizes

Five boys, all members of a Boys Poultry Club, exhibited in the various classes and were consistent winners throughout. Older exhibitors, who had been accustomed to seeing the juniors exhibit in special classes, learned to have a wholesome respect for the boys when they came in direct competition with the boys and saw them win a large share of the awards.

Judges of the Muskegon Show were: Henry C. Dipple, of Indianapolis; Prof. E. C. Foreman, of East Lansing; D. Mieras, of Grand Rapids.

A very interesting thing occured toward the close of the show. Prof. Foreman of the M. A. C. Poultry Dept., who had been placing the awards in the utility classes, was called back to East Lansing for a special meeting. He was unable to return on the following day and so the management of the show was obliged to secure Prof. O. L. Sanford of the Ferris White Leghorn Farms, Grand Rapids, to place the sweepstakes awards on the utility birds. After Prof. Sanford had completed his awards and the winners had been announced, a letter was received from Prof. Foreman directing the placing of the sweepstakes awards. To the surprise and delight of the show officials, these awards, made entirely separately by the two judges, corresponded throughout. As one official remarked, "It shows that they are both darned good men and know their business." It is indeed seldom that such a check has been given on poultry show awards and with such satisfactory results.

The Annual Banquet

Always one of the features of the Muskegon Show, the Annual Banquet this year was attended by more than 200 people making it one of the largest gatherings of its kind ever held in the state. Poultry people representing many sections of western Michigan were present to meet with the Muskegon folks and enjoy their hospitality.

In addition to local speakers the presidents of the Holland and Grand Haven Associations, on behalf of their organizations, responded to toasts.

The guest of honor was Thos. F. Riggs, president of the American Poultry Association. Pres. Riggs complimented the Muskegon people on their excellent exhibit saying that it was one of the best he had ever visited and much better than he had expected to find. Mr. Riggs described the aims and purposes of the American Poultry Association and defended vigorously the standard types of fowls as described in the official Standard of Perfection.

"We need fanciers in the poultry game to develop the poultry breeds to the highest degree possible," asserted Pres. Riggs. "The Jersey cow and the Holstein cow were developed by the fancier and not by the milkman. The Shorthorns and the Herefords are products of the cattle fanciers and not of the butchers. So the poultry varieties need fanciers also."

Mr. Riggs deplored the tendency toward the so-called "utility" fowls with no regard to their appearance He asserted that the standard requirements called for such body conformation that the fowls were certain to be profitable producers as well as beautiful in appearance.

Utility of fancy, Which? To this question Muskegon's answer is. "BOTH." In other words the sentiment is towards a combination of both the present standards, fancy and utility. in the same bird.

Additional Show Features

Special poultry meetings were held afternoons and evenings in connection with the show. Prof. Foreman spoke on "Culling" and on "Type 'In Relation to Production." Dr. H. J. Stafseth, also of M. A. C., discussed "Poultry Diseases."

At these meetings, and also at the evening show, some special poultry motion picture films from the U. S. Dept. of Agriculture were shown by the County Agricultural Agent, Carl Knopf.

A poulty show can be successful only as it has the support of a live organization. The Muskegon and East Shore Poultry and Rabbit Fanciers Ass'n, with as much poultry pep and enthusiasm as its name is long, is the reason for the success of the Muskegon shows.

This Association has 94 members all of them interested in poultry and all of them willing to boost both standard and utility poultry although most of them are fanciers and "back lotters."

The officers of the Association are:

Pres., Thos. Erickson;
1st. Vice Pres., J. E. Marvin;
2nd. Vice Pres., Daniel Wurtz;
Sec'y., H. S. Nobel;
Treas., Lambert Hoeker.

The Secretary, H. S. Nobel, has had much experience with poultry exhibitions and it is through his efforts that the Muskegon Show runs very satisfactorily and smoothly. A special system of records, entry tags, and shipping tags, has been developed by Mr. Nobel. A new feature this year, which received the endorsement of all, was the use of white tags to designate the "standard" entries and of pink tags for the "utility" birds.

So, while Muskegon's 14th. Annual Poultry Show was the largest and best which the Association has every held, plans are already being made to insure an even better show for next year.

GOOD CARE OF BROOD SOW MEANS STRONG LITTER

(Continued from Page 6)

ficient in iodine, but experiments have shown that the addition of a small amount of this substance to the ration enables the sow to produce a healthy, normal litter.

Either potassium iodide or sodium iodide may be used. For a sow of medium weight a daily dose of two grains given in the ration throughout the gestation period is sufficient to prevent the trouble, or a larger dose of three or four grains daily given for eight or ten weeks before farrowing has been found to be satisfactory.

Dry potassium or sodium iodide is not easily mixed with the ration so that each sow will get the required amount. It should be dissolved in water and a small portion of this solution mixed in the water that is used to make the slop. While daily doses are given by some breeders, the dose may be doubled and given three or four times a week. Considerable labor is thereby saved and practically the same results obtained.

A simple method of administering potassium iodide or sodium iodide is as follows: Dissolve two ounces of the solution, each ounce of which contains 30 grains of iodine. This amount of solution is sufficient for five sows for a period of two months. A herd of this size should be given one fluid ounce four times a week. Each sow will then get 24 grains of iodine per week.

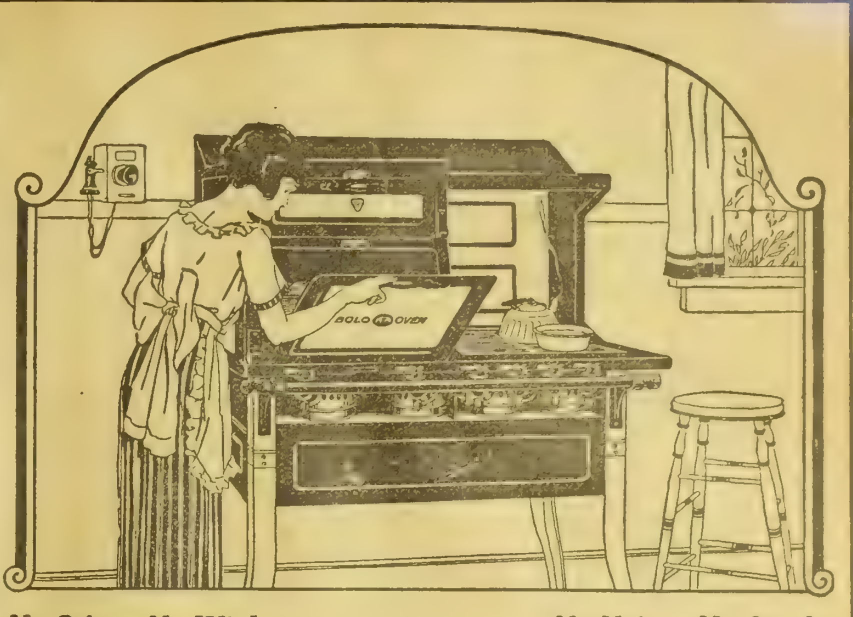
As roughage contains somewhat larger quantities of iodine than do our common concentrates, when the sows are on pasture or when good alfalfa hay is fed, however, and especially if this trouble has been suspected previously, the feeding of the amount of iodine suggested is a cheap insurance against what might result in heavy loss.

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, A. R. Johnson, 609 W. Lake St., Chicago, Ill., is offering to send a lamp on a 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him to-day for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month. (Adv.)



No Odor—No Wicks No Noise—No Smoke

Cook your meals in comfort on a Vapo Oil Range

It burns just like a gas range because it burns Gas made from Kerosene

Thousands saw the Vapo Oil Range demonstrated at State Fairs; perhaps you saw it too. Housewives everywhere say it is the finest, cleanest and most convenient oil range they have ever used. It is built for a lifetime of year-around service.

Each burner a miniature gas plant

Every Vapo burner is a complete gas plant. It generates hydrocarbon *gas* from kerosene. This gas burns with a hot, blue flame that is *sootless, smokeless and odorless.* No wicks to trim. No chimneys to bother with. Cooks faster and better because its flame is hotter and can be adjusted to several heats including simmering heat.

32 to 36 hours on one gallon of kerosene

A single burner will operate 32 to 36 hours on a gallon of kerosene when turned on full. At simmering heat, it will give from 50 to 60 hours' service. Users tell us that 7 quarts of kerosene last the average family for a week.

The automatic lock valve prevents accidental shifting of the flame and is a safeguard against playing with valve. When you find a cooking heat that suits you, you can keep it and turn to it at once next time.

Marvelous built-in Bolo Oven can be made big or little

This oven is equipped with an adjustable *Bolo plate* which makes the oven big or little as you desire. This intensifies the oven heat and enables you to do both slow and fast cooking in the same oven. It gives you two ovens in one. The odor from one oven does not affect what is in the other oven. Perfect ventilation insures light pastry, bread and cake.

The Farm Home
A Department for the Women

Edited by MRS. ANNIE TAYLOR

DEAR FOLKS:—It does not seem possible that a whole year has gone by and Farmers' Week is here with us again. I almost feel like saying "All who are going, please raise up your hand." I cannot tell how many of M. B. F. readers are raising their hands, but I do want to feel that the women of Michigan's rural homes will be in Lansing strong this coming week.

There has been a great deal of preparation and hard work done just to serve you and me and every day will be a profitable one for those of us who make this effort.

Our January 19th issue printed the program for the week. See if you cannot see your way clear to go. This issue is really our Valentine number and I hope my efforts will help you plan "a good time for all."

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

A VALENTINE.

By Margaret E. Sangster.

THE valentines we used to get—they'd silver hearts upon them,
And golden arrows, ruby-tipped, and yards of paper lace;
And softly tinted envelopes with little verses on them,
And, in the center of it all, a cupid's chubby face.

You sent me one, my first one,
When I was only nine—
The postman left a letter;
They told me it was mine—
And I, with cheeks a-tingle,
And rounded eyes a-glow
Said—"Why' who could've sent it?"
And some one said—"You know!"

It seemed all scrolls and flowers,
And little birds with wings,
And slender, smiling angels
And other pretty things.
And, 'way inside was printing
And blue forget-me-nots,
And written in, with pencil,
"I love you lots—and lots!"

They laughed at me, the grown-ups,
They did not understand—
I stood before them, silent,
The letter in my hand—
But oh, my heart was pounding
For "Be My Valentine—"
Was written straight across it.
And I was only nine!

The Valentines we used to get—they'd silver hearts upon them,
And golden arrows, ruby-tipped, and yards of paper lace;
And softly tinted envelopes with little verses on them,
And, in the center of it all a cupid's chubby face!

—Christian Herald.

A VALENTINE SHOWER

IF any member in your community is being married during the month of February or if your social center, church or meeting place needs some kitchen furnishings, a good idea is to have a combination valentine party and kitchen shower.

The invitations made on heart-shaped cards could be worded as follows:

"Instead of your heart bring a frying pan,
A dish or a plate or some kind of a can,
A towel or tablecloth, either will do,
To furnish our kitchen so empty and new."

To provide entertainment you could number each parcel as it came in and pile all the packages on or around a large table before unwrapping. Guessing what each parcel contains proves great fun. Music and recitations would be lovely for the church or music, cards or sewing something special for the bride-to-be, will pass a very pleasant afternoon. Heart-shape, Sandwiches and cakes with coffee for refreshments.

A CHILDREN'S VALENTINE PARTY

THE Invitation—For a children's party use a candy kiss. Write the invitation on a long narrow strip of white paper, with a red border. Wrap it around the kiss, which already has a waxed paper wrapping and cover with a wrapper of red tissue. Wrap and twist in appropriate kiss style. As it probably will not stay twisted without being tied, tie with colored baby ribbon at each end. To one of these ribbons tie a wee card, with the child's name.

The Invitations

"Come to my Valentine Party do!
All sorts of sweet things will be waiting for you,
To admit you, the price is a kiss;
But that must be given to Cupid, my dear,
This isn't the ticket—the one you see here,
And so you, of course, may eat this."

This may be delivered by the child who gives the party.

All invitations for young people can be written out on a piece of paper cut the shape of a spoon with the following words written on it.

"Soon, oh soon,
By the light of the moon,
Come to my balcony
And spoon."

For an old folks' party, use the old fashioned lace valentine, if you can get them. Insert an extra leaf, on which write the invitation.

"For times sake this comes to you.
Do come and play real hearty.
Your youth will come again I'm sure,
If you come to my Valentine Party."

Or a heart would make a pretty invitation.

"We're getting old,
Or so I'm told,
But I'm not down in the dumps.
There's a party due
For me and you,
And the watchword is 'Heart's are trumps.' "

The Decorations

Every ten cent store carry the colored paper suitable for Valentine parties. The color scheme thruout should be in deep pink and white and red. Hearts cut out and either pasted or pinned is the chief decorations. Hang little cupids around on the curtains and stuck in the pictures.

A plate of red hearts numbered should be given the boys and a plate of white hearts numbered should be given the girls. There should be two alike a red and a white heart to match couples up for the first game. This idea is pretty and appropriate for any of the parties suggested.

For the table, do not use too many kinds of decorations. If it is a heart party, have festoons of varying sized hearts, in pink, around edge of table. The place cards if used should be of hearts. Candies should be of hearts.

Sandwitches, cookies, and tarts should all be heart shaped. You can buy the heart-shaped cookie cutters in any hardware store. Arrows may be used in connection with some of the hearts. These should be white, gold or silver.

For the Spoon Party, use pretty souvenir spoons, in connection with any one of the motifs suggested. Every thing on the table must be "spoon vituals," to be eaten with a spoon. This will cause much merriment.

Games

As each is given his souvenir or red heart, he must kiss the giver's hand, and bow allegiance. After taking off wraps, they find partners by the numbers written on the hearts. Each pair is given a candy kiss on a long string, one end of which is to be taken between the teeth. Each then draws in the string and the pair disposing of their kiss first wins. The hands must not touch it.

Another game is to have quotations written on hearts that have been broken or cut and then mixed up. Pass these out and each finds his partner by matching halves.

Then in couples, they pin darts on a large red heart, after the style of "Failing the Donkey." These should be a prize, for everything, especially for a child's party, all of little value.

"Who Kissed Me?" is an amusing stunt. Several, in the secret, go into another room. A girl is brought in, blindfolded, turned around, then led to a chair. When seated, some one kisses her. She is asked, "What boy kissed you?" And on guessing wrong, she is told she is a captive and is kept, the blind being removed. Then a boy is called in, to go thru the same proceedings, and fail to guess correctly, when asked "What girl kissed you?" They always fail to guess correctly, since it is always a girl who kisses a girl, and a boy who kisses a boy.

CORRECT CLOTHING FOR WINTER

NEXT to overheating our houses, our principal Winter sin of commission is wearing clothes that are too heavy or too tight, or both. Most buildings are maintained at a Summer temperature throughout the year, and it is obviously absurd for any one who is going to occupy such buildings to pile on clothing heavy enough for a polar expedition. The safe way to do is to wear clothing of light—or, at most, moderate—weight which in the winter and then to put on a heavy coat or wrap when going outdoors. The skin must breathe as well as the lungs, and for this reason clothing should be such as will permit free circulation of air. Underclothing and suits or dresses should be made of material sufficiently porous to admit the air freely to the body. Thick, heavy woolens, suits lined with an impervious material and outer clothing made with a very tight weave should be avoided. It is perfectly possible to keep warm without packing the body in wrappings such as a mummy might wear. In fact, because of the healthier skin condition that will result from lighter and more porous clothing, you will find that you do not suffer with the cold nearly so much as when you bundle up. Garments that are too heavy not only induce perspiration but hold it and force you to go about all day in a clammy state that is both uncomfortable and unhealthy.

Personal Column

Grandma's Idea of Modern Clothes.—We elderly ladies like pretty fussy dresses, but oh, those narrow skirts. Buy one that has the flying panels and set in skirt to make them wider. It can be done if skirt and waist are joined at the waistline, with three-fourth length sleeves or longer, and a V-neckline, filled in with lace. We can have a comfortable dress. One has to use their own judgment in buying, or get on accommodating clerk interested to please we elderly heavy weight matrons. Even small, elderly women like wider skirts. Why don't the manufacturers of ladies hats and dresses cater to us? We grandma's like to feel dressed up and comfortable.—Grandma.

Little Helps.—When you have broken isinglass in your auto curtains, save pieces for your stove and cut to fit, cut rubber bands out of your inner tubes and use in place of strings on packages and boxes. Use the velvet from old hats to polish your shoes, also to line your man's mittens.—Subscriber

Oat Sprouter.—I made one out of 3 old colanders, the flat ones like a milk pan, or one can-use old pans and punch holes with a nail all over bottom. The main object is to let the water drain out after sprinkling. I wet about a peck of oats with luke-warm water and let stand 24 hours in a pail. Then put in colanders. Set one pan on pail then put sticks across and then another, and so on, and set in a warm place a few days, also sprinkle each day. Keep oats moist. Then when sprouts have formed an inch or so, feed the chickens and see how they will enjoy the oats and sprouts in the cold snowy weather. One could use the flat flour sieves or old window screens. —Mrs. M.

Who Has One of These Attachments?—I am a Business Farmer reader and like it real well. I would like to hear from some of the women who are also readers, if they know any sewing machine company, who makes and sells hemstitchers that fit any machine. I saw the advertisement in our home paper, but mislaid it, and now I am out of luck. The price was $2, if not satisfied return and they would refund the money. I would like to hear from them in the next paper.—A Reader.

Knitting Socks.—Could any of the business Farmer readers send directions for knitting socks. Am sending a cookie recipe. It is as good as Christmas candy.

Four cups brown sugar, four eggs, well beaten, one cup shortening, one tablespoon (scant) soda, one tablespoon cream tartar, one teaspoon salt, eight cups flour, Seasoning of any kind. Mix and form into a loaf. Leave over night, and then slice of medium thickness, and bake.—Mrs. A. D. M., Olivet, Mich.

What I Think of Birth Control.—Dear Mrs. Taylor: Would you please tell me through your personal column, where I could get literature on Birth Control. What is your opinion on the subject? Your paper is wonderful, I can hardly wait for the next issue. Thank you,—Mrs. J. S.

—This is a very hard question to answer because of its personal character, but I will brave the wrath or good will of my readers.

I feel that it is every woman's duty to produce at least two children to help propagate the race if she is mentally and physically strong enough to produce healthy children, and if not, try all means possible to bring this about.

If a woman is sickly and weak and it makes her home a hospital most of the time, I feel it is only right that she should use her head and try and see that her husband sees it in the same light.

I do not feel it is right for one woman to bear all the sickness and struggle and poverty that go with having large families. Sometimes it is better to have fewer children and bring that few up in a clean wholesome atmosphere with good, wholesome food and clothing. These conditions only make for unhappiness and ill health and should be avoided.

If a family with moderate means and good strong bodies want a large family, I would praise them for their love and courage in the glorious of all states, MOTHERHOOD.

We are trying right now to get a Mother's pension through so every woman who will ask for it can have an allowance for every child born to her. I heartily advocate this.

Our communities should have a special trained nurse to help show us how to properly take care of our children.

After all, Birth Control is a personal problem that should be given a great deal of thought and good clear thinking. It rests with each individual and should be considered a matter for both husband and wife to decide.

—if you are well bred!

Children are men and women in the making, and a child's acceptance as a member of human society at large begins with its christening, when it is received in the religious community as an individual. Hense, tho the child does not, in practise, begin to learn the rudiments of manners from association with the adult members of the family until, perhaps, the age of four or five, its christening does not mark the beginning of its social life.

The Birth Announcement.—Cards engraved are the proper form, but for those of us who cannot afford this luxury a simple note announcing the birth with the word "Son" or "Daughter" and the name. Many stationers have stock cards that are very pretty and very good.

Menu for February 1st

Prune Cocktail
Brown Fricassee of Chicken
Boiled Rice Baking Powder Biscuits
Apple and Celery Salad
Mince Pie
Coffee

Brown Fricassee of Chicken.—Draw, singe and joint chicken. Put four tablespoons of fat in saucepan; when brown, put in chicken. Stir until every piece is nicely browned, then add two tablespoons flour, stir again, add one pint of boiling water or stock, stir until it boils; add one teaspoon salt. Cover and let simmer gently until tender then add one teaspoon onion juice, and little black pepper. Put neck piece, heart liver, gizzard, and back pieces in center of dish; put two pieces of breast on top, second joints, on one side of plate, legs crossed on other, and wing at each end of plate. Pour sauce over, sprinkle with chopped sparsley, and serve.

RECIPES

Valentine Lollepop.—One cup of sugar, one cup white corn sirup or gluclose, and one-third cup of water stirred over the fire until completely dissolved and mingled, and then gently boiled to the soft ball stage. If you want your sugar lumps to be red, throw into the partly cooked sirup two tablespoons of the little red cinnamon candies, the smaller the size the better. Such colors fade with cooking so should not be put in at the start. Take a large flat pan and lay sticks upon it in regular line. Pull the candy just enough so that it can be dropped upon these sticks and it is surprising how well you can shape it into hearts.

Eggless Milkless Fruit cake.—Two cups white sugar, one cup butter and lard, two cups hot water, one teaspoon cinnamon, one teaspoon cloves, one pound raisins. Cook all together three minutes and cool half cup chopped citron, one teaspoon soda, sifted with flour, five or six cups flour. Bake in a square pan one hour in a slow oven.

Spanish Macaroni.—1 cup cooked macaroni, 1 cup grated cheese, 2 onions, ½ cup butter, 1 qt. tomatoes, 2 red peppers.

Make a sauce by frying onions chopped fine in one-half cup of butter. Add a quart of tomatoes and the pulp of 2 red peppers. Simmer until reduced to half. Butter a baking dish, put in a layer of the sauce, then a layer of macaroni and grated cheese, and so on until the dish is filled. Bake over one-half hour.

Scalloped Chicken.—Two cups finely minced chicken, one onion, one-half cup rice, one quart chicken stock, three sweet peppers, one tablespoon butter, salt and pepper, one cup white or cream sauce.

Wash the rice well, and cook until tender in the boiling stock. Season to taste with salt and pepper; a little celery-salt may be used, or some minced parsley if desired. While the rice is cooking, boil the eggs hard, chop up fine and stir with chopped peppers or pimentoes into the rice. Fry the minced onion in the butter until a light brown and add. Arrange rice and chicken in alternate layers in a bake dish, covering the top with a few buttered bread-crumbs. Bake for twenty minutes in moderate oven. Chicken is very nice scalloped with bread or cracker crumbs. In this case use more sauce, making it with part of the chicken stock and cream. Mushrooms are minced, celery may be used to season, or a few oysters may be added to the sauce.

One-Egg Chocolate Cake—Sift together one and one-half cups flour, one cup of sugar, one teaspoon of baking powder and three tablespoons of cocoa, beat one egg very light, add three tablespoons of melted butter and one-half cup of milk and add to the dry mixture and beat well. Flavor with one teaspoon vanilla extract. This is quickly made and good. —Alma B., Augusta, Michigan.

The Runner's Bible

(Copyright by Houghton Mifflin Co.)

Forgive and ye shall be forgiven. Take heed unto yourself; if thy brother sin, rebuke him; and if he repent, forgive him. And if he sin against thee seven times in the day, and seven times turn again to thee, saying, I repent, thou shalt forgive him. (Luke17-3-4.)

All evil must be forgotten, whether it be in you or your brother. To hold perpetually in remembrance your brother's faults and sins, is to create an imperfect, a distorted pattern from which you will be fashioned.

AIDS TO GOOD DRESSING

BE SURE AND SEND IN YOUR SIZE

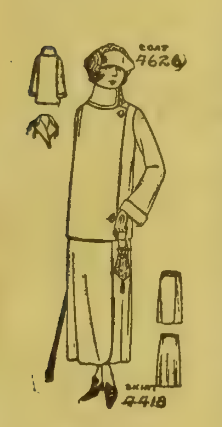
4626-4418. A Stylish Suit.—Broadcloth or velvet would be attractive and seasonable for this model. It is also suitable for the new mohair suitings. The coat has the fronts in double breasted style, and with a collar that may be rolled low to form revers, or turned high in chocker style. The skirt is in "wrap" model. The Coat Pattern, 4626, is cut in 3 Sizes: 16, 18 and 20 years for Misses and Small Women. The Skirt Pattern, 4418, is cut in 7 Sizes: 16, 18 and 20 years, and 31, 33, 35 and 37 inches waist measure for Ladies. The width at the foot is 2⅛ yards. To make this Suit for a medium size will require 5½ yards of 40 inch material.

4611. A Good "Cover All" Apron.—This attractive model may be finished to close at the centre back, or on the shoulders. The belt is slipped under the tab extensions on the pockets. Percale in a neat pattern, or unbleached muslin may be used for this design. It is also good for gingham, lawn or sateen. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A Medium size requires 3¾ yards of 36 inch material

4608. A Quaint and Youthful Model.—For a youthful figure there is no style more charming than that of the fitted waist and full skirt. This is a splendid model for taffeta and other silks also for wool or silk crepe. The Pattern is cut in 3 Sizes: 16, 18, and 20 years. An 18 year size requires 4¾ yards of 36 inch material. The width of the skirt at the foot is 2¾ yards.

4632. A Dainty 'Party" or Dance Frock.—Voile in a pretty shade of apple green with a pattern of embroidery to match, is here shown. Georgette crepe or crepe de chine in orchid or white with the tucks hemstitched would also be pleasing for this style. The dress may be finished to slip over the head or to close to centre back. The puff on the sleeves may be omitted. The Pattern is cut in 4 Sizes: 6, 8, 10 and 12 years. A 10 year size requires 3¼ yards of 32 inch material.

4622. A Dainty Frock for Mother's Girl.—Voile or batiste, China silk, or taffeta could be used for this design. The sleeve may be a short puff, or the popular bishop style. This Pattern is cut in 5 Sizes: 2, 4, 6, 8 and 10 years. A 4 year size requires 2⅞ yards of 32 inch material.



4621. A Simple Frock.—Collar and cuffs of this neat model are checked white and yellow gingham, the frock and sleeves are of yellow poplin. This is a good style for challie, poplin, or linen. It could also be of batiste with collar and cuffs of embroidery. The Pattern is cut in 4 Sizes: 2, 4, 6 and 8 years. A 4 year size requires 2½ yards of 27 inch material. For collar and cuffs of contrasting material ⅝ yard is required.

4630. A Set of Pretty Caps.—Scraps of lace, silk, satin or similar material may be used for these pretty boudoir accessories. No. 1 is pretty with the crown of satin or soft silk shirred to net or lace and trimmed with tiny ruffles or plaited frills. Ribbon or elastic run through a casing holds the cap to the head. No. 2 is made with a wide band which forms a facing, that is to be edged with lace or may be bound with ribbon or bias material. Embroidered net is pretty for this style. The Pattern is cut in 4 Sizes: Small, Medium, Large, Extra Large. A Medium size in either style requires ⅝ yard of 27 inch material. For the crown of No. 1 in contrasting material ¼ yard 9 inches wide will be required.

4623. A New and Stylish Blouse.—Reseda green satin would be pleasing for this design. The buttons could be of crystal or covered with the material of the blouse. This is a good model for crepe, crepe de chine and the new printed silks. The vest, collar and cuffs could be of contrasting material. The Pattern is cut in 6 Sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38 inch size requires 2⅜ yards of 32 inch material. For collar, vest and cuffs of contrasting material ¾ yard of 40 inches wide is required.

JELL-O

America's most famous dessert —for high teas

Jell-O makes a perfect dessert for tea suppers, whether the meal is formal or just family. It is a temptingly pretty dish, with a fine fruity flavor that everyone enjoys and children shout over! Jell-O is prepared in a few minutes and set away several hours before it is time to set the table. Ask for a Jell-O Recipe Book, and try some of the novel Jell-O salads and desserts.

THE GENESEE PURE FOOD COMPANY
LE ROY NEW YORK

RECIPE
Raspberry Bavarian Cream

Wash one box of berries; sprinkle with four tablespoonfuls of sugar. Dissolve a package of Raspberry Jell-O in three-fourths pint of boiling water; when cold and still liquid, whip. Then fold in the raspberries and juice. Set in a cold place to harden. Serve with whipped cream and garnish with fresh berries.

DELUXE PERSONALIZED STATIONERY

Smart stationery, correct in size. DeLuxe ripple-finish, deckle edged lawn correspondence paper, tinged with silver along the deckled edge. 100 double sheets (10½ by 7½) and 100 envelopes, the new smart size printed with your name and address (or any three lines desired) in rich, royal blue. Choice of white, buff, gray, pink, blue or lavender. Do not confuse with cheap bond paper offers. This stylish stationery sent in neat box to any address for only $2.50—less than you can buy the paper unprinted in any retail store. Order today. You'll be delighted. Money refunded if you are not.

Are You Ruptured?

Learn How to Heal It FREE

Ruptured people all over the country are amazed at the almost miraculous results of a simple Home System for rupture that is being sent free to all who write for it. This remarkable invention is one of the greatest blessings ever offered to ruptured persons, and is being pronounced the most successful Method ever discovered. It brings instant and permanent relief and does away with the wearing of trusses forever.

Thousands of persons who formerly suffered the tortures of old-fashioned steel and spring trusses are now rejoicing in their freedom from the danger and discomfort of rupture after a brief use of this remarkable System. There is nothing like it anywhere and hosts of ruptured persons are astounded at the ease with which their ruptures are controlled.

For a limited time only, free trial treatments of this Muscle Strengthening Preparation are being mailed to all who apply. It is an original painless Method. No operation, no danger, no risk, no absence from daily duties or pleasures. Send no money; simply write your name and address plainly and the free treatment with full information will be mailed you in sealed package.

Send now—today. It may save the wearing of a torturing truss for life.

Cured His Rupture

I was badly ruptured while lifting a trunk several years ago. Doctors said my only hope of cure was an operation. Trusses did me no good. Finally I got hold of something that quickly and completely cured me. Years have passed and the rupture has never returned, although I am doing hard work as a carpenter. There was no operation, no lost time, no trouble. I have nothing to sell, but will give full information about how you may find a complete cure without operation, if you write to me, Eugene M. Pullen, Carpenter, 59-K Marcellus Avenue, Manasquan, N. J. Better cut out this notice and show it to any others who are ruptured—you may save a life or at least stop the misery of rupture and the worry and danger of an operation.

MENTION THE MICHIGAN BUSINESS FARMER WHEN WRITING ADVERTISERS

MUSKEGON FARMERS PUT OPERATION IN CO-OPERATION

(Continued from Page 4)

each two weeks period. The operating expenses are deducted, the sinking fund is maintained at about $1,000 and the remainder is paid back to the patrons in their cream checks. This gives the dividends earned by the business each two weeks, directly to the man who milks the cows.

The success of this method is shown in the butterfat prices which the Ravenna concern is able to maintain. Below are the comparative figures for the past five years showing the margin received by the farmer per pound of butter fat over the average price received by the creamery for the butter:

Year	Ave. price butterfat	Ave. price for butter	Margin b. f. over butter
1918	53.3c	49.2c	4.1c
1919	66.0c	60.5c	5.5c
1920	67.2c	60.5c	6.7c
1921	47.7c	43.2c	4.5c
1922	45.3c	40.5c	4.8c

A total of 648,018 lbs. of butter were sold in 1922 for a total of $262,914. The sales of buttermilk brought an additional $2,200. It is interesting to note that the quality of the buttermilk is such that the greater part of it is sold for table use.

The operating expenses during the past year of this $265,000 business were only about $20,000 representing a manufacturing cost of less than 8 per cent. Considering the amount of labor involved in buttermaking, and with the additional packing and wrapping of parcel post shipments, this represents a remarkably low cost.

The Ravenna creamery is not making a mistake which is made by so many cooperative concerns, namely that of paying out all of the proceeds leaving no reserve for financial backing and strength. The trial balance of September 27, 1923, shows a surplus of over $21,000.

Twice per week the cream is gathered on 17 cream routes which extend out into all parts of Muskegon county and even into the adjoining counties of Ottawa, Kent, Newaygo, and Oceana. Four trucks are required for these routes, two of the trucks being owned by the creamery and the other two are hired.

400 Per Cent Increase In Number of Patrons

A splendid growth has been enjoyed by the creamery ever since its reorganization. From a total of 150 patrons in 1918 the number increased to approximately 600 patrons in 1922. This means an increase of 400 per cent in 8 years, all of which goes to show that the Ravenna creamery is a growing concern as well as a going concern.

The sales of Butter in that period likewise increased from 237,000 lbs. to 648,000 lbs. and the amount paid to the farmers jumped from $97,000 to $219,000.

Harvey Averill has been manager ever since the reorganization. He is, to use his own expression, "just an ordinary sod-buster farmer" and he expects to go back to the farm when his period of usefulness for the creamery is at an end.

While Harvery Averill may be an "ordinary" farmer he is certainly an extraordinary creamery manager and much of the success of the Ravenna institution is due to his business ability. A leader in community enterprises, a good "mixer," liked and respected by all, and possessed of an abundance of common sense and good business judgment, Harvey Averill just about fills the bill.

Mr. Averill is ably assisted by two clerks in the office and by a buttermaker and three assistants who handle the manufacturing end.

"Quality"—Always "Quality"

During his whole nine years of service Manager Averill has worked unceasingly to improve the quality of the Ravenna product. At every opportunity he has urged the patrons of his creamery to "produce better cream so we can make better butter and thereby pay you more for your butterfat." All of which is the "better quality—better product—larger profits" lesson which farmers are learning so slowly.

"Seventy-five per cent of the poor butter comes from cream which was

Save half on Fence

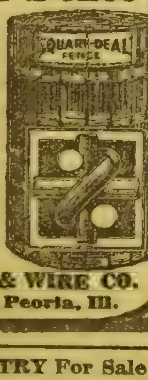
Buy "Galvannealed" Square Deal Fence. We guarantee it to last 2 to 3 times longer than ordinary galvanized wire in any standard test. Its triple thick zinc coating does not flake or peel off. Rust and corrosion can not get in to destroy the steel. It should last 2 to 3 times longer than the fence you now own, therefore, cost ½ to ⅓ as much.

Square Deal Fence

is trim looking, long lasting—economical. Full gauge wires. Stiff, picket-like stay wires. Well crimped line wires. Small, compact knot guaranteed not to slip.

FREE Copy of Ropp's New Calculator (answers 75,000 farm problems) to land owners who write for Square Deal catalog that tells all about "Galvannealed" the new Triple-Life Wire.

KEYSTONE STEEL & WIRE CO.
4830 Industrial St., Peoria, Ill.



Have You LIVE POULTRY For Sale? An Ad in THE MICHIGAN BUSINESS FARMER Will Sell It!

spoiled before it left the farm," declares Mr. Averill. He has an idea that the trend of the future will be toward skimming stations to handle the farmers' milk. And the reason Mr. A. has this hunch is the tendency of farmers to avoid separating the milk and the dislike of the farmers' wives to wash the separators. They want to sell whole milk and the creamery must meet the situation.

If skimming stations do again come into style they will not only reduce the labor on the farm but they will effect a great improvement in the quality of the cream and of the resulting butter.

Every day in every way it is getting better and better, is Manager Averill's opinion of the dairy business. As proof he displays the average price paid for butterfat during the first six months of 1923 by the Ravenna creamery. 55.7c per pound is the figure for the six months and the average for the entire year will undoubtedly be higher.

Notice the average butterfat prices for the preceeding five years which plainly show the rise during the war and the subsequent depression: 1918, 55.3c; '19, 66c; '20, 67.2c; '21, 47.7c; '22, 45.3c—and now up again—55.7c.

These figures support Mr. Averill's argument that dairying has been one of the most profitable lines for the farmer. Dairy prices never dropped as low as did other farm products and they are among the first to recover. It will be pleasing news to Michigan's dairymen to learn that dairy product prices have reached the bottom of the depression and are again on the upgrade.

Demand Exceeds the Supply

And so, as we have attempted to outline, quality is the basis for the success of Ravenna butter and selling direct by mail is the reason for the success of Ravenna creamery. During the last few months the demand for Ravenna butter, both locally and from mail orders, has greatly exceeded the supply.

On several evenings Mr. Averill has reported as follows, "There isn't enough butter left in the creamery tonight to spread a single slice of bread." All of which goes to prove that people know good butter when they taste it and that they will buy it if they can get it.

That there are real cash rewards in cooperation is shown by the Ravenna creamery. The manager estimates that the average price paid for butterfat during the year is from 5c to 11c per pound above ordinary butterfat prices.

Take, for example, the day which was mentioned before in this article when Standards were quoted in Chicago at 48½c. The usual practice is to pay for butterfat 1c per pound under Standard quotations, or 47½c per pound on that particular day. Compare this with the Ravenna returns of 60c for butter and approximately 63c per pound for butterfat.

Can It Be Possible?

No story is at its best which does not carry a moral. In addition to emphasizing quality and cooperation, this account closes with a warning against treason. It is treasonable to "aid or abet the enemy." What then shall we say of the dairy farmer who gives assistance to oleo, that arch enemy of the dairy business?

It is stated on good authority that 75 per cent of the patrons of the Ravenna creamery use oleomargarine on their tables. We can well hope that this figure is placed much too high, but it shows a danger which exists in all parts of Michigan as well as at Ravenna.

The farmer who uses oleo in preference to butter may save a few cents per week on expenses but in other ways he loses fearfully. He loses in the strength and vigor of his growing children who have been deprived of the vitamines so necessary to their development. He loses in the health of the adults of his family who have been given an inferior food product. And, furthermore, he is a trator to his own business.

No one will dispute the fact that anything which aids the sale and use of oleomargarine injures the dairy business to the same extent. Furthermore, that anything which injures the dairy business has an effect on all other lines of farming because they all are interdependent.

DAIRY and LIVESTOCK

DECLINE IN HOG PRODUCTION

THE pig survey taken by rural mail carriers throughout the United States on December 1 shows some very interesting comparisons between different sections of the country, says V. H. Church, Agricultural Statistician for Michigan. The report indicates that there was an increase of 4.7 per cent in the number of sows farrowing in the fall of 1923 as compared with the previous fall, and a decrease of 10.6 per cent as compared with last spring. Wisconsin and North Dakota were the only other corn belt states reporting an increase compared with one year ago. For the corn belt as a whole the number is 6.1 per cent less than one year ago and 43.6 per cent less than last spring. The number of pigs saved in the fall of 1923 in Michigan is 5.8 greater than in the previous fall and 9.8 per cent less than last spring. For the corn belt, the number saved is 3.8 per cent less than one year ago and 43.1 per cent less than last spring.

A decrease of 2.0 per cent in numbers of sows bred or intended to be bred for spring farrowing in 1924 in the State, and 5.4 per cent in the corn belt is also shown. The average number of pigs saved per litter last fall in the state was 6.0 as compared with 5.8 last spring and 5.9 the previous fall. The corresponding figures for the entire corn belt were 5.02, 4.93, and 4.90 per cent. Experience with previous surveys has shown that actual farrowings have fallen considerably short of expressed intentions.

The decline in production and tendency for a further decrease is due to the lower prices that have prevailed for some time, and the relatively better price of corn. Receipts of hogs at stock yards during the last few months have been the heaviest in many years.

DON'T MIX THEM UP

A SHORT time ago I heard a story about a friend of mine who had a little experience in introducing animals of another breed into a herd of purebred cattle. I want you to enjoy the story so will tell it as I heard it.

This particular man had a herd of purebred Holsteins which he had been breeding for about twenty-five years. They were very good producers and probably averaged between 8000 and 10,000 pounds of milk for the year. However, everyone was talking percentage of fat on the milk check from the milk station and it did seem to him that he might be getting a little more money if he could increase the fat percentage. Therefore, he purchased a grade Guernsey cow to put in with his herd of about twenty Holsteins. He turned her out in the pasture with the other cattle and his neighbors noticed her as they passed by on their way to the milk station. There was considerable comment at the milk station and the proprietor remarked that this man had purchased a Guernsey cow to raise his fat content.

A month went by and one morning a neighbor asked how he was coming with the Guernsey cow. He replied, "Very well indeed so far. My fat test went up 1 per cent this month and she hasn't even freshened yet. I do not know what it will do when she does."

This story set me thinking. The first question I asked was,—just how much can one Guernsey cow in a herd of twenty Holsteins affect the milk? I sat down and figured a little.

If the Holsteins average 40 lbs to the cow and the Guernsey 30 lbs., there would be produced 800 lbs of Holstein milk and 30 lbs., of Guernsey milk per day. If the Holstein milk tested 3.3 there would be 26.40 lbs. of fat produced by the Holstein and if the Guernsey milk tested 4.4 there would be 1.32 pounds of fat produced by the Guernsey, a total of 27.72 lbs of fat. Now dividing the total pounds of fat by the total pounds of milk, we find the average percent of fat 3.34 and this would be called 3.3 percent on the milk sheet unless the dealer was generous.

This gives a pretty good indication of the affect that one cow can have in a herd of twenty cows. You see quite readily that the affect is almost negligible. This, however, is not the gravest error and I believe that many of our farmers are short-sighted in mixing breeds for this reason:—that they are sure not to keep a purebred bull of the breed from which they introduce one or two cows to increase the fat content. This means that they will be using a purebred Holstein bull on a Guernsey or Jersey cow and that in the first generation they will have a half-blood or hybrid. This carries us back to the time we started with native cows with no particular description fifteen to twenty years ago or longer and which we have eliminated by persistent effort through use of purebred bulls. One attempting to use this system argues that he does not raise the calves and consequently there is no disasterous affect. However some are pretty sure to sell a heifer calf from this mating if the dam is a good producer, to a neighbor and this neighbor will carry on the work of crossing and breeding to his own dissappointment and loss.

Disasterous results have been obtained through many years by this system of breeding, and breeding policies and methods are just as important as the careful selection of producers and therefore we should keep either one breed or another, building up gradually from good grades to purebreds, for the greatest producers come with the purest blood. We should analyze our business very carefully before making a change. We have sensational and fashionable things in farming as well as in ladies' clothes and many farmers must look carefully into these things before spending much money.

Choose your breed. Work toward your ideal through careful grading up. Eliminate the blood of all other breeds so far as possible and work steadily into a purebred herd being sure to practice as careful selection with purebreds as you should with grades. At any rate, "Don't mix them up."—M. C. Bond.

A LITTLE FEED, A LITTLE LABOR, RETURN GOOD PROFITS

"THERE is a horse that I would give $200.00 for," said a well known dealer who is shipping to the eastern markets, "if he were in good flesh and short haired. As it is, I dare not pay more than $140.00 for him, and even at that I take a chance of losing money. Long

American Field Seed Co., Dept. 827, Chicago, Ill.

haired, thin horses are much more susceptible to disease, must be held in our stables for some time until they get in better condition, and the risk and expense, and the fact that they are not saleable until they are in better flesh, makes a horse of that kind less desirable to me at $140.00 than the same horse would be at $200.00, if he were in fit condition."

Other dealers corroborated his statement and added that while it was unprofitable to put feed into a $50.00 horse, it would certainly pay to put 30 days' feed and some grooming on horses weighing 1500 pounds or over. Twelve quarts of oats per day, plus plenty of good forage and a little oil meal, (say one half teacupful at each feeding time with the oats), will put horses in a much improved condition for sale in 30 days' time, if they are kept in clean stalls, well bedded, and given a thorough grooming every day.

Fifteen dollars worth of feed per horse, plus some work, will make $50.00 to $60.00 difference in the selling price in any good horses that are to be sold this spring; and while horses are a by-product of the farm, it is worth while having such by-products in fit condition to bring a top price.

THE COW

THERE is virtue in the cow; she is full of goodness; a wholesome odor exhales from her; the whole landscape looks out of her soft eyes; the quality and the aroma of miles of meadow and pasture lands are in her presence and products. I had rather have the care of cattle than be the keeper of the great seal of the nation. Where the cow is there is Arcadia; so far as her influence prevails there are contentment, humility and sweet, homely life.—John Burroughs.

SHEEP RAISING PREFERABLE TO GOAT RAISING

I have about 340 acres, about 50 acres cleared. At present 15 acres is in hay. River flows along one side. Would you think it advisable to try raising Angora goats, so they would help clear the brush and at the same time bring in some profit, or would you advise raising sheep? Would the wool be heavier per sheep in this northern country? I have a good barn where I could store hay and house sheep or goats. Expect to rotate crops from hay to small grain, then back to hay for feed, small grain like oats, rye, wheat and barley. Is there a very good market for Angora wool? How do prices compare with that received for sheep wool?—C. F., Cathro, Mich.

—I would advise you to engage in the sheep business rather than in that of raising Angora goats. In the first place, the young lamb is a great deal hardier and easier to raise than is the Angora kid. The lamb grows much faster and will weigh a great deal more than the kid at marketing time in the fall and will bring about double what the kids will.

The sheep will also shear a heavier fleece of wool than the goat will of mohair. Where one specializes in the production of mohair, gives his goats especially good care and produces a high quality of mohair, it will bring more per pound than will wool, but under ordinary farm conditions the clip of wool from a sheep will bring more than the clip of mohair from a goat.

If you desired only to clear this land and then engage in some other form of livestock production, it would be alright to purchase a sufficient number of goats on some of the markets and take them out to the farm and keep them until the brush was destroyed, but as a business on the farm, to be continued year after year, the raising of sheep is undoubtedly preferable to the raising of goats.—Geo. A. Brown, Prof. of Animal Husbandry, M. A. C.

Practices on de Seat

"Aunty, what do you do when your children practice deceit on you?"

"What you all call dis here dey practices?"

"Deceit; tell you lies, you know."

"In dat case, Ah practices on de seat?"

A Self Centering Bowl in the new De Laval

A Better De Laval For Fewer Pounds of Butter

$6.60 to $14.30 Down the Rest in Easy Monthly Payments

Greater Value. Present-day purchasers of De Laval Cream Separators are getting more value than was ever before possible. In 1913 it took 231 pounds of butter to pay for a popular-sized De Laval. Now it requires only about 188 pounds (average prices for years 1913 and 1923) to pay for the same machine—43 pounds or 18% less butter. In addition, the present-day De Laval is at least 20% better, having 10% more capacity, a bell speed-indicator, self-centering bowl, and many other improvements and refinements.

Self-Centering Bowl. The De Laval Bowl is so designed as to center and balance itself when it attains separating speed, which causes it to run smoothly, without vibration, and adds to the efficiency and life of the machine. It also gives the least possible resistance in being revolved, which together with the automatic oiling system and superior design and construction of the driving mechanism, causes the De Laval Bowl to require the least power (per pound of capacity) to drive.

All-Around Superiority. A combination of the foregoing features, together with superiority of De Laval design, workmanship and materials, enables a De Laval to separate more thoroughly under all conditions of use, deliver a smoother cream capable of making better butter, to separate a richer cream with less loss of butter-fat, and to separate with greater efficiency at lower temperatures.

Remarkable Record. Not only was the De Laval the first continuous centrifugal cream separator ever made, but ever since it has been first in popularity, in numbers in use, in efficiency and length of service. All of the thousands of De Laval Separators entered in the "Oldest Users Contest" held last year, averaged over 20 years of use. Any De Laval is capable of giving equal service.

Pays for Itself. There are many worn-out and inferior cream separators in use today, wasting enough cream to pay for a new De Laval in less than a year. You can buy a De Laval on such easy terms that you can use it while it is paying for itself.

The De Laval Milker.

If you milk ten or more cows, a De Laval Milker will soon pay for itself. Besides saving a great deal of time and drudgery, it produces cleaner milk and by its pleasing, uniform action usually causes cows to give more milk. More than 15,000 users will tell you so.

you can double dairy profits

The net profit from your cows can be *doubled* by increasing your total milk production only 10% ! Eminent dairy experts are authority for the correctness of this surprising fact.

10% More Milk—
Doesn't it seem possible?

Let us suppose your profit last month from your cows was $100. If by a little more intensive methods you can get even 10% more milk this month, your net profit would be at least $200 !

Surely such a result is worth trying for. It is the poor milkers in the herd that eat up the profit made by the good producers. Usually they are poor milkers because of some impaired condition of the genital functions—the milk producing organs.

The medicinal properties of Kow-Kare affect just these organs. Its toning, stimulating action is quickly apparent. Sluggish cows have improved appetites and assimilation and better milk flow is sure to follow.

In the treatment or prevention of Barrenness, Abortion, Retained Afterbirth, Scours, Bunches, Milk Fever, Lost Appetite, Kow-Kare has a reputation founded on successful use for over twenty-five years. You, too, can realize greater profits from dairying through the judicious use of Kow-Kare. Try it.

Kow-Kare, large package, $1.25; medium size, 65c—at feed dealers, general stores and druggists. If your dealer is not supplied, we will send postpaid on receipt of remittance.

SPOTTED POLAND BREEDERS TO FORM STATE ASSOCIATION

On Monday, February 4th, of Farmers' Week, the Spotted Poland breeders of Michigan are planning to hold a meeting for the purpose of organizing a State Association of Spotted Poland Breeders. This meeting will be held in Room 110 of the Agricultural Building, Michigan Agricultural College, East Lansing, and will begin at 10 o'clock in the forenoon.

All of the swine breeding associations are meeting on Monday and all join together at 3 o'clock in a meeting of the Swine Breeders' Association in Room 402, Agricultural Building.

Spotted Poland breeders throughout Michigan should make it their duty to attend this meeting, and also, to help in getting all the breeders in their county or immediate community interested in attending, and help boost the State Association.

CULL BEANS GOOD FEED FOR DAIRY COWS

I wish to know if there is any danger in feeding cooked cull beans to cows giving milk or those soon to freshen.—W. C., Morley, Mich.

—Cull beans, apparently, are good feed for dairy cows, if not fed in too large amounts. At the present time we have very little information relative to the amount of beans which can be fed successfully. Cull beans are a good protein feed and should be fed as such in the dairy cow's ration. I would recommend about three pounds per day of raw beans or their cooked equivalent, to milk cows. I would not advise feeding beans to cows about to freshen. Cull beans can be fed either ground or cooked. In feeding raw cull beans I would recommend that they be fed with a mixture of other grains so that the beans do not make over 25 per cent of the ration and that the other grains be palatable to the cow, as one of the difficulties in feeding beans is that the cows do not care very much for them. Cooked beans differ from raw beans in that the protein is not quite as available in the cooked form.—J. E. Burnett, Associate Professor of Dairy Husbandry, Mich. Agricultural College.

Veterinary Department

RING BONE

Can a ring bone on the hind foot of a five-year-old mare be killed? What is the process of treatment? The growth may be plainly seen but the horse is lame only after a long drive.—Reader, North Branch, Mich.

—A great many ring bones can be cured if properly treated. The swelling can never be removed but the lameness can be gotten rid of in some cases. Where there is no lameness it is best to let them alone. Where lameness is present point firing no doubt is about the best treatment that can be applied. This should not be attempted, however, by no one except a qualified veterinarian. If the lameness does not disappear in four to six months time the animal can be fired again. Some cases take from one to three years before the lameness entirely disappears then there are cases that are incurable. Those cases where the bony swelling comes in such a way that it mechanically interfers in the working of the joints of the foot. Let an experienced veterinarian make an examination of your mare and he will be able to give you the desired information relative to a prognosis.—John P. Hutton, Assoc. Prof. of Surg. and Med., M. A. C.

"A man who believes in the old saying, "See a pin and pick it up, and all that day you'll have good luck," saw a pin in front of the post office the other day. Bending down to get it, his hat tumbled off and rolled into the gutter, his eyeglasses fell and broke on the pavement, his suspenders gave way behind, he burst the buttonhole on the back of his shirt collar, and he all but lost his new front teeth. He got the pin.

FREE BOOK ABOUT CANCER

RHEUMATISM

A Remarkable Home Treatment Given by One Who Had It.

In the year of 1893 I was attacked by Muscular and Sub-acute Rheumatism. I suffered as only those who are thus afflicted know, for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely, and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatsim, to try the great value of my improved "Home Treatment" for its remarkable healing power. Do not send a cent; simply mail your name and ad- and I will send it free to try. After you have used it and it has proven itself to be that long-looked-for means of getting rid of such forms of rheumatism, you may send the price of it, one dollar, but understand, I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer when relief is thus offered you free? Don't delay. Write today.

SOYBEANS FOR HOG FEED

Are soybeans of any value for hog feed? If so, explain in which way they should be fed for best results. —J. A. Y., Burr Oak, Mich.

—Soy beans are an excellent protein supplement for feeding hogs. In other words, they play the same part in the ration that would digester tankage, skimmed milk, or oil meal. Experiments have shown, however, that soybeans do not contain the mineral matter such as is found in the skimmed milk or tankage and for satisfactory results, hogs fed soy beans as a protein supplement should have access to mineral matter continually. The following mineral mixture is satisfactory: Pulverized limestone, 10-lbs.; 16 per cent acid phosphate, 10-lbs.; Salt, 1-lb.

The soy beans may be ground and fed in a self-feeder, or they may be ground and mixed up with the ration where the same is being fed in a slop.

Where the soy beans are ground and mixed with a grain ration consisting largely of corn, in the neighborhood of one-sixth to one-fifth of the ration should consist of the ground soybeans.—Geo. A. Brown, Prof. of Animal Husbandry, M. A. C

MICHIGAN BEAN GROWERS PLAN TO MARKET CROP

(Continued from Page 3)

thinks this means a bushel and being unfamiliar with the average shrinkage resulting from the picking process believes the price is a high one. The fact that the average bean grower of this state has received less than $2 per bushel for his beans, machine measure, this year, indicates the measure of misunderstanding liable to occur in the minds of the uninformed public.

Advertising Advisable

"A wonderful field almost entirely unworked is the advertising of the pea bean as a food. We believe that the consumption of beans could be increased 25 per cent at a cost entirely insignificant by efficient advertising. Foreign inferior beans should not be permitted to compete on even terms. There is a tremendous amount of work in the interests of this crop, the promotion of which would be the best investment the Michigan bean grower makes.

"There is no reason why a high quality of white pea beans should at any time be a glut on the market. The means are all at our hands to prevent it. Beans of this character should never sell at a price which will not repay us for our investment in them and a profit. Our present tariff is high enough to make this possible without encouraging importation. We believe beans are the only agricultural product of which this could be said of Michigan, working independently. Vast fields open when we consider co-operation along this line among the states. A certain farmer organization has a committee of seven at work now in Washington on a proposition of this kind.

"We will make no suggestions, but hope and expect that much light will be thrown on these subjects of orderly marketing, adequate price, advertising and protecting the reputation of our incomparable or at least unexcelled, Michigan pea bean.

"In common with many others, we have felt that a meeting of this kind should be held. Mr. Churchill, offering to come on this date, brought things to a focus. It is late to be effective to any degree for this year's crop, is certainly somewhat belated, but a start must be made some time, somewhere. Is this the time, is this the place? We expect this conference to be friendly and effective and constructive.

"We believe every one here is honest in his desire to serve and is measurable unselfish. We ask your co-operation in making this meeting a pleasing and profitable one from start to finish. Many angles are to be presented and we ask courtesy and consideration for all. If, after a careful consideration, the conclusion is reached that it is possible in fairness to all and in the interests of economic efficiency to take steps which promise to put the Michigan pea bean on a more satisfactory and uniformly profitable basis to the grower, we hope to see the preliminary steps taken before the final adjournment of this session."

F.S.R

Fertilizer must be "cured"

Great bins of Royster Fertilizer "cure" or "age" for months so that your results from its use will swell the earnings from your land.

PERHAPS you didn't know that fertilizer should be "cured." Such "details" as this represent the difference between Royster's Fertilizer and less carefully prepared foods—and the difference between profitable crops and crops that are not so profitable.

To keep vast quantities of fertilizer for months represents an enormous supply and a tremendous capital. Therefore, only a large company like Royster's can offer this more effective "cured" fertilizer.

Rid yourself of the idea that all fertilizer is alike. This is no more true than that all land is alike. The truth of this can be proven—not alone by the enthusiastic praise of successful farmers who have used Royster's, but by your own experience.

Grow better and larger crops by using fertilizer that has been "cured"—that is free from lumps—that has been proven chemically correct—and that has established a record for good works over a long period of years. Look for the name "ROYSTER" on the bags.

10,000 miles guaranteed and yet you save 1/3

Riverside OVERSIZE CORD Tires

Riverside Oversize Cord Tires are guaranteed for 10,000 miles and in actual performance give up to 18,000 miles. Can any other tire do more?

So why not save one-third and use Riverside Cords? What more will any other tire do? Then why pay more?

And this 10,000 miles service is backed by a guarantee that has stood for fifty-one years. Does any other tire carry a better guarantee?

Quality is built into Riverside Cords

This guaranteed mileage is built into Ward's Riverside Cords. High treads, thicker and stronger, of tough, live rubber.

This exceptional quality of Ward's tires alone has made us the *largest retailers of tires in the country.* The tires themselves have convinced thousands that Riverside Cords are best.

"I have used Riverside Tires for the past four years. I have never had to send a tire back for adjustment.
I have tried several different highly advertised makes alongside of Riversides and have not found a superior."
Walter M. Schworm, Nessen City, Mich.

You Don't Risk One Cent

Before you buy any tires send for Riversides. Inspect them. Compare them with tires selling for $5.00 or $15.00 more.

Send them back if you do not find them the equal of any first-quality oversize cord made. We will refund your money.

These prices buy 10,000 miles of service—and more.

Buy Both With the Savings Get More Eggs

The DETROIT-ALLIANCE is a Proven BIG HATCHER

THE Detroit is not an untried incubator. For years it has been turning out bigger hatches of fine husky chicks for poultry raisers all over the country. That's why I can so unconditionally guarantee it to out-hatch and outlast any other incubator made, regardless of price.

Shipped complete ready to use except putting on legs.

All the features of machines costing twice as much you will find in the Detroit-Alliance. Double walls with dead air spaces between for keeping out the cold and holding in the heat, big nursery, special thermometer holder that keeps thermometer in plain view from outside yet up where chicks can't break it while hatching, automatic heat regulator, copper leak-proof hot water tank with rounded elbows for even distribution of heat in hatching chamber—in short everything that insures large hatches of strong, vigorous, fast growing chicks, is built into the wonder Detroit-Alliance Hatcher.

Freight prepaid east of the Rockies and allowed to points beyond.

Special Combination Offer

Carries 140 chicks through the critical five weeks following hatching. Double walls, hot water heat, durably constructed yet light and easy to clean. A triumph of mechanical ingenuity.

By buying both machines at one time you get not only the best, most complete profit hatching outfit on the market but you get it at tremendous savings—so big, in fact that if you tried to get the same value anywhere else just the incubator alone without a brooder you'd have to pay more than what I am asking for both machines. *Write now—get my catalogue and sensational combination offer.* Study Detroit-Alliance features and compare, both in quality and price, with any other incubator or brooder ever built. *Write today!*

BROODING PRACTICES

THOROUGH preparations for the reception of the chicks should be made several days in advance of their arrival.

1. The colony house or building used should be tightly constructed and easily ventilated. Adjustable openings in both the front and rear of the colony house, directly below the roof, should be provided especially for summer ventilation. This permits good air circulation and releases the warm air which tends to accumulate near the roof. The growing chicks have all the open air benefits obtained while roosting in trees with the additional advantage of shelter, during inclement weather.

2. The floor of the colony house should be dry, warm and free from draughts. A covering to a depth of two inches of white sand provides ideal conditions and in addition supplies grit material.

3. The brooder stove should be operated two or three days previous to the arrival of the chicks. The automatic heat regulator should commence to check the rampers when the thermometers register 90 degrees F. directly below the outer edge of the canopy or deflector. This will provide sufficient heat and allow the chicks to select the temperature required for their comfort.

4. A wire cloth screen should be placed around the Brooder at a distance of 15 inches from the outer margin of the heat deflector. This confines the chicks, preventing them from straying too far from the source of heat before they are educated to return when uncomfortable. The screen may be removed after the third day or gradually widened out giving more floor space.

5. Avoid overcrowding—this applies both to brooder and house capacity. Many chicks are killed or ruined when the capacity of either is over-rated. A colony house 10x 10 will accomodate 300 to 500 chicks quite satisfactorily. Larger units may produce excellent results but require more experience in this special phase of work.

6. Chicks have a tendency to withdraw from the brooder as they get older and frequently crowd towards certain corners. Huddling may result due to a sudden drop of temperature, should the fire get low. If this occurs a high mortality usually results and a weakened condition is apparent in those that do survive. Keep the corners of the house screened off.

7. The chicks should be coaxed outside during the first and second week. Leg weakness can usually be avoided if the chicks cultivate the habit of running outside almost continuously. They appear thriftier and do not develop the hot-house appearance of closely confined chicks.

8. Low flat roosts should be placed in the colony house after the second week thereby educating the chicks to roost early. Once the chicks have taken to roosting the danger point is past.

9. Reduce the temperature as the chicks get older but don't be too hasty in taking away the heat, because sudden showers may occur in which case a little heat will provide greater comfort and may save the lives of many chicks should they get chilled.

10. Segregate the broilers and cull pullets and draw the colony house to a well shaded range, where plenty of green food is available. Economic gains can then be made by hopper feeding and labor is reduced to a minimum.

KEEP SHELL BEFORE BREEDERS

MANY people assume that if they have supplied the hens with grit that they can get along without oyster-shell. They fall into the error of thinking that all the shell is for is to act as a form of grit and that it is not necessary where grit itself is provided. As a matter of fact, oyster-shell is not intended at all for the primary purpose of aiding in the grinding of the grain or other elements taken into

BOWERS Colony Brooder

Burns any fuel—costs less

This brooder raises more and better chicks at lowest cost. Stove is sturdy, safe, air-tight, self-regulating—best in world to hold fire. Burns soft coal—cheapest brooder fuel—perfectly. Also hard coal, wood, etc. Automatic regulator maintains uniform heat night and day. Canopy spreads heat evenly over chicks; gives pure air, ample room. 500 and 1,000 chick sizes. Guaranteed. Lowest prices. Express prepaid E. of Rockies. **FREE—$3.00** stove pipe outfit sent free with brooder if you order NOW.

the crop, although it does perform some service along that line.

It's chief function is to furnish lime, which is necessary in the formation of shell for the eggs which the hens are expected to lay. Lime is in more available form for this purpose in oyster-shell than in any other form in which it can be fed. Some people attempt to supply it through lime added to the drinking water, but this has not proved satisfactory. Water dissolves but a very small amount of lime.

Where a fine egg is desired either for market or hatching purposes, oyster-shell in sufficient quantities must be before the hens all the time. Hens that have plenty of oyster-shell are going to lay better eggs, and more uniform eggs than those that are denied it. Rough shells on eggs are sometimes a hereditary characteristic in certain hens, but more often are due to a deficiency of lime in the ration than to anything else.

We have demonstrated in our own experience that oyster-shell plays a very important part in the ration for both layers and breeders. The hens eat greedily of it, if deprived of it for a time, and one must be alert to keep the shell hopper full at all times. If the shell runs out for a while, the egg yield is certain to reflect this fact, unless the hens have access to lime in some other form.

OH, MONEY! MONEY!

(Continued from page 8.)

none of them seemed to have any really solid foundation. Interviews with the great law firm having the handling of Mr. Fulton's affairs were printed but even here little could be learned save the mere fact of the letter of instructions, upon which they had acted according to directions, and the other fact that there still remained one more packet—understood to be the last will and testament—to be opened in two years' time if Mr. Fulton remained unheard from. The lawyers were bland and courteous, but they really had nothing to say, they declared, beyond the already published facts.

In Hillerton the Blaisdells accepted this noteriety with characteristic variation. Miss Flora, after cordially welcoming one "nice young man," and telling him all about how strange and wonderful it was, and how frightened she felt, was so shocked and distressed to find all that she had said (and a great deal that she did not say!) staring at her from the first page of a big newspaper, that she forthwith barred her doors, and refused to open them until she satisfied herself, by surreptitious peeps through the blinds, that it was only a neighbor who was knocking for admittance. An offer of marriage from a Western ranchman and another from a Vermont farmer (both entire strangers) did not tend to lessen her preturbation of mind.

Frank, at the grocery store, rather welcomed questioners—so long as there was a hope of turning them into customers; but his wife and Mellicent showed almost as much terror of them as did Miss Flora herself.

James Blaisdell and Fred stoically endured such as refused to be silenced by their brusque non-committalism. Benny, at first welcoming everything with the enthusiasm he would accord to a circus, soon sniffed his disdain as at a show that had gone stale.

Of them all, perhaps Mrs. Hattie was the only one that found in it any real joy and comfort. Even Bessie, excited and interested as she was, failed to respond with quite the enthusiasm that her mother showed. Mrs Hattie saw every reporter, talked freely of "dear Cousin Stanley" and his wonderful generosity, and explained that she would go into mourning, of course, if she knew he was really dead. She sat for two new portraits for newspaper use, besides graciously posing for staff photographers whenever requested to do so; and she treasured carefully every scrap of the printed interviews or references to the affair that she could find. She talked with the townspeople, also and told Mr. Smith how fine it was that he could have something really worth while for his book.

(Continued in February 16th Issue.)

Mr. Gassam—"Yes, I suppose I can claim to be a financial success, and just think, I started business with a shoestring."

Miss Green—"Mercy! It's genius! A man who could get anybody to buy one shoestring couldn't help but succeed."—Boston Transcript.

A ROPP'S CALCULATOR FREE

MARKET FLASHES

MARKET SUMMARY

Wheat, corn and oats steady after advance in price on opening day of week. Rye and beans firm. There is a good demand for butter and eggs. Apples firm. Potatoes steady. Cattle steady but dull. Hogs steady. Sheep active to higher.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

Aid for Northwest

PRESIDENT COOLIDGE has sent a special message to Congress on the acute situation in the northwest wheat growing sections, and reference is made to the numerous bank failures, the many foreclosures of farm mortgages, and the inability of the farmers of the wheat growing districts to finance the necessary purchases of live and other stock which will enable them to diversify their products. "Bills have been introduced," to quote the presidential message, "providing for the lending by the federal government of moneys directly to the farmers for purposes of assisting them in conversion of their farms on the basis of diversified farming." One such, introduced by Senator Norbeck and known as the Coulter bill, would allow a farmer to borrow not to exceed $1,000 at reasonable rates of interest, for the purpose of live stock, poultry and similar necessities on the well-balanced farm. In certain sections where the financial situation is worst, the President suggests that it may be necessary to strengthen the capital resources of the country banks, and to create "new financing institutions such as have been organized with great success in the live stock territory." It is evident, however, that the insecure collateral of the wheat districts stands in the way of new financial institutions such as the live stock pools.

Mixed Farming Conditions

Despite the many gloomy reports coming from agricultural districts, numerous reliable reports are received every day of fair profits derived by small farmers who have made the best of their opportunities, and have not purchased tracts of land at war-time inflated prices. These lands as a rule are mortgaged at high rates of interest, and in most instances they could not be sold for anywhere near the cost price. The average farmer who owns his own farm and owes no man money is the fortunate one, and he can face the future courageously, the essentials being well diversified crops, plenty of manure for his acres, first-class seeds and raising so far as possible such things as his family consume. Michigan farmers have learned the importance of abandoning the dangerous one crop system, and many are taking up dairying and sheep raising, both of which are highly profitable. Michigan farmers are also greatly skilled in growing fruits, grapes, berries, etc., and these find a market in Chicago and other nearby cities. Our domestic trade is on a large scale for January, and the railroads are doing an enormous freight carrying business, their increased operations calling for vast sums to be expended for new equipment. They are paying much higher wages than a decade ago and claim that at existing cost of operation considerable reductions in carrying charges are impossible. The foreign trade of the country is slow to improve because of abnormal business and financial conditions, and it seems hardly probable that any marked change will take place this year, although our exports of provisions are extremely heavy, due to low prices. For the same reason the consumption of fresh and cured hog products in the United States is the largest ever known.

Light Trading in Wheat

Trading in wheat on the Chicago Board of Trade recently was the smallest in a year, while there was good speculative trading in corn. It is encouraging to note that prices for wheat seem to have touched bottom, but it does not look as though any marked improvement will take place in the near future, with rival exporting countries still underselling us. Only a short time ago when Liverpool was selling wheat about 20 cents lower than a year ago, Chicago wheat was selling only ten cents lower than at that time. The visible wheat supply in the United States is decreasing at the rate of more than 2,000,000 bushels a week, but it aggregated 70,495,000 bushels, comparing with 48,829,000 bushels a year ago. Bradstreet's reports 209,000,000 bushels of wheat in the United States and Canada, in addition to large supplies owned by the mills. Much wheat has been sold in the northwest by farmers who could not obtain credit, but much remains. May delivery wheat sells in Chicago close to $1.10, comparing with $1.17½ a year ago.

Corn and oats have advanced to the highest prices of the season, and corn sentiment is still quite bullish despite sales above 80 cents a bushel. Cold weather has greatly increased the consumption of corn on farms, and this is naturally a bullish factor, with the supply in markets unusually low. Rye prices are very low, yet the export demand lags. A great deal of trade is transacted in corn, and it is recalled that a little more than two years ago it sold at 52 cents. May corn sells on the Chicago Board of Trade around 81 cents, comparing with 72¾ cents a year ago; May oats at 48⅞ cents, comparing with 44½ cents last year; and May rye at 74 cents, comparing with 87¾ cents a year ago.

The Bean Market

The news service of the Bean & Pea Journal says: "Michigan beans can be laid down in a territory extending from New York to Kansas City at a lower figure than perhaps any other bean other than the California pinks. Foreign beans are not causing any great concern among domestic shippers as yet, though they are coming in right along. New York state, as usual, controls her own conditions. Idaho reports a growing popularity for Great Northerns."

Hogs Plentiful and Active

The hog market of late was quite a remarkable one, with receipts in Chicago close to the largest on record, while the wonderfully large local and shipping demand kept prices steady day after day. Eastern shippers were usually liberal buyers, taking the choicest hogs, and this outside buying proved of great help to sellers. Because of the enormous marketing of hogs, prices are far lower than in recent years, with prime butcher hogs selling the highest and 15 cents over the best light bacon hogs. Receipts are gaining in weight, late Chicago receipts averaging 233 pounds. Late sales were made of hogs at a range of $6.50 to $7.35, the top being 15 cents higher than a week earlier.

Most farmers appear to be favorably disposed to feeding the usual number of cattle, despite the advance in the price of corn, and this seems to be sensible. A successful Indiana cattle feeder remarked recently that he never made any money feeding cattle when corn was cheap, and doubtless many other stock feeders have had similar experience. When corn is selling at low prices there is apt to be a scramble to buy cattle to fatten, and the business is likely to be overdone. If corn sells high, farmers are apt to stay out of cattle feeding, and in the end cattle go higher. At the present time cattle feeding is normal, and fat cattle are expected to make fair profits for owners. The recent severely cold snaps resulted in large marketing of half fat cattle, lots which had been fed from 60 to 120 days, and selling in the Chicago market for $8 to $9.75 per 100 pounds. Fat light weight yearlings are the best sellers, with heavy long fed steers selling at a discount. Recent sales of beef steers were largely at $8 to $10.25, the very best steers going at $10.25 to $11.25 and the best yearlings at $10.75 to $11.75. The common steers sold at $6.50 to $7.75, aside from inferior little canner and other cheap lots at $4.50 to $6.40. Most butcher stock had a good sale at $3.50 to $8.50 for cows and heifers, and stockers and feeders have a fair sale at $5.25 to $7.25, while calves bring $4 to $13. It is interesting to know that before the war, in 1912, beef steers sold at $4.75 to $9. The late decline in beef cattle was from 25 to 75 cents.

Premium For Lambs

John Clay, the new president of the International Live Stock Exposition, announces that to encourage competition in the car loads of lambs to be exhibited this year in the big show he will donate $250 to be presented to the owner of the champion load. He suggests that farmers prepare a car load of prime lambs and help themselves and also the International. Many sheepmen are in the habit of marketing prime fattened lambs, but it is surprising how many half fat flocks are shipped to market and sold far below the finished lots. Heavy lambs are still discriminated against by the packers, and the demand is mainly for fat handyweights, objections being raised against flocks averaging over 80 pounds. Not many feeding lambs are being offered on the Chicago market, recent sales having been made at $12 to $13.25 per 100 pounds, while killers paid from $12 to $14. Not many breeders are offered, and a short time ago a single-deck of choice yearling ewes, bred to lamb in April, found a buyer at $11.

WHEAT

A steady demand for Michigan soft winter wheat caused a firm tone to prevail in the Detroit market during last week. Receipts were not large and buyers were on hand for everything that was offered. Millers reported an increased demand for flour. Reports come in that a fairly large quantity of wheat is being fed on the farms.

CORN

In spite of fact that corn weakened on many of the large markets of the country it held firm at Detroit. An increase in receipts caused other markets to decline but demand at Detroit took care of all that came to hand. Many of the leading market observers declare that there is a bullish outlook to the future of this grain.

OATS

On nearly all of the larger markets oats followed the trend of corn; where corn was higher oats were higher, and when corn declined oats followed suit.

RYE

There was no change in the rye market, the market remaining steady in tone. There has been an

increase in price of one-half cent during the last fortnight.

BEANS

The bean market at Detroit is experiencing an improved demand and the price is some higher than it was two weeks ago. Eastern markets are quiet and receipts light. An increase in demand is anticipated by eastern dealers.

POTATOES

The potato market is easy at most points and trading slow. Prices show some decline.

HAY

Continued large receipts in practically all markets weakened hay prices somewhat last week. The demand has been quite good but was not equal to the supply and values in consequence show an easier tendency. Western markets show a good demand for best alfalfa, which is strong.

MAKE CLEAN COW BARNS MATTER OF LAW

(Continued from Page 10)

I had two reacters, therefore I can not believe that T. B. comes from filth.

Some will say T. B. is bred from one generation to another. I can not believe that. I had a fine, well-bred heifer react and her sire, grand sire, dam and grand dam, all registered stock, were T. B. tested with never a reacter.

If Mr. B. J. Killham, chief veterinarian, or some other authority would through the M. B. F. give the cause of T. B. in cattle I am sure the readers would be grateful for it.

Mr. Editor,. I don't want to take any more space but let me ask one question. Is milk from T. B. cows any more injurious to the human race than milk drawn from filthy cows with filthy surroundings? Now M. B. F. reader, lets get our heads together and clean house in our cow barns and pull for a law that will force every cow barn in Michigan to be cleaned up. Other states do it, why not us?—O. R. Richard, Clinton County, Mich.

New Rule for Our Employees

All requests for leave of absence on account of toothache, severe colds and minor physical ailments, and on account of church picnics, weddings and funerals and the like, must be handed to the foreman in charge of your department before 10 a. m. on the morning of the game. —Houston.

Railroading in Winter

Especially in Michigan, Railroad transportation is subject to sudden periods of extreme cold and heavy snow. Such weather lowers the efficiency of steam-driven machinery, imposes severe hardships on men, and makes necessary abnormal expenditures for fuel, wages and special equipment.

To vanquish these obstacles—to accept and deliver freight and passengers in the teeth of a midwinter blizzard, when necessary—is an annual battle for each of Michigan's 24 steam Railroads.

Even in a comparatively open winter, the Railroads must always be equipped and ready. On certain northern runs, a snow plow precedes every train throughout the winter, regardless of weather.

Winter railroading in Michigan is seldom possible at a profit. Often it can be accomplished only by large financial loss. Yet, despite the handicaps of climate, the cars move, and Michigan continues warm, well fed and prosperous.

Do you appreciate the foresight, determination and fortitude which, year in and year out, make Railroad transportation so sound a reliance. The Railroads will be pleased and helped to know that you do.

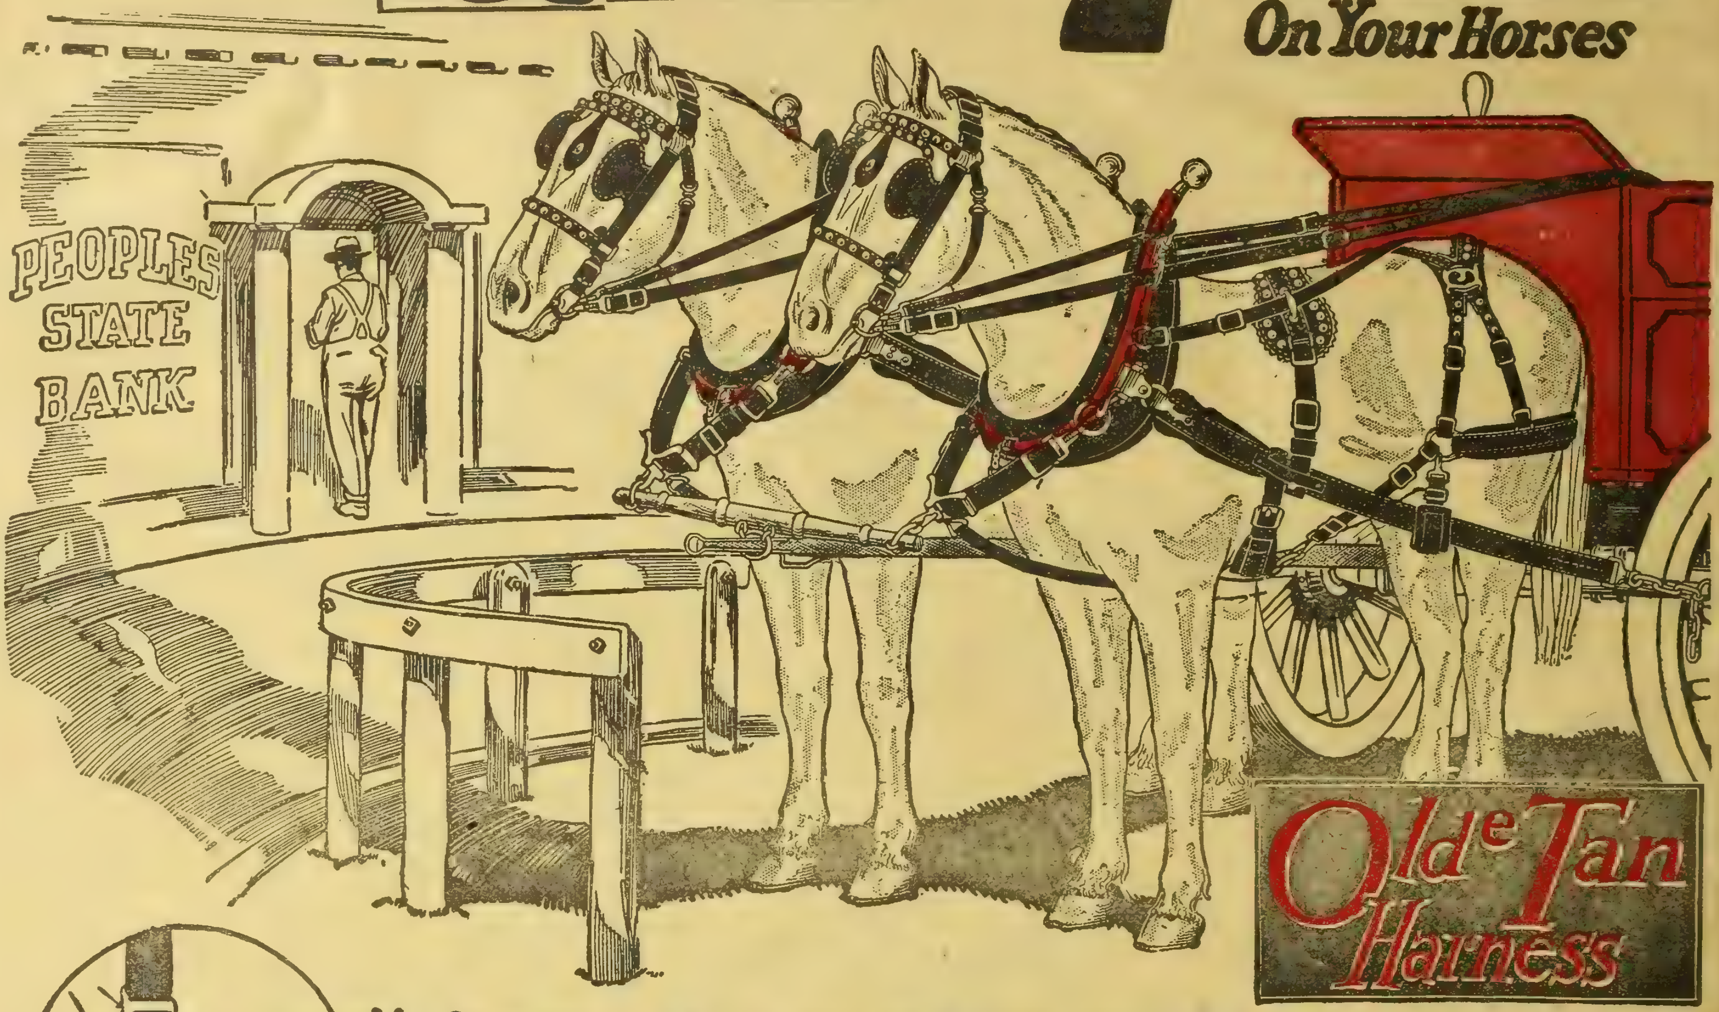
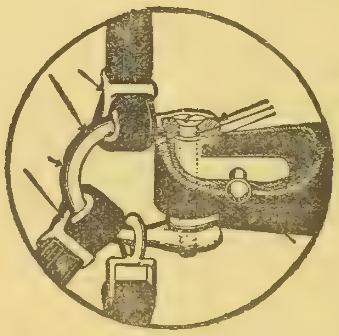
Thorp, Wis., R. 1

$7.50 Puts This Harness On Your Horses





Metal-to-metal construction. Metal bushing. Leather held tight without play or friction. Note special riveted metal extension in breeching.

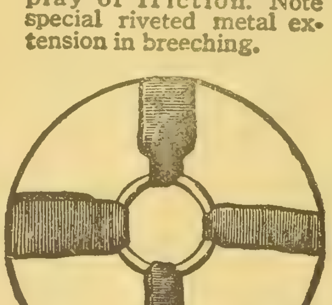
"Am Sending Payment Your Harness Is O. K."

Says Olde-Tan User

"Never saw its equal—it could not be better—beats anything I have seen in 30 years—people here just crazy about it—there's no wear on leather at all—one of the best harnesses ever put on a team in Oregon—it makes the harness here look slim—will outlast two ordinary sets—if it's as good as it looks, it will last as long as I live—saved $15 or $20."

Olde Tan Metal-to-Metal harness has aroused real enthusiasm from coast to coast. The foregoing extracts are a few taken from hundreds of letters. Practical harness buyers see its superiority at once. Metal-to-Metal is so simple and so superior everyone wonders why it was not used before.

With real, old-fashioned tanned leather, backed by 70 years of tanning skill, and then with the leather protected by metal, so that metal rubs against metal and not against leather, it is no wonder that buyers believe it will last as long as they live. You, too, will be amazed at this practical, sensible harness with no round rings wearing against the straps. All square strap surfaces



Never this in metal-to-metal construction. All pull strain and wear is on metal.

Metal-to-Metal

See the Metal-to-metal illustration we show you here. Figure it out for yourself. You know straps wear when they see-saw against metal. Well, they can't see-saw in this harnesss because wherever there is wear, it is metal upon metal. You can put a set of Olde Tan Metal-to Metal harness on your horses for only $7.50 down. If you don't like it, you can send it back. We want to be sure that you see Olde Tan Metal-to-Metal harness. This is why we have made it so easy for you to get it. Be sure to know all about Olde Tan Metal-to-Metal harness before you buy your next set.

A Giant Who Works For You

There is a giant who works tirelessly to lighten the labor on the American farm, to make the farm more productive, and farming more profitable.

He is personified by the vast resources of the Ford organization, whose herculean labors are directed primarily toward lowering the cost and increasing the efficiency of Ford cars, Ford Trucks, and the Fordson Tractor.

The larger this giant has grown the lower the prices of Ford products have fallen, and the more valuable they have become from the investment standpoint as farm equipment.

To the farmer this has meant lower and lower farm costs, better arrangement of farming activities, more money crops, all with less effort and therefore with greater net profit—proof enough that it is to his interest to standardize on Ford equipment.

Farm Bureau Pleased With Record of Past Year

M. L. Noon Elected President and Clark Brody Retained as Secretary—General Manager at Sixth Annual Meeting of Michigan State Farm Bureau.

By STANLEY M. POWELL

(Lansing Correspondent of The Business Farmer.)

SATISFACTION, harmony and enthusiasm marked the sixth annual meeting of the Michigan State Farm Bureau Board of Delegates held at East Lansing, February 7-8. One hundred and fifty accredited delegates and about 300 other Farm Bureau members reviewed the splendid progress of the past year and aggressively formulated a program of policy and action for the coming year.

In a masterly way in the President's annual address, W. E. Phillips, retiring president of the Michigan State Farm Bureau, sketched the history of the organization, rejoiced in its admittedly splendid achievements and briefly outlined his recommendations regarding the future activities. He declared that the Michigan Farm Bureau was today stronger and more substantial than ever before, even though the present membership was less than that which was signed on the first wave of after-war enthusiasm.

Brody Pictures Progress

Perhaps the most impressive feature of the meeting was the annual report submitted by Secretary General Manager, Clark L Brody, summarizing for the delegates the progress and achievements of organized agriculture in Michigan and giving the delegates a panoramic view of activities of the various Farm Bureau departments and services.

Other high spots of the two day meeting were the brief oral reports of the heads of the Bureau's departments, an exceptionally forceful and appropriate speech by N. P. Hull, the election of the new Farm Bureau Board of Directors and the consideration and adoption of the annual resolutions. As illustrating the close cooperation and harmony existing between Michigan farm organizations, it is worthy of note that Mr. Hull is chairman of the executive committee of the Michigan State Grange and is also President of the Michigan Milk Producers Association, one of the powerful commodity exchanges affiliated with the Michigan State Farm Bureau. He urged the delegates to be loyal to their own best interests by standing by their Farm Bureau and taking a personal responsibility for its advancement.

Pick New Bureau Heads

The new Farm Bureau Board of Directors, which is composed of one representative of each of the five affiliated commodity exchanges and six directors chosen at large was elected as follows: M. L. Noon, Jackson, Michigan Milk Producers Ass'n; Herbert Gowdy, Union Pier, Michigan Fruit Growers, Inc.; Fred Smith, Elk Rapids, Michigan Potato Growers Exchange; John O'Mealey, Pittsford, Michigan Live Stock Exchange; W. E. Phillips, Decatur, Michigan Elevator Exchange; L. Whitney Watkins, Manchester; E. C. McCarty, Bad Axe; Mrs. Edith M. Wagar, Carleton; George Wheeler, Mt. Pleasant; M. B. McPherson, Lowell; and Verold F. Gormely, Newberry. The new Board organized by electing M. L. Noon, President and M. B. McPherson, Vice-President. Clark L. Brody was re-engaged as Secretary and General Manager.

Resolutions Fix Programs

The resolutions adopted by the Farm Bureau Board of Delegates constitute probably the most comprehensive program of cooperative marketing and agricultural and general legislation which was ever laid down by any Michigan farm organization. Outstanding in popular interest were resolutions advocating a 2 cent gasoline tax, a State income tax and supporting the State Board of Agriculture in the discharge of its full constitutional duties in the management of the Michigan Agricultural College and its extension activities.

The delegates expressed satisfaction with the present management of the State Farm Bureau and its affiliated commodity exchanges, urged the production of better quality products, favored the teaching of cooperative marketing and farm cost accounting in the public schools and colleges, endorsed County Agent and Boys' and Girls' Club work, favored greater participation by women in Farm Bureau affairs, opposed Pittsburgh Plus and commended the management of Michigan fairs for efforts now being made to present cleaner and more educational exhibitions.

Legislative Program

With reference to national legislation, the Farm Bureau delegates adopted resolutions opposing tax-exempt securities, consumption or sales taxes, government price fixing and governmental guarantees, any form of federal ship subsidy and a lowering of the Great Lakes-St. Lawrence Waterway, strict enforcement of the 18th amendment and Volsted Act, national truth-in-fabric and truth-in-fruit-juice legislation, a law requiring treating all imported seed with Eosin dye, continued support for T. B. work, a national standard container bill, a quarantine on the oriental moth, and a resolution which has as its aim securing a more desirable class of immigrants. The resolution adopted on Muscle Shoals, while not mentioning the Ford tender specifically, still corresponds with it in nearly every requirement which it prescribes and contains a provision in opposition to Government operation.

The State legislative program as laid down for the Farm Bureau by its Board of Delegates includes in addition to the State gasoline tax and the state income tax, a resolution favoring pay-as-you-go policy, another urging that the counties' share of the automobile license money should be collected by the counties wherein the autos are owned and that each county's portion be retained by the county treasurer and the balance turned over to the State. The Farm Bureau program favors legislative reapportionment based on citizenship with a restriction on the maximum delegation from any one county and insists upon full observance of the moiety clause, advocates educational qualifications for citizenship, urges prison manufacture of binder twine and other farm supplies, favors the payment of state bounties on wolves and opposes the present system of paid state trappers.

Unexcelled in Progress

"The farmers of Michigan are not excelled by those of any other state in the development of their cooperative marketing, transportation, pure seeds and other services," Clark L. Brody told the delegates in presenting his annual report.

Speaking of the great commodity marketing organizations affiliated with the State Farm Bureau, Mr. Brody said that the Michigan Milk Producers Ass'n surpasses any organization of its kind in the country; the Michigan Elevator Exchange, serving 150 farmers' elevator associations, is a national leader in that field. The Michigan Live Stock Exchange with its two terminal marketing offices at the Detroit and Buffalo yards gives some 233 Michigan associations of farmers live stock marketing service.

The Michigan Potato Growers Exchange with about 112 associations and the Michigan Fruit Growers, Inc., with 30 associations enrolled complete the groups of Michigan farmers' cooperative marketing organizations that probably handle $40,000,000 worth of business annually for their members.

"The commodity marketing exchanges are pillars of strength for the State Farm Bureau," declared Mr. Brody, and, on the other hand, the commodity exchanges to fortify themselves along grading, legislative, publicity, transportation and general service lines, need a powerful central service organization, combining all the farmers' organized economic power, such as the State Farm Bureau. Neither will reach its highest success without the other.

"In formulating the policies of the State Farm Bureau it is of highest importance that we keep close to the man actually tilling the land, and in this connection our membership solicitors report that while the farmers are much concerned about cooperative marketing they regard with equal importance relief from unjust taxation, excessive freight rates, car supply, and information on public questions concerning agriculture. It should be recognized that cooperative marketing, while a big factor, will not alone bring the complete relief so sorely needed by the farmer."

The Bureau vs. Politics

Reviewing the history of the State Farm Bureau's legislative activities and discussing its failure to secure final passage of the gas tax and the income tax, Mr. Brody said, "There were many disappointments in attempting to carry out the legislative program outlined by the delegates one year ago. Nevertheless, the battles fought by our organization during the past year, especially that of the gas tax measure and resulting conflicts that followed along other lines, have demonstrated that the Michigan State Farm Bureau is a power to be reckoned with and that it is not subservient to the will of any politician or political faction.

"No farmers' organization has ever suffered more violent and unfair attacks than has your State Farm Bureau the past year, and those who would control your organization and make it serve their own ambitions have spared no effort to discredit your Farm Bureau officials and destroy the power and influence of the Farm Bureau. Had the farmers' interests been surrendered, these assaults would not have been made, as it is not the custom of those making such attacks to seek to destroy individuals or organizations that are serving their selfish purposes or that are not in their way.

"Our enemies who would destroy or cripple what they cannot control have attempted to brand the State Farm Bureau as a faction seeking to promote the ambitions of individuals for political office. While the Michigan State Farm Bureau has always taken a firm stand on legislative issues, and must continue to do so, it has never at any time been involved with the political fortunes of any person in any way whatsoever. It is and always has been kept free from such unsavory and emaciating entanglements and must be kept so at any cost. The Michigan State Farm Bureau has avoided those pitfalls that have too many times in the past destroyed or weakened farmers' organizations and has been strengthened rather than injured by the struggle. The Farm Bureau is still and always must be owned and controlled by its members only."

Conclusion

In concluding his masterly report, Mr. Brody uttered the following remarkable paragraph:

"The things really worth while in the world do not come easily but are the product of years and years of hard work, struggle and sacrifice, so it is not surprising and should not be discouraging that the development of the Farm Bureau has been a battle testing the mettle and demanding high courage and perseverance in the membership as well as in your officers and leaders. This is the stuff out of which the great movement essential to the welfare of thousands must be built. The mistakes and failures of yesterday are but the forerunners of the successes of tomorrow. We as farmers of Michigan have put our hands to the plow and are not turning back. The future is full of hope. We are going forward to a better day for organized agriculture."

Eaton County Farmer is "Corn King"

ONE section of the recent M. A. C. Farmers Week program rather mysteriously announced that Michigan's 1923 Corn King would discuss the subject, "How I Did it." The mystery was finally cleared up when G. W. Putnam, Director of the M. A. C. farm crops extension work, announced that his department had been carrying on a semi-contest during this recent season. Twenty-five of Michigan's leading corn growers were chosen for this work and definite records were kept to determine the yield, the cost of production, and the profit per acre. Profit per acre was made the basis of the awards.

Charles Laughlin of Dimondale, Eaton county, produced 83 bushels of shelled corn per acre. Allowing a moisture content of 14 per cent, this is equivalent to a yield of 175 baskets of ears.

Totaling the cost of production up to, and including, the harvesting and then deducting this amount from the value of the corn left a balance of $63.51 profit per acre for Mr. Laughlin. As this was the largest per acre profit, a bronze medal, with the accompanying title of "Corn King of Michigan" was awarded to Mr. Laughlin.

Other leading contestants and the yields they secured per acre are as follows: "Paul Clement, Britton, Monroe county—72.5 bu.; Milo Robinson, Union City, Branch county—70.77 bu.; D. V. Bow, Saginaw—70.72 bu.; P. A. Smith, Mulliken, Eaton county—69 bu.; D. A. Geddes, Swan Creek, Saginaw county—67 bu.; Alfred Vincent, Durand, Shiawassee county—64 bu.; Rossman Bros., Lakeview, Montcalm county—53 bu.

This contest will be carried on during this coming season under the direction of the Michigan Crop Improvement Ass'n. Profit per acre will still remain as the basis of designating the winners. Additional awards will be made.

Improving the Oat Crop

M. A. C. Experts Very Successful in Developing Excellent Varieties of Seed for Michigan

By FRANK A. SPRAGG
Assistant Professor of Farm Crops, M. A. C.

This is a view of the oat varietal series of the year 1909. You will note in fact that there are two such series of plats placed end to end. The one in the foreground is a small series planted from new strains that have not been sufficiently increased to plant plats in the longer series of varieties seen in the background. A varietal series is a collection of varieties planted side by side in a systematic manner. The standard variety is planted on the edge and each fifth plat throughout the series.

THE problem in the production of a crop is to produce the greatest increase of value with the least expense. We must be careful to distinguish between increase of value and transfer of value already produced. The successful farmer must keep two bank accounts. One of these is in the form of soil fertility, and the other in the form of cash or credit. If he simply transfers his account from the farm soil bank to the one in town, he is not really producing any increase in his total valuation but merely changing the form of his wealth. He may do it in such a way as to easily deceive himself.

Farmers often are deceived also by appearances. A certain farmer's yield attracted attention for miles around, and other farmers traveled long distances to buy seed from him. This farmer did not have a superior variety, that could be depended upon to produce more than other varieties under the same conditions, but this high yield was largely due to the fact that the farmer knew how to farm. He was a good farmer living on a rich piece of land, improved by proper rotation and fertilization. He believed in plowing and fitting his land so as to give the seed the best chance to grow. He used acid phosphate that his crop might stand up, mature earlier and produce more under the same conditions. He believed in farming out all weed seeds that his soil might be put to the best use—the production of a desirable crop. He believed in saving his crop from the ravages of smut by the simple formaldehyde treatment. This alone probably saved him ten bushels per acre that would have otherwise gone to smut the threshers' faces, and make the passer-by think his barn on fire because of the dust.

Those who planted the seed that came from this splendid field, but planted it under different conditions, suffered a great disappointment because they did not get the results that they had expected. They had assumed that this fine yield was due to a superior variety and could be depended upon to give better yields than other varieties under poorer conditions, while the yield was actually due to good management of the soil. The yield of any crop is dependent upon two complex forces. One of them is the variety; the other, the conditions under which the crop grows.

The extra good farmer mentioned above had a neighbor who on a similar soil planted a high yielding pedigreed variety. He neglected to fit his land properly; he had run down his farm by failure to return to it the fertility taken out by the crops, and he did not treat his seed for smut.

Through this improper management, he lost heavily on a variety that had high-yielding characteristics and tried to do its best in spite of the farmer. Thus we had on the neighboring farms, conditions that more than counter-balanced the benefit obtained from the improved pedigreed high yielding variety.

What, then do we mean by an improved variety? We mean a variety that will under the same conditions produce better quality or yield or both. The best variety will fail if burnt up by drought, drowned by poor drainage, consumed by smut, or if starved to death by lack of plant food, but even then the pedigreed strain will produce more than its poor competitor, if grown under the same conditions.

Plant Feeding

The problem of producing the greatest increase of value in oats with the least expense, was attacked by the Michigan Experiment Station in 1900, when Prof. J. A. Jeffery began his selection work. Six years later, he turned over to the writer nineteen individual oat plants, whose pedigrees had already passed through six individually selected mother plants. The seed produced on each of these nineteen plants was planted in separate plats in 1907 and again in 1908. By this time the seed from each of Prof. Jeffery's selections had been increased enough to plant a one-twentieth acre plat side by side with each other and in direct comparison with a standard variety in 1909. The grain produced on each plat was carefully threshed by means of a small machine that was entirely cleaned out after every plat. Thus the seed was kept pure. One of these lines was distributed in 1911 as the Alexander and the other in 1916 as the College Wonder.

Beginning with 1906, individual plant selections were obtained from wider sources. Seed was obtained from farmers, seed men, other experiment stations, and from around the world through the U. S. Office of Seed and Plant Introduction and Distribution. About one hundred new sources of seed were received in the next five years. The seeds that went into the nursery were each individually planted five inches from its neighbor in order to be sure that what grew in a spot was only one plant. From these nursery beds thousands of plants have been selected and tested. Those that showed themselves superior were increased and later, tested for yield in direct comparison with one another so that the yielding powers of the varieties could be compared under like conditions. Each variety is usually planted twice in the same year and along side of a standard variety, for each of three years before making a selection for distribution. Those lots that stand at the top of an average of six such results are considered superior, and worthy of further tests in the hands of farmers over Michigan. This work is being done by the members of the Michigan Crop Improvement Association. If a variety wins in the hands of this group of farmers, it is increased by them and distributed to those sections where it is best adapted.

MEET MR. SPRAGG, FOLKS

Mr. Frank A. Spragg

IN a series of articles, of which this is the first, Mr. Frank A. Spragg is going to tell the readers of THE BUSINESS FARMER about the different varieties of seeds for Michigan farms developed at the Michigan Agricultural College. Mr. Spragg is well qualified to write these articles as he has been plant breeder at the M. A. C. since 1906, coming to the College from Montana, and he has seen from the beginning the introduction of the new varieties of seeds introduced by the College. His first article is on oats, and following ones will take up wheat, rye, barley, beans, alfalfa and clover.

The first group of varieties that were collected were tested for comparative yield only during the years of 1909 and 1910. Each of them were planted twice in each of those years however. Thus four results were obtained for each variety. On the basis of these results two new varieties were introduced in 1911. These were the Alexander oat and the Worthy oat, each of them coming from an individual plant selected in 1906. These two varieties were about equal in yield according to the test at M. A. C. and both of the varieties were about equal in yield of extra stiff straw. But some one started the story that the Alexander was suited to sandy soil and that the Worthy was suited to heavy soil. As a result, these varieties were so planted by many. But the Alexander could not produce as much on sand as the Worthy did on good soil, and soon very few people grew Alexander. In spite of these facts at least one man, Mr. George Hurteau of Allegan, grew both Alexander and Worthy on his heavy lowlying soil. As the result of his test, he gave up the Worthy in favor of the Alexander, which he said yielded more bushels of grain for him.

By 1915, about six thousand bushels of Worthy oats were used for seed. It is estimated that at least 100,000 acres of Worthy oats were grown in Michigan in 1917. Exact figures are not obtainable because the spread was largely from farm to farm by natural processes. By 1918 the Worthy oats seemed to be known by nearly every progressive farmer of Michigan. Later introductions have replaced them in a few places, but the Worthy oat has become standard in the district around Fairgrove in Tuscola County were they can be obtained commercially in large quantities.

The oat-improvement work continued at M. A. C. and a large number of new sources of seed were drawn upon. The varieties that won in the earliest yields tests were later compared with the seed from new sources. The policy has been and still is, to send out an improved variety as soon as we are convinced that it is superior to know varieties, and then to keep looking for something better. Thus it happened that the College Wonder and College Success were distributed in 1916, and the Wolverine in 1917.

The College Success was a late variety that had to be planted extra early, but under those conditions produced exceptionally well. It was favored for a time by the farmers of Ottawa and the neighboring counties, where the Worthy had failed but the Worthy was generally reported superior to the College Success in eastern Michigan. However, twenty acres in Huron county showed 95 bushels of College Success oats per acre in 1918.

The Wolverine according to the College tests during the four years 1914 to 1917 averaged 20 per cent more bushels per acre than the Worthy. It is an earlier variety than any of the others mentioned in this paper. The Wolverine has taken well over Michigan and is now the leading pedigreed variety being grown by the Michigan Crop Improvement Association. One might wonder why the farmers of the Fairgrove district stick to and swear by the Worthy when the tests at the College show Wolverine superior. This brings up the problem of local adaptions, as well as personal preferences among farmers.

According to reports, the Strube oats have given extra good yields, on certain low, flat, recently drained parts of Saginaw and Bay counties. Also, it may be the ordinary varieties do not ripen properly under conditions that prevent early planting. Those conditions may need an extra early variety. The Worthy and Wolverine varieties were developed for good oat land. The Worthy and College Wonder were similar in many ways. They were equal in time of maturity belonging to the mid-season class that most farmers plant. However, College Wonder yielded 14 per cent more bushels per acre than the Worthy according to the college tests of 1911 to 1917. And yet among farmers the Worthy is still popular, and no pedigreed seed of the College Wonder is now available. This is an example of what is referred to above as personal preference among farmers.

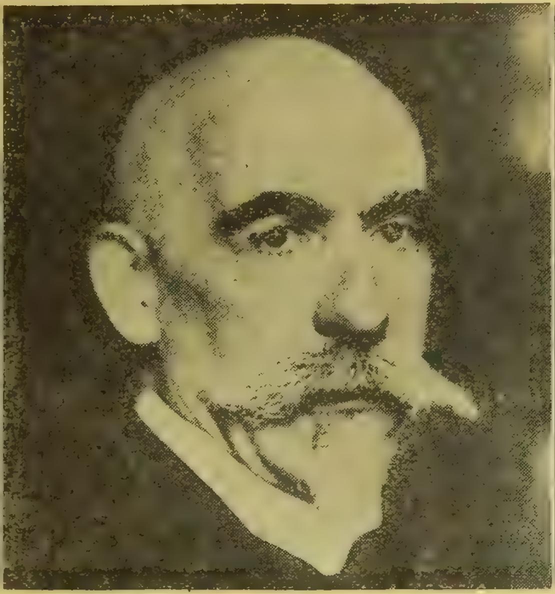
In general, however, it might be said that wide awake farmers over

(Continued on Page 29)

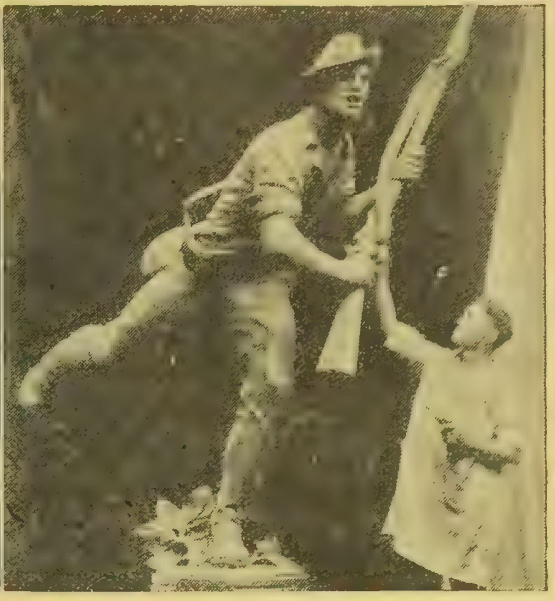
This is a view of a later varietal series when a large number of new series of seed had been drawn upon. This series, like all such varietal tests, is planted with the standard variety, sandwiched in frequently. This will give the farmer an idea of how he can compare varieties on his farm. They must not be planted on the edge of the field, and must be planted side by side in the same field. A drill width of each running the full length of the field will answer.

PICTURES FROM FAR AND NEAR

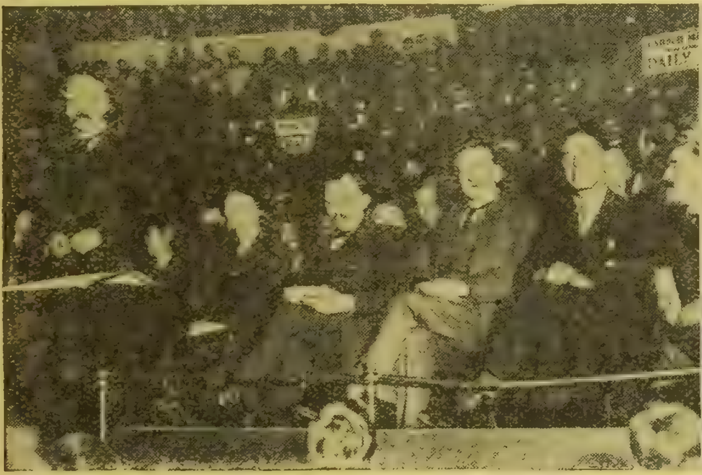
TWO BIG CHIEFS MEET.—Chief Bacon Rind of the Osage tribe and some of his followers paid a visit to President Coolidge a short time ago, and the two big chiefs had their pictures taken together. The Osage tribe is the richest in the country and controls the vast oil fields in Oklahoma.



INVENTS HUGE SUBMARINE CRUISER.—Oswald Flamm, a German submersion specialist, who has invented a submarine cruiser of more than 7000 tons. A big successful model exists. It has been learned that the British, French and Italian governments are interested in the invention.

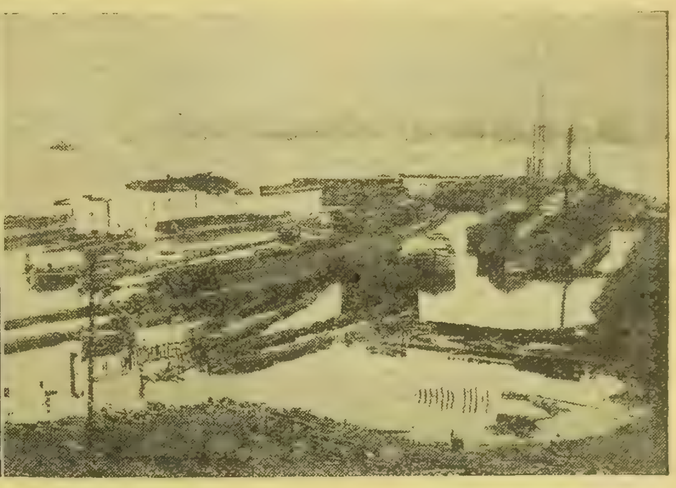


STATUE TO THE SPANISH AMERICAN WAR FIGHTERS.—Photo shows Mr. Robert Aitken, N. A., with his statue of "The Skirmisher" which is to be erected at Binghamton, N. Y. and unveiled on July 4, in honor of the boys, from Broome county, N. Y., who fought in the conflict of '90.



LABOR VICTORY DEMONSTRATION IN ENGLAND.—The Labor party held a demonstration recently in Albert Hall, London, to celebrate their victory. The new premier, Ramsey MacDonald, is shown standing at the left while seated behind him are several members of the Labor party

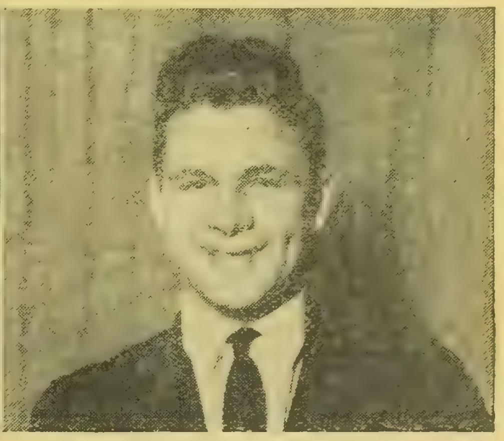
LEADS FEMININE BLACK SHIRTS.—Mme. Amalia Besso leads the woman black shirts of Italy.



A SHIP GRAVEYARD.—Along a goodly stretch of the west bank of the Hudson River, just north of Weehawken, N. J., is to be found a typical graveyard—the last resting place for dead or forgotten ships. The photo shows group of abandoned ships in all states of decay.

PRIEST IS ON LONE PATROL.—The Rev. Phillip Magrath of St. Bridget's Church, N. Y., is making it his nightly duty to patrol the North River front from 23rd to Canal streets, New York City, and defend any peaceful citizen who may be the victim of a thug.

BRAVEST AMERICAN HERO SITS FOR PORTRAIT.—Sargeant Samuel Woodfill, selected by General Pershing as the outstanding American hero of the World War, and retired a few weeks ago from the army, is having his portrait painted in New York. He will be one of the collection of heroes of the war which will be painted by Joseph Cummings Chase, famous artist. Mr. Chase has been commissioned to do this work by the A. E. F.



NOTHING HURTS HIM.—Here is Ralph Colston, freshman at the University of Pennsylvania, who is absolutely immune to pain. Doctors declare that no pain hurts him, also he is double jointed throughout his body. He will take part in the coming Olympic games in the hop-skip-and-jump.

McADOO PRESENTS COWBOY TROPHY.—William Gibbs McAdoo has just proclaimed Yakima Canutt the World's champion cowboy at bull-dogging, roping and riding, and has presented him with a trophy. The trophy is presented annually by the Roosevelt Hotel, of New York, in honor of Theodore Roosevelt. This ceremony took place at Los Angeles, California.

YOUNGEST BANK PRESIDENT IN EAST.—Bernard C. Diekman, although only 28 years old, is president of Ridgefield Park, N. J. Trust Company.

AGED HUNTER KILLS 500 MOUNTAIN LIONS.—Ben V. Lily, of New Mexico, 70 years old, has been a big game hunter from childhood on. He is now employed by the United States Biological Survey, to kill wild animals in the stock raising district. So far he has killed over 500 mountain lions. Each year he saves the stockmen thousands of dollars.

Farmers' Week at M. A. C. is a Splendid Success

Discussion of "The Future of Agriculture" Attracts Thousands of Michigan's Farmers and Housewives. Optimism is Keynote of 1924 Sessions

By CARL H. KNOPF

(Special Correspondent of The Business Farmer.)

IF one were to ask, "What is the greatest annual event in Michigan agriculture?" the answer would undoubtedly be, "The Farmers' Week and Housewives' Congress at the Michigan Agricultural College." This combined event brings together the farm folks from all parts of Michigan for a solid week of enjoyment and profit. The lectures, discussions, demonstrations, and exhibits are a rare blending of scientific discoveries and practical experience and give the maximum of information and inspiration.

The attendance at Farmers' Week for 1924, held February 4 to 8, nearly reached the 4000 mark. This is truly remarkable considering the weather which prevailed during the week. Snow and sleet blockaded railroads and highways in many sections of the state but still the people managed to reach East Lansing. And at M. A. C. they found a Farmers' Week program which justified every effort they made to attend.

Today the question uppermost in the minds of the farmer is, "What is to become of agriculture?" To a great extent the general public is puzzling over that same question. Each year the Farmers' Week program features the principal and timely topics of agriculture, and so the 1924 program was built around the subject, "The Future of Agriculture."

Optimism Prevails Throughout

Probably the most striking thing about the Farmers' Week just past was the optimism which was manifest in the various addresses and discussions. The whole week was saturated with optimism. It was clearly recognized and frankly stated that agriculture is in an unsatisfactory condition. No effort was made to conceal the fact that the road to recovery and normal conditions is a long one. But the general feeling was that the bottom has been reached and that improvement is bound to come. No one predicts, or expects, a rapid rise but all are looking for a steady gain in agricultural affairs.

The Farmers' Week audiences and the sessions of the Housewives' Congress were addressed by men and women who have achieved prominence in state and national affairs. Members of the M. A. C. faculty and other Michigan talent were used on the program more extensively than out-of-state speakers. The wisdom of this was apparent in that our Michigan folks were able to outline definitely our problems in Michigan and to present specific plans for improvement.

Pres. Shaw Predicts Recovery

Speaking at the close of the week's program, Dr. Shaw, Acting President of the M. A. C., made a summing up of the entire week when he discussed the general topic, "The Future of Agriculture." Describing the depression which existed about 1893, Dr. Shaw called to mind the fact that in those days dressed hogs sold for 4c per pound, feeder steers for $4.50 per cwt. and wheat for 60c per bushel. Showing that the prices of the 90's were at much lower levels than during the present depression, Dr. Shaw stated the situation then was made even worse by the corresponding depressions in industry and commerce. The fact that industry is comparatively prosperous at the present time, gives the farmer a better market and greatly helps the present situation.

Dr. Shaw stated that the whole agricultural system was thrown out of balance during the war. Cereals and grains were produced in much greater proportion than livestock products. Poor lands and pastures were brought into the production of cash crops with the result that overproduction following the war wrecked the markets.

"Agriculture is certain to recover," stated Dr. Shaw. He warned his hearers that the process will be a gradual one. Comparing again with the "hard times" of the 90's he showed that the opening of great areas of new Western lands further hindered recovery at that time and yet, 1897 the agricultural situation was quite satisfactory.

Comparing Michigan agriculture with that of the Northwestern states, Dr. Shaw showed how the diversity of this state's crops had helped her escape the crisis which the other sections now face. Michigan's dairy products, beans, poultry sugar beets, and similar crops, were cited as giving great advantages over the one-crop states.

Emphasizing organization as a great factor in improving present conditions, Dr. Shaw called attention to the wonderful aid which Michigan is receiving through the Farm Bureau, Grange, Gleaners, and Farmers' Clubs. He stated that Michigan's 75 cow testing associations, the bull associations, the Dairy-Alfalfa campaigns in 52 counties, the 38-million-dollar income from poultry, and the 1,373 Boys and Girls Clubs are all helping to again put Michigan on the high road to profitable farming.

"Get Above Average"

In one of the most interesting addresses of the entire week, Eugene Davenport, formerly Dean of Agriculture in the University of Illinois, discussed "The Problems of Agriculture." With his keen analysis and pithy advice, Dean Davenport's saying might well be compiled into a sort of "Poor Richard's Almanac" for agriculture.

"You will never get anywhere by being simply an average farmer", stated Mr. Davenport, who added, "Prices of farm products are based on what the average farmer can produce them for—and with no profit added." He advised, as the remedy, that each find out the line of work which he can carry on to advantage and then get above the average.

In briefly discussing the various problems, Mr. Davenport advised that each farmer analyze his farming system. He stated that Michigan is one of the best sections for the production of wheat but that the Michigan farmer connot compete with the peasants of Russia or the Hindus of India in the production of that cereal, hence the farmer must change his system.

A crop system in which the crops dovetail as to time, was advised. Plenty of equipment was recommended with a warning that this may be easily overdone.

Speaking of the time element, Dean Davenport stated that the farmers, as a class, waste more time than any other class of business men. He recommended livestock farming, and dairying especially, as a means of utilizing time to best advantage throughout the year. Speaking of the objection to dairying as "confining" he said that the groceryman, the merchant, and the professional man seemed fully as confined, with the possible exception that they do not have to work on Sundays.

Proper use of capital and consulting with the banker, were strongly advised. "The banker is not a mere money lender, he is the business manager of the funds of the community."

The secret of success in marketing according to Mr. Davenport , has been found by those who realize that two good apples are worth more on the market than two good apples with one poor one thrown in. He told of the grower who made three grades of his apples. The No. 1's he packed in boxes, the No. 2's he fed to the pigs, and the No. 3's were buried.

Other advice given by Mr. Davenport was to improve the home conditions even during the hard times, to get plenty of the best reading matter, to systematize entertainment, and to take a vacation each year, for the farmer, preferrably in the city.

The three requisites for successful farmers are, according to Dean Davenport, that they be progressive, be judicious, and that they have contented minds.

L. J. Taber Says, "Organize"

The address given by Louis J. Taber, Master of the Ohio State Grange and also of the National Grange, was one of the high lights of the week. Speaking on "The Influence of Social Life on the Future of Agriculture," Mr. Taber emphasised social life as being the deciding factor in the agriculture of tomorrow. He strongly advised organization stating that, "The farmer in Michigan who does not belong either to the Grange or to the Farm Bureau is an agricultural slacker." Vigorous applause showed that the audience fully concurred in this opinion.

Mr. Taber stated that the cost of government must be decreased and at the same time the efficiency of government must be increased. Prosperity now hidden must be made to pay its share of the tax burden. The effort of the Grange in Michigan to initiate an income tax was lauded as being splendid work.

Law enforcement is a vital issue stated Mr. Taber. He would deport every alien who violates the liquor law and he would also send to the penitentiary every millionaire who employs men to violate that law for him. "We need a re-baptism in Americanism," stated Mr. Taber who urged that the immigrants be taught to "leave Europe behind."

"Production is more important than marketing," was a rather startling statement from the National Master. He also stated that cooperative production will be a vital factor in the future. Cooperative production was defined as being, not limited production, but rather, "production guided by information and wisdom."

"Farmers have the right to strike the same as have workers in other lines of industry but God forbid that the farmers of America should ever bring want and suffering to innocent people, simply for the sake of advancing their own interests", was a sentiment from Mr. Taber which met with unanimous approval.

Mr. Taber advised the farmers to train leaders for conducting the business of agriculture. He stated that the farmers must not denounce other lines of business but rather that they must learn from, and work with, other business men.

He closed with an appeal to the farmers' organizations to improve the social advantages of the country and raise the standard of living because "the hope of agriculture is the type and standard of its social life."

Housewives Congress

Much interest was shown in the sessions of the Housewives' Congress. Topics of interest to homemakers were presented by various members of the home economics teaching and extension staff. Miss Jean Kreuger, who recently came from the University of Wisconsin to become Dean of the M. A. C. Home Economics Department, presided at these meetings.

The list of topics considered ranged from clothing and furniture to diets and diseases of malnutrition. "How to be Wise When One Buys," was another topic which indicated that the business side of home management must be studied. 'Step Saving Suggestions' were also well received.

Dr. Marie Dye, Assoc. Professor of Home Economics, created something of a sensation in discussing, "Rickets, the Most Universal Disease of Childhood." Rickets was described as a disease of the bones caused by improper feeding. Dr. Nye asserted that almost every infant, between the ages of 6 to 18 months, has rickets to a greater or less degree. As proof of this she cited the experience of a Lansing baby specialist who has found that fully 90% of the children which he examines have rickets to some extent. Sunlight, small quantities of cod liver oil, and egg yolks were recommended for the prevention or cure of rickets.

Following the formal opening of the new Home Economics building on Tuesday evening the remaining sessions of the Housewives' Congress were held in that building.

Erected at a cost of $400,000 this new structure is easily the finest building on the M. A. C. campus and is also claimed to be one of the finest buildings of its kind in the United States. Built of brick and trimmed with sandstone this building has a beautiful and imposing style of architecture which makes it dominate the northern end of the college campus.

The interior of the building is finished in keeping with the whole structure. Nothing has been left undone in the way of arrangement, furnishings, and equipment to provide for the comfort, convenience, and efficient training of the young women fortunate to be enrolled in the M. A. C.

Simultaneous with the opening of the new building comes the announcement that a new course in nursing will be established at M. A. C. in cooperation with Sparrow hospital at Lansing.

The Big M. A. C. Parade

A Farmers' Week feature of recent years has been the annual parade. This year a mile-long procession gave to the thousands of visitors some idea of the activities and resources of the college. Headed by the M. A. C. military band, one of the finest college bands in the U. S. there came

(Continued on Page 19)

Sidney Smith Wins Livestock Judging Contest

ONE of the most interesting events of the recent Farmers' Week at M. A. C. was the livestock judging contest. This contest differed from most of its kind in that the visiting farmers were the contestants. While club boys and college students have had their judging contests for years, "dad" has usually been on the sidelines with nothing to do but look on. This recent contest at M. A. C. was arranged for the farmers and they got into the game most heartily. Each of the two forenoons of the contest the Judging Pavillion was well filled with contestants and spectators and the discussions frequently waxed warm over the merits of the various animals.

Percheron horses, Holstein and Angus cattle, Shropshire sheep, and Duroc Jersey hogs were the breeds used for the contest. Four animals were displayed in each of the five classes.

Each contestant was given a card for each class and on the card he wrote the order in which he placed the animals and also the reasons for so placing them. The contestant was allowed to judge as many of the different classes as he chose. At the close of the contest on Wednesday forenoon, the official placings were announced and discussed.

Beautiful silver trophy cups were provided by the State Board of Agriculture and these were presented to the winners at the close of the general program on Wednesday afternoon. The following are the winners in each of the classes; Percherons, Andy White of Orion; Shropshires, Fred Weikenbach of Beulah; Duroc Jerseys, Russell Jordan of Eaton Rapids; Holsteins, James Avery of Lansing.

Although not making the highest score in any one class, Sidney Smith of Orion had the highest average score for the entire five classes and so he was awarded the championship trophy cup.

As a means of arousing interest in better livestock and also to teach the practical points of livestock selection, the Farmers Livestock Judging Contest seems to fill a very great need and there is no doubt but that the event will be staged at Farmers' Week meetings in succeeding years.

Thirty-Three State Organizations Meet at M. A. C.

Livestock and Poultry Ass'ns, Rural Press and Y. M. C. A. Groups, Muck Farmers, Vinegar Manufacturers and Nurserymen Assemble During Farmers' Week

By CARL H. KNOPF

(Special Correspondent of The Business Farmer.)

EACH year sees a large increase in the number of organizations holding meetings in connection with Farmers Week at the Michigan Agricultural College. There are several reasons for this. Convenient places for meetings are available at M. A. C. while the Farmers Week events attract thousands of farmers from all parts of Michigan and tend to increase the attendance at the group meetings.

Monday afternoon of Farmers' Week was given over to the meetings of the several swine associations in the state. Most of these organizations had a good attendance of interested breeders. Despite the present low prices of pork there was a feeling of optimism in evidence among the swine breeders. The very fact that hog prices have dropped to very low levels is encouraging the swine breeders to believe that there will soon be a steady and gradual improvement in the business.

The various associations elected officers as follows:

Michigan Poland China Ass'n.

President, W. E. Livingston of Parma; Secretary and Treasurer, W. I. Wood, Birmingham.

Hampshire Breeders Ass'n.

President, Floyd Aseltine, Okemos; Vice President, John Landon, Addison; Secretary-Treasurer, C. F. Luckhard, Bach.

Duroc Jersey Breeders Ass'n.

President, O. F. Foster, Pavillion; Secretary-Treasurer, J. F. Schaeffer, Detroit; Directors; V. A. Freeman, East Lansing; Harold Shafley, St. Johns; Newton Barnhart, St. Johns.

Spotted Poland China Ass'n.

This is a new state organization of swine breeders which was formed during Farmers' Week. The following officers were chosen:

President, G. S. Coffman, Coldwater; Vice President, C. F. Luckhard, Bach; Secretary-Treasurer, C. L. Nash, Cassopolis; Executive Committee; Dr. F. Watson, Breckenridge; P. Clark, Adrian; Alfred Grueber, Frankenmuth; C. L. Emery, Albion.

Chester White Breeders Ass'n.

President, A. J. Hawkins, Coldwater; Secretary-Treasurer, F. W. Alexander, Coldwater.

Swine Breeders Ass'n.

This organization looks after the general swine interests of the State. Its officers are; President, John Miller, Swartz Creek; Vice President, W. E. Livingston, Parma; Secrtary-Treasurer, W. E. Haynes, Hillsdale. In addition to the officers this Association also has a board of directors, one director to r epresent each breed. The directors are; F. J. Schaeffer, Detroit, Duroc Jerseys; Albert Feldcamp, Manchester, Poland Chinas; E. R. Morrish, Flint, O. I. C's; F. W. Alexander, Vassar, Chester Whites; George Starr, Grass Lake, Hampshires; C. L. Nash, Cassopolis, Spotted Poland Chinas.

State O. I. C. Ass'n.

President, Edward Smith, Saline; Secretary-Treasurer, Earle R. Morrish, Flint.

The greater part of the cattle associations held their meetings on Tuesday forenoon. The newly elected officers of the various associations are:

Hereford Breeders Ass'n.

President, W. W. Crapo, Swartz Creek; First Vice President, L. Whitney Watkins, Manchester; Second Vice President, E. C. McCarty, Bad Axe; Third Vice President, J. R. Campbell, St. Johns; Secretary-Treasurer, Verne A. Freeman, East Lansing.

Aberdeen Angus Breeders Ass'n.

President, Sidney Smith, Orion; Vice President, Jas. Curry, Marlette; Secretary-Treasurer, Jas. McNab, Cassopolis.

Red Polled Cattle Club

President, N. C. Herbison, Birmingham; Vice President, R. L. Finch, Saline; Secretary-Treasurer, Mark Westbrook, Ionia.

DAIRY BREEDS

The dairy breed organizations also had large attendances at their respective meetings. The Michigan Holstein-Friesian Ass'n. held a sale of 43 purebred Holstein cattle on Monday afternoon of Farmers Week. This was followed in the evening by the annual banquet. At the business meeting on Tuesday the following officers were elected; President, M. W. Wentworth, Battle Creek; Vice President, W. R. Harper, Middleville; Secretary-Treasurer, H. W. Norton, Jr., Lansing. Executive Committee, E. L. Smith, Adrian; H. W. Norton, Jr., Lansing; Dudley E. Waters, Grand Rapids; J. E. McWilliams, Mt. Clemens; Silas Munsell, Howell; John B. Strange, Grand Ledge; John H. Wynn, Rochester.

Other dairy cattle associations and their officers are:

Guernsey Cattle Club

President, John Endicott, Detroit; Vice President, George Hoffman, Monroe; Secretary-Treasurer, C. F. Meyers, Grand Blanc; Directors, F. C. Holbeck, Long Lake; H. W. Wigman, Lansing; J. M. Williams, North Adams; J. B. Deutsch, Big Bay.

Ayrshire Breeders Ass'n.

President, W. T. Shuttleworth, Ypsilanti; Secretary-Treasurer, E. C. Roberts, Fennville.

Brown Swiss Breeders Ass'n.

President, L. S. Marshall, Leslie; Vice President, H. C. Teel, Lansing; Secretary-Treasurer, E. H. Creuss, Sebewaing.

A Pioneer of Thirty-Four Years

One of the veteran livestock organizations of the state is the Michigan Improved Livestock Breeders and Feeders Association which had charge of the general program on Tuesday afternoon of Farmers' Week. Following the regular program a business session was held and the following officers were elected; President, Jacob De Geus, Alicia; Secretary, George A. Brown, East Lansing; Treasurer, H. F. Probert, Jackson.

The livestock organizations in Michigan are not confined entirely to the cattle breeders as [illegible] by the interest and attendance at the meetings of the Michigan Horse Breeders Ass'n. Officers of this association for the coming year are:

President, L. C. Hunt, Eaton Rapids; Vice President, Jacob De-Gues, Alicia; Secretary-Treasurer, R. S. Hudson, East Lansing; Executive Board, O. E. Bell, Mason; Ray Whitney, Onondaga; William Bird, St. Johns; Sidney Smith, Orion.

Large and enthusiastic meetings were held by the Michigan Muck Farmers Association during parts of two days during Farmers' Week. This association elected as its officers; President, Robert Zimmerman, Centerville; Vice President, George Kaper, Hamilton; Secretary-Treasurer, P. H. Harmer, East Lansing.

The Michigan Crop Improvement Association has become a vital factor in the farm industry of the state. During the past year its work has been considerably extended as well as increased in scope. The association takes the new and improved varieties developed at the M. A. C. and distributes them over the state. It also maintains an inspection service which handles the certification and registration of worthy seed. After this improved seed is produced in sufficient quantity it is placed on the market, usually through the agency of the Seed Department of the Michigan State Farm Bureau. By thus acting as the intermediary agency between the College's development work and the Farm Bureau's marketing system the M. C. I. A. is rendering a very valuable service to the farmers of Michigan. Its officers as chosen for the ensuing year are; President, Garfield Farley, Albion; Vice President, Ralph Arbogast, Union City; Secretary, H. C. Rather, East Lansing; Directors, A. B. Cook, Owosso; E. C. McCarty, Bad Axe; George Wheeler, Mt. Pleasant; W. R. Kirk, Fair Grove; C. R. Oviatt, Bay City; Charles Laughlin, Dimondale.

Other organizations relating to, or allied to agriculture which held meetings during Farmers' Week are; Michigan Press Association; Michigan Crop Reporters Association; Vinegar Manufacturers Association; Michigan Nurserymens Association; County Y. M. C. A. Secretaries; and Short Course Students Association.

Holstein and Shorthorn Breeders Hold Sales

HUNDREDS of Farmers' Week visitors mingled with Holstein and Shorthorn breed enthusiasts in the crowds which attended the two sales of purebred cattle during Farmers' Week. The sales were held in the judging pavilion of the Agricultural building and, each time, the crowd of spectators and buyers taxed the capacity of the pavilion

The Holstein sale was held on Monday afternoon, February 4th. Under the direction of J. G. Hays, field man for the Michigan Holstein Breeders Association 43 head of purebred Holsteins had been consigned by various Holstein breeders throughout the state. These were all animals of excellent type and breeding some of them being backed by creditable production records made in Cow Testing Associations or under official supervision.

The 43 head of Holsteins sold for a total of $10.800.00 or an average of more than $250 per head. This sets a high mark for state sales of Holstein cattle during recent years. It shows that good animals were consigned and also proves that people will pay good prices for good stuff

The two cows brought $420 each. One was consigned by John C. Buth, of Grand Rapids and sold to L. C. Carlyle of Yale, Michigan. The other $420 cow was purchased by M D. Buth of Grand Rapids from the consignment of J. N. Lamoreaux of Grand Rapids.

An aged bull, also consigned by Mr. Lamoreaux, was sold to a group of Holstein breeders in Newaygo County for $415. Two other animals sold for $400 while 4 other animals reached, or exceeded, the $300 mark, each.

The range of prices and the spirited bidding at the sale indicates

"A Stitch in Time Saves Nine" Applies Very Well to Work on the Farm

By F. T. RIDDELL

(Department of Farm Management, Michigan Agricultural College.)

DID you ever stop to think of the thousands of dollars that are spent every year for farm machinery? Did you ever stop to consider that this machinery had to be replaced about every ten years? Not only this but there are the repair costs that must be taken care of which helps to add to the bill.

An investigation conducted by the Farm Management Department of the Michigan Agricultural College showed that the investment in farm machinery in twenty-five of the better farms in Lenawee County amounted to $1,800 per farm and the average investment on the same number of high grade farms in Montcalm, Antrim and Emmet Counties amounted to $1,000 per farm. At once it is apparent that the farmer has no small amount of money invested in this sort of farm equipment. The depreciation charge alone amounts to approximately one-tenth of the investment. While this is an unavoidable charge, there are many other things entering in which indirectly tend to lower the farm income.

Fam machinery is a very important and dependable factor in our production and the efficiency of utilization of this factor depends on the farmer himself, as to the condition of the machine when he desires to use it. In many cases too much valuable time is wasted making repairs [illegible] adjusting machinery at the [illegible] year when a few hours delay [illegible] mean the cutting down of crop yield or the entire loss of the crop

The farmer's time is divided into seasons; seeding time, cultivating, and harvesting cover three of these periods and the operations performed in any one of these cannot be postponed to any other period. Thus the farmer must be in readiness at the proper time if he expects to get the best results out of the business. For a few hours delay at seeding and harvesting time may mean a bank balance in red ink at the end of the year. (A poor or damaged crop.)

Oats is a crop that must be sown at a time of year when the weather conditions are catchy, and if not seeded when conditions are right it may mean several days delay and a lot of extra work to refit the ground. Much of this delay coming through poor preparation for the task at hand. The horses are in poor condition, the tools are rusty, the drill needs repairing or the seed has not been cleaned, perhaps it was the farmer's intention to treat his seed for smut but due to delay in securing the disinfectant he postpones this operation for this year trusting to luck. Thousands of tons of hay are ruined each year because the hay loader failed to work; because the hay fork, the track, or ropes were in poor repair. The hay loader may have been left in the field where it was last used all winter or long enough so that it is rusty, the ropes are rotten or the slats are cracked or warped out of shape, so when farmer Brown finds himself confronting a twenty-acre field of hay ready to harvest and the weather man predicting a storm within a few hours he frets and stews, and everything is in an uproar because the hay loader won't work.

Often-times spraying is delayed and put off until it is too late because the materials were not secured at the proper time or the spraying outfit does not work, the pumps need rewashering, the hose or pipes leak, or have corroded.

The tractor is another piece of farm machinery that is not only expensive but complicated and fails to function unless in perfect condition. It is a powerful machine and if in condition is a big factor in production when things are favorable for its work. Investigations show that the tractor only operates about 38 days a year on the average farm, thus if the machine is not in preparation for utilization at the proper time its overhead expense per working day or per acre will be greatly increased.

On the majority of farms the winter season is the farmer's slack period. Outside of caring for livestock there are very few operations to perform and these do not have to be done at any definite period, thus leaving time on the farmer's hands which could be utilized very profitably in the overhauling and repairing of farm machinery, cleaning

Oh Money! Money!

by ELEANOR H. PORTER

Copyright by Houghton Mifflin Company

THE STORY TO DATE

MR. STANLEY G. FULTON, 50-year old bachelor and possessor of twenty million dollars, calls on his lawyer and they discuss the disposition of this large fortune after its owner's death. The lawyer is in favor of giving the money to colleges or charities while Fulton is opposed to these ideas. He remembers that he has some distant cousins and decides to leave the money to one of them, but first he determines to learn which one will use it to the best advantage. To find out who is the worthy one he, through his lawyer, gives, each cousin $100,000 to use as they will. Before giving them the money grows a beard and, using the name of Mr. John Smith, goes to the town where they live to find out what kind of people they are. Upon arriving in town he visits James Blaisdell, one of the cousins, where he tries to hire board and lodging. While there he meets Miss Flora Blaisdell, another cousin who is a dressmaker. They decide they cannot rent a room to him and supply him board and refer him to Frank Blaisdell's, the third cousin. He gets a room there and, passing as a writer gathering material for a book on the Blaisdell family in this country, he starts out. He calls on all of the Blaisdells and as they all talk of a relative by the name of Miss Maggie Duff he decides to call on the lady. He finds her living with her father, an old man who seems to have soured on the world. He secures what information he can from her and her father. He then writes a letter to his lawyer discussing the various relatives he has met. The members of the Blaisdell family learn that each cousin of Stanley G. Fulton has fallen heir to $100,000 and there is much excitement.

(Continued from February 2nd issue.)

MR. SMITH, these days was keeping rather closely to his work, especially when reporters were in evidence. He had been heard to remark, indeed, that he had no use for reporters. Certainly he fought shy of those investigating the Fulton-Blaisdell legacy. He read the newspaper accounts, though, most attentively, particularly the ones from Chicago that Mr. Norton kindly sent him sometimes. It seems in one of these papers that he found this paragraph:—

There seems to be really nothing more that can be learned about the extraordinary Stanley G. Fulton-Blaisdell affair. The bequests have been paid, the Blaisdells are reveling in their new wealth, and Mr. Fulton is still unheard from. There is nothing now to do but await the opening of the second mysterious packet two years hence. This, it is understood, is the final disposition of his estate; and if he is really dead, such will doubtless prove to be the case. There are those, however, who, remembering the multi-millionaire's well-known eccentricities, are suspecting him of living in quiet retirement, laughing in his sleeve at the tempest in the teapot that he has created; and that long before the two years are up, he will be back on Chicago's streets, debonair and smiling as ever. The fact that so little can be found in regard to the South American exploring expedition might give color to this suspicion; but where, oh, where, on this terrestrial ball could Mr. Stanley G. Fulton find place to live in unreported retirement?

Mr. Smith did not show this paragraph to the Blaisdells. He destroyed the paper containing it, indeed, promptly and effectually—with a furative glance over his shoulder as he did so. It was about this time, too, that Mr. Smith began to complain of his eyes and to wear smoked glasses. He said he found the new snow glaring.

"But you look so funny, Mr. Smith," said Benny, the first time he saw him. "Why, I didn't hardly know you!"

"Didn't you, Benny," asked Mr. Smith, with suddenly a beaming countenance. "Oh, well, that doesn't matter, does it?" And Mr. Smith gave an odd little chuckle as he turned away.

CHAPTER XII

The Toys Rattle Out

Early in December Mrs. Hattie, after an extended search, found a satisfactory home. It was a somewhat pretentious house, not far from the Gaylord place. Mrs. Hattie had it repapered and repainted throughout, and two new bathrooms put in. (She said that everybody who was anybody always had lots of bathrooms.) Then she set herself to furnishing it. She said that, of course, very little of their old furniture would do at all. She was talking to Maggie Duff about it one day when Mr. Smith chanced to come in. She was radiant that afternoon in a handsome silk dress and a new fur coat.

"You're looking very well—and happy, Mrs. Blaisdell," smiled Mr. Smith as he greeted her.

"I am well, and I'm perfectly happy, Mr. Smith," she beamed. "How could I help it? You know about the new home, of course. Well, it's all ready, and I'm ordering the furnishings. Oh, you don't know what it means to me to be able at last to surround myself with all the beautiful things I've so longed for all my life!"

"I'm very glad, I'm sure." Mr. Smith said the words as if he meant them.

"Yes, of course; and poor Maggie here, she says she's glad, too,—though I don't see how she can be, when she never got a cent, do you, Mr. Smith. But, poor Maggie, she's got so used to being left out—"

"Hush, hush!" begged Miss Maggie.

"You'll find money isn't everything in this world, Hattie Blaisdell," growled Mr. Duff, who, to-day, for some unknown reason, had deserted the kitchen cookstove for the living-room base burner. "And when I see what a little money does for some folks I'm glad I'm poor. I wouldn't be rich if I could. Furthermore, I'll thank you to keep your sympathy at home. It ain't needed nor wanted—here."

"Why, Father Duff," bridled Mrs. Hattie indignantly, "you know how poor Maggie has to—"

"Er—but tell us about the new home," interrupted Mr. Smith quickly, "and the fine new furnishings."

"Why, there isn't much to tell yet—about the furnishings, I mean. I haven't got them yet. But I can tell you what I'm going to have." Mrs. Hattie settled herself more comfortably, and began to look happy again. "As I was saying to Maggie, when you came in, I shall get almost everything new—for the rooms that show, I mean—for, of course, my old things won't do at all. And I'm thinking of the pictures. I want oil paintings, of course, in gilt frames." She glanced a little disdainfully at the oak-framed prints on Miss Maggie's walls.

"Going in for old masters, maybe," suggested Mr. Duff, with a sarcasm that fell pointless at Mrs. Hattie's feet.

"Old masters?"

"Yes—oil paintings."

"Certainly not." Her chin came up a little. "I'm not going to have anything old in my house—where it can be seen. For once I'm going to have new things—all new things. You have to make a show or you won't be recognized by the best people."

"But Hattie, my dear," began Miss Maggie, flushing a little, and carefully avoiding Mr. Smith's eyes, "old masters are—very valuable, and—"

"I don't care if they are," retorted Mrs. Hattie, with decision. "If they're old, I don't want them, and that settles it. I'm going to have velvet carpets and the handsomest lace curtains that I can find; and I'm going to have some of those gold chairs, like the Pennock's have, only nicer. Theirs are awfully dull, some of them. And I'm going to buy—"

"Humph! Pity you can't buy a little common sense—somewhere!" snarled old man Duff, getting stiffly to his feet. "You'll need it, to swing all that style."

"Oh, father!" murmured Miss Maggie.

"Oh, I don't mind what Father Duff says," laughed Mrs. Hattie. But there was a haughty tilt to her chin and an angry sparkle in her eyes as she, too, arose. "I'm just going, anyway, so you don't need to disturb yourself, Father Duff."

But Father Duff, with another "Humph!" and a muttered something about having all he wanted already of "silly chatter," stamped out into the kitchen, with the usual emphasis of his cane at every other step.

It was just as well, perhaps, that he went, for Mrs. Hattie Blaisdell had been gone barely five minutes when her sister-in-law, Mrs. Jane, came in.

"I've come to see you about a very important matter, Maggie," she announced, as she threw off her furs—not new ones—and unbuttoned her coat—which also was not new.

"Then certainly I will take myself out of the way," said Mr. Smith, with a smile, making a move to go.

"No, please don't." Mrs. Jane held up a detaining hand. "Part of it concerns you, and I'm glad you're here, anyway. I should like your advice."

"Concerns me?" puzzled the man.

"Yes. I'm afraid I shall have to give up boarding you, and one thing I came up today for was to ask Maggie if she'd take you. I wanted to give poor Maggie the first chance at you, of course."

"Chance at me!" Mr. Smith laughed, but unmistakably he blushed. "The first —But, my dear woman, it is just possible that Miss Maggie may wish to—er—decline this great honor which is being conferred upon her, and she may hesitate, for the sake of my feelings, to do it before me. Now I'm very sure I ought to have left at once."

"Nonsense!" (Was Miss Maggie blushing the least bit, too?) "I shall be very glad to take Mr. Smith as a boarder if he wants to come—but he's got something to say about it, remember. But tell me, why are you letting him go, Jane?"

"Now this surely will be embarrassing," laughed Mr. Smith again nervously. "Do I eat too much, or am I merely noisy, and a nuisance generally?"

But Mrs. Jane did not appear to have heard him. She was looking at Miss Maggie, her eyes somber, intent.

"Well, I'll tell you. It's Hattie."

"Hattie!" exclaimed two amazed voices.

"Yes. She says it's perfectly absurd for me to take boarders, with all our money; and she's making a terrible fuss about where we live. She says she's ashamed—positively ashamed of us—that we haven't moved into a decent place yet."

Miss Maggie's lips puckered a little.

"Do you want to go?"

"Y-yes, only it will cost so much. I've always wanted a house—with a yard, I mean; and 'twould be nice for Mellicent, of course."

"Well, why don't you go? You have the money."

"Yes, I know I have; but it'll costs so much, Maggie. Don't you see? It costs not only the money itself, but all the interest that the money could be earning. Why, Maggie, I never saw anything like it." Her face grew suddenly alert and happy. "I never knew before how much money, just money, could earn, while you didn't have to do a thing but sit back and watch it do it. It's the most fascinating thing I ever saw. I counted up the other day how much we'd have if we didn't spend a cent of it for ten years—the legacy, I mean."

"But, great Scott, madam!" expostulated Mr. Smith. "Aren't you going to spend any of that money before ten years' time?"

Mrs. Jane fell back in her chair. The anxious frown came to her face.

"Oh, yes, of course. We have spent a lot of it, already. Frank has bought out that horrid grocery across the street, and he's put a lot in the bank, and he spends from that every day, I know. And I'm willing to spend some, of course. But we had to pay such an inheritance tax and all that it would be my way not to spend much till the interest had sort of made that up, you know; but Frank and Mellicent—they won't hear to it a minute. They want to move, too, and they're teasing me all the time to get new clothes, both for me and for her. But Hattie's the worst. I can't do a thing with Hattie. Now what shall I do?"

"I should move. You say yourself you'd like to," answered Miss Maggie promptly.

"What do you say, Mr. Smith?"

Mr. Smith leaped to his feet and thrust his hands into his pockets as he took a nervous turn about the room, before he spoke.

"Good Heavens, woman, that money was given to you to use. Now, why don't you use it?"

"But I am using it," argued Mrs. Jane earnestly. 'I think I'm making the very best possible use of it when I put it where it will earn more. Don't you see? Besides, what does the Bible say about that man with one talent that didn't make it earn more?"

With a jerk Mr. Smith turned on his heel and renewed his march.

"I think the only thing money is good for is to exchange it for something you want," observed Miss Maggie sententiously.

"There, that's it! triumphed Mr. Smith, wheeling about. "That's exactly it!"

Mrs. Jane sighed and shook her head. She gazed at Miss Maggie with fondly reproving eyes.

"Yes, we all know your ideas of money, Maggie. You're very sweet and dear, and we love you, but you are extravagant."

"Yes. You use everything you have every day; and you never protect a thing. Actually, I don't believe there's a tidy or a linen slip in this house." (Did Mr. Smith breathe a fervent "Thank the Lord!" Miss Maggie wondered.) "And that brings me right up to something else I was going to say. I want you to know that I'm going to help you."

Miss Maggie looked distressed and raised a protesting hand; but Jane smilingly shook her head and went on.

"Yes, I am. I always said I should, if I had money, and I shall—though I must confess that I'd have a good deal more heart to do it if you weren't quite so extravagant. I've already given you Mr. Smith to board."

"Oh, I say!" spluttered Mr. Smith.

But again she only smilingly shook her head and continued speaking.

"And if we move, I'm going to give you the parlor carpet, and some rugs to protect it."

"Thank you; but, really, I don't want the parlor carpet," refused Miss Maggie, a tiny smouldering fire in her eyes.

"And I shall give you some money, too," smiled Mrs. Jane, very graciously,—when the interest begins to come in, you know. I shall give you some of that. It's too bad you should have nothing while I have so much."

"Jane, please!" The smouldering fire in Miss Maggie's eyes had become a a flame now.

"Nonsense, Maggie, you mustn't be so proud. It's no shame to be poor. Wasn't I poor just the other day? However, since it distresses you so, we won't say any more about it now. I'll go back to my own problems. Then, you advise me—you both advise me—to move, do you?"

"I do, most certainly," bowed Miss Maggie, still with a trace of constraint.

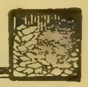
Any you, Mr. Smith?"

Mr. Smith turned and threw up both his hands.

"For Heaven's sake, lady, go home, and spend—some of that money!"

(Continued in March 1st issue.)

Farmers Service Bureau



(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

LUMPS IN ALUMINUM PAIL

I have an aluminum pail and there are small lumps around on the inside. Is it alright to use it for drinking water? What is the cause of the pail getting that way?—Mrs. A. O., Carsonville, Mich.

—The lumps on the aluminum pail are due to an impurity in the alloy which has been used recently to made cheaper grades of aluminum utensils. A little electric battery is set up in the structure of the metal. It is in no way harmful.—Dr. C. C. Young, Dept. of Health.

CAN REMOVE FENCE

I have a farm I bought on contract. I missed payment but my contract has not been foreclosed. I bought fence and temporarily fastened it up. Can I take it away?—J. B., Whittemore, Mich.

—If the fence is of temporary construction and you removed it before the contract was foreclosed, I am of the opinion you would have the right to take it off the farm.—Asst. Legal Editor.

STATE FUND FOR PURCHASING ATHLETIC EQUIPMENT

Could you please tell me if there is a place in Lansing or elsewhere in Michigan that schools get playthings free, such as footballs, basketballs, etc.? I have been told there is such a place, but do not know where to send.—D. B., Bad Axe, Mich.

—Just after the war when the Michigan Boxing Commission was organized, a certain part of its receipts was turned over to this Department for the purchase of athletic equipment. With the dying out of boxing in Michigan this fund was not kept up and, consequently, the supplies purchased at that time have been practically used up. There was, however, at that time a good deal of equipment sent to schools, especially in the smaller communities and in rural districts. This practice has been discontinued.— A. F. Westphal, State Director of Physical Education.

FELL TREES INTO DITCH

I sold a piece of timber to a lumber company and they let the job of cutting the timber to some parties. There is quite a large ditch running through this piece of timber and when they cut the trees they fell several of them into the ditch. Now these tops are stopping up the ditch to a certain extent and causing sand bars. Would the parties that cut the timber be obliged to remove these tops from the ditch or will I have to do it?—L. Y., St. Johns, Mich.

—I am of the opinion you could recover damages from the parties who cut the timber, if they refuse to remove the tops from the ditch.—Asst. Legal Editor.

CANNOT MAINTAIN GASOLINE PUMP ALONG TRUNK LINE

I am writing to you for a little information about a gasoline pump on Michigan trunk line between Flint and Owosso. There is a party trying to make us move it but I say they cannot because they do not show any papers from the State Highway Department. Have they got the right to make us remove it? I have had trouble with the oil company and believe they are trying to bluff us so we will move it. The pump is located on five points and the pump is thirty feet from state trunk line. Is that far enough or not? And will they have to serve

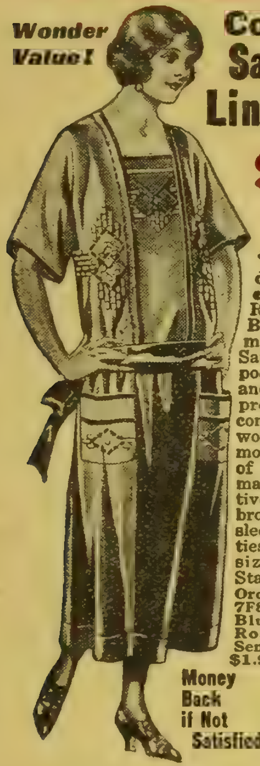
Fashions for Springtime
Appealing in Style and Price

There's a freshness of Spring itself in Sharood's new styles for the coming season. And what amazing values—absolutely the Biggest Bargains in America! Here are some of the newest Spring fashions. Look them over—and note the extraordinarily low prices for such fine styles. Then send your order—early—before the big rush, the tremendous demand for these choice styles, commences. Our unqualified "Money-Back" Guarantee insures full value for every penny you spend.

Satisfaction Guaranteed or Money Back

Merely give name and number of each article you want. Also state size, and write your name and address plainly to avoid delay. Send only the amazing bargain price and few cents postage mentioned in each description. When goods arrive, examine them carefully. If not delighted with your bargains, return goods and we refund your money instantly. Order Now—Today! Shipment positively goes forward within 24 hours of time we receive your order.



Wonder Value!

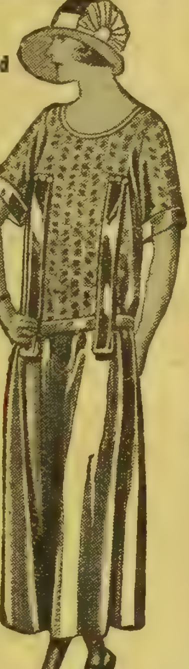
Combination Sateen and Linene Dress

$1.98

A very charming and "different" dress for day-time wear, in choice of Tangerine, Rose or Copenhagen Blue top. The skirt is made of lustrous Black Sateen, with large patch pockets of same color and material as waist, prettily decorated with contrasting tops and wool embroidery to harmonize. The blouse is of solid color Linene made especially attractive with wool hand embroidery. Novel Vestee sleeves. All-around belt ties in back. Women's sizes, 34 to 46 bust. State size.

Order Tangerine by No. 7F8041. Copenhagen Blue by No. 7F8042. Rose by No. 7F8043. Send Bargain Price, $1.98, and 6c for postage.

Money Back if Not Satisfied



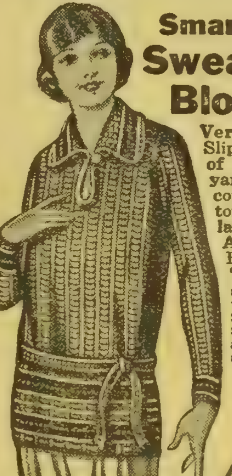
Beautiful Silk and Crepe Dress

For Women and Misses

$4.98

Silk and Crepe are beautifully combined in this lovely dress. The bodice is of printed figured pattern silk and cotton crepe. Pretty bands of crepe silk on front and back, finished with small metal buttons. The neck and sleeves are outlined with crepe silk. The skirt and the trimming are made of heavy Silk Crepe. Belt all around. Truly, an amazing value! State skirt length desired. Color, light Blue. Misses' sizes, 32 to 38. Women's sizes; 34 to 44 inches, bust measure.

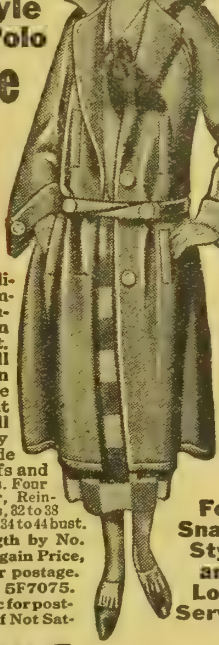
Order by No. 5F7605. Send Bargain Price, $4.98, and 6c for postage. Satisfaction Guaranteed or Money Back Instantly.



Smart Slip-Over Sweater Blouse

$1.98

Very smart and stylish Slip-Over Sweater Blouse of pure worsted knitted yarn with wide border of contrasting colors at bottom and on cuffs and collar. Full rack stitched. All-around sash. Color, Buff with Brown and Tangerine. Women's sizes 36 to 44 bust measure. Order No. 3F1976. Send bargain price, $1.98, and 6c for postage. Money back if not satisfied. State Size.

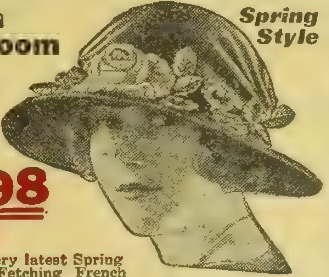


Sport Style All Wool Polo Chappie Coat

$7.98 UP

Good style and reliable quality are combined with an unusually low price in this Chappie coat. Of serviceable All Wool Polo cloth in popular sport style with inverted pleat in back. Belt all around. Roomy Raglan sleeves made with separate cuffs and trimmed with buttons. Four slash pockets. Color, Reindeer Tan. Misses sizes, 32 to 38 bust. Women's sizes, 34 to 44 bust. Order 38-inch length by No. 5F7071. Send Bargain Price, $7.98, and 16c for postage. 42-inch length, No. 5F7075. Send $8.98 and 18c for postage. Money Back If Not Satisfied. State Size.

For Snappy Style and Long Service



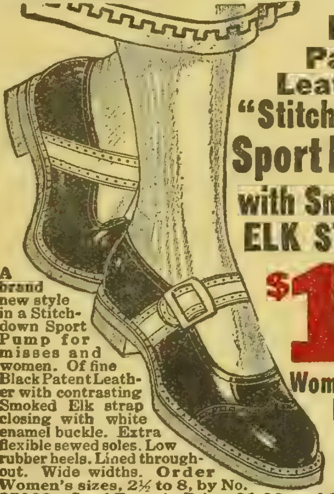
Spring Style

French Mushroom Poke Shape

$1.98

Here's the very latest Spring Hat Style. Fetching French mushroom poke with shirred back. High lustre Baronette satin crown, hand draped. Brim is of the very newest French Visca cloth trimmed with beautiful floral wreath and foliage in many contrasting Spring colors. Made in 3 very popular shades for Spring.

Order Sand Color by No. 8F9800. Copenhagen Blue by No. 8F9803. Black by No. 8F9804. Send Bargain Price, $1.98, and 15c for postage. Money Back if Not Satisfied.



New Patent Leather "Stitchdown" Sport Pump with Smoked ELK STRAP

$1.98

Women's and Misses' Sizes

Flexible Soles

A brand new style in a Stitchdown Sport Pump for misses and women. Of fine Black Patent Leather with contrasting Smoked Elk strap closing with white enamel buckle. Extra flexible sewed soles. New Book of Latest Styles and Bargains Mailed Every Six Weeks

Your order from this advertisement brings you our beautifully illustrated 120-Page Bargain Book of Early Spring Styles, fresh from the presses, and offering matchless bargains in everything to wear for every member of the family. Not only this, but we will also send you, *regularly, every six weeks*, the latest issues of our Bargain Catalogs as they appear. In this way we will keep you in constant touch with the latest fashions and the most attractive bargains of the moment. You can readily see the advantages of Sharood's plan of sending you smaller books frequently, over the policy of other houses who send you, but once or twice a year, a big catalog that takes many weeks to prepare and often fails to reach you until its styles and prices are entirely out of date. It will take but a glance through this wonderful book to convince you that Sharood's offerings are the very newest—prices the lowest in America—bar none!

Send Quick! The thing to do now is to supply your immediate needs from this advertisement. These are picked bargains. Order them on approval—even before you get our book, because they are sure to be snapped up quick. Go through these offers—don't overlook a single one. Then, if you don't see here just what you want, your name and address, by post card or letter, brings you the Early Spring Style Book, and also puts you on our mailing list to receive the regular Sharood Bargain Catalog every six weeks. Act Now—take advantage of these phenomenal bargains.

Your Money Back If Not Satisfied

Once Again—
at Your Door

The Opportunity for You to Save Money

Ward's new complete catalogue for Spring and Summer is now ready, and one free copy may just as well be yours.

The opportunity for Saving is *at your door.* It is for you to give the answer. Will *you*, too, save money this Season on everything *you* buy?

How Ward's Low Prices Are Made

Over 100 expert buyers have been at work for months finding and making these Ward bargains for you. Fifty million dollars' worth of merchandise has been bought whenever and wherever prices were lowest. Vast amounts of ready cash have been used to make possible for you and your family this great opportunity for saving.

"Ward Quality" is Your Assurance of Reliable Merchandise

Ward's is a money-saving house. We make low prices. But there is one thing always to remember when comparing prices. We sell only merchandise of "Ward Quality."

We sell only the kind of merchandise *that will give you satisfaction*—that will stand inspection and use. We do not sell "cheap" goods. We sell *good* goods cheap. At Ward's we never sacrifice quality to make a low price.

And that has stood as our governing policy for fifty-one years.

Everything for the Home, the Farm and the Family

FOR WOMEN: Montgomery Ward's first catalogue contained mostly things for women. So for 51 years our best efforts have been given to the woman's and young woman's needs and wishes. And so in New York our own Fashion Experts live and work to buy the best New York styles for you. You can get at Ward's the best and newest styles in garments with the utmost wearing quality without paying the usual "Fashion profits."

FOR THE HOME: All over America thousands of homes have been made beautiful, comfortable and convenient by articles bought from Ward's. Our experts are practical artists in home furnishing. Here in this catalogue you will find everything new for the home, everything beautiful, and everything at a saving.

FOR THE FARM: We know the farmer's needs. We have studied them for over half a century. And so we can say to everyone on the farm that at Ward's everything for the farm is intelligently chosen with practical knowledge of its use. Fencing, hardware, roofing, tillage tools, tires and everything for the automobile—of reliable quality is offered at a big saving.

FOR MEN: Suits, overcoats, shoes, everything the man, young man or boy wears can be bought at Ward's not only at a saving, but with assurance of satisfactory service in everything you buy.

What the Neighbors Say

WHEAT GROWERS SHOULD RAISE SUGAR BEETS NOW

DEAR EDITOR: A remedy is sought for distressed American wheat farmers who are selling their surplus abroad at less than its cost of production.

This condition arises not so much from the low price of wheat as from the fact that while cost of production has increased, the yield per acre remains at 13 to 15 bushels, compared with an average of 24.7 bushels in northwestern Europe, their high yield having been brought about by the introduction of sugar-beet culture.

One of the suggestions made for their relief is for our farmers, where the growing of sugar beets is possible, to devote sufficient of their present wheat area to sugar-beets to produce at home the sugar we now import.

Among the numerous important advantages of this plan are:

FIRST: It would create for American wheat farmers a home market for a profitable cash crop, on which they would realize nearly two hundred million dollars annually.

SECOND: It would save our sending several hundred million dollars abroad for the purchase of a crop we are eminently fitted to produce at home.

THIRD: It would save consumers on the purchase price of sugar, as domestic sugar always sells at a lower price than imported sugar. For several months consumers in the west have been purchasing domestic beet sugar for a full cent a pound less than consumers in the east have been compelled to pay for imported sugar made from Cuban raws.

FOURTH: It would free the American people from subjection to foreign combinations which in 1920 boosted the price of Cuban raw sugar to 24c per pound, at a time when refined domestic beet sugar was selling at one-half that price.

FIFTH: But more important than all other considerations combined, it would double the yield and reduce the price of every crop grown in rotation with sugar beets, thus aiding the farmer and lowering the price of all foodstuffs to the consumer.

Sugar beets improve the soil. Europe doubled her yield of cereals per acre by growing them in rotation with sugar beets and other hoed root crops. In a thirty year period (1879-1909), Germany increased the cereal yield on 34,000,000 acres by 530,000,000 bushels, the value of which since has been as much every year as all it cost her to establish the greatest beet-sugar industry in the world.

A similar increase in this country would give our farmers an extra four billion bushels of cereals without extra cost, thus enabling them to produce in competition with the world, however low the price might go.—Truman G. Palmer, Sugar Statistician, Washington, D. C.

SIMPLER SYSTEM OF GETTING TITLE TO LAND

DEAR EDITOR:—I have just been reading in your issue of January 5th, the letter from Ealy & Co., abstractors, Tuscola county, Mich. Now I wish every property owner in Michigan could read and ponder this letter.

If it is such trouble and expense to get an abstract now, what will it be a hundred years from now? It would seem as if our legislators might put in some of their time in giving us a better and simpler system of title to real estate than we have at present.

Just a suggestion: I understand that original title to a large part of the real estate in this country was acquired by warrant or grant directly from the state or United States. Certainly a good enough title for any one. Now why not have our probate or our curcuit courts examine and correct the title to every piece of property in the country. Then let the state give a warranty deed to every owner. When a man sells let him surrender his deed and let all the old records be destroyed.

Of course some lawyers and perhaps abstractors might be out of a job, if they really want to do some really useful work, I could give one of them a job on my farm. Aside from said lawyers and abstractors, does any one know of any good reason why, some such plan should not be put in operation.—A. Bauhahn, Ottawa County, Mich.

FRUIT AND ORCHARD

Edited by FRANK D. WELLS

PRUNING OF SMALL FRUITS

THE pruning of small fruits although necessary is an operation which is in general badly neglected. Raspberries, blackberries, gooseberries and currants are often able to survive neglect and still produce small crops of fruit annually. For this reason they are often left uncared for, with the result that the plants become very thick, and thus spraying, cultivation and harvesting operations are made difficult. The yield of the plantations is likewise reduced. When the plants are regularly and well pruned, they will produce larger and better fruit, cultural operations are made easier, and the plantations will remain in a profitable condition over a much longer period than will those which are neglected. Pruning the small fruits is often tedious, but the actual work is very simple and easily performed if a few principles are kept in mind.

Raspberries, Blackberries and Dewberries

The methods of growth and fruit bearings of the raspberry and the blackberry are essentially the same. The canes bear fruit but once. Each season new shoots are developed from the crown of the plant or from buds on the roots. The following year they produce flower clusters, bear fruit, and die. The object to be kept in mind when pruning these fruits is to remove all the old canes which are of no further use, and to secure, by proper thinning and heading-in, a proper number of vigorous, well-developed shoots for the production of a crop the following season.

The practice of removing the old canes varies with different growers. Some remove them soon after the fruit is harvested; others leave them until spring. Both practices undoubtedly have some advantages, but better results are secured when the old canes are cut out and burned as soon as the fruit is harvested. Insects and diseases which they harbor are in this way destroyed and the growth is given more room to develop.

At the time the old canes are cut out, the young shoots should be thinned. When the plants are kept in hills or the growth confined to original crowns, all weak and badly diseased shoots should be removed and those remaining thinned out, leaving only a sufficient number to produce the next season's crop. In the case of the red raspberries, when the canes are not much branched eight or ten may be left in each hill; but if they are large and much branched, five is enough. Four or five canes is the usual number left with the blackberries and with the black and purple raspberries.

When red raspberry plants are allowed to form a solid or continuous row, all suckers should be kept cut out so that only a narrow hedge about twelve inches wide is allowed to form. Those in the row should then be thinned, leaving the remainder spaced so that they will stand about six inches apart.

Spring pruning is usually practiced, especially if the canes are tall and vigorous or have been severely winter-injured. They are cut back to live wood or to a desirable fruiting height, usually four or five feet.

so that they will support a crop of fruit.

Black raspberries are usually pruned more severely than the reds. They are pruned during the summer by pinching off or heading-in the young shoots to stop the terminal growth and to induce the development of low and well-branched plants. The work should be done during June and July when the shoots are 18 to 24 inches high. In order to check growth at the desired height it is necessary to go over the plantation several times, as all the new shoots do not attain the proper height at the same time. Weak plants are likely to result if the shoots are allowed to grow much beyond the desired height and are cut back later. In the spring, all the lateral or side shoots should be cut back to 12 to 18 inches in length, depending upon the vigor of the variety. The pruning of the blackberries and the purple varieties of raspberries is similar to that just described for the black raspberries, except that the new growth is allowed to grow to a height of about 30 to 36 inches before being pinched back.

The new growth of the dewberry is not pinched back in the summer, but is allowed to run on the ground. It is cut back to the desired length the following spring and tied to the trellis.

When pruning currants and gooseberries, it should be borne in mind that the best of fruit is usually produced at the base of one-year-old shoots and on the spurs which have developed from the two and the three-year-old wood. The pruning of these fruits, therefore, consists of cutting out all of the oldest wood each year and thinning out the new shoots so as to leave only a few of the strongest ones to replace [illegible] older bearing wood. A good bush should have from five to [illegible] ing stems, the number depending upon the fertility of the soil and the vigor of the variety. It should be the aim at each annual pruning to provide this number of stems two or three years of age and a continuous supply of young ones coming in to take the place of those removed. Very vigorous young shoots are sometimes headed-in to induce the development of spurs. All branches tending to lie on the ground should be removed and the center of the bushes kept open by cutting out crowding and interfering branches. Do not leave the bushes too thick. This is a common mistake when pruning these fruits. Larger berries and better filled bunches are secured and the fruit is more easily harvested if the bushes are not allowed to become too dense.

Black currants bear the most fruit on the one-year-old canes, and for this reason it is necessary to keep up a good supply of young shoots. The wood must practically be removed each year.

The pruning of the gooseberries and currants may be done any time during the dormant season, but it is usually deferred until late winter or very early spring just before growth starts. When pruning, watch for indications of the cane borer. A cane with a black center and somewhat hollow indicates the presence of the borer, and such a cane should be cut back until sound, healthy pith is reached.—R. E. Loree, Horticultural Department, M. A. C.

DO NOT GROW GRAPES

Would you advise growing grapes on a large scale here in Arenac county? What would be a reasonable return off an acre of grapes and what kind would you advise growing here? The ground is sand and clay loam. I have a piece of ground that is quite sandy. Would you advise planting cherry trees on it?—G. La G., Twining, Mich.

—We do not recommend the commercial culture of grapes in Arenac county. Occasionally there might be a season when the fruit would ripen properly if the soil and the location happen to be particularly favorable. However, growing season temperatures in that part of the state are not sufficiently high in the average season to mature grapes satisfactorily.

The cherry which is mentioned in your letter would be much more satisfactory for that part of the state. —V. R. Gardner, Professor of Horticulture, M. A. C.

Why, Without Realizing It, You May Need

for Economical Transportation

CHEVROLET

There are three main groups of prospective buyers of Chevrolet automobiles and commercial cars.

First, are all who know from comparisons or through the experiences of friends that Chevrolet provides the utmost dollar value in modern, economical transportation of people or merchandise. This group constitutes our spontaneous market; its members walk right into our dealers' places of business and buy Chevrolet car.

Second, the large group of people with modest incomes who have the false impression that so good a car as Chevrolet is beyond their means.

They do not realize that due to engineering excellence and full modern equipment, Chevrolet operating and maintenance costs average so low that during the life of the car, it delivers modern, comfortable, fast transportation at the lowest cost per mile, *including the purchase price.*

The tremendous growth of our business during the last two years has been due to the shifting of thousands from this group to the first group.

Third, the smaller but very important group of people of ample means, able to buy the highest priced cars, only a small percentage of whom as yet realize that Chevrolet combines quality features of much higher priced cars with such operating economy that as an extra car it virtually costs them nothing, due to the reduction in their transportation expenses effected by it.

This message, then, is addressed to all in the second and third groups. We respectfully suggest consideration, investigation and comparison of Chevrolet with any other car at any price. The result will be to our mutual benefit.

Burrit Grange Cup 1st Prize Tractor Plowing Contest
Big Rock Plowing Match For Best Tractor 1923

E-B Fordson Plow Wins Two Matches First Season

Both the Burrit Grange and Big Rock plowing matches were won by the E-B Fordson Plow with perfect jobs of plowing. Farmers prefer this plow because of its flexibility, its even furrows and the ease with which it is handled from the tractor seat.

The E-B runs at an even depth because of the flexible hitch and location of wheels. Uneven ground does not affect movement of plow itself. The rolling landside assists the plow in running level and reduces draft.

Equipped with adjustable coulter-jointer and
E-B Quick Detachable Shares.

THE OUT-WORKED LIFE

A SERMON BY REV. DAVID F. WARNER

TEXT: "Work out your own salvation with fear and trembling."—Phil. 2:12b.

THIS is the emptied life. We pray for a filled life. Why? That we might empty it. For an inworked life that we might outwork it. It is the only way to keep life from decaying. The Dead Sea stinks. Why? It has no outlet. It is not outworked. When the word was made flesh, Jesus was under the same demand for outworking his life as we are. This he called obedience. "He learned obedience by the things which he suffered. And having been made perfect, he became unto all them that obey him the author of eternal salvation."

In this vision of the incarnate Christ we get our true setting of the meaning of life and how to save it to serve this meaning. And isn't this the great concern of living? There is nothing quite so pitiful as to see men satisfied with the trival, and who daily hinder the sublime possibilities of the soul. We want the things of earth and we get them. And when life closes to familiar scenes we have but a handful of fading glory. We return to our Maker the ashes of a burnt-out life. What shame!

The Bible teaches that every man away from God is fit only for disgrace and eternal death. But it teaches that a deliverance from this is the "blessed hope." When we are led out to the gallows of judgment, and the trip is ready to pull, and then comes the voice of pardon; that will be the unspeakable blessing. But it is now, for the judgment day is on now, yet, there awaits that final transaction with God, when we pass thru, all alone, the last turnstile of earth's journey. Ominous dread? No. "Death is swallowed up in victory," says Paul.

But this is not all of salvation. If so, my personal escape from hell would be my only purpose in life. But isn't that the traditional belief? Yes, but it is untenable in the light of a social Gospel. And just this has produced many negative and selfish lives. Salvation has another dimension and a larger spiritual content. It is deliverance from, into—, from a slavery to sin into a bondservice to righteousness; from a negative into a positive outworked life; from a religion of "nots" into a religion of "dos," and into a wider existence where we expand and grow into mighty trees of God's planting; "unto the measure of the stature of the fullness of Christ;" which fullness was emptied, outworked for our example. What insufficient definitions and understanding of religion we have had! To be like Jesus, who loved his neighbor as he loved himself, is to be saved.

But this salvation is to be reached after. "I press toward the goal," says the apostle. You have seen athletes running in a race. How hot and eager! How hard they worked! Well, they could not run that race by sitting in the grandstand with the crowd. Neither can you. But how may we win the race of salvation? Work it out. You'll not win by accident, and not get it from your ancestry. "My father worketh hitherto and I work." "We must all appear before the judgment seat of Christ"—Well, read it for yourself in 2Corinthions 5:10. Work is the primal law of redemption. You will remember God's charge to Adam. This is man's noblest birthright. And to think of your own vainglory and high-mindedness is to know that developing a Christian personality is hard work, but a noble achiement. It means the form of work that serves out amidst the lust and power, and the greed and gain of this world. Out where the cloud of sin is darkening the pathway of men. Out of the pews of the church into the world fields of action. Love working out is the only way to resist the appetite for sin and keep oneself from the meannesses of earth. Work is the open way to health and success. Call up Abe Lincoln and hear his testimony. Ask the rest of the rail-splitters and frontiersmen. What say you, friend? Open the portals of the past and hear what great men of God have said. Well, whenever I see a holy, Christian character, I know that he has come up thru the Gethsemane of struggle and tears. "Work out your own salvation," and yet it comes as by magic.

And in what spirit shall we work? Well, just read Phil. 2:12-18. "Do all things without murmurings and questionings." Some of us have fallen out with work and others complain that it does not suit their case, opinion, or party. This darkens our light amidst a crooked generation. We are looked upon as no different than the world. When we give way to these surface vices, our life loses its attraction. We are asked to speak to some erring friend, or to go on some mission of mercy, but we put it off, and off, until at last, the clock of conscience says it is time to act; and then we go, but with murmuring and disputing. And so with our giving and self-denying, we murmur and complain. Yet, at last we may do it, thinking that in the mere doing conscience may be satisfied. No, no, there is no radiation of Christ in this. And this wise generation knows it. Tho imperfect in accomplishment, we are urged to be perfect in motive. This gives spiritual sanction to the most humble service. Religion must have something rare and uncommon to be attractive.

No one was more glad and free in his new-found religious liberty than was the apostle, Paul. He was always happy and optimistic, yet sublimely serious. "This one thing I do." And he did it in fear and tremblings; in shipwreckings, scourgings, and death. Friends, most of us take life so lightly. We seem not to have counted the glory of spiritual achievement, or the tragedy of spiritual defeat. We seem not to feel that God has invested his son in us and we are bought with a tremendous price. Why barter away our lives and blest immortal prospects? Why are we not serious and earnest? My penmanship teacher practiced two hours before writing a letter to a particular friend. We are writing our own life's epistle and sending it on to our Dearest Friend where we are to meet it as our book of life. Ought we not to work out our salvation with fear and trembling?

And God is out enabling power. It is he who worketh in us both to will and to work his good pleasure. To attempt to work out our salvation on the field of human effort alone, is to meet defeat and failure. This is Paul's argument, in the seventh chapter of Romans. But when God works in us we are willing his good pleasure, and are no longer debtors to fleshly appetites and disobedience. Why does the little bud on the tree develop into fruitage? Why does the acorn grow to be a massive oak? God, is the answer. This is what the apostle means by strength in weakness.

Pull the switch and feel the pull and energy of that mystical force, electricity. Paul was constantly pulling the switch, or rather, he left it open. How easy and free his life! Said he, "It is no longer I that work but Christ that worketh in me." God takes up his abode in the heart's holy of holies that he might work out in the ideals of life. He lays hold of the intellect that we might understand his will; upon the emotions that we might feel his pleadings; upon the will that we might be helped into right choices; and upon the imagination that we might enjoy the city of gold. All this, that we might not run in vain. Work out your own salvation with fear and trembling.

SUFFICIENCY:—Our Sufficiency is of God.—2 Corinthians 3:5.

GET UNDERSTANDING:—A scorner seeketh wisdom, and findeth it not: but knowledge is easy unto him that understandeth.—Proverbs

EVERY DAY:—This is the day which the Lord hath made; we will rejoice and be glad in it.—Psalm 118:24.

UNCLE RUBE SPINACH SAYS

WHY WORRY?

HOW much worrin' we do when there aint a thing to worry about, don't we now? You know, right here, this very night, an' its night now, as purty nigh it any ways. It's past 'leven o'clock P. M., but I've been settin' here wonderin' what I could worry 'bout an' then all to once, I happened to think of my shoe strings. You know I most always gen'rly wear two shoes an' I have an awful time with the strings 'at I tie 'em up with. Mostly I tie 'em in a double bow knot, not that I have to tie 'em that way, but I do.

Well its easy enough to tie 'em but the untyin' aint always so easy. You see my strings, the end of 'em I mean, has a habit of droppin' through the loops 'an when I jerk 'em to git my shoes off, I'm all tangled up, so as I said, tryin' to think of somethin' to worry 'bout, I thought of the shoe strings, an' I reached down an' give one a jerk,—she came off jest fine. I wuz surprised an' used some rather harsh words—give the other string a jerk an' would you b'lieve it—it came also. Well there, an' here I am jest provin' to me that this worry biziness is all foolish. We worry 'bout things that can't possibly happen to us.

Mebbe we think the Lord put us here to worry 'bout somethin', but good friends, he never did any such thing. He put us into this world, made the world beautiful, put flowers, trees, an' everythin' here for us to enjoy. If we don't enjoy all the beauty that is around us, well then, dear friends, there's somethin' wrong with us ourselves, an' we'd ought to see a doctor right away. An' I don't mean a reg'lar doctor that charges a dollar for a little box of pills 'at costs him 'bout 3 cents. I mean a doctor that will tell you your real trouble. An' gen'rlly speakin' you'll find you aint so sick as you think. Your mind gits kinda warped or somethin' an' you think the world is upside down. No matter folks, I know 'cause I've been into an' thorugh it—yes, lots of times, an' its a dear ol' world, beauty all 'round us, even the snow flakes, if you've ever examined 'em, have a beauty all their own. Every one of 'em have a form perfect, each one is perfect. Were we half so perfect there would be no jails, no prisons, no lunatics, no feeble minded, there would be nothin' in this world but peace an' happiness.

But we worry, we feel that we must worry 'bout somthin'. That's why I worried 'bout my shoe strings. Friends, mebbe you're lookin' for bigger things to worry 'bout. You'll find the things you're lookin' for, don't ever fear. If you want to worry jest keep a finger in the air, an' worry will come to you. It's a bountiful crop this year—every year for that matter. Always plenty of material to start things, but what does it get you in the end?

Oh shucks! When my shoe string came untied I quit the worryin' folks. Friends, jest think the matter over, resolve right now that two things shall not worry or fret you. An' here are the two things that no one should ever worry 'bout; the things you can't help, an' the things you can help. If you can't help a thing why worry 'bout it? If you can help it, go ahead an' change it an' don't worry 'bout it any more. An' last an' finally, don't worry anyway Cordially yours,—UNCLE RUBE.

Clean Through

A superintendent of public instruction in Georgia explained the powers of the X-ray machine to a gathering of negroes at the school commencement. After the meeting was over a negro called him aside and wanted to know if he was in earnest about his machine. The superintendent assured him that he was. "Boss, I wants to ax you ef er nigger et chicken, kin you look in him and see chicken?"

"Why, yes, Ephraim."

"Well, boss, I wants to ax you jes' one mo' question. Kin you look in dat nigger an' tell whar dat chicken come from?"—Royal Gaboon.

He Was Loyal Anyhow

"Can't yer go any faster?" roared the angry traffic cop to the fellow who had delayed a string of autos several blocks long.

"Yes," calmly replied the driver of the antiquated flivver, "I can, but I don't want to leave the car."—Wallace Farmer.

DODGE BROTHERS
TOURING CAR

It is good to know that you can park the car on cold days, assured that it will start promptly upon your return.

Precise engine construction, a powerful starter, battery capacity far beyond actual requirements, and a carburetor which thoroughly vaporizes the fuel, are a few important reasons why cold weather has practically no effect on the car's behavior.

SAVE 50¢ A ROLL
Ward's RADIO ROOFING

Regular 85-pound standard weight

Don't confuse this full-weight 85-pound roofing with cheaper, lighter roofing sold at the same price.

Lay it over old roofs. There is enough in one roll to cover 100 square feet—yet a roll costs only $1.85, with nails and cement.

Fire Underwriters Approve it

Radio Roofing is surfaced with red or green slate that beautifies as well as protects it. Resists fire. Not affected by heat and cold.

We guarantee it for 15 years—it should last many more.

Send for Free Sample

Examine it! Cut it open! Test it. Judge its remarkable quality. Write for free Building Material Catalogue.

Order the roofing you need, Catalogue No. 174-M00. State color—red or green.

"The Farm Paper of Service"

WOODROW WILSON

AMERICA has paid its final respects to one of its great presidents, Woodrow Wilson. His earthly remains have been deposited in the cathedral which overlooks the capitol of the great democracy whose destiny this man helped to mold.

The name of Woodrow Wilson will oft be mentioned in history and in school-rooms many generations after the names of those who harrassed his plans have been forgotten.

The principles which Woodrow Wilson laid down at a time when all of the world was a seething cauldron of war and hatred attracted all men of every nation, creed, and color to the standards of humanity which he unfurled. The principles of world peace and world democracy which he preached during those trying years and which he failed to accomplish in practical form at Versailles will be echoed from one generation to the other until their accomplishment is assured on this earth.

Woodrow Wilson will be remembered always as the pioneer apostle of world peace. Nothing that his enemies have said will deter in the slightest the measure which history takes of this man.

As one writer has so aptly expressed it "Woodrow Wilson was the greatest single casualty which the United States suffered in the World War."

He died a martyr to a principle as lofty as that for which Lincoln died and which, like Lincoln, he could not live to see completed.

We bow our heads in humble reverence to the memory of a man who gave his life for his country—Woodrow Wilson.

MICHIGAN LEADS IN BEANS

ACCORDING to Frank B. Drees, secretary of the Michigan Bean Jobbers Association, the 1923 crop of navy beans in Michigan exceeded two million bushels, and if so this will place California in second position.

In navy beans the farmers of Michigan have a crop which can be made, if it already is not, the most profitable single crop grown on the farm in our state and a crop which will make the particular sections of Michigan especially suited to it among the most profitable farming lands in America.

If it is true that Michigan grows practically three-fourths of all the navy beans sold in the United States, then it is equally true that the men who grow them should control its price and destiny on the market.

In the face of some discouragement from co-operatives which have been organized during the past few years and which has not made a success in controling the markets, we predict that for the growers of any single commodity who can band themselves together as can the bean growers of Michigan, there is excellent reason to believe that they can control the price of their product on the market and thus realize from it the profit to which they are entitled as manufacturers.

A recent meeting of the bean growers at Detroit showed that these gentlemen have at last awakened to the possibilities of cooperating with the grower and their action is not to be discouraged, but that they must get ready to share the profit and responsibilities of marketing Michigan's beans with the authorized representatives of the growers themselves is only a case of "eventually, why not now?"

HORSE VS. TRACTOR

AT one of the Farmers Week meetings at Lansing, Mr. R. L. Hudson, superintendent of the horse department, made the following statement: "It has been generally agreed by horsemen and tractor men alike that the horse as well as the tractor are here to stay and that we have been going through a period of adjustment i nwhich the place of each has come to be recognized."

This would seem to indicate that both sides of a controversy which has waxed warm during the past decade have come to acknowledge the rightful place of each, on the farms of this country.

It is safe to assume that the tractor will never entirely supplant the horse and it is equally true that the horse cannot meet the competition of the tractor in certain lines of farm work which must be done quickly and efficiently.

It is equally true that the tractor will replace two or three teams and that the ordinary farm in Michigan, for instance, of comparatively small acreage can be well handled by a small tractor and one team, whereas three or four teams might be required without the aid of the tractor.

It is interesting also to note that the cost of a tractor is today less than a portable engine of the same horsepower would have cost ten years ago. There is no reason for the farmer waiting for silo filling, wood cutting, or even threshing if he and his neighbor will purchase cooperatively these important machines and handle them with their own tractors.

We predict a large sale of tractors in Michigan this year, principally because farmers are becoming convinced that these machines have been brought to a practical and efficient point which guarantees them long life and proves that they are out of the experimental class.

To those farmers who are planning to buy tractors this year we want to add just one word of advice, and that is: get your tractors early enough so that it can be well worn-in before you put it to the heavy duties of plowing. You would not think of running an automobile at high speed with a load of six or seven people the minute you bought it, and yet your tractor in plowing works even harder. Our suggestion is that you get delivery of your tractor at once and begin using it on light work around your farm so that it will be well worn-in by the time plowing starts. You have not a minute to lose and your dealers will be glad to accommodate you in the matter of time because he is as anxious as you to see you make a success of a tractor on your farm.

PROHIBITION ON TRIAL

NO sane man would attempt to argue but what absolute prohibition of alcohol for beverage purposes would be an excellent condition. But prohibition which prohibits is one thing and prohibition which maintains a great army of bootleggers and produces a crop of corrupt officials is quite another.

It seems a pity that men cannot be found who can enforce laws, but after six years of prohibition in Michigan one feels at times that too long a step was made without the backing of proper public enlightenment, that too drastic a law was put on the books before the people were ready to receive it.

One thing is certain, that man or woman is a traitor to better government, who ostrich-like, with head in the sands, refuses to face the conditions as they exist, not only in the urban centers, but in the rural sections of Michigan.

There are those who believe temperance and moderation can be taught, whereas prohibition can never be enforced. One thing is certain, the present intolerable disregard of a constitutional law cannot continue without proving a menace to the very foundation of our government.

WHY TAX THE AUTOMOBILE BUYER?

THE automobile manufacturer is putting up a just fight for discontinuance of the five per cent excise tax which the buyer of a new automobile must pay in addition to the manufacturers price.

This excise tax on automobiles was imposed, as we understand it, during the time of a national emergency, when the purchase of a new car was by some considered a luxury and a source of taxation revenue which was entirely justified. The times which made this excise tax practical under such conditions have passed long ago and that Secretary of the Treasury Mellon should not have recommended the abolition of this unjust tax on the citizens of this country in his recent proposal is to be regretted.

The farmers of the United States will buy more than half of the automobiles purchased in this country in 1924. It is mighty important to them that this tax be removed, and if some of their would-be sponsors in Congress will take enough time from their wailings over "our pitiful plight" to remove this tax, they will receive the undying gratitude of their farmer constituents.

The average farmer has driven his old Lizzie just as long as he proposes to, and this year with conditions looking better he is going to trade it in for a new model and perhaps a truck too, so it is mighty important to him that this direct tax on his progressiveness be removed.

WELL, NOW, MR. PESSIMIST!

WE recognize that there are still any number of farmers, and friends of the farmer, who do not believe that cooperative marketing can ever be made a success in these United States. They remind us of the man who saw the giraffe in the circus menagerie and said "I don't care, there ain't any such animal!"

The facts are, that the cooperative farmers organizations in American did a business of over two billion dollars last year. Reports to the Department of Agriculture from 2600 grain organizations show business totaling $490,000.000; 1841 dairy products organizations, $300,000,000; 1182 livestock shipping associations, $220,000,000; 856 fruit and vegetable associations, $280,000,00; 78 cotton cooperatives, $100.000,000; and 14 tobacco organizations $132.000,000.

Only 8313 of the 10,000 organizations have reported, of which 90 per cent were engaged primarily in selling farm products, and 10 per cent in collective purchasing of farm supplies.

THE RETURN OF THE PRODIGAL!

WE saw a cartoon the other day that was a clear exposition of the happy return to the farmer of his wayward daughter, Prosperity, who has been absent from the old farm these past few years.

Prosperity has come back to the farm. In some sections she is more worn from her trials and tribulations during the sojourn away from home than in others, but in those sections which are not dependent on any one crop, where diversified agriculture has been practiced as it has in Michigan, for instance, her return is spirited and easily apparent.

Many of the farm homes to which this wayward daughter would now return and settle down in the peace and comfort of former years have been boarded up and their once proud possessors have flown with other moths who have been drawn by the flame of the city lights. Fain now would she help in the planning of this year's crops, in the upbuilding of the herds and flocks, but no, like rats from the ship in distress, these weak ones of the farm, are now standing in lines to catch the street-car to their work, punching the time-clock and returning to their homes after dusk with scarce enough from their high-sounding wages to pay the land-lord, the gas-bill, the butcher, the baker and the hoard of city vultures who prey on their daily stipend.

Back on the farms of Michigan, the sterling men and women who have stuck to the ship, while the winds of adversity howled through the rigging and when it seemed as though the harbor of safety would never be reached before dire calamity would send them to the bottom of despair; these sturdy souls are looking forward to a year which promises a further return to the days of normalcy.

Natural conditions have brought about a cleaning-out of the laggards, the mis-fits, the ne'er-do-wells on the farms of the United States. To-day we have left as our legacy the cream of the farming population and with them, we face the tomorrow with upturned faces and high hopes.

Welcome home, Miss Prosperity, we've kept the chair at the right-hand of dad, always waiting for you and altho the fatted calf may have already been shipped to a market that paid a fair price this year for him, have another helping of chicken and biscuits, we want you to know we're glad to have you home, and we'll never again mention how long you stayed away, if you'll just take your old room upstairs and make this your home for ever-more!

PUBLISHER'S DESK

BE A FINGER PRINT SPECIALIST

THE old saying goes "Do one good act every day," and if I do nothing else today I will save one reader sixty dollars because I have just advised him that I do not believe there is a very good opening for a finger-print expert at Moscow, Michigan.

There seems to be no end to these correspondence school games, and you will always find them tied up with a five-dollars down and a five-dollars-a-month proposition, as this one was. Their circular matter is sometimes so plausible that unless you had stones in your pocket you might be wafted away in the exuberance of the man who wrote it.

I see by the papers that a Harvard professor is making a rocket which he hopes to shoot to the moon and I fully expect to find the circular matter for a moon-shooting correspondence school guaranteeing to teach you how to make a rocket to hit the moon for five dollars down and five dollars per before many more issues go to press. If you see one tell me about it.

DETROIT AIR COOLED CAR COMPANY

A READER writes to find out if the hundred dollars which he paid for one share of preferred and one-quarter share of common stock in the Detroit Air Cooled Car Company has been lost. I am given to understand that this company is still in operation but that manufacture on a profitable basis has not begun yet. While there is life there is hope!

THE ART WORK SCHEME

"Dear Mr. Slocum: I would like to ask you a few questions on which I would like to get your idea as to what can be done. Now, in regard to the Underwood Art Goods Company, Portsmouth, Ohio, the manager is Ruth E. Underwood. I saw her ad. in a paper of where she wanted ladies to do fancy work at home, so I wrote her and she said that she would send me a finished article, for which she charged a price of $1.00 and she sent me a free try-out for me to make and send back for inspection.

"The finished article was a handmade handkerchief and she was to pay me 25 cents apiece for making them. And when I had done work enough to amount to $12.00 she was to refund my dollar.

"So she accepted my work and sent me a quarter of a dozen to make. I made them and sent them back, for which she agreed to send my pay as soon as she received the goods. I sent the work back to her but have never heard from her since, and that was the latter part of May 1923. I wrote her in regard to the work and have heard nothing. I also had a return on the outside of the package.

"Now I would like to know if there is any way of getting my dollar back or the pay for the work or stopping her from swindling others out of their dollars?"

I HAVE advised our reader who wrote the above that she should send a registered letter to this company, stating her claims, and keep a copy of that letter. If she does not receive a satisfactory reply I will take it up with the proper authorities to see that justice is secured, and I would be glad to hear from any others of our readers who have had experience with the above company.

I. R. HOUGH FUR COMPANY

THROUGH this department we have continuously advised fur trappers in Michigan to insist upon the company to whom they ship furs holding their shipments separate until the price has been quoted and made satisfactory. If there is any business in which there are more crooks than in the buying of raw furs we do not know what it is. This morning on my desk I find a letter from a reader at Charlevoix, as follows:

"I have just read in The Business Farmer of another person who shipped furs to the I. R. Hough Fur Company, Meriden, Connecticut, and got skinned as I did but worse. I sent three good mink all prime and should have been classed as large and four rats, large, for which I should have gotten $25.00. I had them insured for $20.00 and got a check for $2.30 for summer caught furs, none gotten before November 1. I sent check back and wanted furs returned but they said they were nearly rotten, green, mildewed, and burnt—some classification for summer caught furs. I can give exact dates of sending and receiving checks as I had them registered. This letter can be published and I would like the address of the other party who sent the other letter on page 15, issue of February 2, 1923."

These letters hardly bear out the high-sounding circular matter which this company sends out, from which we quote as follows: "Why you should ship to the Hough Fur Company, Inc. We are recognized as the most liberal and expert graders. We quote the very highest prices. And we do absolutely guarantee to pay you every cent your furs are worth. Fictitious high prices mean nothing to you—it's the liberal grading that counts every time. Remember our quotations are net to you. I pay all express charges and refund parcel post charges on all shipments. Goods are held separate upon request and we charge no commission."

Compare these printed claims with what our readers have been reporting of their dealings with this Company. Can you beat i ?

Fur trapping is a profitable side line for men and boys in most sections of Michigan. It is a stable employment and there is always a good market for all kinds of furs, but the most important thing is to know they are being sold through a responsible house that will give you a fair grading, and it is well to pay no attention whatsoever to fly-by-night concerns that make especially high prices in the circular matter which they send by mail. This type of house cannot advertise in high-grade publications, which attempt to protect their readers.

PAID UP RIGHT WAY

ABOUT two weeks ago I sent an account to you for collection. It was for milk sold to the —— Creamery Company. Would say I have had a local attorney trying to collect this account since the last of August but was unable to collect it. I received my check yesterday. This shows they were glad to s[illegible] when they found you were after them.

I am very thankful to you for this service and wish you would write me as to the amount I am in your debt for same.

I will ever be a booster for the Michigan Busines Farmer for the amount saved me on this one instance would pay many years subscription to M. B. F. Again thanking you I remain W. M., Beryille, Mich.

OUR BOOK REVIEW

(Books reviewed under this heading may be secured through The Michigan Business Farmer and will be promptly shipped by parcel post on receipt of publisher's price stated.)

Good Health.—How to get it—how to keep it—by Alvah H. Doty, former health officer of the port of New York and author of "Prompt Aid to the Injured." It is published by D. Appleton and Co., New York, and the price is $2.00.

The Eighth Wonder,—and other stories, by A. S. M. Hutchinson, author of "If Winter Comes."—"The Eighth Wonder" which gives the book its name, is a story of love glorified; "Some Talk of Alexander" the tale of a spiritual awakening; "The Rough Little Girl and the Smooth Little Girl" as fine a picture of the temper of a real aristocrat by birth and breeding as has been drawn; "The Swordsman" a dramatic account of an ancient British revenge; "The Grim Test" a charming and humorous modern love story, "A Magdalen of the Soil" a tragedy of present-day France. In "There Still are Fairies" a workmen's strike is handled with a light humorous touch, and "In Evening Bells" is an allegory which closes the book on a high spiritual level. The stories are altogether different but promise excellent entertainment and need no other introduction to a public already acquainted with this author's work. Little, Brown and Co., Boston, Mass. ($2.00.)

First Mortgage Real Estate Gold Bonds

Farmers accustomed to appraising real estate appreciate most highly the conservative procedure of the Federal Bond & Mortgage Company in restricting each issue to a moderate portion of the rock-bottom value of the security.

10,000 miles guaranteed and yet you save ⅓

Riverside Oversize Cord Tires

Riverside Oversize Cord Tires are guaranteed for 10,000 miles and in actual performance give up to 18,000 miles. Can any other tire do more?

So why not save one-third and use Riverside Cords? What more will any other tire do? Then why pay more?

And this 10,000 miles service is backed by a guarantee that has stood for fifty-one years. Does any other tire carry a better guarantee?

Quality is built into Riverside Cords

This guaranteed mileage is built into Ward's Riverside Cords. High treads, thicker and stronger, of tough, live rubber.

This exceptional quality of Ward's tires alone has made us the *largest retailers of tires in the country*. The tires themselves have convinced thousands that Riverside Cords are best.

"I have used Riverside Tires for the past four years, I have never had to send a tire back for adjustment.
I have tried several different highly advertised makes alongside of Riversides and have not found a superior."
Walter M. Schwoem, Nessen City, Mich.

You Don't Risk One Cent

Before you buy any tires send for Riversides. Inspect them. Compare them with tires selling for $5.00 or $15.00 more.

Send them back if you do not find them the equal of any first-quality oversize cord made. We will refund your money.

These prices buy 10,000 miles of service—and more.

Cletrac

A Better Tractor
A Lower Price
$1270
F. O. B. FACTORY

12-20 H~P

CLETRAC'S *crawler* construction, its suitable size, great pulling power, simplicity and economy of operation all appeal to the farmer. The broad tracks with which Cletracs are equipped furnish plenty of traction in any kind of soil—no miring down, no "digging in."

Cletracs, because of the broad tracks on which they travel, are noted for their splendid work in seed-bed fitting. Cletracs *do not pack the soil.*

The purchase of a Cletrac is an investment in a crawler tractor of a size best suited to the all-round power requirements on the farm.

Five millions of dollars in equipment and a big factory constituting upwards of five acres of floor space under roof signify the element of permanency back of Cletracs.

Cletracs, with these and many other advantages of crawler construction, are now offered at the above new low price.

Write for catalog and let us tell you more about the use of Cletracs.

RADIO DEPARTMENT

EDITED BY J. HERBERT FERRIS

HOW TO BUILD A SIMPLE RECEIVING SET

SINCE writing the first part of this series of "How to Build" articles I have constructed a simple receiving set exactly as described in the preceeding article, with the exception that a rheostat was added to control the "A" battery should I desire to use some other kind of tube than the one mentioned. This set cost less than the figures given previously and in every way is satisfactory. With it I have heard broadcasting stations during the daytime that with my larger set and amplifiers I could not hear.

It is possible that the beginner may have some trouble in "tuning-in" at first. Just have patience and keep trying, making all adjustments very slowly and carefully. When you once hear a broadcast and realize just what you have done the "tuning-in" will come easier each time you try it. After having used your set for several nights you will be able to listen-in without much preliminary adjusting.

Be sure that when you once have got a station in clear to write down on a memorandum at just what points you had the dials set. This will make it easier for you the next time that you want to hear the same station.

Be sure to disconnect your "A" battery as soon as you are through listening for that time. The longer your battery is used the shorter the life. The most satisfactory results with a WD-11 (or WD-12) tube will be had if you will use two or three No. 6 batteries connected in parallel; that is with all the carbons connected together and all the zincs connected together; this will add many times the life of one battery alone, as dry batteries will give a longer service for the less current that you use. The additional cost of one or two extra dry cells at first is small and will mean that you will more than get your money back in increased life.

Sometimes when your set is connected up it will not work, and this may be due to the fact that if the wires from the rotor (moving part) of the vario-coupler are connected in one way that the set will not regenerate or oscillate, but by simply reversing the connections of these two wires you will find that the set works fine. Therefore it is advisable not to solder the connections on these two wires until you have tried out your set and found that it works.

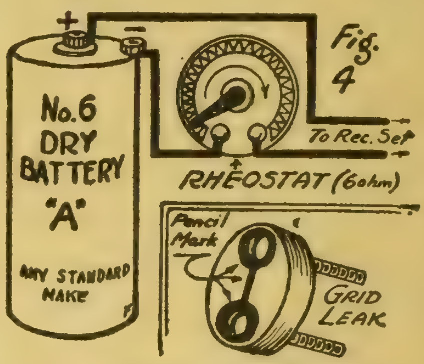
A rheostat in the "A" battery circuit will give you slightly better control on clearing up the voice in what you hear. It should be connected as shown in Fig. 4, and can either be connected on your panel or be connected just to your wires between the A battery and your set. In either place the results will be the same. It will save your battery also as you will then only have to use just the exact current necessary to receive well. This will cost you from 60c up.

Should you have a car with a starter and so can have a 6 volt storage battery to use will find that with a UV-201A or a C-301A tube, which costs the same as a WD-12, you can use your storage battery for receiving instead of buying dry batteries, but you must then use a 30-ohm rheostat to control the current for the tube which then will give you practically a whole month of receiving for three hours a night, on one charge.

In handling these vacuum tubes, no matter what make, be sure that you place them down carefully and gently, remembering that they cost you $6.50 each and if the filament is broken that the tube is no longer of any use as a detector. They should also be carefully watched to see that by mistake you do not short-circuit your "B" battery across the filament which will burn it out.

The list of parts given did not mention dials for either the vario-coupler or the variable condenser. These were figured in on the price given and unless you wish to spend more you will not have to. Always remember that the prices given are for low priced parts, and you can always buy better parts for higher prices. Yet at double the prices given you will not get enough more satisfaction or service out of your set to warrant your spending the money.

The grid condenser has a important function to perform and should be short circuited (or shunted) with the grid leak. This grid leak, unless you buy a complete mounting and leak, will only be a piece of hard rubber, thru which two screws project. It will be necessary for you to remove these screws and place a piece of strong letter paper on the rubber and then replace the screws which will have to pass through the paper. Before screwing them down all the way, take a soft lead pencil and blacken the paper around each hole and under the screw head, only blacking out a little farther than the heads will cover. Now when your screw heads are down tight and the set is ready to test take your pencil and make a mark connecting the screw heads. This is to let excessive charges that collect on the grid of the bulb leak away. Sometimes you have to use a heavier or lighter mark. Take an eraser and after trying a heavy mark erase a part of it and try till you get the best results. These final adjustments should not be made untill you are listening-in to a broadcast at which time you will be better able to tell if the heavy or light line is giving you the best results.



Rheostat to control "A" battery.

Whenever you have finished listening -in, cover your set with a piece of paper or cloth to keep out the dust. It will make a lot of difference in the reception if you get dust particles between the plates of your condenser.

Do not place your set where the baby, or young children can play with it, nor do not permit strangers or even friends to turn the knobs just to see what it will do. Only the maker and the older members of the family should handle the set at all; the builder should be the one who first trys to make it work as he knows just how it was connected up.

After a time of using your set you will possibly want to get the music and talking a little louder so that several people in a room can hear all the good things; then you will want what is called an "amplifier." This will bring in the signals so that a "loud talker" can be used and heard by either a roomful or a large crowd depending upon the number of "steps" or "stages" of amplification that you use. We will now tell you how to build a "one step" or a "two step" amplifier.

PICKED OUT OF THE AIR

Radio is rapidly becoming more interesting and of more importance to the farmer. Hardly a week passes that one does not read of another station devoting certain nights to broadcasting programs of particular interest to farmers. It is getting so that a farmer can "tune-in" nearly any night of the week and find at least one station broadcasting a special farm program.

Have any of you heard station WKAR? It is the station of our Michigan Agricultural College, and they are in the air each Wednesday evening during the winter months. The station has a sending range of 3,000 miles and they are planning some good programs. They broadcast on a 280-meter wave length, and they start at 8 o'clock, Central

Standard time. Be ready for them next Wednesday evening.

A broadcasting station has just been constructed for Sears-Roebuck Agricultural Foundation, of Chicago. It is to be an exclusive agricultural broadcasting station and will operate on a wave length of 448 meters.

If you want to hear an old fashioned dance concert listen to WOS, Missouri State Marketing Bureau, Jefferson City.

One Farm Bureau program a month will be broadcasted from WGY. This program is broadcasted the last Monday of each month at 7:15 P. M. E. Victor Underwood, Secretary of the New York Farm Bureau Federation will speak the last Monday in February.

POTATO MARKET IN HEALTHY CONDITION

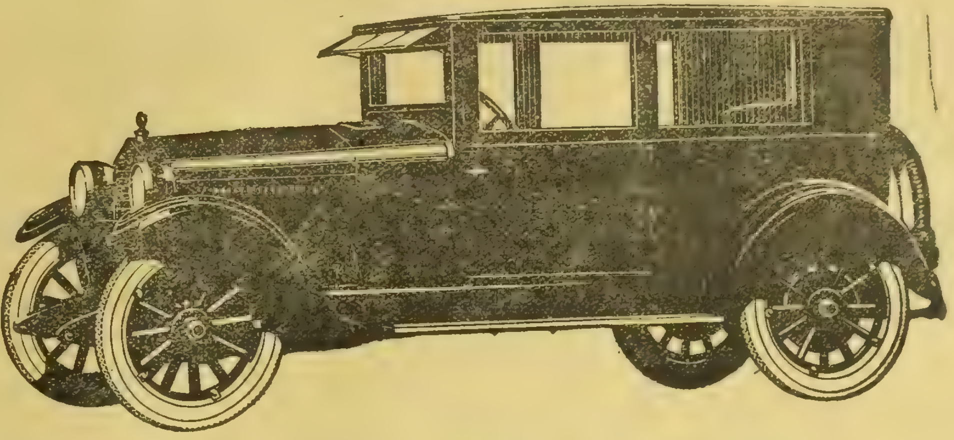
POTATO prices are improving. Returns on the 1923 crops are averaging a little better than a year ago, according to late figures. The average planted in 1923 was about 10 per cent smaller than the previous year due to disastrous returns on the 1922 crop. The estimated yield is around 412,392,000 bushels or 14 per cent less than a year ago. With a smaller crop and a brisk demand due to the buying power of the consuming public potato distributors are optimistic. This year's crop will equal practically the same as the 1917-1921 average of 288,000,000 bushels. On a per capita basis the crop will be about 15 per cent smaller than in 1923 or 3.75 bushels. The average in the last 20 years has been 3.6 bushels while last year it was 4.1 bushels. Usually a yield of less than 3.6 bushels per capita results in higher price, or if the yield is more than the average, the price usually drops in proportion. This was true last year when the 1922 crop yielded 60,000,000 bushels above the average consumption. Prices went so low through the fall and winter that many of the growers left their fields undug. This year the crop is almost a normal yield on a per capita basis, the result is stronger prices.

Compared with last year, the crop is larger in the intermediate states of Ohio, Indiana, Illinois, Missouri, Kansas and Kentucky. In New Jersey and Virginia there is a big reduction. Of the 18 late potato states the most important ones are New York, Michigan, Wisconsin, Minnesota, North Dakota, Nebraska, Colorado and Idaho and in these states the crops are from 10 to 35 per cent less than a year ago. Maine is an exception, with an increase of more than 50 per cent. The crop in the late potato states is altogether about 40,000,000 bushels less than in 1922. The carlot shipments for the season up to December 22, 1923, comprised 90,477 cars as compared with 90,387 cars during the same period of the previous year. The car lot movement for the two years is approximately the same. From the minor late crop states 13,924 cars were moved against 25,010 cars in 1922. Most of this decline is in shipments from New Jersey, which shipped only 6,245 cars this year as compared with 18,030 cars in 1922. Shipments from the early producing states totalled 33,147 cars in 1923 as compared with 40,870 cars in 1922. Since the 1923 crop is considerably smaller than the crop of the previous year and shipments to date have totalled practically the same, the conclusion may be drawn that the marketable supply still to be shipped is smaller than it was a year ago.

Within the last few weeks the potato market has slightly strengthened. Carlot shipments have declined. They are now but little above normal for this season. Demand should remain strong for the rest of this year as industrial prospects are favorable. With indications pointing to a smaller commercial movement the prevailing level should remain considerably higher than for the ten months ending October 31, 1923. Exports during the past year have been about normal, while the imports have been less than the average, due to unattractive prices here and to tariff restrictions.

(Editor's Note: The above information was secured through courtesy of the Sears-Roebuck Agricultural Foundation.

The New ESSEX
A SIX
Built by Hudson under Hudson Patents



A 30 Minute Ride Will Win You

Essex closed car comforts now cost $170 less than ever before. Also with this lower price you get an even more attractive Coach body and a six cylinder motor built on the principle of the famous Hudson Super-Six.

It continues Essex qualities of economy and reliability, known to 135,000 owners. It adds a smoothness of performance which heretofore was exclusively Hudson's. Both cars are alike in all details that count for long satisfactory service at small operating cost.

Gives Ideal Transportation

You will like the new Essex and its nimble ease of operation. Gears shift quietly. Steering is like guiding a bicycle, and care of the car calls for little more than keeping it lubricated. That, for the most part, is done with an oil can.

The chassis design lowers the center of gravity, giving greater comfort and safety at all speeds, on all roads. You will be interested in seeing how this is accomplished.

Greater fuel economy is obtained. The car is lighter, longer and roomier. You will agree that from the standpoint of appearance, delightful performance, cost and reliability, the new Essex provides ideal transportation.

The Coach $975

Financial Statement as of December 31, 1923

Cash in banks and office	$309.271.06
Municipal Bonds	28,947.45
Building and real estate	27,727.44
Furniture and equipment	12,000.00
Salvage	9,350.00
Accounts Receivable	6,662.25
Accrued Interest	3,725.35
Total Assets	**$407,683.55**

Total Assets, December 31, 1921	$137,392.51
Total Assets, December 31, 1922	226,499.45
Total Assets, December 31, 1923	**407,683.55**

During the year 1923 the assets of the company increased $181,184.10.

The total claims paid for the year 1923 amounted to $402,422.11. The total claims paid since organization amount to $1,664,120.10.

The company made a state-wide record for the year 1923, writing and renewing 46,050 policies. With a state-wide organization to write insurance and adjust claims the company is prepared to continue to give efficient service for 1924. No automobile owner should drive a day without insurance. Select a well established company that is prepared to stand the test of the serious claims and that has had experience in handling the complicated automobile claims.

Ask any sales agency and they will name you the agent for this company. The rate is very reasonable and you can obtain any kind of policy that you may desire to meet your needs. Insure today; tomorrow may be too late.

Citizen's Mutual Automobile Insurance Company

HOWELL, MICHIGAN

The Children's Hour

DEAR girls and boys: Washington's birthday is but a few days off and many of you will observe at school by speaking pieces, holding a party, or in some other way quite as suitable. Thoughts of George Washington bring to my mind many of his sayings. Some of them you have heard while others you have not, but I am going to give you some of them and hope you will remember and think of them during your daily work or play. They are:

Think before you speak.

Speak no evil of the absent, for it is unjust.

Let your conversation be without malice or envy.

Show not yourself glad at the misfortune of another, though he were your enemy.

Associate yourself with men of good quality if you esteem your reputation.

If a man does all he can, though he succeeds not well, blame not him that did it.

Be not hasty to believe flying reports to the disparagement of any one.

Aren't these fine sayings? We should remember them in our daily life.—UNCLE NED.

THE HEIGHT OF RIDICULOUS.

By Oliver Wendell Holmes.

I WROTE some lines once on a time,
In wondrous merry mood,
And thought, as usual, men would say,
They were exceedingly good.

They were so queer, so very queer,
I laughed as I would die,
Albeit, in the general way,
A sober man am I.

I called my servant, and he came,
How very kind of him,
To mind a slender man like me,
He of a mighty limb!

"These to the printer," I exclaimed,
And in my humorous way,
I added (as a trifling jest),
"There'll be the devil to pay."

He took the paper, and I watched,
And saw him peep within;
At the first line he read, his face
Was all upon the grin.

He read the next, the grin grew broad,
And shot from ear to ear;
He read the third; a chuckling noise
I now began to hear.

The fourth, he broke into a roar;
The fifth, his waistband split;
The sixth, he burst five buttons off;
And tumbled in a fit.

Ten days and nights, with sleepless eyes,
I watched that wretched man,
And since I never dare to write,
As funny as I can.

Sent in by Berenice Brockway, R. 3, son Michigan.

OUR GIRLS AND BOYS

Dear Uncle Ned:—This is the first time in my life that I have written to M. B. F. We live on my grandfathers sheep ranch, 96 acres of wild land. My mother has lots of pretty flowers, which makes the place look homelike. I am deaf and go to the Michigan School for deaf at Flint. I want to get an education so I can help my parents because my father is not well. I have one sister and one brother. I am the oldest. Last August on Sunday afternoon I went over to my friends house, and they took me to Mud Lake to swim, but I can't swim as I am not able to use my arms good, but my girl friends all swim. I had a good time though. I can't do things like girls and boys who are strong, but don't take any back seat when it comes to dancing any fancy steps. I can enjoy a dance or movie. There is none nearer than 14 miles so I cannot go much. I read all the letters the boys and girls write in the M. B. F. and one time last summer I read one written by Bernice Kimball. She goes to Flint school too. She is also deaf. I receive a great many letters from the deaf boys and girls who were the pupils at Flint school, and I sure am interested in them. From your niece.—Alvina Lucille Hains, R. 4, Box 40, Harrison, Michigan.

Dear Uncle Ned:—I have been a silent reader for about three years. I would never miss the girls and boys page. I wrote two letters before to Uncle Ned but I never saw them in print. I would like to see this one in the M. B. F. I saw only one letter on the children's page that was from Provemont, so that put this notion in my head. My age is between 14 and 20 years old. All that guess my age correctly will get a long letter from me. I passed my eighth grade this last spring and now I would like to go to the Ferris Institute next winter. I will close with a riddle. What is the difference between the North and South pole? Answer: the World. Now don't forget to guess my age.—Mary Ziets, R. 1, Box 31, Provemont, Mich.

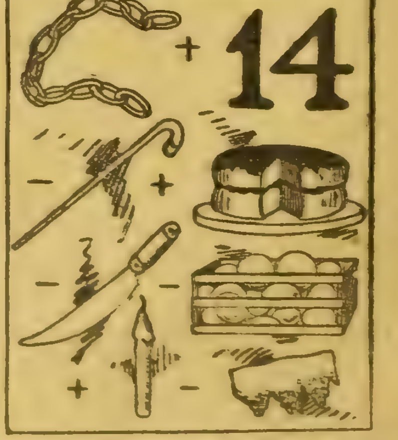
Dear Uncle Ned:—I have been a silent reader of the Children's Hour for some time. Well, I must describe myself. I am twelve years of age, and in the 7th grade at school. I will close with some riddles. What is over the water, under the water, and always with its head down? Why is a goose like a cows tail? Why is the home of an old man easy to enter? What kind of business never progresses? What relation is the door to the door mat? I will close now. I hope that Mr. Wastebasket does not get this letter. I wish some of the girls and boys would write to me. With love to Uncle Ned and cousins.—Gladys Trace, R. 1, Palms, Michigan.

Dear Uncle Ned:—I was just reading the M. B. F. and found so many nice letters that I thought I would write a few lines for the children's page. I am 15 years old and have 1 sister married. My father owns 80 acres of land. We have 2 horses, 7 cows, 3 yearlings and 3 calves. We live about 30 rods from the school. The school teachers stay at our place. Well I will close hoping to see my letter in print in the next issue, and wishing to receive many letters from the children that read the M. B. F. I will answer every one of them. From your nephew,—D. O. Ball, Maple City Mich., R. 2. P. S.—I will take a guess at Veda Wheaton's age. I will say that 12 years is the age.

Dear Uncle Ned:—We have been taking your paper, and I always like to read it. I have never written you before, so will take the pleasure of dropping a few lines too. I am ten years old. My birthday is May 9th. Have I a twin? I am in the 4th grade at school, and we live on an 80 acre farm. We have 3 horses and 12 head of cattle. We have pigs, and 100 chickens. We have 6 cats, and we live 4 miles from Traverse City. When I was reading your last paper, I found some riddles of Miss Imogene Hibberd about the green, white and red house. The answer is a watermelon, isn't it? Another riddle I saw by Miss Gladys Carlson: What grows in the summer and dies in the summer? The answer is an icicle, isn't it? Well, as I like to hear riddles, I think I will put in some too: Where was old Uncle Moses when his lamp went out? There are two brothers, Joe and Tommy. Each of them had a flocks of sheep. If Joe would give Tommy one of his sheep, they would have the same amount of sheep, but if brother Tommy had to give his brother Joe one of his sheep, brother Joe would have three times as many as brother Tommy. How many sheep did each brother have at first? My next riddle is. I went through an orchard and picked some apples. On the way home I met my friend No. 1. I gave him half of the apples and a half of an apple more than half. The balance I kept. On the second road I met my friend No. 2. I gave him half of the balance, and a half apple more than half, and the balance I kept. On the third road I met my friend No. 3. I gave him half of the balance and a half apple more than half, and I only had one apple left. How many apples did I pick up, and I never cut or broke one apple, and gave each friend a half apple more than half? Well as my letter is getting long I will close hoping to get an answer from some cousins. Good-bye Uncle Ned, until the next time.—Miss Martha Hermann, R. 2, Box 21, Traverse City, Michigan.

A BREED OF PUPS

BY WALTER WELLMAN



Add and subtract the names of the objects, and have, as a result, the name of a breed of dogs. What is it?
—Answer to last puzzle: CLARA and IDA.

FARMERS' WEEK AT M. A. C. IS A SPLENDID SUCCESS

(Continued from Page 6)

the infantry, coast artillery, and cavalry units of the college regiment. Next came floats representing departments of the college and following these were prize winning livestock from the splendid flocks and herds of the college. The whole parade gives to the visitor a moving picture of M. A. C. and demonstrates something of the size of the college institution.

Seven Big Exhibits

The exhibits held in connection with the Farmers' Week programs form one of the big attractions of the week. The Poultry Show, held at the poultry plant brought together the winning birds from the various poultry shows of the state for a final competition. The entries in the rabbit classes were also extensive and this section of the show was held in the Veterinary building.

The Animal Husbandry Department exhibit was held in a building joining the Judging Pavillion. This exhibit illustrated the results of various feeding experiments and also featured the M. A. C. winnings at the International Livestock Exposition.

At the new Home Economics building interesting exhibits of clothing and textiles claimed the attention of the women visitors. Proper combinations of foods for the various meals formed a large part of the nutrition exhibit. Proper home furnishings were also displayed. The work of the co-eds with nutritional experiments was illustrated by many cages of white rats upon which the several diets are being tried.

The Engineering building contained the exhibit of the Engineering Department. A minature power station and transmission line was shown, together with extensive exhibits of metals. The big broadcasting station of the college was also a center of attraction. This station is WKAR and broadcasts at 280 meters. Several of the talks given during Farmers' Week were broadcasted for the benefit of those not able to attend.

The Farm Crops exhibit, consisting of splendid displays of grain and potatoes, was located on the second floor of the new Library which is just being completed. A display of landscaping and design was also made in this building.

The 15th Annual Horticultural Show was held in the college Armory. This show brought out excellent exhibits of apples from different counties of Michigan. Always artistically arranged, this display of flowers and fruit attracts many visitors.

Entertainment

The musical organizations of M. A. C., such as the orchestra, glee clubs, and quartette of the college, added much to the programs. Motion pictures, and comedy plays lightened up the programs while the U. of M.-M. A .C. basketball game added the sport feature.

Special sales of Holstein cattle and Shorthorn cattle attracted many followers of those breeds. Livestock judging contests proved a big source of interest.

The main part of the programs, given at the general sesions in the afternoons, was made up of short talks given by the heads of different college departments. These talks, while interesting, were especially valuable in that each professor outlined the work which his department proposes to do, out through the state, in helping the industry which he represents.

Professors Brown of the Animal Husbandry Department, Foreman of the Poultry Department, Reed of the Dairy Department, Cox of the Crops Department, McCool of the Soils Department, Chittenden of the Forestry Department, and Gardner of the Horticultural Department, were those who presented plans for extending the work of their respective departments out to the people of the state.

Other speakers who featured the programs were H. R. Smith, Commissioner of the National Livestock Exchange at Chicago; E. L. Ewing, Traffic Counsel for the Michigan State Farm Bureau; J. W. Nicholson, Manager of the State Farm Bureau's Seed Department; Verne Branch, Director of the Detroit Municipal Markets; J. T. Horner, Associate Professor of Economics at M. A. C., and Dr. Hugh Cabot, Dean of the University of Michigan's school of Medicine.

The conclusion of the whole matter is that nowhere else in Michigan can the farmer and his family find such a source of entertainment, enjoyment, information, and inspiration as that afforded by the Annual Farmers' Week at the Michigan Agricultural College.

"A STITCH IN TIME SAVES NINE"

(Continued from Page 7)

seed, making repairs on gates, as well as many other operations could be gotten out of the way before the rush season, for the work performed now on such operations will pay big in the increase of crops produced or sowed.

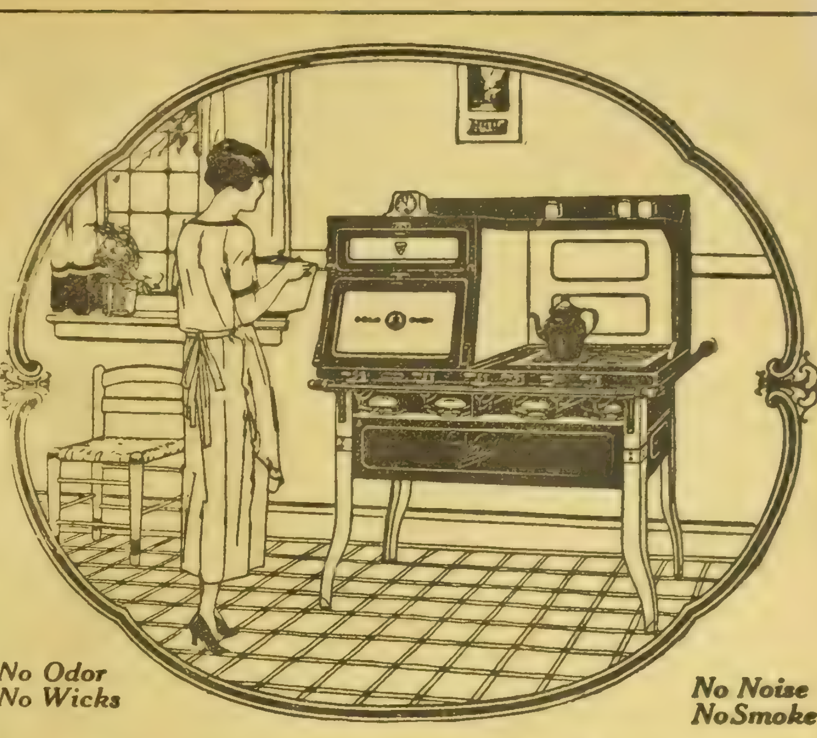
Not only can time be used profitably and crop production increased by having everything in readiness at the proper time but the life of farm machinery can be greatly prolonged by keeping it properly housed and repaired at the right time. The average life of a grain binder according to Minnesota Bulletin No. 117 is 7.41 years. If properly cared for and kept in good state of repair when used under normal conditions it should last much longer than this. The manure spreader no doubt receives as hard abuse as any machine on the farm due to the exposure and type of work it has to perform. The apron fails to work satisfactorily but instead of properly repairing it, at once, the farmer hastens to devise some means of getting by, by wiring up the broken part with hay wire; something else calls the farmer's attention and the next time the machine is used more difficulties arise and finally a breakdown about the time the load is one-fourth off, thus meaning a waste of time and costly repairs that could have been avoided if the machine had been cared for in the proper manner at the right time instead of decorating it with hay wire. Don't delay repairing your machinery until the last moment when you are rushed and then attempt to get by with the use of hay wire. For a machine that only half performs the job is not only expensive but takes the joy out of life and leads one to use profane words when with a little forethought in replacing broken parts and making the necessary adjustments at the right time would avoid all unpleasant moments and have saved time and money as well. Sometimes it takes days and even weeks to get repairs which if delayed too long might mean the purchase of a new machine or the hiring of the neighbor's machine or poorly performing the operation which in any case is expensive in the end.

It may mean only tightening or applying a little oil paint to the proper places or perhaps the adjustment of the equipment which is inexpensive but if delayed will result in the weakening of more expensive parts. So remove the hay wire, tighten up the bolts, repair the slats, and be ready for operations when the zero hour comes.

A good plan is to make a note of the condition of the machine at the end of the season or at the time it is last used. A convenient way is to use a tag system writing on the tags the parts that need repairing and then attach the tag to the machine. In this way when the farmer finds time to make repairs he knows at once what is wrong and does not have to waste time in finding out what to do.

If the machinery that needs repairs is placed in a convenient place in the shed, so as to be reached easily, it will facilitate matters very much, for lots of times the hay loader or binder is stored in the rear of the shed or an inconvenient place to get at, and repairs are neglected and postponed until it is time to use the machine or not at all.

Not only can the farmer utilize his time to a profit in getting his machinery in readiness but he can also utilize his time to a very great advantage in having his seed selected, tested, and cleaned, gates made, and posts sharpened. These and many other operations can be taken care of during the winter months thus in the end helping to make farming more profitable and enjoyable.



No Odor
No Wicks

No Noise
No Smoke

Make every meal delicious with a Vapo Oil Range

Cooks with an odorless, smokeless flame just like a gas stove

The Vapo Range operates like a gas range because it burns gas. It has all of the conveniences of the gas stove and all its cooking qualities. The marvelous Vapo Burner converts the kerosene into gas and burns it with a hot, blue flame that neither smokes or smells. Turned on at full heat, it will operate from 32 to 36 hours on one gallon of kerosene. At a simmering heat, it will burn from 50 to 60 hours. That is real economy.

Vapo Bolo oven bakes and roasts like a gas stove

The cabinet types of Vapo Ranges have a built-in Bolo Oven—a feature found only on the Vapo. The adjustable Bolo plate will make the oven big or little. Bolo means "Big or Little Oven." This makes a more intense heat because it is confined in a smaller space. You can do slow and fast baking at the same time.

Vapo is the only oil stove oven thatoffers you this advantage.

Vapo insures cooking comfort

Vapo construction includes many details which make for cooking comfort. The cooking top is roomy enough to prepare a large meal without crowding. The high shelf does not interfere with use of a wash boiler on the top and yet is not out of reach. The range is the right height to prevent back strain. Bolo oven doors drop to form shelves when needed. The oil tank is placed right for easy filling and the range sets flush against the wall. A range to treasure and be proud of. Have your dealer show you a Vapo.

Use the coupon for free booklet

Vapo Oil Ranges, Heaters and Water Heaters are sold by one high grade hardware or furniture dealer in nearly every community. If your dealer has none in stock. Write us, giving us his name and we will see that you are supplied.

GEORGE WASHINGTON

ONLY a baby, fair and small,
Like many another baby son,
Whose smiles and tears came swift at call;
Who ate, and slept, and grew, that's all—
The infant Washington.

Only a boy, like other boys,
With tasks and studies, sports and fun;
Fond of his books and games and toys;
Living his childish griefs and joys—
The little Washington.

Only a lad, awkward and shy,
Skilled in handling a horse or gun;
Mastering knowledge that, by and by,
Should aid him in duties great and high—
The youthful Washington.

Only a man of finest bent,
Hero of battles fought and won;
Surveyor, General, President,
Who served his country, and died content—
The patriot Washington.

Only—ah! what was the secret, then,
Of his being America's honored son?
Why was he famed above other men?
His name upon every tongue and pen—
The illustrious Washington.

A mighty brain, a will to endure,
Passions subdued, a slave to none,
A heart that was brave and strong and sure,
A soul that was noble and great and pure,
A faith in God that was held secure—
This was George Washington.

VALUE OF SALADS IN THE DIET

SOME of us went and heard all about it and some of us staid at home.

Well it was a very fine lecture and demonstration, and important.

Salads do have a place in our diet; and altho some of us feel that it is one of those extra fussy dishes that the men folks do not care for, it should be eaten in some form at least once a day.

Miss Hughes, Asso. Prof. Home Economics, brought out the thot that the dressing for salads should be appropriate for the combination you are serving and made to be good tasting. A great many of us just throw a few ingredients together and think that it is going to taste alright. It is not true with any cooking. Thot and care has to be exercised in making any dish.

It took me a long time to convince my husband of the fact that he should eat salads and how much they meant to his health.

At first he would say, it was just like eating a lot of grass. I had become careless and thot that plain lettuce with dresing was all that he needed. I soon discovered that the lettuce was alright but the dressing was all wrong. I made my French dressing too sour and the vinegar taste was too strong. I soon learned by experience the right amount to use and also that he tired of the same dressing. I found he liked a very inexpensive boiled dressing and I alternated with it.

Salads don't necessarily have to be expensive and extravagant. Some very simple combinations will give you the right amount of iron that comes with this class of food.

At this time of the year, when our blood is thick and heavy with the winter cold and lack of exercise that comes with the summer in being out-doors, it is very important that we watch our diet and not let it be too heavy and rich. Lots of vegetables and salads will help keep us in good condition.

I remember last year receiving so many letters telling about eczema. I sort of felt that these folks had all let their blood get sluggish with lack of green food stuffs in their diet.

Let us not allow this condition to exist this spring, but start right now and eat the right foods and drink lots of water. Remember the lovely vegetables you put up last summer? Eat them up. Leave out some of the meat and use more vegetables and eat moderately.

Below is a list of salad combinations that were given all those who heard the lecture and are very fine. Use some of the more simple combinations that you no doubt have on your own shelves. I agree with Mrs. Campbell State Home Demonstration Leader when she says the nuts found right here in Michigan make an excellent substitute for the walnuts and pecans that are imported from California. Can you imagine a nicer nut meat than our own native hickory?

Salad Combinations

1. 1 c apples, 1 c celery, ½ c walnuts (Waldorf Salad).

The Farm Home
A Department for the Women

Edited by MRS. ANNIE TAYLOR

DEAR FOLKS:—All I lack is the room to print the many splendid letters that you sent to me. They speak for themselves in our columns below. We all seem to feel the same about reading and I too feel that sometimes we try to make our children read what is not interesting to them and then think it is the child's lack of wanting to read.

Send for the "Bok Peace Plan" and read it thru. This subject is too big and fine a thing to let go by and say it is something we do not understand.

Maybe some of you mothers have some special sandwich filling that appeals to your kiddies. Let the rest of us have it and share with you. One of our readers asked for new fillings other than egg and in this issue I have put a few. These may not be new but they are wholesome.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

2. 1 c pineapple, 1 c bananas, ½ c cherries.
3. Banana rolled in chopped nuts.
4. Prunes stuffed with pecans, whipped cream.
5. 1 c celery, 1 c apples, green peppers.
6. 1 c grapefruit, 1 c marshmallows, 1 c white grapes, ¼ c nuts.
7. 1 c pineapple, 1 c marshmallows, 1 c white grapes, ½ c nuts.
8. 1 c oranges, 1 c Bermuda onions.
9. 1 c oranges, 1 c dates.
10. 1 c chicken, an equal amount of celery (1 or ½ c), ¼ c olives, ½ c nuts.
11. 1 c peas, 1 c cheese cut in small cubes.
12. 1 cooked chicken, 1 cucumber, 1 c walnuts, 1 c peas.
13. Sweet breads, 1 pint, equal amount of cucumbers.
14. 1 c olives cut lengthwise, 1 c almonds, cut lengthwise.
15. Canned pears cut in halves, shredded almonds in center of pear. Serve with cheese straws.
16. 2 c salmon, 1 c celery cut fine, ½ doz. sour pickles.
17. Head lettuce and requefort cheese.
18. Cooked asparagus, rings of green peppers, slices of pimentoes.
19. Sliced hard-boiled eggs, cucumbers, celery and lettuce.
20. 2 c cold string beans, 1 t onions cut fine, ½ doz. radishes, sliced thin.
21. 1 can strained tomatoes, 2-3 box gelatine soaked in ½ c cold water, 1 t salt, 1 t powdered sugar. Make a jelly, put into molds, serve on lettuce.
22. Dressing for head lettuce: t parsley—chopped very fine, 1 egg hard boiled, cut fine, 1 t cooked beets, chopped fine, 1 t vinegar, paprika, 1 T chili sauce, add to ¼ c mayonnaise dressing.
23. Unsweetened prunes stuffed with cream cheese. Garnish with pimento or green pepper. French Dressing or Mayonnaise.
24. Tomato—moulded in gelatine.
25. 1 slice pineapple on lettuce. Garnish with 1 T pimento and 1 T grated cheese.

THE CHILDREN AND SHUT-IN DAYS

TO my mind the subject you have chosen for discussion in your Woman's Department in the January 19th issue is one of most vital importance, and interesting to all of us mothers everywhere, for not only are the childhood years of our little ones affected, but their characters throughout life may be made or marred by the tenor of their home life.

I have two children, a boy and girl, aged seven and nine, respectively, and I know by experience that it takes a great deal of one's time to keep them contented and out of mischief, especially as you say on shut-in days. But I find these days can be the happiest periods of our lives if we seek to interest our children in worthwhile things, and keep their little minds and hands occupied. I believe the whole keynote of the situation can be found in the word "busy," not necessarily busy in work, though each have their little chores to do, but busy also in their play. They love to read, and I try to supply them with good books suited to their age and they pass many a pleasant hour reading aloud to each other or to me. On Sundays we have a Sunday school class, and I teach them bible stories, prayers and graces, each taking turns in asking the blessing at table. Frequently we sing songs, and it is surprising how quickly they will learn a tune. Here is where their choice of good music as well as good books rests with the Mothers, and how truly applicable is the old bible verse: "Teach thou thy child in the way he should go, and when he is old he will not depart from it."

Again they spend many a pleasant hour sorting their flower and garden seeds which they collected, or making picture books. Just now their evenings are taken up making valentines. I try to teach them to play quietly in the house. They have the whole out-of-doors to play in when their pent-up energy must escape, and, of course, Baby Brother comes in for a share of their time.

Surely the aim of a mother can be none higher than to be such a companion to her children that they would rather be home with her than anywhere else in the world.—M. G. F., Cheboyban County, Mich.

NOT A DULL DAY SO FAR THIS WINTER

WINTRY days do not seem to be lonely ones for us so perhaps I have some ideas to pass along. My three little girls of 5, 4 and 2 years have been taught to depend upon themselves considerably and very seldom do they say "Mamma, what shall I do?" They play with picture puzzles, their spelling board and other toys, play house with their dolls, the rockers are their cars at times and they go traveling and amuse themselves while mother gets a lot of work done. They also help by running small errands about the house. The eldest often helps with the dishes and just this morning proudly announced that she had made up her bed before coming down stairs.

Once in a while for variety they have a party with "eats" that have been made in their aluminum play dishes, a tiny loaf of bread, a dainty little cake, cocoa made in a tiny kettle, etc. Of course I bake these things when I am doing my baking. Once this winter when they wondered what to do we had a taffy pull, each child of course pulled taffy and it was such fun that we are going to do it again soon.

One thing the two older girls love to do is make kindergarten things. We save the pretty colored paper that comes into the house and I help them make paper lanterns, and other things. They are never so happy as when making something The only materials I have purchased is a box of crayolas and they amuse themselves for a long while coloring pictures.

I tell them stories and was very much surprised one day to see them act out one of the stories. (I had never mentioned to them that it was possible to "play" the stories.) The baby soon left them and went to play by herself, but that didn't matter to the other two, they doubled up on their parts and their play went along uninterrupted. Since then they have dramatized a number of stories by themselves and seem to enjoy it immensely.

One must be careful to choose the right kind of stories for children. The girls are now beginning to make up stories suggested to them by pictures on the magazine covers or in advertisements. These little stories they tell aloud to the others.

There are very few days when the children don't get out of doors for a while at least and we haven't had a lonely day this winter, and do not expect to have.

Do not misunderstand me—my children are healthy, normal youngsters and disagree and quarrel at times as all normal children do, but we do not have time hanging heavy on our hands. By keeping the children happy and contented I have more time to work and read, and sew, and study, and these wintry days seem all too short for all we'd like to do, and this in spite of the fact that a few weeks ago we moved to a new neighborhood where we are among total strangers—Mrs. W. E. Fitzgerald, Kent County, Mich.

THE AMERICAN PEACE AWARD

A GREAT many brilliant minds have been working for a solution for world peace and I know you all have heard it discussed. Whether it is the right step or whether it is the wrong step has been one of the perplexing questions that even our great men have been unable to solve.

The "Bok Peace Plan" is now opened for discussion and if there are any of the women readers of this page that are interested as voters and want to know more about what these men and women are doing, send for the printed "Winning Peace Plan." Address your letter to the "American Peace Award," 342 Madison Ave., New York City ,N. Y.

Personal Column

Making Textile Leather and Wood Art Products at Home.—As you know we farm women are interested in making money at home; some thing as a side issue. I have a chance of getting textile leather and wood art products stamped for painting, but have to pay $7.75 first as a membership fee to insure them for their stock material as they are to furnish everything. Now could you kindly write me as to their reliability and whether it would be wise to send the money. I know nothing about this company but want to earn the money yet I do not want to be a loser. The company I refer to is "The Nile Art Co., Fort Wayne, Indiana."

—Perhaps some of our readers have had some experience along this line and can help or suggest a way for our reader.

—if you are well bred!

The Reply.—The reply to a birth announcement must be prompt. A short, warm note of congratulation, not too conventional, best answers the purpose. Gifts of flowers, jellies or any little article for the child are a graceful courtesy; but not imperative, since the note of congratulation answers the needs of the occasion.

Menu for February 16th

Onion Cocktail
Roast Mutton; Currant Mint Sauce
Okra and Tomatoes
Jellied Salad
Butterscotch Pie
Coffee

Onion Cocktail.—Two cups diced apples, one cup diced onions, one cup seeded raisins. Fill glass with onions, apples, raisins. Pour over a sour dressing made as follows: One-fourth cup each of vinegar and water, one tablespoon lard, salt and red pepper to taste, and two teaspoons sugar. Place in small sauce pan over fire until lard melts, then stir in well beaten yolks of two eggs, stirring constantly until thick. Place in ice box to cool before using.

Butterscotch Pie.—One egg, one cupful dark brown sugar, one cupful milk, three tablespoons flour, two tablespoons lard, three tablespoons water, one-fourth teaspoon salt, one tablespoonful powdered sugar, one teaspoon vanilla, one baked crust.

Put yolk of eggs into saucepan, add brown sugar, milk, water, lard, salt, and vanilla. Stir over fire until it thickens and comes to boiling point. Pour into baked pie shell. Beat up white of egg, then beat powdered sugar into it. Spread on top of pie and brown lightly in oven.

RECIPES

Sandwich Fillings.—To keep sandwiches, place them in a bowl and cover with a cloth wrung out of hot water. Sandwiches thus treated may be made in the morning and used in the evening.

The possible filling for sandwiches are unlimited. The ingenious housewife can always find some tasty combination from her pantry for the emergency afternoon or lunch box sandwich. Sandwiches also supply a wonderful source for using up "odds" and "ends" or "left-overs" such as bits of meats, vegetables, etc. They can so readily be mixed with salad dressing or other seasonings and so form tasty fillings. Always remember that sandwiches to be pleasing should be dainty and attractive.

1. Minced ham with shredded lettuce, onion and mayonnaise.
2. Dutch cheese mixed with chopped stuffed olives or pickle, green pepper and chili sauce.
3. Dutch cheese mixed with walnut or hickory nut meats, olives, paprika and cream.
4. Peanut butter mixed with chopped dates and a bit of orange juice.
5. Figs chopped with crystallized ginger and a bit of rind and juice of lemon.
6. Chicken or veal minced with mayonnaise.
7. Pimentoes, green peppers and celery shredded and mixed with mayonnaise.
8. Tongue, minced with India relish or chopped pickle.
9. Apple butter mixed with chopped nuts.
10. Tuna fish or salmon mixed with celery, nut meats and salad dressing.
12. Minced hard boiled eggs, melted butter, seasonings, onion and mayonnaise.

Candied Citron.—Cut the citron, which should be fully ripe, into very large pieces and peel, using only the hard part outside. To each four pounds of citron allow two pounds of sugar, one lemon and one-half pound ground ginger, one-half teaspoon ground cloves and allspice, mixed. Put the citron in a kettle and pour the sugar over it and let it stand all night. In the morning add the lemon cut fine and the spices in a bag. Work until the citron is clear and tender and the syrup is quite thick. Take it out and drain well and spread in a single layer on a large agate tray in a place where the wind will blow over it, but not in the sun or oven. Turn occasionally and keep the tray tilted so that any syrup that drains off may be readily dipped out with a spoon. When partly dry roll in granulated sugar and spread again. Repeat until well crystalized. Then pack away for winter. The syrup is fine for pancakes.

Nut and Rice Loaf—Three cups chopped peanuts, three cups cooked rice, one teaspoon celery salt, one teaspoon onion juice, three teaspoons salt, two beaten eggs, one cup sweet milk. Mix thoroly. Bake half hour in a slow oven.—Alma B., Augusta, Michigan.

The Runner's Bible

(Copyright by Houghton Mifflin Co.)

He that goeth about as a tablebearer revealeth secrets, but he that is of a faithful spirit concealeth the matter.—Prov. 11:13.

The malicious tablebearer is an anomaly in nature. All other animals which thrive upon corruption, because they devour it, are benefactors. But through the scandalmonger, corruption is nourished and increased a thousand fold. The one who has the love of God in his heart never discusses the errors and sins of another; on the contrary, he does his best to conceal and to destroy them.—(Luke 6:13; Ps. 32:1.)

AIDS TO GOOD DRESSING

BE SURE AND SEND IN YOUR SIZE

FASHION BOOK NOTICE

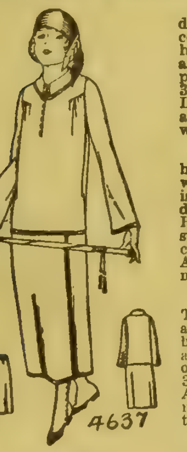
Send 10c in silver or stamps for our UP-TO-DATE SPRING AND SUMMER 1924 BOOK OF FASHIONS, showing color plates, and containing 500 designs of Ladies', Misses' and Children's Patterns, a CONCISE and COMPREHENSIVE ARTICLE ON DRESSMAKING, ALSO SOME POINTS FOR THE NEEDLE (Illustrating 30 of the various, simple stitches) all valuable hints to the home dressmaker.

4629. A Set of Attractive Sleeves.—No. 1 is a new two-piece model suitable for cloth, velvet or silk. No. 2 will be pretty in crepe, silk or chiffon. No. 3 is very stylish and pleasing. It is a good model for combinations of plain and figured materials. The Pattern which includes the three styles illustrated, is cut in 4 Sizes: Small, Medium, Large and Extra Large. To make No. 1 will require ⅞ yard of 40 inch material. No. 2 will require 1½ yard and No. 3, 1⅛ yard. For band cuff and cap on No. 3 of contrasting material ⅝ yard is required.

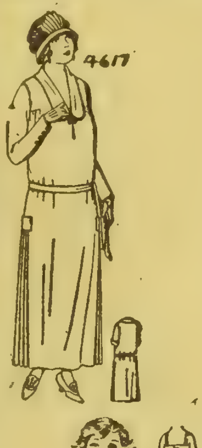
4619. A Neat and Comfortable Play Suit.—This model provides a separate blouse. The Overalls are sleeveless, and the body portion of the back is buttoned to the waist portion. Seersucker, denim, or gingham could be used for the overalls, and cambric for the blouse, or the entire suit may be of one material. The Pattern is cut in 4 Sizes: 2, 3, 4 and 5 years. A 4 year size requires 1½ yard for the Overalls, and 1⅛ yard for the Blouse.

4631. A Popular "Play" Costume.—Dotted percale and white linine are here combined. This style is also for gingham, wool jersey, wool rep, and pongee. The Pattern is cut in 4 Sizes: 4, 6, 8 and 10 years. A 6 year size requires 2¾ yards of 36 inch material. For collar and cuffs of contrasting material ⅝ yard is required.

4638. A Serviceable Set of Bloomers and Brassiere.—For the growing girl comfort and freedom in movement and breathing is very desirable. The brassiere may be of satin, jean, drill or strong muslin. The bloomers are nice for cambric, sateen, serge or flannel. This Pattern is cut in 4 Sizes: 12, 14, 16 and 18 years. A 14 year size requires 2⅛ yards of 36 inch material.



4637



4617

4612. A Pretty "House" Frock.—Household duties will be lightened when one is attired in so comfortable and pretty an "apron frock" as is here portrayed. The closing is at the left side, and the right side, boasts of a very convenient pocket. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. The width at the lower edge is 2 yards. A Medium size will require 5½ yards of 27 inch material.

4637. A Jaunty Up-To-Date Model.—Here we have the latest expression in blouses, coupled with a smart skirt in wrap effect. This style is especially suited to growing girls. It may be developed in wool rap, jersey, serge or broadcloth. Braid or binding, or a simple finish of machine stitching is nice for decoration. The Pattern is cut in 5 Sizes: 12, 14, 16, 18 and 20 years. A 16 year size requires 2¾ yards of 54 inch material.

4617. A Popular Style for Stout Figures.—The plait fullness and "V" neck line are new and attractive style features. In black satin or blue serge this design will make a good serviceable day dress. It is also good for crepe weaves or wool rep. The Pattern is cut in 7 Sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 40 inch size requires 4¾ yards of 40 inch material. The width at the foot with plaits extended is about 2⅝ yards.

6420. A Popular Blouse or Smock Suit for Small Boys.—This is a good model for twill, serge, corduroy, velveteen and for all wash materials. The Pattern is cut in 4 Sizes: 3, 4, 5 and 6 years. A 4 year size requires 3¼ yards of 27 inch material.

Just for Curiosity

If you are curious about the results that come from using Calumet—bake a cake and use some other baking powder, then use the same recipe and employ

CALUMET
The Economy BAKING POWDER

Compare the texture of the two cakes—the way they look—the way they taste. The difference will cause you to join the millions who use Calumet daily. You will then realize why it is called the most economical of all leaveners.

There are never any losses—no last-moment disappointments where Calumet is employed—everything comes from the oven baked "just right."

Don't buy an unreliable brand of baking powder simply because it costs a trifle less than Calumet—it only means false economy. Made in the world's largest and most sanitary baking powder factories—never touched by human hands Calumet comes to you pure, wholesome and positive for results.

EVERY INGREDIENT USED OFFICIALLY APPROVED BY U. S. FOOD AUTHORITIES

Sales 2½ times as much as that of any other brand

Are You Ruptured?

Learn How to Heal It FREE

Ruptured people all over the country are amazed at the almost miraculous results of a simple Home System for rupture that is being sent free to all who write for it. This remarkable invention is one of the greatest blessings ever offered to ruptured persons, and is being pronounced the most successful Method ever discovered. It brings instant and permanent relief and does away with the wearing of trusses forever.

Thousands of persons who formerly suffered the tortures of old-fashioned steel and spring trusses are now rejoicing in their freedom from the danger and discomfort of rupture after a brief use of this remarkable System. There is nothing like it anywhere and hosts of ruptured persons are astounded at the ease with which their ruptures are controlled.

For a limited time only, free trial treatments of this Muscle Strengthening Preparation are being mailed to all who apply. It is an original painless Method. No operation, no danger, no risk, no absence from daily duties or pleasures. Send no money; simply write your name and address plainly and the free treatment with full information will be mailed you in sealed package.

Send now—today. It may save the wearing of a torturing truss for life.

GAS AND INCOME TAXES URGED BY LINTON

THE proposed gas tax and the income tax amendment were named by William S. Linton, chairman of the state tax commission, as the two most immediately available remedies for the oppressive real estate taxes that are being carried by the taxpayers of the state especially the farmers, in an address recently at Saginaw.

"There is no question about it," said Mr. Linton, "Taxes are oppressive. Workers everywhere today give one day out of their week to pay the expenses of government. The burden is great, and others besides the farmers are loaded down. This situation has been brought about largely on account of the world war.

"Tax exempt bonds have taken from the state tax rolls a great amount of wealth. An interesting point in this connection is that almost the first municipal tax exempt bond ever issued in Michigan was a Saginaw City bond, issued under a special legislative act years ago.

"Farmers should in some practical way be relieved from their excessive realty tax burden. The state portion of the taxes is small, however, as compared with the local share, the state receiving only about 10 cents out of every dollar of the taxpayer's money. Most of the money paid by many counties to the state is returned again in the primary school and road funds.

"Real estate is too heavily burdened. This includes the farm, the home and business places. The laws of the state require that a great amount of the taxes come from real estate. We will have to look to other lines also to help out this condition.

"A gas tax is now in force in 36 states. Under such a law the persons who actually use the highways would pay for them in a fair proportion. Tourists, it is estimated, would bring in more than $1,000,000 to the state under such a tax.

"The income tax amendment if passed would require each person whose income was more than $4,000 per year to contribute his full share toward the up-keep of the state. This tax would undoubtedly take care of all the state's expenses, and real estate would then have to care for local taxes only.

"The farmer today is up against it. In many of the counties of the state farmers are abandoning their farms because of insufficient revenue, and with present expension maintenance, they cannot even keep up their taxes. As this condition grows a serious question arises. Where is our food supply going to come from unless the soil is worked to the limit, and the farmer is made contented and prosperous by fair and liberal treatment?

"I am in favor of eliminating the state taxes collected from real estate entirely by getting this support from some proper source."

GETTING OUT FIREWOOD

FIREWOOD has never been in such great demand as during the past two or three years. Shortage and high price of coal, of course, has been the reason. And as usual when something is urgently needed, labor to produce it is hard to find.

Necessity, the mother of invention, taught me a quick and easy way of splitting logs. I will describe it briefly:

Taking as an example, a log four feet in diameter and fourteen feet long. An auger hole was bored two thirds of the way through near either end. It is desirable to have both holes as nearly as possible in the same grain of the wood. One and one-quarter pounds of forty per cent straight nitroglycerin dynamite was loaded in each hole and well tamped in with damp clay. The charges were fired with cap and fuse. Electric blasting caps would have been better to insure the charges going exactly together.

Cost was 75 cents for explosives and I figure 75 cents more for one hour's time. The labor charge can be considered or not as the operator prefers. Usually such work is done by farm help in slack time and no real extra labor cost is incurred.
—C. G. S.

Can also show you other choice quality bunches. All are dehorned, deep reds, good stocker order. Well marked and show their breeding. If in the market for real quality, one car load or more your choice. Write stating number and weight preferred.
V. V. BALDWIN, Eldon, Wapello Co., Iowa.

Digs Deep
Kills the Weeds
Makes a Fine Seed Bed

JOHN DEERE-SYRACUSE
Spring-Tooth Harrow

This harrow's sharp-pointed, penetrating teeth work the seed bed from the bottom to the top, tearing out the underground roots of weeds, bringing them to the surface.

It is a non-clogging harrow—the frame between the sections has a small opening in the front which widens toward the rear—there is no loading or choking at this point. The frames are also slightly raised at the rear inner ends, and the teeth are spaced so that trash naturally works toward the center and through the opening.

Both you and your horses will appreciate this harrow—it has direct draft—no side motion.

Frames, tooth bars and teeth are highest quality steel—extra strong and durable. Teeth have no bolt holes to weaken them. Your John Deere dealer can furnish any number of sections you require; also tractor hitch.

Get ahead and keep ahead of the weeds by using a Syracuse Spring-Tooth Harrow. Write today for free booklet describing it. Address John Deere, Moline, Ill., and ask for Booklet DJ 713

JOHN DEERE
THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

JOHN W. SNYDER, St. Johns, Mich., R. 4.

MICHIGAN BREEDERS FAIL TO BID AT POLAND CHINA SALE

ON February 5th the Detroit Creamery Farms held the first of a series of late winter sales of high grade hogs. Some of the finest Poland Chinas ever bred in this state were sold at this sale and the cream of the stock offered was purchased by breeders from out of the state. It was enough to make one wonder as to what is to become of the Poland China hog in this state when Michigan breeders failed to bid very high on the quality stock. Michigan breeders must keep this fine stock in the state if they want to retain their position as a livestock state. They will have another opportunity March 11th when the Detroit Creamery Farms will sell another fine lot of Poland Chinas. The attendance was fair considering the weather. Following is a list of the numbers of animals sold, name and address of purchasers and prices paid:

No. 1, J. H. Ganahl, St. Louis, Mo., 225.00; 3, Arlington Place Farms, Indianapolis, Ind., 120.00; 4, Arlington Place Farms, 120.00; 5, Arlington Place Farms, 255.00; 6 Arlington Place Farms, 140.00; 7, Fred Smith, Roseville, Mich., 80.00; 8, Oscar Blythe, Grove Hill, O., 50.00; 9, Arlington Place Farms, 130.00; 10, Dewey Nash, Fairfax, Oklahoma, 80.00; 11, Emil Rosell, Mt. FARMERS SOLVING FARM MANAGEMENT PROBLEMS

THOUSANDS of farmers in all parts of the country are reorganizing their business to bring about a better balance between their crop and livestock enterprises, the United States Department of Agriculture declares. Through the farm management extension work of the department, livestock growers particularly are appreciating the importance of producing on the farm a properly balanced livestock ration instead of purchasing feeds in the open market. Farmers are also becoming more self-sufficient in the matter of food for the family whereas formerly much of the food consumed has been purchased, it is said.

The basis for the reorganization program is the keeping of simple farm accounts that reveal at once the weak spots in the business such as poor crop and livestock combinations, waste motion and inefficient use of labor, the department says. Mass meetings at which farmers are being impressed with the need for more efficient farm management to combat the high costs of production and marketing are being held wherever farmers can be assembled by the extension workers connected with State agricultural colleges and Federal Department of Agriculture. The teaching of farm booking in rural grade schools so that the growing generation of farm boys and girls may have a better understanding of efficient farm management has been one of the striking developments of the movement.

A recent directory of the cow-testing associations in the United States compiled by the Department of Agriculture shows the sections that have made the greatest progress in this work. Wisconsin leads with 151 cow-testing associations, Minnesota is second with 55, Michigan is third with 53, Iowa is fourth with 47, and Pennsylvania and Ohio tie for fifth place with 36. The total number of associations in the United States is 627. There are 277,010 dairy cows in these organizations.

Signs of Safety

Larro

The Safe Ration for Dairy Cows

Just as the railway semaphore prevents disaster, so does LARRO insure safety for your herd.

Safe—because Larro has just the right amount of protein from the right sources. More is often dangerous. Less is not enough.

Safe—because the quantity and high quality of each ingredient *absolutely do not change.* No variations to throw cows off feed. Larro-fed cows are always in best of health. It means much.

Safe—because a powerful electro-magnet prevents the slightest bit of iron and steel from getting into finished Larro. Absolutely no nails, wire or junk in Larro.

Safe—because it is free from adulteration and fillers. It contains nothing but clean, wholesome, milk-making, profit-making ingredients.

Read "Feeding the Fresh Cow" in The Larro Dairyman, our free, quarterly magazine for cow owners. Send us your name and address today if you are not receiving it.

Sale will commence at 1 o'clock

in a heated pavilion at Farm No. 3, Corner Gratiot and Nunneley Roads, 1½ mile south of Mt. Clemens. Come early inspect the offering and enjoy a good lunch at noon.

Detroit Creamery Farms,

Mt. Clemens, Mich. A. A. Schultz, Sup't.

10% More MILK
Doubles Dairy Profits
"A penny a day per cow invested in KOW-KARE works wonders"

A poor milker costs just as much to house, feed and care for as a good producer. For this reason just a slight increase in the milk yield makes a big difference in the *net* profit. Dairy experts say an increase of 10% in the milk yield will *double* the profit.

How important it is, then to get from your cows every pint of milk of which they are capable.

The chief cause—almost the only cause—of poor milkers is the condition of their health. Particularly the health of the milk-making organs.

Kow-Kare, the famous cow medicine and conditioner, acts directly on the milk-producing organs. It tones up the genital and digestive functions, makes them sturdy and active. More milk and better health *must* result. Feed Kow-Kare one week out of each month (a tablespoonful twice a day) and the result will surprise you.

For the treatment of Barrenness, Abortion, Retained Afterbirth, Scours, Bunches, Milk Fever, Lost Appetite, etc., Kow-Kare has a well-earned reputation. No dairy barn should be without it. For twenty-five years it has been the chief reliance of thousands of dairymen, when cows are sick.

Feed dealers, general stores and druggists sell Kow-Kare; $1.25 and 65c sizes. Write for our free book, "The Home Cow Doctor." It is full of information valuable to cow owners.

DAIRY ASSOCIATION CO., Inc. Lyndonville, Vt.

Makers of Grange Garget Remedy, Bag Balm, American Horse Tonic and Horse Comfort.

Unprofitable Cows are often sick without appearing so!

Watch the milk pail closely. The rise and fall of the yield indicates the health condition of the cow. A cow may look well, yet be suffering from sluggish digestive or genital organs. Kow-Kare acts directly on these organs. Its use restores normal milk yield and enables the cow to throw off disease.

GREATEST NEED OF PURE BRED SIRES

THE greatest need for more profitable dairying in Michigan is better herd sires. This does not apply particularly to the farmer or breeder who has a large herd of cows, but more particularly to the farmers who are milking a half dozen cows or less. These small herds are producing the great bulk of the dairy products that are sold on the market today. In many herds the cows are of no particular breeding and show all colors from common red to black and white, brindle, yellow, blue, roan and black. Some of the individual cows in these small herds are exceptionally good producers but they are accidents in most cases. These occasional good cows rarely produce a good daughter because they are bred to a scrub or grade sire. It is a well known fact that the individual farmer cannot afford to own a well bred pure bred sire when he has a herd of only six to a dozen grade cows—simply because the cash outlay would bring the service fee to high for the calves he obtains.

Every farmer knows this, and that is the reason he uses a scrub or grade bull—usually one out of his own cows. The only remedy for this condition is for several or many farmers in a community, township, or county to decide on one breed and then buy the best bull or bulls of that breed they can afford, and use this bull as a community sire. Such a plan will do more than anything else to place the cow business on a more profitable basis.

In Alpena County, Michigan, thirty farmers adopted a plan similar to this some twelve years ago and they have used three herd sires in as many communities for several years. They have figured it out from their records that the service fee per heifer calf obtained in this association has cost them less than one dollar and while this co-operative plan was established only a few years ago, today they can boast of 800 offsprings of these bulls. They have more than doubled the value of the cattle they are milking and the community has built up such a reputation for the breed of cattle they are handling that they have no trouble in selling their surplus stock at good prices. Any one wishing detailed plans for organizing a bull association should apply to the Agricultural College.—O. E. Reed, Professor of Dairy Husbandry, M. A. C.

WORK OF COW TESTING ASSOCIATION

AN indication that cow testing association work is helpful to promote better sires is shown in that 189 purebred sires were purchased among the association members. Twenty-eight associations are listed with all members either owning or using purebred sires, while 92.7 per cent of all the C. T. A. members are either using or own purebred sires. It is interesting to note that there are 876 purebred Holstein, 284 purebred Guernsey, 235 purebred Jersey bulls and a small number of other breed sires in use by the members of sixty-two associations we have reporting out of seventy operating. There the 42 grade Holstein, 30 grade Shorthorns, 24 grade Jersey and 11 grade Guernsey bulls in use among these sixty-two associations reporting.

Occasionally the argument is presented by the farmer when the cow testing association work is mentioned to him, that it is only for purebred cows. This argument is untrue. Two-thirds of all the cows listed in the Michigan C. T. A. are grade cows. On a basis of sixty-two associations that have reported there are 12,318 grade cows and 5,373 purebred cows among the association membership. Of this number 6,849 are grade Holsteins, 2,134 grade Guernseys, 2,104 grade Jerseys and 988 grade Shorthorns, while 3,824 are purebred Holsteins, 83 are purebred Jerseys and 532 are purebred Guernseys, plus a small number of representatives of minor breeds.

In a report for the year 1923 the number of cows under test in the cow testing association work in Michigan is shown to have increased from 4,973 to 20,314. The average production per day for all cows in the Michigan cow testing associations was found to be 20.9 pounds of milk and .83 pounds of fat. Allow-

BROOKS APPLIANCE CO., 297 STATE ST., MARSHALL, MICH.

ing a ten months' milking period this would make the average production of the Michigan C. T. A. cow 6,357 pounds of milk and 252.5 pounds of butter fat. The 1920 United States census credits the average of the Michigan cow with 3,750 pounds of milk and 150 pounds of butter fat.

To prove that the cow testing association work sends "visitor" cows to the butcher—it was found that a total of 714 cows were sold as undesirable, unprofitable individuals during the year.—A. C. Baltzer, Extension Specialist in Dairying, Michigan Agrilcultural College.

FEEDING VALUE OF WHITE AND YELLOW CORN

Would you please let me know if there is any difference in the feeding qualities of the white and yellow corn?—L. M., Sterling, Mich.

—From the standpoint of the chemical composition, there is no difference in the feeding value of white and yellow corn and under average farm conditions where good rations are being fed and some leguminous hay forms part of the ration, there would be absolutely no difference in feeding value between white and yellow corn.

The white corn, however, is lacking one of the vitamines which is absolutely necessary to the proper functioning of the digestive tract in the digestion and absorption of minerals. This vitamine, which is lacking in white corn, is found abundantly in either clover or alfalfa hay. Where livestock is on pasture there is, therefore, no difference in white and yellow corn. Neither is there any difference in their value during the winter if the stock have a small amount of either clover or alfalfa.

Even hogs will eat a sufficient quantity of alfalfa or clover to give them all of the required vitamine.—Geo. A. Brown, Professor of Animal Husbandry, M. A. C.

COW HAD MILK FEVER

We have a cow that freshened October, 1923, and got down with milk fever for about 3 hours. Since then she gave only about one-quarter as much milk as other years. Also garget part of the time. What can I give her? Would this come alright at next calving?—B. V., Remus, Michigan.

—It is not an uncommon occurence for a cow to become affected with garget after having an attack of milk fever. I am afraid that there is very little that you can do to bring this cow back to her full milk at this laction period. She will very likely be all right again at her next laction period. Two tablespoonfuls of artificial carlsbad salts given on the cows feed night and morning for three or four weeks may bring favorable results.—John P. Hutton, Veterinary Division, M. A. C.

KITTEN EATS LITTLE

I have a half blood Angora kitten weaned about five months ago which never has eaten as a kitten should. It seems hungry and cries for food and then eats very little. It does not grow and is so poor and lately will not play. It has so little life, but its mate eats and grows and is so playful and lively. I've been told it may have worms. Could you judge? If you could and would suggest a remedy I would greatly appreciate it.—Miss P., Ingham Co., Michigan.

—Give the cat one grain of calomel and one grain of sodium bicarbonate at one dose. Then give night and morning one drop of tinctura of nux vomica and five drops of water, and continue for several weeks.—John P. Hutton, Veterniary Division, Michigan Agricultural College.

Corn prices made appreciable advances during the past year, says the United States Department of Agriculture. Low receipts at primary markets and the low visible supply of corn have resulted in rising prices despite large farm stocks and heavy production during the three years 1919-1922. It is pointed out, however, that the price of hogs must always be considered in connection with that of corn, inasmuch as approximately 80 per cent of the corn crop is sold "on the hoof."

Get more milk!

Use

Dr. LeGear's Stock Powders

You ought to see the hundreds of letters that people write in, like this:- "One of my cows in her last milking period produced less than 40 lbs. of milk daily. This year she was started on Dr. LeGear's Stock Powders and is making over 60 lbs. daily." Frank J. Swantner, Valley Park, Mo.

The reasons for such results now are easy to understand. In spring and summer, green pasture gives cows, in natural form, the laxatives, tonics and purifiers needed to *turn the most feed into milk.*

In winter, dry feed lacks these elements and much feed goes into *waste,* instead of milk.

Dr. LeGear's Stock Powders give cows just what their winter feed lacks. Tonics to sharpen appetite, aid digestion and purify the blood. Laxatives to correct bowel troubles. Vermifuges to expel worms. Minerals for milk, bone and blood tissues.

Every hog, horse and sheep, too, as well as your cows, need this helpful conditioner now. Get it! Satisfaction guaranteed or money refunded.

Small, medium and large packages. 25 lb. pails. 100 lb. drums.

20% Less Butter Will Buy a 20% Better De Laval

Present-day purchasers of De Laval Cream Separators are getting more value than was ever before possible. You can now get a new De Laval for approximately 20 per cent less butter than the same size machine could be purchased for ten years ago.

In addition, the present-day De Laval is at least 20 per cent better, having 10 per cent more capacity, a bell speed-indicator, self-centering bowl, and many other improvements and refinements.

Self-Centering Bowl. The De Laval Bowl is so designed as to center and balance itself when it attains separating speed, which causes it to run smoothly, without vibration, and adds to the efficiency and life of the machine.

All-Around Superiority. A combination of the foregoing features, together with superiority of De Laval design, workmanship and materials, enables a De Laval to separate more thoroughly under all conditions of use, deliver a smoother cream capable of making better butter, to separate a richer cream with less loss of butter-fat, and to separate with greater efficiency at lower temperature, all of which means more money and profit for the user.

Pays for Itself. There are many worn-out and inferior cream separators in use today, wasting enough cream to pay for a new De Laval in less than a year. You can buy a De Laval on such easy terms that you can use it while it is paying for itself. See your De Laval Agent or send coupon for full information.

The De Laval Milker. If you milk ten or more cows a De Laval Milker will soon pay for itself. More than 15,000 in use, giving wonderful satisfaction.

DETROIT CREAMERY HOLSTEIN MAKES GREAT RECORD

AN excellent record for the production of butter was made recently by Elmland Jewel De Kol Cornucopia of the Detroit Creamery Co. Holstein herd at Mt. Clemens, according to the advanced registry department of the Holstein Friesian Association of America. At the age of five years and nine months this cow produced in one year under the supervision of the State Agricultural College 21,700.4 pounds milk and 720.30 pounds butterfat—equal to 900.3 pounds butter.

Nearly 97,000 Holstein cows and around 6,750 bulls have been admitted to entry in the Advanced Register up to the present time. The increased value of a cow tested for advanced registration depends upon the production shown. It is usually considered that the increased value is not less than $100 a cow.

CANNOT MAINTAIN GASOLINE PUMP ALONG TRUNK LINE

(Continued from Page 8)

papers on me before they can make me move it? And if they do serve papers how long are they supposed to give?—G W. H., Corunna, Mich.

—The state Administrative Board recently passed a resolution prohibiting the maintenance of any gasoline filling station on any state trunk line in the state.

The maintenance of any part of the gasoline filling station within any part of the right-of-way of a highway is an obstruction and the authorities having control over the highway in question may compel the removal thereof

If the pump mentioned in your communication is within the limit of this trunk line highway either the State Highway Commissioner or the Board of County Road Commissioners of the county in which the road is situated, if it be a county road, may compel the removal thereof. The statute does not prescribe the proper notice to be given, but thirty days notice would undoubtedly be sufficient.—H. Victor Spike, Assistant Attorney General.

NEXT OF KIN IS HEIR

If a person who has no children and no brothers or sisters, dies leaving no will, would the first cousins inherit the property. If so, suppose one cousin is dead, could the children of this cousin share in the property?—P Q Jackson County.

—If the deceased had neither wife nor mother or father at the time of his death the next of kin would inherit the property in the following order of priority: uncle or aunt, then first cousins. The heirs of a deceased cousin would be entitled to their parent's share.—Asst. Legal Editor.

ALLOWANCE FOR DRAIN

A county drain is being surveyed across my farm. The drain will be 400 rods long I put in 120 rods of 10-inch tile five years ago, which is sufficient for that drain in my farm, located near the lower end of the drain and which they plan to leave in. There are eight farmers interested besides myself. Would like some idea of what I have a right to expect from the 120 rods of tiles toward my share of the expense.—E. Pettsford, Mich.

You should have an allowance for the drain put in by you, to apply on your share of the expenses. The allowance should be based on the actual value of the drain. The value could be estimated upon the actual cost of putting in the same drain now, including labor and material, less depreciation.—Asst. Legal Editor.

LAW PROHIBITS MARRIAGE OF COUSINS

Give the law in full of Michigan and nearby states on cousins marrying. Does it make a difference if the people are past middle age and not liable to raise a family?—Mrs. W. V., Ortonville, Mich.

—Compiled Laws, 1915, Sections 11364 and 11365 prohibit the marriage of first cousins in Michigan. Most states have similar provisions against this kind of marriage. Such laws are by no means economic regulations, but follow the general policy of the law of the various states in which they have been en-

RHEUMATISM

A Remarkable Home Treatment Given by One Who Had It.

In the year of 1893 I was attacked by Muscular and Sub-acute Rheumatism. I suffered as only those who are thus afflicted know, for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely, and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatsim, to try the great value of my improved "Home Treatment" for its remarkable healing power. Do not send a cent; simply mail your name and address and I will send it free to try. After you have used it and it has proven itself to be that long-looked-for means of getting rid of such forms of rheumatism, you may send the price of it, one dollar, but understand, I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer when relief is thus offered you free? Don't delay. Write today.

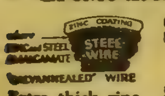
New Rust Resisting Fence Wire

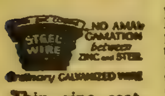
"Galvannealed"—newly discovered rust-proof fence wire, insures many years longer service than you have ever had before from any kind of fence.

In "Galvannealed" wire an extra heavy coating of rust-proof zinc is amalgamated INTO the body of the steel wire. In ordinary galvanized wire a thin coating of zinc is merely laid ONTO the steel body of the wire.



"GALVANNEALED" WIRE

Extra thick zinc coating goes IN.



Ordinary GALVANIZED WIRE

Thin zinc coating only goes ON.

Square Deal Fence

is now made from rust-proof, high test "Galvannealed" wire or from standard quality galvanized wire. Square Deal leads with its stiff, picket-like stay wires that make fewer posts necessary. Its well crimped line wires spring back into place after every shock and strain. Famous Square Deal Knot can never slip. Square Deal stands tight and trim, looks better, wears longer, therefore costs less.

2 Books FREE

Ropp's New Calculator (worth 50c) figures grain and livestock profits; measures capacities of cribs, wagons, silos; figures interest, wages; contains commercial law, parcel post rates, etc. Sent free with Square Deal catalog that tells all about "'Galvannealed'—the Triple-Life Wire." Both books free to land owners.

DR. E. R. FENN, V. S., Pottersville, Mich.

acted, and have for their purpose the protection of the health and general welfare of society. So when two people go into another state for the express purpose of contracting a marriage which is forbidden by the laws of their own state they not only commit an offence against the dignity and honor of their own state, but against society in general.—Asst. Legal Editor.

NO RIGHT TO PAY LOSS

A man whose cyclone insurance dues were to be paid in November neglected to pay, and in August a cyclone passed through that section blowing down his barn and after this happened he sent in his back dues to the company and the company paid the loss. Had the board of directors a right to pay this loss?—J. E., Washtenaw County, Mich.

—The Board of Directors would have no right to pay a loss on a policy, after the policy had lapsed.—Asst. Legal Editor.

HUSBAND WOULD GET HALF OF PROPERTY

Will you please tell me, where a man and wife own a farm and there are no children and no joint or no will made, in case the wife should die, would the husband get all property or would he have to share it?—F. P., Coral, Mich.

—Upon the death of the wife without surviving children and without having made a will, the property would descend as follows: One half to the husband and the other half to the father and mother of the wife, or to her brothers and sisters or nephews and nieces.—Asst. Legal Editor.

MUST PAY DOG TAX

Is it a state law that compels you to pay a dog tax. If a person's dog kills another man's sheep and he finds it out, can he kill the dog or make the owner pay for the sheep that he has killed?—H. L., Mt. Morris, Mich.

—A state law requires the owner of dogs to pay a tax on them, except in cities having ordinances providing for such tax.

Any person may kill any dog which he sees pursuing, worrying or wounding any live stock. If any of your live stock have been injured by the acts of any dog, you may report the matter to the local justice of the peace, whose duty it is to investigate the matter and summon the owner to show cause why the dog should not be killed. You may also sue the owner for damages, and make him pay for the sheep killed or injured.—Asst. Legal Editor.

SUE MAN WHO SOLD COW TO YOU

On November 5th, 1923, I bought a cow, not milking at time and supposed to freshen in December. I paid cash for the cow. Now this cow was bred December 31 instead of freshening and is standing dry all this time. What can I do? Can I hold the seller for discount or return of cow? If he says the bank held a mortgage on the cow and took the money, can I collect from the bank?—E. R., Gladwin, Mich.

—You would have to sue the man who sold the cow to you, for damages for misrepresentation. You would have this right of action against him if he falsely misrepresented that the cow would be fresh when he knew she would not. If you obtained judgment, you would levy on any of his property, and the bank would have nothing to do with it.—Asst. Legal Editor.

The purebred Holstein cattle which farm boys and girls of Delaware have fed and cared for as a part of their dairy calf club work constitute 19 per cent of the purebred Holsteins in that State, according to a recent report received by the United States Department of Agriculture.

Buy Federal Land Bank Bonds

Farmers! Here Is Your Own Borrowing and Investing System

THROUGH the twelve Federal Land Banks, farmers own and operate a huge national co-operative borrowing and investing business. Already, these Banks have resources of over $880,000,000! They are supported by more than 4,500 local National Farm Loan Associations with a membership of nearly 300,000 farmers.

After paying the costs of operation and setting aside necessary reserves, all profits are returned to the borrowing farmers through their local associations. To date, over $7,000,000 has been paid as dividends.

A Federal Land Bank mortgage need never fall due. It is gradually retired by the semi-annual payment of a uniform sum, equal to the interest on the amount borrowed plus ½ of 1% of the loan. For example, the farmer with a mortgage of $1,000 at 6% pays $35 every six months. This includes the interest and a payment on the principal sufficient to cancel the loan in about 33 years.

When You Have Money To Invest

Every farm family should support their co-operative Farm Loan System by investing in Federal Land Bank Bonds. This can be started with a single Bond—$40, $100, $500, $1,000, $5,000 or $10,000—and increased as the money can be spared. These bonds are safe. No investor in them has ever lost a dollar. They are free from all taxes, except inheritance taxes. This applies to both principal and interest.

Should you need money quickly, these Bonds command a ready market, or your banker will accept them as security for a loan.

You can buy these Bonds from any Federal Land Bank or from the Fiscal Agent at Washington, D. C. The Bonds will be sent by registered mail. All correspondence confidential. Remember that the words "The Federal Land Bank" appear at the top of every Bond issued by a Federal Land Bank.

Write today for "Federal Farm Loan Board Circular No. 16." It's free.

If you desire a Federal Farm Loan, apply to the Secretary-Treasurer of the nearest National Farm Loan Association. Ask your County Agent for his address.

FEEDING THE CHICKS

IDLE chicks will soon form the habit of toe-picking and cannibalism. It is a natural habit for the chicks to pick at something, and if there is nothing else in sight for them to pick at, they will pick each others' toes. Of course, they cannot be fed until they are at least forty-eight hours old, but do not put them under the hover or into the brooder until there is something ready for them to pick at. This may be grit or oyster shell, and should be placed in several shallow pans and a little may be scattered in the litter to provide somthing for the chicks to scratch for.

It is well to remember that grit is a chicken's teeth, and they should always have access to plenty of it. The commercial grit may be used, or the grit may be ground or crushed at home, from broken crockery and glassware. Sods dug up with an axe and brought into the brooder house while the biddies are confined contain grit, and help to bring out-of-doors conditions inside, on cold days. If this is practiced faithfully you will have no trouble with leg weakness, as it is not only confinement, but lack of access to Mother Earth that causes leg weakness in young chicks.

Finely chopped vegetables, such as mangels, beets, potatoes, etc., provide the much needed succulent material in the chicks' diet, and much healthful exercise is obtained by chasing one another about with the vegetable scraps. Busy chicks are contented chicks, and their running about develops sturdy legs.

Milk will provide the necessary animal protein and help with the rapid development of the chicks. If you have not the time properely mix a dry mash, buy some good commercial brand. Balanced rations are just as necessary for chicks as for mature fowls. Fed in self-feeding hoppers, near the brooder, it provides every thrifty chick with an equal opportunity to grow and develop.

ANIMAL PRODUCTS AND EGG YIELD

A GREAT increase in our annual egg production may be expected when poultrymen and farmers in general recognize the importance of animal feeds in the fall and winter rations for the laying flock. The demonstration of the superiority of feed combinations containing meat scrap, milk and its products, tankage, or fish scrap is one of the most valuable additions to our knowledge of poultry management contributed by the United States Department of Agriculture and various experiment stations.

Practically all experimental tests have shown that these feeds will greatly stimulate egg production, especially during the fall and winter months. The fact that many farmers get no eggs at all during this period may usually be attributed to a lack of essential animal feed. The addition of from 10 to 25 per cent of one of those named would in most cases make a remarkable difference. Which one of these feeds should be used depends upon local conditions and prices. They are of about equal value when the protein content is taken into consideration. The fish meal and tankage have given just as good results as meat scrap. Milk is just as good when available at a low cost, and fresh buttermilk and skim milk produce good results. In some sections condensed buttermilk and semi-solid buttermilk have been fed with success.

In a test extending from November 1st to July 10th on the government farm at Beltsville, Md., 30 hens on a ration without meat scrap or any animal feed averaged 74 eggs each. Another flock of 30 hens of the same breed during the same period laid an average of 113 eggs each, the difference of 39 eggs being attributed to the ration which contained meat scrap. Both flocks were out on range whenever the weather was favorable, which made the difference less than it would have been had the birds been kept in pens. In a test made by Purdue University Agricultural Experiment Station animal feeds were shown to have a decided value in the ration of laying hens and pullets. The pullets fed skim milk averaged 140.2 eggs in a year; those fed meat scrap, 135.9 eggs; and those in the check pen that received no animal

BOWERS Colony Brooder

Burns any fuel—costs less

This brooder raises more and better chicks at lowest cost. Stove is sturdy, safe, air-tight, self-regulating—best in world to hold fire. Burns soft coal—cheapest brooder fuel—perfectly. Get My Special Low Price — On This Wonderful Incubator

Hatches a Chick From Every Fertile Egg

Freight prepaid east of Rockies and allowed to points beyond

The DETROIT is scientifically constructed to give big hatches of lusty, fast growing chicks.

Temperature is automatically regulated by a Miller type trip burner that acts directly on the flame. Heat is held in and cold kept out by double walls having dead air spaces between them. Every part of the hatching chamber is evenly heated—the hollow square hot water tank has rounded elbows that prevent cold corners.

These are only a few of the features that make the Detroit such a big hatching incubator. Write for catalog giving full and detailed description and get the almost unbelievable bargain price.

Big Combination Offer

feed of any kind laid an average of only 61.2 eggs.

It has been shown that it is impossible to judge the value of a hen as a layer unless she has been fed a ration that would give her an opportunity to demonstrate her capacity. Pullets that have not yielded profitably because of a ration lacking in animal matter have become profitable layers when the defect in the ration was corrected.

LAZY HENS TRAPPED; CAN'T LOAF ON JOB

EVEN barnyard hens will have to punch time clocks if an invention now being exhibited at a London, England, poultry show finds favor with the farmers. An ingenious Dutchman is suspecting some of his hens of loafing on the job. He has accordingly evolved a system by which, fitted on the back of each of his chickens, a leather strap is attached with a piece of colored chalk at the end.

Above the door of each trap nest he places a paper and a memorandum. The door is so constructed that the hen can not enter the nest without making a mark on the paper. As he uses different colored chalk for each chicken, he is now jubilant at having been able to rout the unproductive hens from his flock.

The inventor alleges he has not yet discovered a way to register the fradulent entering of nests—that is the hen chalking up a mark without laying any eggs.

IMPROVING THE OAT CROP

(Continued from Page 6)

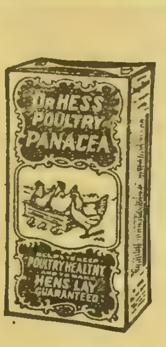
Michigan have a number of old stand-by varieties that should be replaced with caution if at all. Many a farmer has seen some big advertisement and at once got enough of that seed to plant his entire acreage, only to discover in the fall that he had been a sucker. But that was not the worst part of it. He had fed out his old variety, and he did not know where he could get any more seed. He would not grow his purchase another year, and had to look again.

A far better method is to test the new variety of oats side by side with the old variety in the same field. Be sure that they are not planted in separate fields, but side by side in the same field. Leave an alley wide enough to walk in back and forth between the two varieties. Get yields on them in the fall. Examine the seed that you thus obtain. If you are then convinced that the new variety is superior to your old variety, grow some more of it. If not, grow your old variety. Keep looking for a variety that, under your soil and conditions, will produce more bushels of grain per acre when planted side by side with your old variety in the same field. This is safe in the case of oats as they do not cross. Be careful that you don't mix them mechanically.

The desire of M. A. C. is that each farmer may have the best variety for his soil and conditions. Then if he will also be a good farmer and give the seed a chance, the problem is solved. Unfortunately only a few farmers will do that, and the problem remains.

The Michigan Agricultural College has now spent over twenty years improving varieties of oats. Several new improved varieties have been distributed, and from the list two varieties have stood the test of time. These are the Worthy and Wolverine. They are both stiff straw varieties. The hope now is, that Michigan farmers will generally take advantage of the work of their agricultural college, and will try the Worthy, or Wolverine, either one or both of them along-side of their old variety in the same field. There the farmer must be the judge. If the work at M. A. C means anything, it means that many of these farmers, will vote in favor of one of the improved varieties, for these strains mean greater yields and better quality at no greater expense. The work of growing the crop is the same regardless of the variety, but a good variety gives greater returns for this effort.

All correspondence on this matter should be sent directly to the Secretary of the Michigan Crop Improvement Association, East Lansing, Michigan.



VIGOROUS BREEDERS

STRONG CHICKS

Mating time is the time that your breeders should be in the pink of condition

—so that they can impart health and vigor to their offspring—the chicks.

Begin now to condition your breeders.

Feed

Dr. Hess Poultry

MARKET FLASHES

MARKET SUMMARY

Wheat unchanged. Coarse grains quiet and steady. Beans steady. Butter in demand. Receipts of eggs exceed demand. Potatoes quiet. Poultry firm and supply small. Cattle trade slow and prices lower. Sheep active. Although the hog market is active prices are lower.

(Note: The above summarized information was received AFTER the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

The Farmer's Outlook

THIS depends very greatly on where the farmer lives and how his farming is conducted. The newspapers are devoting much space to the bad farming conditions, but these reports come largely from the northwest and parts of the middle west where farm lands were boomed beyond all reason during the war; and small farmers who have not branched out and contracted for more acres than could be paid for are getting along very well as a rule. Just now the bad conditions existing in South Dakota are causing the federal government much concern, and hopes are entertained that legislation will be enacted which will bring relief to the large wheat growers and arrest the great fall in prices for that important farm product. In addition to needed financial relief for these farmers, who have been depending wholly on raising wheat, it is planned for them to diversify their productions so as not to depend upon a single crop. It is hoped to reach definite conclusion on these matters in time to lower the wheat acreage the coming spring. Already a hopeful feeling prevails throughout the country, and wheat prices have had a fair advance, despite the lack of anything like a normal export demand. Foreign business conditions are still far from normal, and European countries are unable to buy our products in anything like pre-war volume. Meanwhile, we are getting along quite comfortably, business moving smoothly in most channels, wheat and hogs being the important exceptions because of overproduction. There is no overproduction of cattle, however, and there is a serious underproduction of sheep, although this important industry is steadily growing in Michigan and several other middle western states. Mutton is far more popular than it used to be, and stockmen owning flocks of sheep and lambs are getting along extremely well on the whole. The cattle industry never looked more promising than now, high prices prevailing in the markets of the country, while dairy men have every reason to be satisfied. Deflation has about run its course, the banks are in fine shape, and the Chicago banks are making loans at 5 to 5½ per cent.

Important Change in Wheat

Only a few weeks ago it looked next to hopeless for wheat prices, with nearly everyone talking bearish and farmers hardly daring to expect much of a change for the better. It is still a little early to talk intelligently about the future, but public sentiment has changed to such an extent that leading speculators in wheat hesitate about going much "short" of the Chicago market. Prices have advanced to the highest point of the season, and although the visible wheat supply in this country is still much larger than a year ago, it is steadily decreasing, notwithstanding unusually small exports of wheat and flour from our shores. A short time ago it was said that wheat held in the interior by farmers for $1 a bushel was well cleaned up. This has reduced the offerings until a new high level is reached, those who have taken profits looking for a temporary break. Leading conservative traders predict that the deferred futures of wheat will receive excellent support on breaks. Of course, it is obvious that the higher wheat sells, the worse will the export demand become, and from now on we must depend mainly on domestic consumption. There is a prospect of radical measures by Congress, with a probability of a higher wheat tarriff, and much reliance is placed on the promise of a reduced spring wheat acreage. It is an important fact that the winter wheat acreage is much lowered, and it is startling to learn that the two Dakotas had around 11,000,000 acres of spring wheat last year out of a total for the United States of 18,800,000 bushels. Our foreign outlet for breadstuffs is so much lowered that during a recent week exports of wheat from North America were only 2,422,000 bushels, comparing with 6,151,000 bushels for the corresponding week last year. The visibe supply of wheat in this country is decreasing every week, but it is still large, being about 67,000,000 bushels, comparing with 46,776,000 bushels a year ago. The late rise saw May wheat sell in the Chicago market as $1.13, a new high price for the season, with a subsequent reaction. A year ago May wheat sold at $1.21½.

Corn at New High Level

Corn has advanced within a short time to the highest prices of the season with large speculative and legitimate buying and no excessive offerings, although larger shipments from farming districts are being made. Large amounts of corn and oats are being fed on farms, and the visible corn supply increases slowly, while light exports are going forward. Some farmers are marketing part of their corn surplus, believing that later marketings will be large enough to weaken prices materially. Corn for May delivery is up to 82 cents, compared with 76 cents a year ago; oats selling at 49¼ cents, comparing with 88¾ cents a year ago.

Shortage of Seed Corn

There is a shortage of good seed corn throughout a large portion of the corn belt states, the result of unfavorable weather conditions last year. Much of the corn harvested in 1923 in Illinois, Indiana, Iowa and Missouri was soft, and farmers who failed to have early maturing corn may expect to get thin stands. Seed crop experts suggest that farmers owning cribs of old as well as early maturing corn make germination tests as early as possible. Only corn that shows a germination test of 90 or more should be saved for seed.

Co-Op Increases Price

In a report published in the Chicago Tribune, it is shown that farmers in Carroll county, Ill., received from 4 to 5 cents per pound more for their butter fat last year by selling it through their own organization than they were offered by local creamery stations. They sold approximately $116,000 worth of poultry, butter and eggs in 1923 through the Mount Carroll Cooperative Creamery Company, Inc., which was established two years ago. This is a $30,000 increase over the first year. The company paid a 7 per cent dividend to its stockholders at the end of the year and voted a patronage dividend of ½ cent on each pound of butter fat delivered to the creamery. The dairymen brought in 160,000 pounds of butter fat during the twelve months and received an average of 46.8 cents a pound for it, or 4 to 5 cents more than the local creameries offered them. The patronage dividend amounted to about $800.

Illinois Orchards Cooperate

Six hundred carloads of fruit and vegetables were shipped to ninety-eight towns in twenty states from Illinois orchards and gardens last year through the Illinois Fruit exchange, a cooperative organization of farmers with headquarters at Centralia, Ill. The products of this organization are distributed through the Federated Fruit and Vegetable Growers, Inc. Both organizations are fostered by the farm bureaus.

There is such a marked scarcity of well finished beef cattle, both long-fed heavy steers and yearlings, that sellers can depend upon obtaining fancy prices. The bulk of the steers offered on the Chicago market recently found buyers at $8 to $10.35, but a late sale was made of two car loads of 1493-pound steers to a New York shipper at $11.50, being 15 cents above any previous sale of heavy steers for 1924. The best yearlings have been taken at $10.50 to $11.50, while only a few heavy steers sold as high as $10.50 to $11. No steers that were good went below $9, and low grade steers sold at $4.50 to $7. Butcher cows and heifers were good sellers at $3.50 to $8.25 mostly, canner and cutter cows selling at $2 to $3.40, bulls at $3.50 to $7.50 and calves at $5 to $14. A limited business is seen in stockers and feeders at $5 to $7.50, a few fleshy steers suitable for a short finish bringing $7.75 to $8.25. A year ago the best beef steers sold at $11, two years ago at $8.90. Cattle not good in quality have sold 25 to 75 cents lower, the consumption of beef having fallen off. Compared with normal years, fat cattle are selling at high prices.

The Hog Traffic

So long as supplies of hogs sent to market foot up such remarkably large numbers there will be great difficulty in placing prices on a much higher level; but it is surprising how well values have ruled under such big receipts in Chicago and other western markets. Hogs on the Chicago market average up well in quality, the bulk selling within a range of 30 cents and heavy butchers going at the top, being 10 cents above the best bacon hogs. Late Chicago receipts averaged in weight 232 pounds, being five pounds less than a year ago. The consumption of fresh and cured hog products is the largest ever known, and exports of provisions are enormous. Fresh pork sells extremely low, and it is largely substituted for other meats. Hogs have sold recently at $6 to $7.20.

High Prices for Lambs

At times prices for lambs suffered declines, but whether the market happens to be up or down, values are very high, and the sheep industry is on a good paying basis. Late sales of lambs were made in the Chicago market at $13.50 to $15.00, with feeders bringing $13.00 to $13.75. Eight years ago the best lamb brought $11.50.

WHEAT

The general outlook for the wheat market shows little change and a firm tone is favored. Milling demand is good as millers are buying our wheat to mix with Canadian wheat. Millers say that Canadian wheat is not grinding well and requires a mixture of American to make good flour. Bulls are making much over expected help from the government and bears are not inclined to consider fighting an advance that has the government back of it.

CORN

Corn is not coming to market very fast at the present time as farmers are holding their surplus to feed to farm animals or to sell next summer when they expect much higher prices. Those who are forced to sell are about the only ones sending to market at present. There are many believers in higher prices in the corn market during the next few months and all receipts of good corn are promptly taken. Chicago dealers state they expect the amount of receipts to decline soon.

OATS

There has been little doing in the oat market and an easy tone prevails.

RYE

Rye is inactive failing to follow the leading grains.

BEANS

The bean market at Detroit is in about the same condition as it was two weeks ago and prices are unchanged. Eastern dealers report large receipts of foreign beans. At New York and other large markets in the east consumption is said to be fair and the market inactive. Heavy advertising done by the canners recently is helping to keep up the demand.

POTATOES

A steady to firm tone is noted in the potato markets of the country. Although the trade has not been especially active there has been a steady demand for good grade stock and dealers are expecting this to continue.

HAY

Unfavorable weather conditions have caused a somewhat firmer tendency. Country loadings have been interfered with and the movement has been light. Demand has been slow at some eastern markets but at the close the demand has increased somewhat and a better feeling is shown. As a whole markets are steady to firm.

MARKET QUOTATIONS

Wheat

Detroit—Cash No. 1 red, $1.16½; No. 2 white, $1.16½; No. 2 mixed, $1.15½.

Chicago—Cash No. 2 red, $1.14½; No. 2 hard, $1.12½.

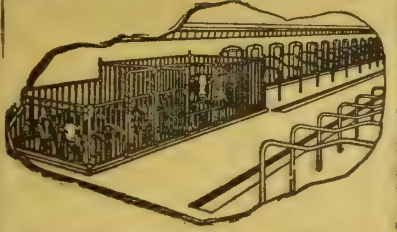
Week of February 17

The first half of this week in Michigan will be generally mild and unsettled to stormy. Showers or snow flurries will occur during the period from Sunday to Wednesday together with moderately strong winds in various parts of the state.

About Wednesday or Thursday temperatures will fall somewhat

Your Barn
Equipped Complete



A Year to Pay

Yes, you can now buy barn equipment from the old established, quality house of Babson Bros. on a small payment down, with a year to pay the balance. Write for complete proposition at once.

Whatever you want — a complete outfit — a few stalls — a pen — a carrier — everything formerly sold only for cash, now offered on this easy payment plan. You'll be surprised at the many big improvements we have made and the low prices quoted on barn equipment which measures up to the quality standard of the famous imported Melotte Cream Separator, sold by us on payments to thousands of American farmers for years.

Expert Service FREE

Let our expert submit ground plans for your new barn—or for re-arranging your old barn, with utmost economy and convenience. You assume no obligation. Let us figure with you. Our prices, superior quality, and monthly terms will be mighty attractive.

Write Today!

Just a card will do. Tell us what equipment you are interested in. How many cows you have. Get our complete proposition. See how easy it is to buy the Babson way. Write us at once. Do not miss this chance of fixing up your barn now and paying during the coming year.

Babson Bros. Dept. 33-02 Chicago 2843 W. 19th Street

FOUR BROOMS

$2.85
We pay the postage

Two fine parlor brooms, one kitchen broom and one heavy garage or barn broom. These brooms ordinarily sell through stores at $4.00. Our price, delivered at your door, $2.85—the best household value ever offered straight from our big factory.

A Year's Supply of Brooms
Direct From Factory

Made from the country's finest broom straw yield. All stock hand sorted and selected.

Sold on absolute satisfaction or money back basis.

Reference—Commercial Trust & Savings Bank, Lomax, Ill.

Only one set to a family—Send check or money order today. $2.85 brings these four brooms to your home—we pay the postrge.

Consumers Broom Mfg. Co.
870 First St. Lomax, Ill.

Detroit Beef Company

offers its services to the *Farmers of Michigan* as a high class, reliable commission house for the sale of *Dressed Calves* and live poultry. Write us for information how to drses and ship calves to market. $250,000 capital and surplus. 34 years in business in the same place and same management.

Address

IMPROVED ROBUST BEANS—HEAVIEST yielding existing variety and latest improved Agricultural College strain. Ninety-four per cent germination. Not polished or hand picked. Ninety pound bag, six dollars. Owosso. Will pick out three pounds to Bag. A. B. COOK, Owosso, Mich.

lower but about Friday will again rise under the influence of falling barometer. As a result of this condition snow flurries will occur in many parts of Michigan during last days of week. This activity will be followed by change to much colder.

Week of February 24

Following the storminess that may reach into this week, the weather in Michigan will be generally fair and colder up to about Wednesday. Shifting winds from east to south with falling barometer by the middle of the week will introduce rain, sleet or snow into many parts of the state.

Following after this storm area the weather will be clear and the closing days of the week will experience mild temperatures for this time of year.

March Warm and Dry

March in Michigan will average warmer than the seasonal normal and will give indications of an early breaking up of winter but the farmer has yet to reckon with fickle April. During March precipitation will be far below the seasonal average.

April Cool and Stormy

For April in Michigan there will be much storminess and temperatures will average below the seasonal normals.

HOLSTEIN AND SHORTHORN BREEDERS HOLD SALES

(Continued from Page 6)

to supporters of the breed that Holstein cattle have started their long-delayed "comeback." Several out-of-state breeders were present and animals were purchased to go to Pennsylvania and to Indiana.

A Holstein heifer donated by Corey J. Spencer of Jackson, to the Peoples Church of East Lansing, was sold twice. The first sale was under the direction of Prof. O. E. Reed, head of the M. A. C. Dairy Department, as auctioneer. The bids were donations, each bidder paying into the building fund of the Peoples Church the amount which his bid raised the preceding bid. Some $165 dollars was raised for the new church building in this way. Then the animal was auctioned off in the regular manner and was purchased by the Detroit Creamery Company for $200. This amount also goes toward the building of the new church.

A fund which is bound to be of untold benefit to worthy students at the M. A. C. was created by Mr. Spencer through the donation of ten purebred Holstein heifers. These were sold for $1100. This money has been put in a loan fund and will be used to assist needy students who are working their way through college.

The Shorthorn Sale

At the close of Farmers' Week, on Friday afternoon, the Shorthorn breed was featured. The animals consigned to the sale were first brought in and judged. This gave the buyers an opportunity to inspect the offerings as well as to discuss Shorthorn type. Following the judging came the sale at which some 45 Shorthorns changed hands.

Due to a large number of young animals the average of the sale was somewhat low, being in the neighborhood of $100 per head. The top animals of the sale brought $300 each. These were yearling heifers, bred and consigned by H. B. Peters and Sons, Carland, Michigan, and were sold to Houston and Ikeler of Grandville, Ohio.

Officials in charge of the sale expressed themselves as satisfied with the results secured. As a result of the interest displayed they are looking forward to a certain, though gradual, improvement in the Shorthorn business. —Carl H. Knopf, special correspondent.

The Time is Ripe for Tax Reform in Michigan

Reports Show Not Only Tax Totals Are Too High but Tax Burden is Not Equally Distributed Over Entire Wealth of the State

By **STANLEY M. POWELL**

(Lansing Correspondent of The Business Farmer.)

YEAR after year you have found your taxes a little higher than they were the previous year until all taxpayers are now anxiously asking where all this money is going to, what is it being used for. Mr. Powell answers the questions in this article which is the first of a series on taxation in Michigan and how to solve the present dilemma. Taxation is one of Mr. Powell's favorite subjects and he has made a very careful study of it so he knows thoroughly what he writes about. Let us have your comments, on any one, or all, of the articles.

"REAL ESTATE, which constitutes but 35 per cent of the wealth of Michigan, is today paying 80 per cent of the total taxes, while the other 65 per cent of Michigan's wealth escapes with but 20 per cent of the tax burden," said Representative Fred B. Wells, of Cassopolis, discussing Michigan's taxation conditions recently. Mr. Wells ought to know what he is talking about, for he was one of five senators and representatives chosen from the 1921 Legislature to make a two-year study of taxation conditions in Michigan and other states.

We hear a lot of talk about taxes, especially along about this time of the year. Many hair-brained ideas are advanced as to what should be done about the situation, but it seems evident that the solution of our present difficulties is suggested by the startling figures presented by Mr. Wells. If those figures are true, the difficulty is not mearly that the tax totals are too high, but that the tax burden is not equally distributed over the entire wealth of the state. To talk blindly of tax reduction may be to oppose good schools and other desirable projects but to advocate the placing of a larger proportion of Michigan's wealth on the tax rolls as a method of reducing the tax rate is a proposal to which no fair minded citizen should take exception.

Taxes Sky-Rocket

Taxation seems to be a chronic disease afflicting the body politic. We are annually reminded that it seems to be a necessary evil that is always with us. But during recent years it has seemed to go from bad to worse and the unfortunate individual who owns farm or town real estate in Michigan today is suffering from intermittent chills and fever and a very unsteady pulse as he faces a tax burden which in many cases is already becoming confiscatory.

The alarming increase of tax totals in Michigan is revealed by the following figures: In 1901 the total tax levied on the general property of the state for state, county, city, village, township, road, school and drain purposes was $23,350,000. By 1921 this figure had increased to the staggering total of $158,389,000, an increase of 700 per cent in 20 years. It is interesting to note that during this 20-year period the assessed valuation of the property bearing these taxes increased only about 410 per cent. The result was inevitable. The rate of taxation had to go up, which it did, mounting from $17.49 per thousand in 1901 to $28.88 per thousand in 1921.

Tax Payers Can't Pay

This tax burden on real estate is proving too great. Present conditions show that such a high general property tax is neither safe nor advisable. As this rate of taxation on the general property of the state has increased so rapidly, it is very significant indeed that the delinquent taxes returned to the Auditor General have increased likewise. In 1919 the assessed valuation of the property returned delinquent for taxes was $187,349,683. In 1920 this total was nearly doubled to $363,350,009. 1921 revealed another husky jump, bringing the total up to $449,474,231. This was practically one-tenth of the total assessed valuation of Michigan real estate for that year. The taxes returned delinquent amounted to over $10,000,000.

By 1922, the last year for which figures are available, the total value of property returned delinquent had risen still further, being $455,746,257. The total unpaid taxes for this year are not yet available, as the staff of clerks in the Auditor General's Department have not yet finished the tremendous task of totaling them. Not only have many tax payers allowed their property to return to the state rather than pay these high taxes, but unquestionably there have been three or four times as many more who have had to borrow money at 6 or 7 per cent rather than pay the heavy penalty of delinquent taxes.

Still Bonded Indebtedness Increases

This tax increase would have been bad enough if we had been observing a "pay-as-you-go" policy, but that was not the case. On top of this increase in the taxation on general property, the public bonded debt has been increasing by leaps and bounds. During the ten years from 1911 to 1921 the bonded indebtedness of the cities of Michigan increased 550 per cent, while that of the counties increased 800 per cent. The State, which in 1911 had no debt at all, by 1921 had $65,000,000 of bonds outstanding. In other words, the bonded indebtedness of Michigan and its various subdivisions had increased in ten years 830 per cent. Bear in mind that even these figures do not include Covert road, drainage and other district bonds, which would make this increase much larger.

To make the situation real plain, let's restate in a little different way. Each man, woman and child paid in general property taxes in Michigan $10 in 1901 and $43.02 in 1921, and over and above this for each man, woman and child there was an increase in the bonded indebtedness outstanding from $13.46 in 1911, to $82.95 in 1921.

Can't Economize Greatly On State

In this increase in the tax burden in Michigan, which is seriously discouraging the ownership of real estate and homes, as is known by all who have given taxation any serious study, it is interesting to note that only about 11 per cent of the taxes are levied for state purposes, while the remaining 89 per cent are for local purposes, which the taxpayer has the power to vote upon himself. However, this fact does not make his burden any lighter.

The two big questions in taxation are economy in government and equitable distribution of the burden. As far as economy is concerned, we can never expect 100 per cent efficiency when our public officials are elected by popular vote, and surely no citizen of Michigan wishes to give up the privilege of franchise, even through the average citizen neglects the privilege.

Regarding state expenditures, when one considers that about 20 per cent of the expenditures must go for interest and sinking fund for bonds issued; about 30 per cent to support our state educational institutions, (containing about 18,000 students, the necessity for which is readily seen for a people who must be enlightened and educated to better govern themselves); about 15 per cent for hospitals, housing 8,100 insane people; about 11 per for correctional and charitable institutions and prisons housing about 6,000 people; and the courts, legislature, all state departments, boards and commissions involving not over 20 per cent of our state expenditures, it is plain to be seen that if any material cuts are to be made in state expenditures, they cannot be made on boards, commissions, etc.

The strictest of economy should be exercised in making appropriations for these boards, commissions and departments, but if they were all abolished and the whole state capitol and Lansing government blown up, it would only have reduced the taxes of the people of Michigan between 4 and 5 cents on the dollar during the past year or two.

How Then Reduce Taxes

State expenditures can not be greatly reduced, if we are to maintain the standards the people of Michigan demand for their colleges and state institutions. It is very plain that there is a greater opportunity to economize on the expenditures of $138,000,000, for local purposes than upon the expenditure of less than $20,000,000 for state purposes.

Some system of taxation must be devised which will not only relieve real estate somewhat, but that will have a tendency to bring about more economy in local expenditures, and that will be so devised that there will be sufficient people contributing to the support of all branches of the government, including the State, so that the officials elected will feel responsible to the people electing them.

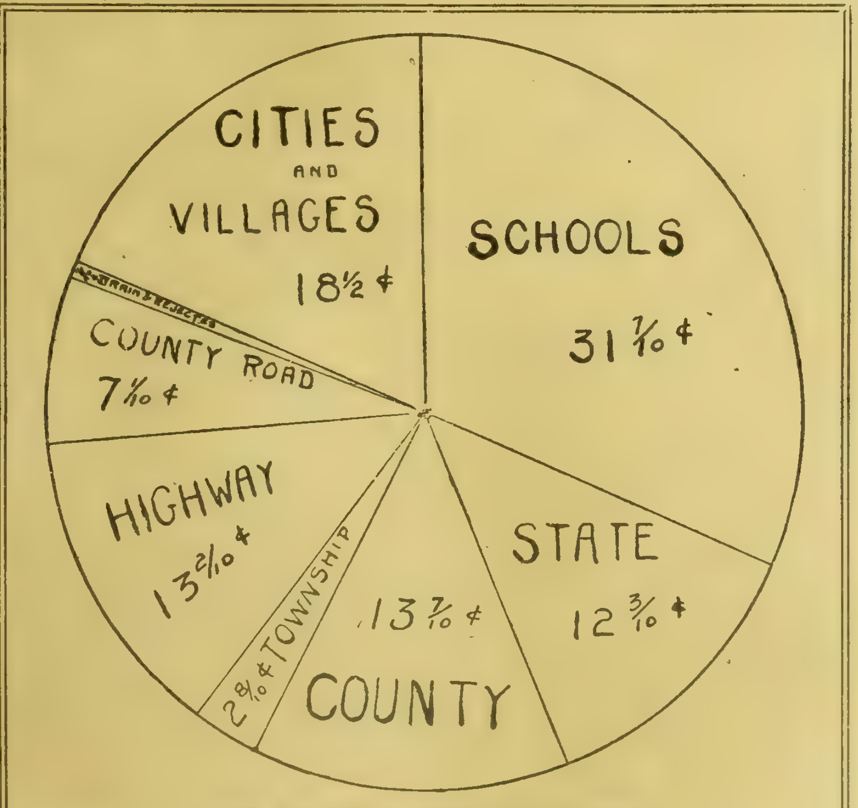
If it would be possible to remove all state tax from the general property of the State, every taxpayer would soon realize that if he desires lower taxes on his home, his business or his farm, then he must interest himself in the management of his schools, his city or township and the building of the roads in his community.

To bring about more economy, the people of Michigan must get rid of the tendency at "voting time" to vote large expenditures for schools, roads, cities, etc., and at "tax paying time" to point with disgust and bitterness toward the state as the cause for the large figures on their tax receipt. If the entire state tax were removed from general property (which in 1921 was 78 per cent real estate) every general property taxpayer's mind would be forced toward the extravagance in local expenditures.

Proposed Solutions

To meet these requirements it is being strongly urged that we adopt a state income tax in Michigan which would raise sufficient revenue to entirely remove the necessity for the general property tax for state

(Continued on Page 19)



HOW THE STATE USES ITS DOLLAR

This chart shows how the state spends its revenue for the various state boards, commissions, institutions, etc. Note how much is absorbed by interest on the state bonded indebtedness.

Wexford Farmers Organize Community Meet

Education and Entertainment Both Have Place on Friday Night Programs of Community Meeting in Carpenter Schoolhouse

By EVA HENDERSON DAVEY

COMMUNITY SONG

(Composed by one of the men while he milked)

ON Friday night it's my delight,
And a pleasure, don't you see?
To mingle with the boys and girls
Of the Carpenter Community.
There's an organ in the corner,
There's music when you come,
And you're welcome every Friday night
To the Carpenter Community Meet.

On Friday night, be it dark or light,
You'll find me right on hand,
My part to fill with hearty good-will,
And by the Community stand.
There'll be many neighbors present,
And real old friends to greet;
So, you're welcome every Friday night
To the Carpenter Community Meet.

TWO miles west of the recently incorporated city of Manton, in Wexford county, Michigan, is located the Carpenter school house where in November, 1921, was organized The Carpenter Community Meet.

The Carpenter district is one of the oldest settled parts of this section of Michigan, the Carpenter school being district number one in Cedar Creek Township. Many of the people in the neighborhood are sons and daughters or grandchildren of the early settlers. Some of them are living with their families on the same farms where they were born and in the same houses. The oldest residents still remember the days when each house stood in its own little clearing, made by cutting down, rolling into a heap, and burning the big maple, beech, etc.; and the provisions were carried down from the new town of Traverse City on horse-back or often on the back of the early settler himself. A short time after the towns of Manton and Clam Lake (Cadillac) were started.

It is a quiet country place, too near Manton to be a backwoods settlement and too old to be considered such by its inhabitants, and too far from town to take a very active part in the social life of the village.

It is comparatively easy to hold almost any sort of a meeting or to organize a society in a settlement far from town. People in such communities feel the need of getting together and depend upon each other for their social life. But in a place like Carpenter district they are not so united, and any such undertaking to be a success must have behind it a united effort.

Beginning in the fall when the crops were mostly harvested and farm work not so strenuous a few of the neighbors began to discuss plans for some kind of a country club. An opening meeting was announced for November and a notice published in the Manton Tribune-Record.

About thirty people came to this first meeting, old, young and those who were neither; and every one was given an opportunity to tell what kind of meetings he wanted. Entertainment seemed to be the leading idea though some were for organization with a view to community betterment, and some wished to enlist outside aid in solving the problems common to all, such as restoring soil fertility, breeding up live stock, lowering taxes, etc. But all were agreed that they wanted meetings of some kind and all declared themselves willing to help.

A chairman, a sec'y-treas. and an organist were elected and the name Carpenter Community Meet chosen. A vote to meet once each week on Monday nights carried. The chairman appointed two committees, one to provide a program for the following week and one to choose a topic for debate and appoint debaters to argue it at the third meeting.

That was the beginning and each week throughout the winter a community meeting was held. Sometimes the roll-call numbered fifty or sixty and even on several occasions as high as seventy-five or eighty, and sometimes on a stormy night only eight or ten would be present. The chairman and his wife and the secretary never missed a meeting.

The meetings were opened by community singing and prayer, followed by recitations, readings, talks, discussions. Special features were: debates, talks on given topics, speaking by someone from outside, special music, mock trials, suppers.

The notice regarding the opening meeting brought a letter from the county agricultural agent, Mr. Wm. F. Johnson of Cadillac, to the chairman, Mr. Walter E. Davey, congratulating the community on its effort and offering his help. During the winter he spoke one evening answering questions and making suggestions for community welfare, and gave a short demonstration of poultry culling on some hens brought in from the nearest poultry house. In the spring he made another visit and spoke on soil fertility, crop rotation, etc. In the summer Mr. Johnson held a poultry culling demonstration at one of the farms with Mr. C. M. Ferguson, poultry expert of Lansing, as demonstrator. Since then poultry raising for profit has been on the increase and more farmers are raising pure-bred stock and buying setting eggs and cockerels with a view to increasing egg production.

Wexford county has in former years been a great potato raising center and much of the soil will no longer produce potatoes enough per acre to yield a profit but instead give the grower a money loss while decreasing the fertility of his soil. The answer to the question as to what he shall do to bring back the fertility of the soil and at the same time turn the loss into gain lies in the raising of alfalfa, sweet clover, soybeans, etc. and letting some one else raise the potatoes until he has rebuilt his soil so that he can produce them at a profit.

Quite a number of debates were held during the winter after the Community Meet was organized. Men and women consulted histories, geographies, maps, not to mention dictionaries, in looking up forgotten facts. Some who had never before heard a debate took part and learned to enjoy the battle of argument followed by the matching of wits and knowledge in rebuttal.

In the spring a debate was arranged with a near-by debating society and the Carpenter Community debators were the victors.

At Christmas time the community united with the school in a tree and program. The community filled one hundred sacks of candy, nuts, and pop corn and one was given to every person present at the tree and one sent to absent ones who had attended former meetings and to people unable to come. This has been done each of the three Christmases since the Community Meet was organized.

With the coming of spring the question of keeping up the meetings was discussed. One man who had been a regular attendant always ready to do his part declared that if an attempt were made to hold meetings during the busy season the Community Meet would be so dead by fall that it could not be resurrected. Quite a number shared this opinion. Others felt they needed recreation in summer as well as in winter.

It was finally decided to hold a meeting once a month, the programs to be voluntary. No committees were appointed except when suppers were served. The chairman was at liberty to call upon any one present to contribute something to the program. Very few failed to respond. Sometimes the response was hesitant. More than one person rose slowly and made his way still more slowly to the front deciding on the way he would do but ready to do something when he faced the audience. And the meetings were as enjoyable as those of the winter and fully as well attended, one of the usual attendants being the man who thought summer meetings would kill the Meet. His little daughter liked to speak pieces and she brought her father and mother along to keep her company.

When work slacked down in the fall requests for more frequent meetings ended in a decision to hold one every other week. At the beginning of summer the night had been changed from Monday to Friday so the children could come with less interruption to their school and their sleep.

The second winter the Superintendent of the Manton Consolidated

Are Fruit Growers Willing to Pay 5 or 10 Cents More for Certified Trees?

By E. A. KIRKPATRICK

IN the past year and three months, I have asked 97 people whether, if they were about to plant an apple orchard, they would be willing to pay five or ten cents a tree for certified trees—that is, certified as to variety.

In 83 of the 97 cases, the answer was "Yes." In the other 14 cases, the answer was not always "No," but it amounted to that; there was a lukewarmness that indicated little or no interest.

My list included a dozen professors of horticulture, fifteen professional and business men, and the rest were farmers with orchards. And would you believe it, the most enthusiastic about this matter were the farmers.

"Yes, siree," said one man at the meeting of New Jersey Horticultural Society. And here's the reason: "Fifteen years ago I planted an orchard of 500 trees, supposed to be Grimes Golden and Jonathan. They came into bearing a few years ago and turned out to be Ben Davis, every last one of 'em. See what I would have gained by buying certified trees? But they didn't have them then."

The most striking thing brought out by my nosing around was this: "How can the inspector who certifies the trees tell the different varieties, and how does he mark them so that the mark will stick to the trees?" The folks I tackled got even with me and, after answering my question, asked me the ones just stated. More than half of the folks wanted to know those facts. I take it that the others already knew.

The answer to those questions is really a short history of tree certification. It is a new thing—only a few years old, to be exact. It is the brain child of Dr. J. K. Shaw, Massachusetts Experiment Station, who has been working on the problem since 1915. Dr. Shaw, in tests, showed that he could register a 99.99 per cent "guess" on varieties, by the system of identification he has worked out. Up to the present time, the identification is based on the leaves, but Dr. Shaw is now working ahead on tree form and appearance of the bark as additional "finger print" material.

The Massachusetts Fruit Growers Association took up with the idea and now offers certification of twelve leading varieties of apple trees to any nursery in the state, or of any trees to be purchased by growers or dealers in the state. A representative of the Experiment Station examines the trees, and if they are found true to name, a hole is drilled in the branch of each tree and a small lead seal is attached with a press. The seal bears the letters "M. F. G. A.," and the date of year in which inspection is made. On the other side are the words "Certified to be Baldwin," or whatever variety it happens to be. The cost of this work has been between 2 and 3 cents a tree. In 1921, about 3,000 trees were examined and 10 per cent were untrue to name. In 1922, 10,000 trees were examined and the percentage was much lower.

A view of the 15th Annual Horticultural Show held during the 1924 Farmers' Week at the Michigan Agricultural College.

Massachusetts is the only state that is putting this idea to work, and since the nursery business is an interstate business, the work in Massachusetts doesn't begin to solve the problem, for fruit growers in the other states.

Are the nurseries in favor of this plan? Well, some of them are, and some are not. I suspect they would be in favor of certification if it were required, or in use in all states, just as they are in favor (publicly) of the present quarantine laws. I have put this matter up to a half dozen or more nurserymen, and find there are a few reasonable objections, as follows:

1. The expense of certification, which would, as a matter of course, be paid by the buyer of the trees. If 10 per cent of the trees were rejected, that would increase the cost of the ones certified, and there would also be the actual cost of the work of certification.
2. Small-order buyers (and about 85 per cent of the nurserymen's business comes from this class) do not care so much about getting a particular variety; many of them don't know one variety from another. They would have to pay for certification whether they wanted it or not.
3. An experienced nurseryman can tell one variety from another

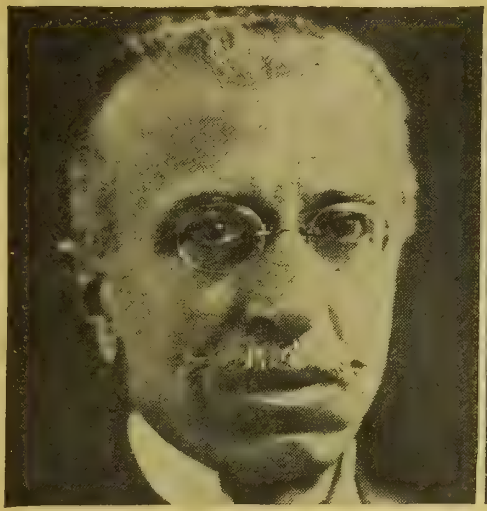
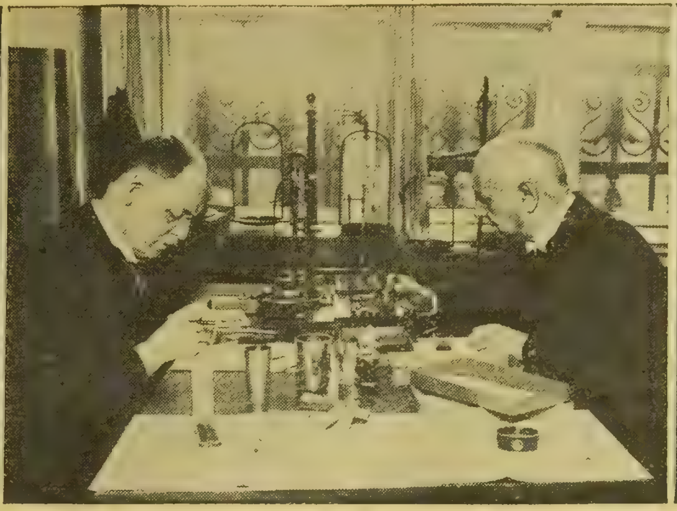
PICTURES FROM FAR AND NEAR

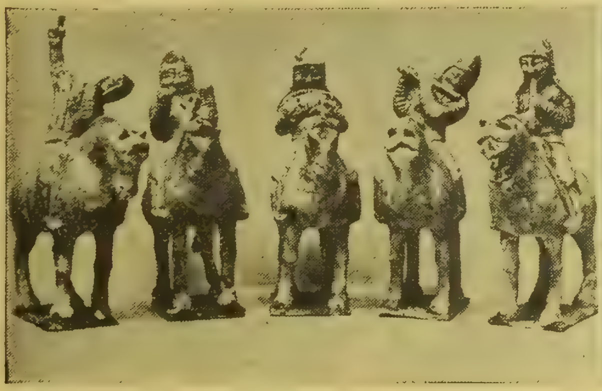


CLAIMS CURE FOR CANCER.—Dr. Naame, a Syrian, who has been reported as having perfected a sure cure for cancer. He has worked for years, watching causes of the disease, experimenting with results, and at last his efforts have been rewarded.

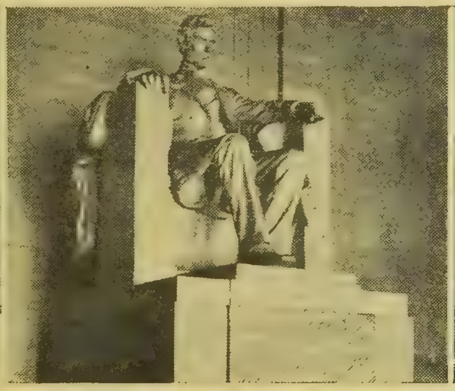


FIRST MUNICIPAL GOLD SALE BUREAU IN GERMANY.—Scarcity of money in Germany is causing the middle class to sell its gold, silver and precious jewels. To prevent unscrupulous dealers from cheating the people an Appraisal Bureau has been started by the government where experts give free appraisals. The experts work without salary.

LEADS CRUSADE AGAINST DIVORCE.—Jean N. Penfield, noted feminist, is leading a crusade against too easily obtaining divorces. She shows that divorces should be brought to a minimum to avoid future chaos, but if necessary, grant, and make valid in every state.



CHINESE JAZZ BAND OF 600 A. D.—This group of stone figures, dug up from a tomb in the interior of China, are now on exhibition in the Pennsylvania Museum. They were placed in the tomb and were supposed to provide music for the departed soul as he went on his way to the next world.

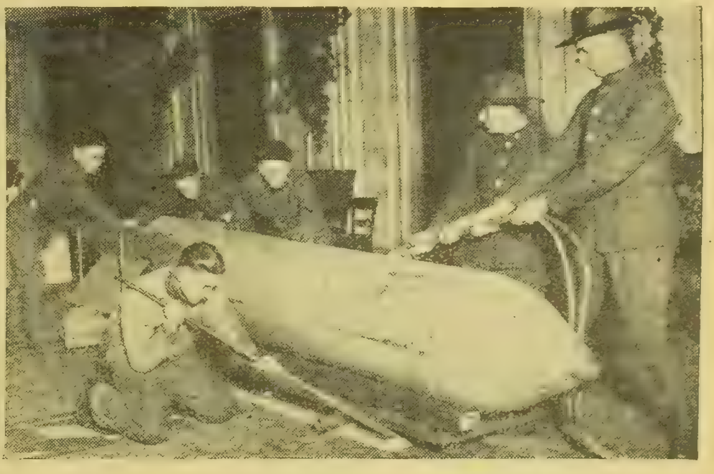


MEMORIAL STATUE OF LINCOLN.—This statue of "The Great Emancipator" is the work of Daniel Chester French, well known sculptor, and has won the admiration of thousands. It is considered a wonderful likeness.

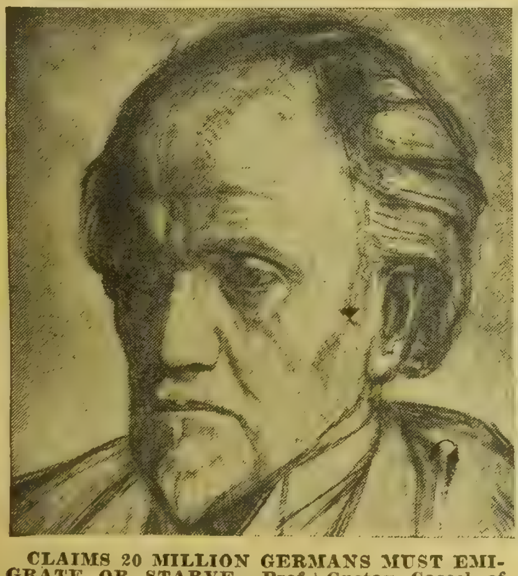
"GIVE ME A SHAVE, HAIRCUT AND SOME MUSIC".—No doubt that is what most men demand when they go to this Washington, D. C., tonsorial parlor, where the new Nickel-in-the-slot Radio receiving set has been installed. It is the invention of D. J. Richardson, of that city.

EDISON'S SON TO TAKE OVER CONTROL OF DAD'S PLANTS.—Charles Edison, son of Thomas Alva Edison, has taken over the managership of all of his father's 33 different industries. He took the place of Stephen B. Mambers, who has been at the job for the past eleven years.

WINNER OF BOK PEACE AWARD.—Dr. Charles Herbert Levermore, winner of the Bok Peace Award.



WORLD'S LARGEST BOMB.—This is the largest bomb in the world and has been on exhibit at the Hotel Commodore, New York City, recently. The bomb weighs 2 tons, is almost 14 feet long and was developed by army experts to be carried by Barling bombing planes.



CLAIMS 20 MILLION GERMANS MUST EMIGRATE OR STARVE.—Prof. Gustav Cassel of Stockholm University, claims twenty million Germans must emigrate at once or starve in the next few months. This picture of Prof. Cassell is a sketch made of him by his son, who is a well known artist.

LONDON BRIDGE.—Every time the Tower Bridge of London is raised for river boats to pass it costs the city $15. It isn't often that the Thames rises so high that the bridge must be raised, yet every part of the machinery must be kept in perfect condition at all times. The bridge is almost 30 years old. The London children consider it a great treat to see the "bridge go up."

SEEKS ARMY DISCHARGE.—James W. Westcott, 90 years old, of Brooklyn, N. Y., is seeking an honorable discharge from the U. S. Army. He fought in the Civil War, was wounded, officials were unable to find room for him in the hospital so he was sent to his sister. When the war ended the government forgot about him.

What the Neighbors Say

FUTURE OF BEAN MARKET

MY opinion is that the future bean market depends entirely on the grocer. If they will insist on a fair return for their labors, which they are justly entitled to, they can get 6c or 7c a pound just as readily as they can 5c and the trade will take them just as readily as they do now.

The idea that a 7c price in Michigan attracts imported beans in competition is disproven this year by the large imports that have come in and are still coming from both Japan and Europe. With a Pea bean market of $5.00 in Michigan. we have brought in as many beans to date and contracted for their importation as we ever have.

My personal opinion of the market is that it will be a steady, firm market, and that while fluctuation might run over a range of a dollar a bag, nevertheless, Pea bean accounts will show a good profit if they trade from day to day and leave the future alone.

If Michigan had entered the advertising campaign, I am sure that the demands for beans would have been so stimulated that never again would the thought of manipulation as a means to create demand, enter into the minds of the Michigan people and that bean prices would range today from $6.50 to $7.50 instead of $4.75 to $5.25.

I have had proven to me by actual experience that the consumer will pay 20c a pound for beans and be glad to get them, if they are given a reason for buying them. The material which the advertising committee gathed during the summer contained every reason why people should eat beans, and it is unfortunate that through Michigan's failure to come in this campaign that we were unable to broadcast to the American people the advantages of beans over any other food product that they might use. Think of Henry Ford trying to stimulate the demand for Ford automobiles by going around to his agents and placing dummy orders. This is the policy the bean men have followed in the past.

It might interest you to know that I run an add every Friday in the Christian Science Monitor on the household page, offering 5 pounds of beans for $1.00, and I am doing a very satisfactory business. I would suggest that you get one of these Monitors. This proves to me that the consumer will pay a fair price for a good product.—Benjamin Gerks, New York.

BEST FARMERS CONTINUE TO MOVE TO CITY

DEAR EDITOR:—As one of your readers I again wish to express my opinion on one of your articles appearing in the Feb. 16th issue, entitled "The Return of the Prodigal."

Prosperity has not returned to the U. S. or Canadian farmer. Nor will it soon. Auctions are being held daily in all parts of the country even now. Many more will follow in the spring. Yes, the doors and windows will be boarded up for those leaving do not intend to return soon, if ever. It is not the flame of city lights that is calling the farmer. Not so, but it is the light of desire for better conditions, less hours of toil and the night to enjoy some of the good things that the average farmer is denied. Then again you are mistaken when you say its the weak ones who leave the poor conditions and absolute slavery of the farms.

Only the strong, determined and better class of farmers are leaving the poor conditions behind. It is the rats or farmers who are mislead by articles in their daily papers or farm journals who stay and live and hope for the prosperity that you tell them year after year is just around the corner, and never comes.

Yes, the farmer who becomes a worker in one of the large modern shops does punch a clock. At the end of a day his card shows a total of from eight to ten hours work. If the poor devil had remained on the farm and had punched a clock his hours would have registered nearer 16.

Yes, he does ride to work in an electric vehicle called street car. This is just one of the modern means of conveyance at his command. And he gets home from his work several hours before dusk except in a few winter months, while the everage farmer is doing up his evening chores by lantern light. While the city worker has his Sunday for pleasure, rest or education the farmer has hours of necessary labor to perform.

Yes, back on the farms of Michigan are men and women who have stuck. Why? Well, for various reasons. Some are too young to leave for the better conditions offered them in the city yet, others dare not leave the old parents worn out by years of slavery and misery, and others are only waiting for some poor boob to come along and buy or rent their place so they can leave. Then you have the class of easily satisfied farmers who are satisfied with a living and nothing more. This class is largely responsible for the rut and slave-like conditions that the average farmer is forced to live in.

But again I say the farmers are waking up and the articles such as you like to hand out are turning many into deep thinking men and women. I might suggest to you that it would be wise to tell your readers of the paper published in Chicago called Farmer-Labor Voice. Will you do it?—Ralph Jordan, Petoskey, Mich.

VOTE DOWN BEET CONTRACT OFFERED

DEAR EDITOR:—At a meeting of the Durand Local of the Michigan Sugar Beet Growers Assn. it was unaminously voted that the present sugar beet contract for 1923 offered by the Mich. Sugar Factories, consisting of a 45-55 proposition with a $7 guarantee be turned down and not taken up for the reason that the 45-55 basis is unfair to the grower besides it gives the factories absolute monopoly of the contract labor or beet workers the wages of which the grower pays.

It was resolved by a unanimous vote that the growers will consider a contract based on a 50-50 proposition and average sugar price or sales, with "field" or labor supervision based on the acreage basis instead of the per cent of sugar basis.

It was also unanimously voted to cause a copy of these proceedings to be mailed to the sugar companies doing business in this section and also that copies be mailed the farm organizations and the newspapers of the state. Signed: C. E. Ackerman, C. S. Reid, F. Mikan, officers of The Durand Beet Growers' Ass'n.

P. S. The financial statement of the above organization shows a substantial balance on hand and the organization stands ready to cooperate in any way to benefit the industry represented.

FARM OR FACTORY

IT is a great mystry to me why the majority of the farm boys would rather leave the farm and work in the factory, than go to high school and hense college.

The eighth grade seems to be the limit of the farm boys education. At this period they are not fitted for a special vocation, and they are too young to own or manage farms. They become discouraged. To the boy just finishing the eighth grade the farm looks like a poor paying proposition. The boy measures wealth, at this time, by actual cash. So our boy goes to the city, procures a job in the factory and becomes a slave to command.

I cannot understand why a boy would rather be a factory worker, than the monarch of his own farm. Have they no pride in being a landowner, and managing their own affairs, instead of being a machine in a factory. You will say, of course, that the boys make more money in the factory. But the factories close down or our boy is fired. Then the money he has saved must go to tide him over until the factory opens, or he succeeds in getting a new job, and of course there is always the possibility of a failure. The crops on the farm may fail—but one has a home and enough to eat, and there are always the cows and hens to fall back upon.

In the country one has a play of ideas to work out. Ones imagination has full play, and an inventive nature can find an outlet on the farm. But if one has decided that he prefers the city life to that of the country, at college he will be able to fit himself for a business life or take up a profession.

In a factory the young man's mind is cramped. He has no outlet for his imagination or inventive ability. Who could have ideas about the common routine of factory work? He might be able to write an ode "On Dipping a Wire Frame in Gasoline," but I doubt it.

Now, if the country boy goes to high school that would occupy the time, at which he would be discouraged with the farm. His mind being inquiring, he will form many new ideas, and by the time he has finished high school, he will have decided whether he wishes to remain a farmer or take up a profession. He will then go to college—take a course in extensive farming, or a business or professional course and become his own boss and much respected citizen. — Dorothy Dill, Traverse City, Michigan.

LOW VALUES REDUCE CATTLE PRICES

EDITOR, Business Farmer—Cattle prices, with their up and downs, depend on many different factors other than the price of beef. Some livestock producers watch the beef market closely, but pay little attention to the price of hides and other by-products. Yet these same hide and by-product prices largely affect the price received by the producer of the live animal.

As an example, the decline in hide prices alone, since the peak in 1919, has reduced the value of an average native steer about $22.00. When hide prices fall, the packers cannot make up the loss by charging more for meat, because if this were done the demand for beef would be restricted, and the whole supply could not be sold.

Therefore, the immediate effect of the drop in hide prices is to lower cattle prices. Over long periods of time, however, low hide prices make for higher beef prices by discouraging cattle production. At the present time, hide prices are considerably below the pre-war level and consequently are a depressing influence in cattle prices.

Conditions in the leather market have been such as to cause very wide fluctuations in hide prices during recent years. From a peak of about 53 cents per pound in 1919, heavy native steer hides fell to about 10 cents early in 1921. From this low point, hides moved gradually upward until they reached a price of 23 cents in November 1922, which was fairly comparable with the pre-war level of prices. But they did not remain there very long. In December there was a sharp decline followed by a continued drop which reached a level of a little below 15 cents in July 1923, a price which has been maintained since then with only slight fluctuations either way. The following table shows the effect of these fluctuations on the value of a 60-pound hide:

August	1919	$31.80
April	1921	6.00
November	1922	13.00
January	1924	9.00

The above table shows that the decline in price from the **1919** peak to the 1921 low point amounted to over $25.00 per head. The decline since November 1922 amounts to about $4.00 per head.

The drop in prices of the cheaper grades of hides has been even more pronounced than in the case of good mative steer hides. For this reason prices of poorer grades of cattle from which such hides are obtained, have been affected even more in proportion, than good native beef steers.

The extremely low prices of practically all grades of heavy hides are merely a reflection of a condition existing in the leather industry. Any improvement in the leather business will be accompanied by an advance in hide prices.

Producers and packers have mutual interest in this situation and it is to be hoped for the good of the entire industry that the extreme depression in the hide market will not continue.—Swift & Company, Chicago, Ill.

MICHIGAN CROPS

KNOW THE SOURCE OF YOUR SEED

IN nearly every community in the State there is an unsuccessful field of alfalfa and frequently of June clover that stands out as a warning against the disasterous effect of sowing unadapted seed. It would be very difficult to find a farmer who would consider planting Southern Illinois corn in Northern Michigan for grain purposes and yet there are quite a number of farmers who do not hesitate to sow Arizona common alfalfa seed in Michigan. The results are usually more disasterous than planting Southern Illinois corn in Northern Michigan because alfalfa usually does not produce a crop the first year and Arizona common alfalfa frequently winter kills so badly that the crop the second year is unprofitable. It may be mentioned here that the Arizona section produced more than 2,500,000 pounds of alfalfa seed this season and this seed is being distributed quite rapidly.

A careful study of the adaptability of alfalfa and clover seed has been made by the Farm Crops Department of the Michigan Agricultural College. More than 400 plats of alfalfa and clover sown from seed of many sources are available for study. The following table shows very briefly some of the results secured.

Experiments carried on at the Michigan Agricultural Experiment Station show the following yields for the various strains of seed:

Strain of Alfalfa	State	Tons per A. Air dry hay
Hardigan	Michigan	7.21
Grimm	Idaho	7.09
Common	Montana	6.39
Common	Utah	6.06
H. Perivian	Arizona	1.11
Common	Arizona	0.92

The above plats were seeded the same day and given the same care in every way so that the difference in yield is a difference in adaptability to Michigan conditions.

What of the value of Hairy Perivian seed in Arizona? It is excellent for the southwestern part of the United States. This is just the point we wish to bring out. Seed adapted to one section may not be adapted to another section. Then keep the seed in the section where it is adapted and this can best be done by the farmers demanding adapted seed.

Data very similar to that secured with the adaptability of alfalfa has been secured with the adaptability of June clover seed. Seed from Italy and Southern France produces stands that are much less productive than our own Michigan grown seed. On the plats at the college those seeded with Michigan seed produced 1.7 tons more air dry hay per acre than plats seeded the same day with Italian seed. This is very important at the present time due to the fact that the clover seed crop in the United States is about 45 per cent normal and large importations of seed from Italy and Southern France are being made into this country.—C. R. Megee, Dept. of Farm Crops, M. A. C.

SERRADELLA

We wish to learn if you know of a grass seed by the name of Serradella. We understand this is a foreign grass and is used for building up soil, also for feeding cattle, sheep, etc. The seed is a yellowish seed, very nearly the same size as clover seed.—D. M. & Co., Remus.

—Serradella is an annual legume with a much branched, slended stem. It is cultivated for forage and green manure in France, Germany, Portugal and Spain. It has been carefully tested here at the college, and due to the sparse growth produced, cannot be recommended for Michigan conditions. Sever-

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

DUTIES OF JUSTICE OF PEACE.

What are the duties of a justice of the peace of a township?—N. G., Petoskey, Mich.

—The duties of a justice of the peace of a township are so many and varied, that it is not possible to give them in detail. In a general way, a justice of the peace is a member of the township board during the last two years of his term of office. He may also sit on the board during any period of the first two years of his term of office when by reason of a vacancy in any other office on the board, there are not three other members to act thereon. He may also try civil cases in tort where the amount involved is not more than $100 or actions on contracts, where the amount does not exceed $300. He also has original jurisdiction in cases of misdemeanor. That is, where the punishment is by fine of not exceeding $100 or imprisonment in the county jail not to exceed ninety days. He may also hold examination in criminal cases involving crimes to be tried by a court of record.—Clare Retan, Deputy Attorney General.

MUST GET LICENSE FROM STATE

I have a recipe for jam which everybody seems to call delicious. I have thought of trying to put it up in cans for sale. I did not make up the recipe myself. Could I can it in ordinary mason jars and sell it, or would I have to get permission from the state to do so?—F. D., Nessen City, Michigan.

—You would be required to obtain a license from the Food and Drug Commissioner of the State, at Lansing, Mich., in order to make and sell your jam. License fee is $25.00. —Asst. Legal Editor.

FUR RAISING

Do you know where I can purchase a pair of muskrat? How large a space should muskrat have? Which is the easiest to raise coon, skunk or muskrat?—A Reader, Lenox, Mich.

—Perhaps by paying trappers about double the fur value. There are also dealers who have them for sale. Might write B. F. Tarman, Quincy, Pa. A pond of an acre if well supplied with vegetable growth such as cattails is sufficient for six or eight females and a couple of males if put in before breeding season. Muskrat have two or three litters a year and six females if they do well would mean well up towards one hundred muskrat by fall. If you have a place of only a few square rods they can be raised but would require food perhaps towards fall when with the young the numbers increased. Muskrat are the easiest raised for they will practically raise themselves if conditions are right, that is, water and food. Not only muskrat raising but coon, skunk and mink raising is only begun. The fur catch for the season of 1923-24 is only about half of an average crop and points to the raising if the supply is going to equal the demand from this on.—Fur Editor.

LAWFUL LINE FENCE

What should a lawful line fence between two pieces of property be constructed of? How high. Are sheep, goats and hogs classed as stock?—M. J. S., Turner, Michigan.

—Sec. 2206, C. L. 1915 provides that "All fences four and one-half feet high and in good repair, consisting of rails, timber, boards, wire, or stone walls or any combination thereof, and all brooks, rivers, ponds, creeks, ditches and hedges, or other things which shall be considered equivalent thereto, in the judgment of the fence viewers, within whose jurisdiction the same may be, shall be deemed legal and sufficient fences." Sheep, goats, hogs, etc., are livestock, but a fence may be legal and still not be sufficient to restrain such animals.—Asst. Legal Editor.

CAN CUT TREES

I have some valuable timber such as black walnut, white ash, elm and hickory, along the highway, adjoining my farm. This highway is called the trunk line M-63. This road has been surveyed, but not graded. By the stake this timber stands about 80 feet from the center of said highway. Now have I got the right to cut and market this timber? Also have I the right to trim shade trees along my farm without the consent of the road boss?—H. W., Cloverdale, Mich.

—The timber growing in the highway adjacent to your farm belongs to you, and you may cut it or do whatever you wish with it so long as you do not interfere with travel on the highway. You may trim the trees along your premises without consulting the road boss.—Asst. Legal Editor.

GIVING TOBACCO TO OWN CHILDREN

Is there any law to prohibit a man from giving his own children tobacco?—Reader, Saginaw County.

—There seems to be no statute which prohibits a father giving tobacco to his own children. Section 15277 of the Compiled Laws of 1915, makes it unlawful for a person or his clerk or agent to sell, give or furnish tobacco in any form to a child under seventeen years of age without the consent of the parent or guardian. It implies, therefore, that tobacco may be furnshed to a child with the consent of the parent or of course, by the parent. —Clare Retan, Deputy Attorney General.

WHO PAYS TAXES?

I have sold 40 acres of land this fall, and had an argument regarding taxes. Sold it in October. By law who should pay the taxes?—J. A., Grant, Michigan.

—If you sold your land at any time prior to December 1st, the purchaser is bound to pay the taxes for the current year. Where the land is sold after December 1st, the seller pays the taxes for the current year. —Asst. Legal Editor.

CULTURE OF MUSHROOM

Would you please give me full information concerning the cultivation of white mushrooms? What is the usual market price, also how long does their season last by raising them in a hot bed and where could I obtain the spawn or seed?—W. H., Flint, Mich.

—The common cultivated mushroom is known botanically as Agaricus campestris and grows wild during the months of August and September. Any cellar of outbuilding which will maintain a uniform temperature of 45 to 65 degrees is a satisfactory place for growing mushrooms. Fresh horse manure is fermented for three or four weeks, turning it every three days so that the pile will not burn in the center, and placed in the beds eight or ten inches deep. The manure should be moist but not wet. Level and tramp well and leave until the temperature recedes to 70 degrees, at which time it is ready to spawn.

Good spawn may be secured in brick form from any reliable seedsman. Each brick is broken into ten or twelve pieces and each piece spaced ten inches each way and covered one or two inches deep in the manure. About ten days after spawning the bed is cased to prevent evaporation: that is, covered with an inch of fine loam soil.

Success depends largely on the condition of temperature and mosture existing in the cellar or building. Excessive moisture causes growth of foreign fungi and on the other hand the atmosphere should be moist enough to prevent evaporation from the bed. A temperature of 55 degrees gives best results. Growth is more rapid at higher temperatures but the period of production is shorter and the crop lighter.

The beds begins to produce in eight to ten weeks after spawning and will continue to produce for two to four months.

The price of mushrooms varies considerable. Very often a dollar a pound is realized and sometimes they sell as low as twenty-five cents per pound. Probably forty to sixty cents a pound is an average price. A square foot of bed space should yield a pound of mushrooms.—E. P. Lewis, Instr. in Vegetable Gardening, M. A. C.

CHARGE FOR FOOD AND KEEP

I would like to know how long I would have to keep and feed a stray dog which has no tag to claim ownership. Can I claim ownership? I have watched for an advertisement claiming her. Would I have to advertise her? If so, how long? If I find the owner can I get a reward? —H. R., Holton, Mich.

—If the owner of the dog calls for it, you may charge him for keeping and feeding it, and hold the dog until he pays you. However, I would advertise in the local paper for three or four issues and, if nobody calls for it, keep it.—Asst. Legal Editor.

GO INTO BANKRUPTCY

Two persons agree to go into partnership in farming and draw up an agreement to that affect. The partnership borrow money and the two partners sign as securities. The partnership does not prosper and they decide to cease operations. One of the parties is willing to, as the other has lost his all in the partnership, but desires to save a little out of the wreckage, at least not to be held responsible for anything, should the assets of the partnership not be equal to the liabilities. Will it be necessary for him to take the bankruptcy law to protect his earnings in the future? And what can he save by taking the law?—O. F. F., Pavilion, Mich.

—Each partner would be liable personally for the debts of the partnership in the event the assets did not equal the liabilities. In order to protect your future earnings from liability for the payment of the debts of the firm, it would be necessary to file a petition to be adjudged a bankrupt. Bankruptcy would not save your present assets from liability, however.—Ast. Legal Editor.

INOCULATING SHOOL CHILDREN

They inoculated my sister some time ago for diphtheria, injecting the virus into the abdomen without painting the abdomen with iodine. She was very ill afterwards as were all the children in the school. Now they are going to inoculate the children again, in the arm. Have we a right to forbid this being done? This second inoculation is also for diphtheria.—D. M., Ossineke, Mich.

—It is not always necessary to apply iodine before administering toxin antitoxin. In fact our physicians often use other cleansing agents such as alcohol.

There is no law to compel school children to be inoculated against diphtheria. Any parent who does not wish his child to have the treatment has the right to request of the school authorities that it be not given.

Of course, it is much more advisable that this case who has been inoculated once should receive full immunization, which would require three inoculations.—R. M. Olin, Commissioner of Health.

LIABLE FOR BREACH OF CONTRACT

A sells B forty acres of land. B signs a contract to pay interest annually for five years and then pay for it. B has one hundred and twenty acres valued at twelve thousand dollars free of incumbrance. Now after B has had possession of the forty awhile can he back out and not pay for the forty or does his property stand good for the debt?—M. H., Snover, Mich.

—If B breaks his contract and refuses to pay for the land, he would be liable to you for damages for breach of contract. B's unencumbered land could be levied upon to collect the damages after a judgment had been obtained.—Asst. Legal Editor.

CAN COLLECT RENT FOR HALL

I rented a hall to an organization and received no rent. Can I collect same and who would one serve papers on? Or how would you go about collecting it?—W. J., Gilford, Mich.

—You could collect rent for the use of your hall. The proper person to serve would be the secretary, president, or other officer of the organization.—Asst. Legal Editor.

LICENSE TO PEDDLE GLASSWARE

Do you have to pay a license to sell glass ware on the road? If you do how much is the license for a team of horses or a car?—D. N. B.

—I am of the opinion that one would have to secure a state license to peddle glassware and if on foot the fee is $5.00; of with one horse, $10.00; two horses, $40.00; a small car $20.00 and a large car $40.00. Application should be made to the State Treasurer.—C. J. DeLand, Secretary of State.

BEST TIME TO PRUNE TREES

When is the best time to trim black walnut and fruit trees?—C. H., Boon, Mich.

—Fruit or other trees may be pruned at almost any time during the dormant season when the tissues are not frozen. This means any time when the temperatures do not go below twenty degrees above zero, as a few degrees of frost usually does not serve to freeze up the tissues. This, of course, means that the bulk of the pruning is done during March and April, as it is at that time of the year that weather conditions are most favorable for the work.—V. R. Gardner, Professor of Horticulture, M. A. C.

MORE CONTRIBUTIONS TO FEEDING FUND

Two contributions to the German Babies Feeding Fund have been received since we published our statement of total received. These were for $1 each and came from William Baum and Andrew Baum, both of AuGres.

Farmer Putnam's Philosphy

I GOT home from Grange meetin' the other night mad and ready fur a fight. Josephine noticed I had a bad look in my eye and it made her bristle up and she sez: "What's the matter Tom; didn't they elect you to office?"

"Woman," sez I, "let me be. We didn't have no election; we had a debate on agricultural conditions. I tell you things is in a turrible state and I believe this country is goin' to have a revolution before long, if the farmer don't git more prosperous soon."

"Tom," she sez, "you go on to bed and stop talkin' nonsense, or there'll be a revolution right here at home."

I was so mad I couldn't talk back and I didn't know a thing till next morning when it all come back to me that I had been over in Europe where I took up a five acre patch of rocky land. I had one cow instead of a work horse and I used her to plow with. After I got my plowin' done I planted potatoes by hand and when they come up I hand hoed 'em five or six times, because I didn't have no cultivator or any other tool to work with exceptin' the hoe. Well the next trouble was dry weather. The neighbors told me to go and pay the priest to pray fur rain. I done so and then it rained so hard that half my crop washed away. Then the neighbors blamed me fur payin' the priest too much; they said us Americans was too liberal with our money.

Well, I finally got to harvest my potatoes and they made a big cartload. I hauled 'em to town with my cow hitched to the cart and sold 'em, gettin' two cartloads of paper marks fur the load.

When I got back to my patch the neighbors had the laugh on me, because they said the money wasn't worth the paper it was printed on and that the two loads of marks wouldn't buy a suit of clothes. After I woke up and thought this here dream over it took all the fight out of me and now I'm goin' ahead plannin' my spring work and thankful that conditions is as good as they is, and that I don't have to farm in Europe.—Thos. Jefferson Putnam, Specialist in Rural Devilment.

Oh Money! Money!

by ELEANOR H. PORTER

Copyright by Houghton Mifflin Company

tinued from February 16th issue.)

MRS. JANE laughed a bit ruefully.

"Well, I don't see but what I shall have to, with everybody against me like this," she sighed, getting slowly to her feet. "But if you knew—if either of you knew—how really valuable money is, and how much it would earn for you, if you'd only let it, I don't believe you'd be quite so fast to tell me to go and spend it."

"Perhaps not; but then, you see, we don't know," smiled Miss Maggie, once again her cheery self.

Mr. Smith said nothing. Mr. Smith had turned his back just then.

When Mrs. Jane was gone, Mr. Smith faced Miss Maggie with a quizzical smile.

"Well?" he hazarded.

"You mean—"

"I'm waiting orders—as your new boarder."

"Oh! They'll not be alarming, I assure you. Do you really want to come?"

"Indeed I do! And I think it's mighty good of you to take me. But—should you, do you think? Haven't you got enough, with your father to care for? Won't it be too hard for you?"

She shook her head.

"I think not. Besides, I'm going to have help. Annabelle and Florence Martin, a farmer's daughters, are very anxious to be in town to attend school this winter, and I have said that I would take them. They will work for their board."

The man gave a disdainful sniff.

"I can imagine how much work you'll let them do! It strikes me the 'help' is on the other foot. However, we'll let that pass. I shall be glad enough to come, and I'll stay—unless I find you're doing too much—about your father?"

"Oh, he won't mind. I'll arrange that he proposes the idea himself. Besides,"—she twinkled merrily—"you really get along wonderfully with father, you know. And, as for the work—I shall have more time now: Hattie will have some one else to care for her headaches, and Jane won't put down any more carpets, I fancy, for a while."

"Well, I should hope!" he shrugged. "Honestly, Miss Maggie, one of the best things about this Blaisdell money, in my eyes, is that it may give you a little rest from being chief cook and bottle washer and head nurse combined, on tap for any minute. But, say, that woman will spend some of that money, won't she?"

Miss Maggie smiled significantly.

"I think she will. I saw Frank last evening—though I didn't think it necessary to say so to her. He came to see me. I think that you'll find that they move very soon, and that the ladies of the family have some new clothes."

"Well, I hope so."

"You seem concerened."

"Concerened? Er—ah—well, I am," he asserted stoutly. "Such a windfall of wealth ought to bring happiness, I think; and it seemed to, to Mrs. Hattie, though, of course, she'll learn better, as time goes on, how to spend her money. But Mrs. Jane— And, by the way, how is Miss Flora bearing up—under the burden?"

Miss Maggie laughed.

"Poor Flora!"

"'Poor Flora'! And do I hear 'Poor Maggie' say 'Poor Flora'?"

"Oh, she won't be 'poor' long," smiled Miss Maggie. "She'll get used to it—this stupendous sum of money—one of these days. But just now she's nearly frightened to death."

"Frightened!"

"Yes—both because she's got it, and because she's afraid she'll lose it. That doesn't sound logical, I know, but Flora isn't being logical just now. To begin with, she hasn't the least idea how to spend money. Under my careful guidance, however, she has bought her a few new dresses — though they're dead black—"

"Black!" interrupter the man.

"Yes, she's put on mourning," smiled Miss Maggie, as he came to a dismayed stop. "She would do it. She declared she wouldn't feel half decent unless she did, with that poor man dead, and giving her all that money."

"But he isn't dead—that is, they aren't sure he's dead," amended Mr. Smith hastily.

"But Flora thinks he is. She says he must be, or he would have appeared in time to save all that money. She's very much shocked, especially at Hattie, that there is so little respect being shown his memory. So she is all the more determined to do the best she can on her part."

"But she—she didn't know him, so she can't—er—really mourn for him," stammered the man. There was a most curious helplessness on Mr. Smith's face.

"No, she says she can't really mourn," smiled Miss Maggie again, "and that's what worries her the most of anything—because and he with neither wife nor chick nor child to mourn for him, she says. But she's determined to go through the outward form of it, at least. So she's bought a veil. She's taken Mr. Fulton's picture (she had one cut from a magazine, I believe), and has had it framed and hung on her wall. On the mantel beneath it she keeps fresh flowers always. She says it's the nearest she can come to putting flowers on his grave, poor man!"

"Good Heavens!" breathed Mr. Smith, falling limply into a chair.

"And she doesn't go anywhere, except to church, and for necessary errands."

"That explains why I haven't seen her I had wondered where she was."

"Yes. She's very conscientious. But she is going later to Niagara. I've persuaded her to do that. She'll go with a party, of course,—one of those 'personally conducted' affairs, you know. Poor dear! she's so excited! All her life she's wanted to see Niagara. Now she's going, and she can hardly believe it's true. She wants a phonograph, too, but she's decided not to get that until after six months' mourning is up—it's too frivolous and jolly for a house of mourning."

"Oh, good Heavens!" breathed Mr. Smith again.

"It is funny, isn't it, that she takes it quite so seriously? Bessie suggested (I'm afraid Bessie was a little naughty!) that she get the phonograph, but not allow it to play anything but dirges and hymn tunes."

"But isn't the woman going to take any comfort with that money?" demanded Mr. Smith.

"Indeed, she is! She's taking comfort now. You have no idea, Mr. Smith, what it means to her, to feel that she need never want again, and that she can buy whatever she pleases, without thinking of the cost. That's why she's frightened—because she is so happy. She thinks it can't be right to be so happy. It's too pleasant—to be right. When she isn't being frightened about that, she's being frightened for fear she'll lose it, and thus not have it any more. I don't think she quite realizes yet what a big sum of money it is, and she'd have to lose a great deal before she lost it all."

"Oh, well she'll get used to that, in time. They'll all get used to it—in time," declared Mr. Smith, his face clearing a little. "Then they'll begin to live sanely and sensibly, and spend the money as it should be spent. Of course, you couldn't expect them to know what to do, at the very first, with a sum like that dropped into their laps. What would you do yourself? Yes, what would you do?" repeated Mr. Smith, his face suddenly alert and interested again"What would you do if you should fall heir to a hundred thousand dollars—to-morrow?"

"What would I do? What wouldn't I do?' laughed Miss Maggie. Then abruptly her face changed. Her eyes became luminous, unfathomable. "There is so much that a hundred thousand dollars could do—so much! Why, I would—" Her face changed again abruptly. She sniffed as at an odor from somewhere. Then lightly she sprang to her feet and crossed to the stove. "What would I do with a hundred thousand dollars?" she demanded, whisking open a damper in the pipe. "I'd buy a new base-burner that didn't leak gas! That's what I'd do with a hundred thousand dollars. Are you going to give it to me?"

"Eh? Ah—what?" Mr. Smith was visibly startled.

Miss Maggie laughed merrily.

"Don't worry. I wasn't thinking of charging quite that for your board. But you seemed so interested, I didn't know but what you were going to hand over the hundred thousand, just to see what I would do with it," she challenged mischievously. "However, I'll stop talking nonsense, and come down to business. If you'll walk this way, Mr. New Boarder, I'll let you choose which of two rooms you'd like."

And Mr. Smith went. But, as had occurred once or twice before, Mr. Smith's face, as he followed her, was a study.

CHAPTER XIII
The Dancing Begins

Christmas saw many changes in the Blaisdell families.

The James Blaisdells had moved into the big house near the Gaylord place. Mrs. Hattie had installed two maids in the kitchen, bought a handsome touring car, and engaged an imposing-looking chauffeur. Fred had entered college, and Bessie had been sent to a fashionable school on the Hudson. Benny, to his disgust, had also been sent away to an expensive school. Christmas, however, found them all at home for the holidays, and for the big housewarming that their parents were planning to give on Christmas night.

rank Blaisdells had also moved. They were occupying a new house not too far from the grocery store. They had not bought it yet. Mrs. Jane said that she wished to live in it awhile, so as to be sure she would really like it. Besides, it would save the interest on the money for that much time, anyway. True, she had been a little disturbed when her husband reminded her that they would be paying rent meanwhile. But she said that didn't matter; she was not going to put all that money into a house just yet, anyway,—not till she was sure it was the best they could do for the price.

They, too, were planning a housewarming. Theirs was to come the night after Christmas. Mrs. Jane told her husband that they should not want theirs the same night, as Hattie's, and that if she had hers right away the next night, she could eat up any of the cakes or ice cream that was left from Hattie's party, and thus save buying so much for herself. But her husband was so indignant over the idea of eating "Hattie's leavings" that she had to give up this part of the plan, though she still arranged to have her housewarming on the day following her sister-in-laws.

Mellicent, like Bessie, was home from school, though not from the same school. Mrs. Jane had found another one that was just as good as Bessie's, she said, and which did not cost near so much money. Mr. Smith was not living with them now, of course. He was boarding at Miss Maggie Duff's.

Miss Flora was living in the same little rented cottage she had occupied for many years. She said that she should move, of course, when she got through her mourning, but until then she thought it more suitable for her to stay where she was. She had what she wanted to eat, now, however, and she did not do dressmaking any longer. She still did her own housework, in spite of Harriet Blaisdell's insistence that she get a maid. She said that there was plenty of time for all those things when she had finished her mourning. She went out very little, though she did go to the housewarming at her brother Jame's—"being a relative, so," she decided that no criticism could be made.

It seemed as if all Hillerton went to that house-warming. Those who were not especially invited to attend went as far as the street gate, and looked on enviously. Mrs. Hattie had been very generous with her invitations, however. She said that she had asked everybody who ever pretended to go anywhere. She told Maggie Duff that, of course, after this, she should be more exclusive—very exclusive, in fact; but that this time Jim wanted to ask everybody, and she didn't mind so much—she was really rather glad to have all these people see the house, and all—they certainly never would have the chance again.

Mr. Smith attended with Miss Maggie. Mrs. Hattie had very kindly included him in the invitation. She had asked Father Duff, too, especially though she said she knew, of course, that he would not go—he never went anywhere. Father Duff bristled up at this and declared that he guessed he would go, after all, just to show them he could, if he wanted to. Mrs. Hattie grew actually pale, but Miss Maggie exclaimed joyfully that, of course, he would go—he ought to go, to show the proper respect! Father Duff said no then, very decidedly; that nothing could hire him to go, and that he had no respect to show. He declared that he had no use for gossip and gabble and unwholesome eating; and he said that he should not think Maggie would care to go, either,—unless she could be in the kitchen, where it would seem natural to her!

Mrs. Hattie, however, smiled kindly, and said, of course, now she could afford to hire better help than Maggie (caterers from the city and all that), so Maggie would not be in the kitchen, and that with practice she would soon learn not to mind at all being 'round among folks in the parlor.

Father Duff had become so apoplectically angry at this that Mr. Smith, who chanced to be present, and who also was very angry, was forced to forget his own wrath in his desire to make the situation easier for Miss Maggie.

He had not supposed that Miss Maggie would go at all, after that. He had even determined not to go himself. But Miss Maggie, after a day's thought, had laughed and had said, with her eyes twinkling: "Oh, well, it doesn't matter, you know,—it doesn't really matter, does it?" And they had gone.

It was a wonderful party. Mr. Smith enjoyed it hugely. He saw almost everybody he knew in Hillerton, and many that he did not know. He heard the Blaisdells and their new wealth discussed from all viewpoints, and he heard some things about the missing milliorare benefactor that, were particularly interesting—to him. The general opinion seemed to be that the man was dead; though a few admitted that there was a possibility, of course, that he was merely lost somewhere in darkest South America and would eventually get back to civilization, certainly long before the time came to open the second letter of instructions. Many professed to know the man well, through magazine and newspaper accounts (there were times when Mr. Smith adjusted more carefully the smoked glasses which he was still wearing); and some had much to say of the millionaire's characteristics, habits, and eccentricities; all of which Mr. Smith enjoyed greatly.

Then, too, there were the Blaisdells themselves. They were all there, even to Miss Flora, who was in dead black; and Mr. Smith talked with them all.

Miss Flora told him that she was so happy she could not sleep nights, but that she was rather glad she couldn't sleep, after all, for she spent the time mourning for poor Mr. Fulton, and thinking how good he had been to her. And that made it seem as if she was doing something for him. She said, Yes, oh, yes, she was going to stop black mourning in six months, and go into grays and lavenders; and she was glad Mr. Smith thought that was long enough, quite long enough for the black, but she could not think for a moment of putting on colors now, as he suggested. She said, too, that she had decided not to go to Niagara for the present. And when he demurred at this, she told him that really she would rather not. It would be warmer in the spring, and she would much rather wait till she could enjoy every minute without feeling that—well, that she was almost dancing over the poor man's grave, as it were.

Mr. Smith did not urge her after that. He turned away, indeed, rather percipitately that Miss Flora wondered if she could have said anything to offend him.

Mr. Smith talked next with Mrs. Jane Blaisdell. Mrs. Jane was looking particularly well that evening. Her dress was new, and in good style, yet she in some way looked odd to Mr. Smith. In a moment he knew the reason: she wore no apron. Mr. Smith had never seen her without an apron before. Even on the street she wore a black silk one. He complimented her gallantly on her fine appearance. But Mrs. Jane did not smile. She frowned.

"Yes, I know. Thank you, of course," she answered worriedly. "But it cost an awful lot—this dress did; but Frank and Mellicent would have it. That child!—have you seen her to-night?"

"Miss Mellicent? Yes, in the distance. She, too, is looking most charming, Mrs. Blaisdell."

The woman tapped her foot impatiently.

"Yes, I know she is—and some other folks thing so, too, I notice. Was she with that Pennock boy?"

"Not when I saw her."

"Well, she will be, if she isn't now. He follows her everywhere."

"But I thought—that was broken up." Mr. Smith now was frowning.

"It was. You know what that woman said—the insult! But now, since this money came—" She let an expressive gesture complete the sentence.

Mr. Smith laughed.

"I wouldn't worry, Mrs. Blaisdell. I don't think he'll make much headway—now."

"Indeed, he won't—if I can help myself!" flashed the woman indignantly.

"I reckon he won't stand much show with Mellicent—after what's happened."

"I guess he won't," snapped the woman. "He isn't worth half what she is now. As if I'd let her look at him!"

"But I meant—" Mr. Smith stopped abruptly. There was an odd expression on his face.

Mrs. Blaisdell filled the pause.

"But, really Mr. Smith, I don't know what I am going to do—with Mellicent," she sighed.

"Do with her?"

"Yes. She's as wild as a hawk and as—as flighty as a humming-bird, since this money came. She's so crazy with joy and excited."

"What if she is?" challenged Mr. Smith, looking suddenly very happy himself. "Youth is the time for joy and laughter; I'm sure I'm glad she is taking a little pleasure in life."

Mrs. Blaisdell frowned again.

"But Mr. Smith, you know as well as I do that life isn't all pink dresses and sugar-plums. It is a serious business, and I have tried to bring her up to understand it. I have taught her to be thrifty and economical, and to realize the value of a dollar. But now—she doesn't see a dollar but what she wants to spend it. What can I do?"

(Continued in March 15th issue.)

THE STORY TO DATE

MR. STANLEY G. FULTON, 50-year old bachelor and possessor of twenty million dollars, calls on h' lawyer and they discuss the disposition of this large fortune after its owner's death. The lawyer is in favor of giving the money to colleges or charities while Fulton is opposed to these ideas. He remembers that he has some distant cousins and decides to leave the money to one of them, but first he determines to learn which one will use it to the best advantage. To find out who is the worthy one he, through his lawyer, gives, each cousin $100,000 to use as they will. Before giving them the money grows a beard and, using the name of Mr. John Smith, goes to the town where they live to find out what kind of people they are. Upon arriving in town he visits James Blaisdell, one of the cousins, where he tries to hire board and lodging. While there he meets Miss Flora Blaisdell, another cousin who is a dressmaker. They decide they cannot rent a room to him and supply him board and refer him to Frank Blaisdell's, the third cousin. He gets a room there and, passing as a writer gathering material for a book on the Blaisdell family in this country, he starts out. He calls on all of the Blaisdells and as they all talk of a relative by the name of Miss Maggie Duff he decides to call on the lady. He finds her living with her father, an old man who seems to have soured on the world. He secures what information he can from her and her father. He then writes a letter to his lawyer discussing the various relatives he has met. The members of the Blaisdell family learn that each cousin of Stanley G. Fulton has fallen heir to $100,000 and there is much excitement.

FARM MECHANICS

BREAKING IN THE NEW TRACTOR

NO doubt many of our readers are contemplating the purchase of a new tractor for spring work. To those who are I want to pass on to you a word of caution about breaking it in.

It is not advisable for you to wait to get the tractor until you want to use it and then put it to work right away pulling a plow. It wants to be worked in gradually at not too heavy a load.

You are familiar with the notice pasted on the windshield of practically every new car, cautioning purchasers not to drive the car over twenty-five miles an hour for the first five hundred miles. You would not think of loading seven or eight heavy persons into a five-passenger car and try to see how many miles you could cover in a given length of time or how steep a grade it would pull on high with that kind of a load.

That probably would not do as much damage to the car as putting a new tractor to work plowing ten or twelve hours a day the first thing would do to a tractor. There is just as much reason for "easing in" the tractor as there is for driving a car carefully for the first five-hundred miles, or starting in a team of horses that is soft after three or four months of idleness.

The reason why it is necessary to work in a new tractor gradually is because it takes time to wear down the wearing surfaces of bearings, pistons, and cylinders. All tractors are run for several hours at the factory, but not long enough so that the wearing surfaces of the pistons and cylinders are worn down smooth enough so there will be no danger from scoring when the machine is put to heavy work.

If the tractor is started off at light work the wearing parts of pistons, cylinders, and bearings attain a working surface gradually and do not become overheated or scored. As they become worn in it is easier to lubricate the various working surfaces properly so that when the machine is called upon to do heavy work it will handle it without serious injury.

A tractor, or any machine in fact, will well repay the owner for the care taken in seeing that it is worked in gradually. It will avoid a lot of trouble and expense. Many a tractor has been practically ruined by failure to observe this caution, thus bringing the wrath of the owner on the tractor and its manufacturer when the fault is really his own, in not observing a few simple precautions that were, or should have been at least, explained to him by the manufacturer's representative.

I would, therefore, advise that those readers who have definitely decided to buy a tractor this spring get delivery as early as possible so that they will have an opportunity to give it as much use as possible before they are ready for the heavy work of plowing. If you cannot do any better, let it run idle for several hours each day, and see that it gets plenty of lubrication. There may be light belt work that you can do with it such as sawing wood, grinding feed, etc., or it can be used for hauling manure, or harrowing.

If you haven't any work for it to do until you get ready to plow, spend a few hours as often as you can playing with it—just drive it up and down the lane or out in the fields to get familiar with handling and operating it. It will not only be good experience, but it will also be a mighty good thing for the tractor.

A CHEAP AND RELIABLE HOUSEHOLD CEMENT

CURDLE skim milk with vinegar or rennet, press out the whey and dry the curd at a gentle heat, but as rapidly as possible. When perfectly dry, grind it to powder in a mortar, and mix it with one-tenth its weight of dry quicklime in fine powder. To every ounce of the mixture add five or six grains of powdered camphor. Reduce the whole to a fine powder by rubbing with back of heavy spoon or pestle, and keep in a wide-mouthed bottle well corked. When required for use, mix it into a paste with a little water, and apply immediately.

HUDSON

Offers a Finer Coach on a New Super-Six Chassis

The Coach

$1475

New Models
Speedster - - $1350
7-Pass. Phaeton - 1425
Sedan - - - 1895
Freight and Tax Extra

At almost open car cost the new Hudson Coach gives all the utility you can get in any closed car, enhanced by an even more attractive and comfortable Coach body. You will note at once its greater beauty, more spacious seating, wider doors and longer body. The lines are new, too. With this finer body you also get the advancements of a new Super-Six chassis. It has the reliability and economy of maintenance and operation for which everyone knows Hudson. To these it adds a new degree of smoothness in performance that will surprise and delight even those who best knew the past Hudsons.

HUDSON MOTOR CAR COMPANY
DETROIT, MICH.

Galvannealed
the Triple-Life Wire
Cuts Fence Costs in Half—

is GUARANTEED to last 2 to 3 times longer in any standard test and to have 2 to 3 times heavier zinc coating than ordinary galvanized wire. It should last many years longer; therefore, cost far less than you paid for your present fence.

"Galvannealed" wire amalgamates the rust-proof zinc coating INTO the steel; galvanizing merely lays it ON. That's what will make "Galvannealing" last so much longer than ordinary galvanized wire.

Stiff stay wires and well crimped line wires locked together with the famous little Square Deal Knot so tight they are guaranteed never to slip, make Square Deal a firm, long-lasting, economical fence. 50c copy of Ropp's New Calculator sent free to landowners who write for catalog that tells all about the new high test, Triple-Life "Galvannealed" wire.

The WINDMILL with a RECORD

The Auto-oiled Aermotor has behind it 9 years of wonderful success. It is not an experiment.

The Auto-oiled Aermotor is the Genuine Self-Oiling Windmill, with every moving part fully and constantly oiled.

Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet.

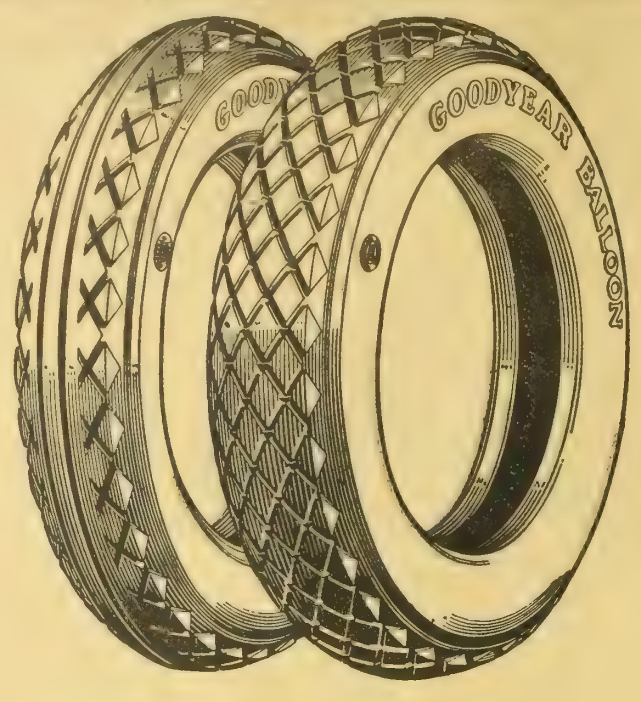
The Auto-oiled Aermotor is so thoroughly oiled that it runs in the slightest breeze. It gives more service for the money invested than any other piece of machinery on the farm.

You do not have to experiment to get a windmill that will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine.

Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production.

The Aermotor is made by a responsible company which has specialized in steel windmills for 36 years.

AERMOTOR CO. Chicago Kansas City Dallas Minneapolis Des Moines Oakland



Before long you'll be buying balloon tires—most everyone will. If your car is like most now in use *you can get Goodyear balloon tires to fit your present wheels and rims* —a big saving. Or you can get Goodyears in the smaller diameter 20- and 21-inch rim sizes. Either way you're sure of a real balloon tire, of tested and proved dependability

Development Congress Discusses Taxes

THE problems of taxation vied with those of reforestation at the Tri-State Development Congress which met in Duluth recently, and received the major portion of attention. 200 delegates representing Wisconsin, Minnesota, and Michigan listened to Dr. R. L. Ely, noted authority on agricultural economics, Mr. J. C. Watson of the Illinois Agricultural Association, and E. G. Quamme, President of Federal Land Bank, discuss this all important matter of taxes. Dr. Ely said, "Unless the present tendency toward governmental agencies and commissions, toward greater bond issues, and toward continued issuing of tax-exempt securities, ceases, land taxes will soon reach the point of confiscation—the government will own all the land and farmers will be tennants. 66 per cent of the annual value of land is now going toward taxes. The farmers and the railroads enjoyed the highest rate of taxation in Wisconsin during the past two years. Every attempt to "swat the rich" by dircet taxes result in a greater ax for the landowner and consumer. Disaster awaits us unless we begin to practice real economy in government, unless we stop asking the government to do more things for us—creating this paternalistic attitude—unless we return more to the indirect tax. In 1910 only 3 per cent of our revenue was derived from direct taxes, but in 1920 it was 20 per cent. Demagogs and politicians have been promising us from time immemorable that they will reduce taxes if elected but not a one of them has ever done so. We, ourselves, are at fault because we are continually urging some new commission or agency. The income tax is a fair tax and should be retained."

A resolution was drawn up and heartily endorsed, pointing out the impending danger as taxes on land approach the point of confiscation, urging the research to discover ways and means for more equitable distribution of taxes, and questioning the wisdom of further issuance of tax-free securities.

In the discussion on the utilization of the idle lands in northern Michigan, Minnesota, and Wisconsin, Mr. Herman Lundin of Michigan sounded the keynote when he said, "The hope of these states and the hope of the nation lies in the reforestation of idle land, preferably by private capital but by governmental agencies if necessary. Without more adequate fire protection or without a better system of taxation, however, we will never realize this hope." In this sentiment he was echoed by all prominent men present such as the deans of the three Agricultural Colleges, Dr. R. T. Ely, an authority on agricultural economics, and Rapheal Zon, Director of Lake States Forest Service Station. Mr. Zon said, "With only three states east of the Mississippi River showing an increase of acres of land put into farms over those abandoned, it is useless to talk of putting these acres of marginal land to better use than forestry. Rather than permit them to be idle let them produce a crop of lumber which will be valuable enough in a generation from now." Another speaker pointed out that even in Wisconsin, the foremost in colonization methods, last year 90,000 acres of farm land was abandoned while 100,000 acres were being incorporated into farms. In most cases this better farming land was found in so-called cut-over country. He pointed out that all lands could be classified as good agricultural land, as marginal, or submarginal. During emergencies, such as the World War, the marginal lands are brought under cultivation and are made to pay because of the high prices, but it is an economic waste to work them during periods like those we are in now. The submarginal will probably never be used for agricultural purposes and should be utilized for permanent forest while the marginal should produce a crop of early maturing timber and may be returned for agricultural purposes if conditions are favorable.

Dr. Ely said, "We deplore the present paternalistic tendency of our government—a government that is more and more doing the things for us that we should be doing ourselves. It is a dangerous thing but it is the only way that we will have the proper reforestation unless our states furnish adequate fire protection and cease to penalize, by severe taxes, the growing of timber." In a carefully prepared speech Mr. Lundin described the plan of taxation of forest lands as incorporated in the bill which he introduced in the Michigan Legislature of 1923. He propose that the land be taxed at 5c an acre but that no tax be levied against the growing timber until it was harvested when the tax would be as many per centums as the years the forest had been exempt. In other words, if the timber was harvested 25 years later, the tax would be 25 per cent of the value. To recompense the townships for the loss in taxes the local townships could borrow, the money to be returned when the taxes from the lumber harvest came in. "Such a system of taxation," said Mr. Lundin, "is being used in the Scandinavian countries with great success. It brings about reforestation by private individuals as a regular crop, it provides wealth for the townships in later years, it preserves our game and fish, it provides places for recreation and rest, and it benefits agriculture by bringing about a better distribution of the rain-falls." "But", he concluded," We must have fire protection." His plan met with the approval of those present and will probably be advocated in all three states as the uniform law for taxing lands devoted to forestry.

Dean R. S. Shaw of Michigan Agricultural College took a prominent part in the discussions. In a splendid discourse at the banquet he said, "There never was a more critical period ahead of the American people as far as agriculture is concerned. The success of this great industry in the past gained through exploitation of the soil. The three things that will contribute to the success of the nation or any nation in the future are the fertility of the soil, adequate transportation, and busy workshops. We must see to it from now on that real farming keeps away from the undesirable system of exploitation."

Dean Coffey of Minnesota sees a great industrial development in Lake States provided the raw materials, particularly forest products, remain available. He said, "Agriculture and forestry are basic to future prosperity and greater development of the three states. They should supplement each other; the settler should grow, utilize and market timber the same as he does other crops. We foresee a great industrial development for the region, but in order to achieve this development the intelligent utilization of land is necessary, for industrial development is contingent upon a supply of raw products, and at least half of our raw products for manufacturing in the United States comes directly from farms and forests.

"We are the great playground of the Middle West. To be permanently successful in attracting tourists we shall have to make intelligent utilization of land."

Dean Russell of Wisconsin pointed out the relations between industry and agriculture. He said, "Fat cities cannot build on a lean countryside."

It seemed to be the consensus of opinion that a great future awaits the Lake States if (1) taxes on land can be reduced, (2) our idle lands utilized by growing timber crops, (3) continued adequate rail transportation coupled with increased water route facilities.—E. J. Leenhouts.

OUR BOOK REVIEW

(Books reviewed under this heading may be secured through The Michigan Business Farmer, and will be promptly shipped by parcel post on receipt of publisher's price stated.)

The Potato.—By William Stuart. This book explains the culture, cultivation, harvesting, shipping, storage and marketing angles—enumerating conditions peculiar to the North, South, East and West. Various planting methods, influence of the soil, temperature, moisture, varieties to grow, crop rotation, kind and amount of seed to use are made intelligible with plain, everyday text. New and up-to-date potato machinery pictured in action. This complete course in potato culture is a good investment for the young farmer planning to grow his first crop: for the student, shipper, buyer, seedsman, gardener, and practical farmer who wishes to keep abreast of the latest developments. Published by J. B. Lippincott Co. Price $3.00. Postage or express charges extra.

Uncle Rube Spinach Says:

WOMENS RIGHTS, ETC.

SOMETIMES I git letters from sev'ral an' var'ous women askin' 'bout women's rights an' vice versa, or what ever they call 'em—have they got all their rights, what are they, how'd they git 'em an' what are they for; in fact, lots of women don't seem to know what they want nor what rights they've got.

You know there's mightly few women, if they'd stop an' consider the matter, that'd want to have jest the rights that mere men have got. Fact is, if we'd pin women down to men's rights they'd raise—well the dickens, blazes an' everything. Why folks, if women was pinned down to jest the rights men has you an' I, an' mebby Bill Bryan an' Coolidge 'ud be 'bout the only ones that could live with 'em or nigh 'em now 'an forevermore.

Jest cut 'em right down to our rights—well, jest make 'em pay alimony for 20 or 30 years, let 'em pay a few breach of promise things, give 'em a fine of ten thousand or more dollars for kissin' one of us unprotected male men, send 'em to jail if they speak to us on the street 'thout a pleeceman's introduction. put 'em in a padded cell 'thout pads if they cast vampy eyes onto us—well they do them things to men, yes even for less'n anything like what I've mentioned. Why a man can't even slap a woman's face 'thout bein' haled 'fore a Justice an' fined or sent to prison for life or longer. Now you know a woman can slap a man ragged 'thout no provocation a tall hardly—jest in defense of her honor or whatever it is she slaps him for an' he ain't got a word to say 'bout it—he has no honor to be mussed up or whatever they do with what a man ain't got. A woman can git excused from jury duty on 'count of sex—a man can't do that. Women can run away from their husbands an' the law can't touch 'em for it. Let a man try runnin' away from his wife and he lands in jail. Wife can hold one-third interest in her husband's property—a man can hold nothin' but his temper an' hardly that.

Women can sue for divorce an' man has to pay all expenses—even in the marriage game itself. Who pays for the license? Who pays the preacher? Who buys the weddin' ring? Who keeps it if the thing its for busts up? Equal rights! Equal'ty of the sexes! Dear folks, there ain't no such animal known—there couldn't be—not in ten thousand years. An' if women 'ould only study the matter jest a little while they'd see it wouldn't be good for 'em to have any such thing. Fact is, they wouldn't want it at all.

Sad indeed 'ould be the day for this ol' world if men and women could be on an equal footin'—women would have to come down off'n the high pedestal; (what ever that is) they'd have to lower themselves by a good many degrees from where men themselves have placed 'em.

Woman with all her lovliness, with the great mother love, the motherhood that belongs to her alone, can never become man's equal. She must always remain his superior. In all the finer things of life woman is at the top. She makes the home bright, she is the joy of life, she has more nerve, more hope, more love than any man can ever have.

Yes by gravy, she has more privileges than men an' she should o'rt to have 'em for she is the maker an' the finisher of all that is good an' noble in man's life! An yet I'm kinda sorry to say, lots of our fine, nice women ain't satisfied with what they've got—they seem to want to come down to men's level, to be on an equality with them. Oh my dear women friends, jest thank our good God that you are not man's equal—that you are so much above him in all that is good an' lovely that he can never hope to reach your level.

I am not writin' this in any sentimental mood—I don't like women 'specially well myself, but I know somethin' of the lovliness of 'em—of the mother heart that's in 'em, an' I am sayin' to you an' every lady 'at I never want to see women on an equality with men unless men get on a higher plane than they've ever been an' I guess mebbe higher 'an' they ever will be.

Womans rights mebbe is a nice thing. I'll say its all right an' they've got a lot more'n we poor cusses'll ever have. I'm glad they got 'em—but equality! No my dear women of the she sex, I don't never want to see no such thing as that, least-wise not into this world as she is today. Cordially yours.—UNCLE RUBE.

FOR THE BABIES!

Detroit, January 18, 1924.
Michigan Business Farmer,
Mt. Clemens, Michigan.
Attention Mr. Geo. M. Slocum.
Gentlemen:—

A few days ago I had the pleasure of receiving your check for $189.00 through Mr. Richard Koehler, which, by your noble efforts, you collected for the German babies feeding fund. The same was immediately forwarded to Germany for the purpose indicated.

On behalf of the committee I wish to offer sincere thanks for your action which we notice was entirely voluntary, and coming from a non-German publication, it is doubly appreciated. Your sincerely.—Chas. L. Beck, Sec'y., German Child Feeding Campaign, Detroit.

ARE FRUIT GROWERS WILLING TO PAY MORE FOR TREES?

(Continued from Page 4)

and, if he is making an honest pack, he would have to pay for service not needed. Mixing of varieties needn't occur where experienced men do the packing.

4. What about replacement of varieties, if under certification some should slip through that were not true to name?

5. If the inspector were the least bit in doubt, he would err on the side of safety and throw out some trees of known variety.

Last winter at a meeting of the Ontario fruit growers, it was stated that some nurseries in that province as well as some in the states, used to practice substitution of varieties; if they had not the variety asked for, they would give what they considered the next best thing.

That there was truth in this statement is evident from the experience related by one of the Ontario men present. He said that in 1912 he bought 1,000 Morello cherries, and when they came into bearing, there were only 800 Morellos; there were 100 Early Richmond trees and 100 of other worthless varieties. In 1913, 200 Monarch plum trees were bought, and 120 turned out to be Green Gage. In 1916, he bought 500 Bartlett pears, and 75 turned out to be Bosc.

Professor Macoun, horticulturist at the Ontario agricultural college, says they have been studying identification of apples for several seasons and have made application for a man to go into growers' orchards and pick out trees not true to name.

Can this work be extended to other fruits than apples? Yes—and it is just as essential with other fruits, if not more so. It apples turn out to be worthless they can be topworked, but this is not true of peaches, pears, plums, cherries.

In view of all these facts, if I were a fruit grower (and I used to have a large orchard) I would want certified trees. I believe other growers would pay the extra cost for them, too. And if I were a nurseryman, I would try to give the growers what they want. A satisfied customer you know, is the best kind.

Wrong Name

A local doctor recently was paid a visit by a young negro who complained of pains in the chest, from which he could get no relief. The doctor made ready for an examination, and applying his stethoscope, said:

"I don't like your heart action. You've had some trouble with anigina pectoris, haven't you?"

"You is kinda right, doc," said the young exaggerated brunette, grinning sheepishly, "only that ain't her name."

Zinc Insulated TRADE MARK **Fences**

No Extra Cost

INSULATED AGAINST RUST

40% TO 100% MORE ZINC

AMERICAN, ANTHONY, ROYAL,
NATIONAL, ELLWOOD, U. S.

Our New Wire Has Double the Heat Treatment in the Zinc Bath—the Proper and Only Way to Give a Heavier Coating with Lasting Quality

This new galvanizing *insulates* the wire with zinc, or spelter. The wire passes through a long molten bath where it accumulates this greater protective coating, *impregnating the steel.*

You know, of course, that all fence wire is galvanized—to protect it from rust—to make it last longer, in all kinds of weather.

Perhaps you *don't* know that there's as much difference in galvanized coatings as there is in the thickness of bark on trees.

It is not only the amount of zinc applied that gives the wire long life, but the coating must be uniform and even to be durable *and made inseparably a part of the steel.*

The temperature of the bath, the great length of time the wire takes to pass through it, the great amount of zinc that can be applied by this process without cracking or peeling—all these are important factors.

Our Zinc Insulated Wire Fences Have 40% to 100% More Zinc Than Other Fences

Our Zinc-Insulating process perfectly protects the wire. It repels rust. It protects the wire from the oxygen in the air and the storm elements. It safeguards the steel.

By this process the zinc is practically a part of the steel, giving it a super-protection that adds many years to the life of the wire. As a result, OUR WIRE FENCE WILL OUTLAST ANY OTHER WIRE FENCE MADE, and its use greatly reduces your fence cost per year—to say nothing of the better protection its staunchness and sturdiness insures.

All our Farm Fences — of every brand — American, Royal, Anthony, National, Ellwood and U. S. — are Zinc-insulated—*at no extra charge.*

Some wire fence makers market several qualities—a very small percentage of their to al production bearing even good galvanizing, and that usually sold at a marked price advance. It all looks alike. You can't tell the grades apart. We make one grade only.

When you buy this ZINC INSULATED FENCE you are purchasing added years of fence service, without extra charge.

Your local dealer sells Zinc Insulated Fence and we stand back of him for your protection. We prepay the freight to the dealer.

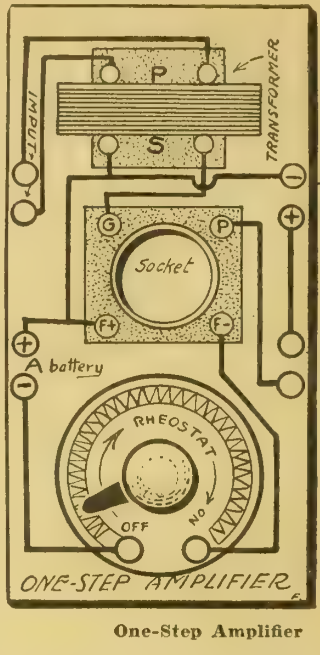
RADIO DEPARTMENT

EDITED BY J. HERBERT FERRIS, R. E.

HOW TO BUILD A ONE OR TWO STEP AMPLIFIER

WE will now tell you how to build an amplifier which can be connected to the receiving set previously described. This will enable several people in a room to hear what your radio brings in.

The type of amplifier that we are going to describe is one that's called an audio-frequency amplifier; this is because it amplifies or increases the audible sounds that your detector and receiving set pick up. There is another type of amplifier that is for radio - frequency amplification, this we will not take up at present as we are more interested in getting louder results from the set that we have already built.



One-Step Amplifier

One step of amplification will add quite a bit more volume to your results but the addition of a second step adds so much greater a volume that it will pay to build a two step amplifier in preference to a one step. Directions will be given for both, (and as we realize that the pocket book is a governing factor) that if you cannot build a two step by all means build a one step.

List of Parts for One-Step Amplifier and Approximate prices

1 Socket for WD-12 tube	$ .75
1 WD-12 Vacuum tube	6.50
1 6-ohm rheostat	.75
1 Audio frequency amplifier	4.00
6 Binding posts	.50
1 22½ volt "B" battery	1.50
1 No. 6 dry battery (three of these are better)	.50
	$14.50

For a two step amplifier you will need 2 or each of the above items except the binding posts, "B" battery and the No. 6 dry cells.

Remember that on your detector you are only using a "B" battery of 22½ volts, whereas the amplifier will need at least 45 volts. The battery you use for your receiving set is also used in the amplifier, both the "A" and "B" batteries.

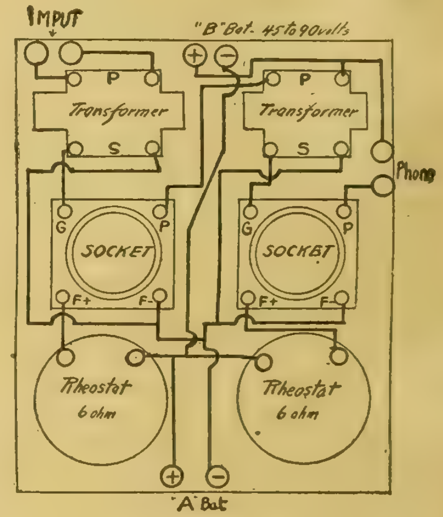
You will also need some short pieces of "bell wire" for making connections and a piece of wood for the base and another for the front panel.

We are showing two diagrams with this article, so that if you have ordered the parts for your amplifier you can build either one-step or two-step amplifier to add to your receiving set.

As stated before, we wish to emphasize it, a one-step amplifier adds very little more volume to the received signals, whereas the second step adds a very great deal more in proportion. The one-step will make music and voices that ordinarily are barely hearable loud enough to understand perfectly in the telephone receivers. The addition of a second step will make everything too loud for the telephone receivers, but will enable you to use a horn attachment to your receivers so that a roomfull can hear what is going on. It also will enable you to attach your receivers to your phonograph so that you will get the benefit of the specially designed horn that all talking machines have. You can buy (if you wish to spend the money) a regular loud talker (or speaker) and get volume enough to fill a hall or church or school.

In the list of materials given for the amplifier, we have only given one "B" battery, stating that with the one you have for your detector that you will then have 45 volts in your B battery. An amplifier will give good results with only 45 volts, but 67 to 90 volts will give much greater amplification in volume of sound received. So for loud results you will need three or four B batteries.

Do not buy 45 volt batteries or 90 volt batteries, for the reason that if any part of it proves defective the whole battery is ruined. If you buy separate units of 22½ each and connect them in series, you can see that if one set goes bad you have only lost one battery of 22½ volts instead of 45 or 90 volts. This is much easier on the pocket book.

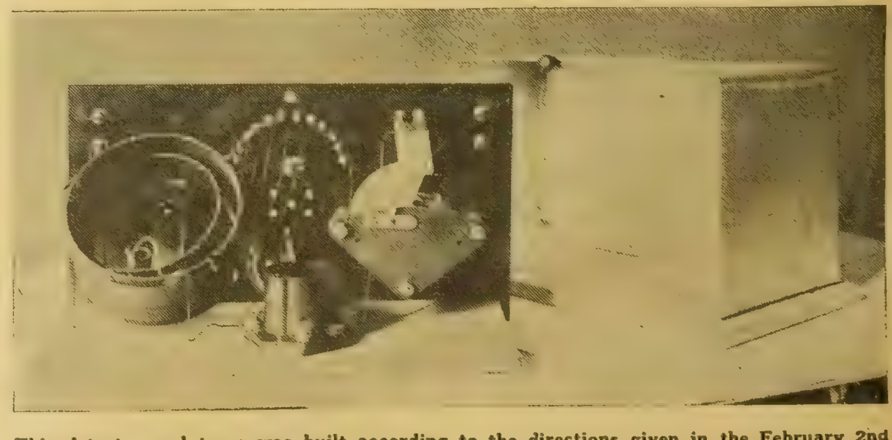


Two-Step Amplifier

Now to work!

Look over the diagram carefully, arrange all the parts approximately as shown, then make each connection from the binding posts to the instruments in turn. Solder all joints or if placed under nuts or screw heads be sure that the wire is clean and the screw head is clean and then tighten down good and tight. Good contacts depend upon the thoroughness with which you keep the parts clean, the care taken and soldering wherever possible.

It is not necessary to tell you how to make each connection, but it is necessary that you follow the diagram carefully. We have used graphic representations of the

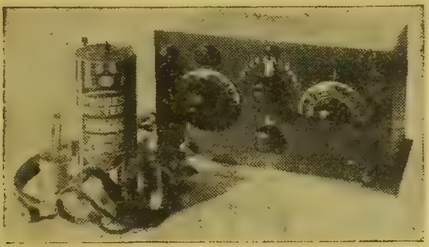


This detector and tuner was built according to the directions given in the February 2nd issue, except that as I use different tubes I have added the rheostat recommended in the February 16th issue. This shows how the instruments are placed.

different parts instead of the conventional symbols.

The binding posts and the rheostat are mounted to the panel which is fixed to the base with screws. The panel and base should be treated with parrafin or shellac as previously used on your detector set. Hard rubber or bakelite is much better. The exact position of the binding posts and other parts is not fixed but should be followed fairly closely. The shorter the wire leads are the better the results.

To connect this amplifier to your receiving set do as follows: Connect your A battery to the posts marked A, the positive to the positive post and the negative to the negative post. The B battery is connected next to it's posts. Your telephone receivers are removed from your receiving detector set and attached to the amplifier post marked "Phone" and two wires are run from your detector from the posts that you just took the telephones from and connected to the 2 posts marked "imput."



With this receiving set, which was described in our issue of February 2nd, I have heard stations 1,000 miles away.

To tune in, turn on the current with the rheostat of your amplifier about one half way and then tune your detector set as you previously did before adding the amplifier. You should now hear any broadcast much louder than before, it may be a little "mushy" but by adjusting the rheostat of the amplifier up or down a little you will clear up the voices so that they will sound natural.

Always burn your bulbs as low as possible, just so that you get the results, it does not pay to force them too high as the life is shortened and the batteries are used up sooner and above all the results in tone or sound are not satisfactory.

GOOD NEWS FOR YOU

The price on vacuum tubes for detectors and amplifiers have come down and instead of paying $6.50 each they can be bought for $5.00 to $5.50 each.

A VOICE FROM OUT OF THE SNOWBOUND NORTH

We are buried under about four feet of snow up here and if it wasn't for the Radio we would just about give up living on the farm as a bad job, but since we got it we do not care whether the snow gets to the eaves or not so long as it does not cover our wires.—Mrs. C. A. B., Hiawatha, Mich.

Questions and Answers

SEND IN YOUR QUESTIONS

I recently read a report that farmers were not taking much interest in radio but from the number of letters that pour into my office each day I am sure that the report did not refer to the farmers of Michigan. So far we have been able to publish only a few questions and answers due to shortage of space, but every question that comes in receives my best attention and a personal reply without charge to the reader. We hope to have room for more of these in our department in the future as many ask questions that are in the minds of many who are interested and the answers will prove of general interest. Send along those questions as I will answer them by an early mail. Let's get a radio receiving set while it is good "radio weather." Or if your set is not working right maybe I can help you.

SENDS FOR PARTS

I am enclosing my check for $25. Will you please purchase for me, and send by parcel post (or express if it would be better) the complete equipment listed in M. B. F. of Feb. 2nd, for building a radio receiving

RELIABLE ADVERTISERS

We will not knowingly accept the advertising of any person or firm who we do not believe to be thoroughly honest and reliable. Should any reader have any cause for complaint against any advertiser in these columns, the publisher would appreciate an immediate letter bringing all facts to light. In every case when writing say: "I saw your advertisement in The Michigan Business Farmer!" It will guarantee honest dealing.

"The Farm Paper of Service"

KEEP COOL-IDGE!

THERE is little doubt but what the Republican rallying cry for this year's campaign will be "Keep Cool-idge!" Calvin Coolidge is famed for his especial characteristic of immunity to the popular hysteria of the moment and although small in stature he has a David-like capacity for aiming straight with a single word at the vulnerable point of his opponent.

Into a calm political sea in which the bark which bore his colors was riding peacefully to a harbor of certainty for re-election which seemed ahead only as far as November, came a veritable typhoon in the shape of the Teapot Dome oil graft exposure. The Democrats looked on while the fleet of Republican cabinet officers were being tossed high on the waves of public opinion and finally dashed one by one on the rocks of sacrifice, but their contentment was shortlived when the cyclone switched its tail, as cyclones will, hitting the Democratic pride of the fleet so hard a blow that it is doubtful if the most able politicians of that party will be able to resurrect the good ship "McAdoo" from the dephths where it now lies.

Michigan had something at stake in all of this because Edwin Denby, Secretary of the Navy, is one of the national figures whom we are proud to point to as a son of this state. That he has been the "goat" in the present controversy is easily apparent to any man who knows the political game and how it is played, and that Calvin Coolidge should have defended his cabinet officer against the unwarranted attacks without the opportunity of a fair trial has only added to his standing with the sane thinking element in this state.

Calvin Coolidge, himself a Vermont farmer boy, with a keen knowledge of the hardships of his people on the rocky hillsides of that state, has shown an appreciation of the agricultural situation and a desire to remedy it which have been noted with growing approval by the farmers of this country. That he has not been led astray by radical senators who claim to represent the farming interests of this country is a proof that he can keep cool and a reason why the voters next fall are quite apt to rally to the banner "Keep Cool-idge!"

RADIO MAKES WINTER FLY

A LETTER just received from a lady reader at Hart, Michigan, closes with these lines: "The snow is piled high here but it doesn't matter so long as it does not cover the wires to our radio. With it the whole world is brought through storm, sleet, and snow into our living room, last night we listened to our President as plainly as if he had been on our own telephone."

One by one the terrors of farm isolation are being eliminated by science and invention. We have continually stated in these columns that radio was destined to be one of the greatest developments for improving farm life and keeping the boys and girls on the farm that has ever been divised. We considered that the radio ranks only second to the automobile and truck in its importance to agriculture.

It is easy to see from the correspondence addressed to the radio editor of THE BUSINESS FARMER that the interest in radio has jumped foreward by leaps and bounds this winter. We receive ten letters to every one we received a year ago, and wherever a radio is introduced on the farm it becomes the opening wedge which brings any number of outfits into each community.

A radio set may be purchased at low cost and assembled by the men and boys on the farm. J. Herbert Ferris, our radio editor has promised to help any reader of THE BUSINESS FARMER who assembles such a set to make it work satisfactorily; in other words, if you build a set according to his suggestions and it does not work satisfactorily, you may send it for him to test it out and tell you where the trouble is or correct it for you. This is a very generous offer and is made simply because there is no man in our state more keenly interested in or who will have had more to do with the development of radio on the farm than our own radio editor.

Do not hesitate to write him on any subject regarding radio. No matter how simple your questions or how intricate, we want to continue this publication as the leader in the development of this wonderful boon to the farm home which we from the first have pioneered.

THE WILLIAMS BILL

REPRESENTATIVE ARTHUR B. WILLIAMS of the Third District, Michigan, has undertaken a task which is to be commended and the plans under which he proposes to secure the results will well bear the scrutiny of every man interested in the greatest problem in American agriculture today, namely, that of safe marketing.

That Representative Williams has a keen conception of what is most needed is proven in his recent statement that:

"The critical phases of the farm situation are dealt with by a number of bills now pending in congress designed to give temporary and immediate relief. The bill that I have introduced is one intended to correct an underlying difficulty and to assist in affording permanent relief to the farmer.

"If the farmers of the country in 1920 and during the period since then had been thoroughly organized they would have been in a position very largely to have protected themselves. Instead of continuing on a war basis of production they would have curtailed to the probable needs for domestic consumption and export. Instead of doing that with reference to certain products at least, they have kept right on producing regardless of the market available to them.

"The first step in the matter of governing production is to have a well organized sales agency that is constantly in touch with the nature and volume of demand. A good sales organization in any business directs and has everything to say with reference to the kind and quantity of production. In this the farmers have been lacking. Their business, by and large, should be viewed from the same standpoint as that of the manufacturer. In times of lessened demand the manufacturer usually cuts down his production, when a lesser volume will bring more net profits than a larger volume will at ruinous prices.

"The bill that I have introduced has two general aspects. It provides a well balanced federal board to supervise and encourage the development of cooperative marketing organizations and in addition it is authorized to study the whole subject of marketing of farm products. To make recommendations from time to time to strengthen the plan undertaken and report as to conditions both in this country and abroad intimately affecting the marketing of these products with estimates as to the volume and character of products that should be produced by the farmers in any given year.

"This bill covers new ground, and I am quite aware that no doubt many valuable suggestions can be made with reference to it. I invite these and later may find it necessary to amend the bill to embody some of these ideas."

Cooperative marketing by the various branches of agricultural production is today a success. The apparent need now is a closer co-relation between the producers in the various states; in other words, there is no need for the bean growers in Michigan to proceed along individual lines if they can secure the cooperation of the other bean-growing states, although it would probably be advantageous for them to maintain their own individual selling relations and the matters of production discussed and mutually agreed upon between the various state units.

The Williams Bill coming from a Michigan representative deserves especial attention from us, and we feel that th farmers of the state and the farm organizations who represent them should go on record regarding this bill immediately and either give Representative Williams their hearty support or point out to him wherein this bill does not meet the needs as he has expressed them.

WOODROW WILSON

THE eagle has passed on! . . into the blue . .
And all the chattering of the sparrows dies.
They could not bear to see the eagle rise
Beyond the reaches that their small wings knew,
Above the housetops they could compass too—
But though they strove to blind the eagle's eyes
With fluttering wings . . to stay him with their cries,
He rose and passed—above, beyond their view.

An eagle always is a lonely one—
The far heights call to him and he must go;
But little birds cannot look on the sun.
And what an eagle knows they cannot know . .
When he is gone the small ones know, at last,
That there, above their heads, an eagle passed!

—By Roselle Mercier Montgomery.

WEXFORD FARMERS POINT THE WAY

IF you have been wondering how to get the folks in your neighborhood into a spirit of neighborliness which would make your life happier and more contented turn to page 4 of this issue and read the story of what they have done over at Manton.

There is not a community in Michigan where there is not a school house, and there is not a school house which is not available for the very purpose to which this one has been put. A community proposition such as this breaks down all the barriers of creed, secret fraternity or clanish organizations and leads all to a common footing through which to enjoy and profit by their social intercourse.

We heartily commend these Wexford County farmers for having helped to blaze a way.

THE TAX TUG O' WAR

ONE does not need to be a political diagnostic- [illegible] determine that the real reason why the Democrats and Republicans are enjoying [illegible] a merry tug o' war over the tax situation is because 1924 is an election year.

The one thing which all classes, including the farmer, capital, labor, and all other divisions of society, are solidly behind is a program which will reduce taxation in this country.

It should also be easily apparent that the one sure way to reduce taxes is to lower the cost of government operations. It is encouraging to know that this has been carried on more or less successfully, not only in the state, but in the national government during the past two years and we should not pass in this discussion without giving some credit to the men who have been active in making the present tax reduction plans even possible. The budget plan is largely responsible for these economies and that the national government should find itself with a surplus of funds with which to carry on the work of 1924 and, therefore, the possibility of eliminating the so-called "nuisance" taxes and to reduce the income tax is indeed commendable.

We doubt if the present war over the exact percentage of reduction in income and surtaxes will seriously affect the average farmer in Michigan. It is our opinion that there are many taxes which the farmer pays directly or indirectly which affect him much more seriously than that of the so-called income tax, which is applicable to so small a percentage of the men who till the farms of this country. The farmer would be quite willing to pay an income tax if his income were large enough to make such a feat possible, but during the last two or three years this particular tax has been the least of his troubles.

From our standpoint our chief interest in is a direct taxation of some sort which will spread the load evenly. We feel that agriculture was unduly burdened under the present system of taxation, and whether it be single tax, sales tax, or income tax, the fact remains that some new plan must be devised which will eliminate part of the load which the farmer is now asked to carry.

PUBLISHER'S DESK

M. B. F. READERS NOT SUCKERS!

Dear Mr. Slocum:—I am not considered a very stingy person and I am going to live up to my reputation. I have just received something that promises something good and I want to pass it along. I know you are after the frauds and I should think they would find out that the readers of old M. B. F. are not suckers. Enclosed you will find some good bait from Mr. Moriarity, of Chicago. I enjoy reading the M. B. F. very much. It is certainly clean in advertising and everything else. Very Cordially yours, W. G. Winslow, Selkirk, Michigan.

THE circular enclosed by Mr. Winslow, offered him a wonderful proposition if he would simply return a printed card to the address in Chicago. We are glad to know that he, with other readers of our page, is turning the tables and laughing at the city "rubes" who think they can sell gold-bricks to readers THE BUSINESS FARMER. Sooner or later we'll have them black-listing Michigan as a poor state in which to sell patent medicines, gilt picture frames, oil stocks and canvas automobile tires—then what will we have to smile over?

OFFER SHUT—IN $100 A WEEK

Dear Sir:—Am certainly interested in your articles of the Publisher's Desk and in fact the whole of THE BUSINESS FARMER which my father takes. Have been on the sick list for the past two years with operations and other trouble, but am gaining fairly well now. So I am writing you if you would advise me to write show cards for the Sho-Rite Sign System, which is located in Detroit. I have circulars from them and they want me to take their course, which is $35 cash or $45 on easy payments, and they guarantee steady work at home or get one a job as show card writer, and they say I can earn from $15 to $50 a week spare time, and also that a person can in time earn as much as $100 a week. It sounds fishy, so I am asking you about it. They have sent me a design to work out which I did, which they sent free. You will find the letter enclosed what they say about it. If anyone inquires about the Nile Art Company, Fort Wayne, Ind., don't recommend this company to them for they only got $7.75 out of me for their painting outfit with which to paint pillow tops and lamp shades. I painted two pillow tops and three lamp shades for which I was supposed to get $6.25, but instead they returned the pillow tops and shades. The way they first explained to me was that I was to buy the paint from them and they would furnish the goods to paint, but when they returned the pillow top and shades they wanted me to buy the designs from them at 60c a piece, and all the profit that I would get out of it would be the work. Well I guess a person has to be a fool first in order to get wise. Put this in your paper so others can read it. What kind of work would you recommend for me, as I am unable to do farm work and am only 20 years old, but would like something with a future. A subscriber and always will be.—

IF the Publishers Desk can just once in a while save a few dollars for some unfortunate who without its help might have been victimized, we shall be mighty well pleased with our work.

This sign-writing scheme was at one time worked entirely from Canada, now it has been taken up in Detroit and other cities. There is no question but what someone with latent artistic ability might learn to write signs, but the trouble with those schools, like most of their kind, is that they will take anyones money and promise them jobs at unheard-of wages just to get their tuition fees.

Sometime we want to find a correspondence school which offers the entire course and agrees to take their pay out of the first weeks salary which they so glibly promise the would-be student! If you find one, no matter whether they promise to make you play a violin like Fritz Kreisler or write songs like Irving Berlin, we advise you to take the course, because you have nothing to lose and much to gain.

Our advice to this ambitious young unfortunate is that he take up book-keeping or typewriting at some nearby business college.

MAKING APRONS AT HOME

Dear Sir:—I would like to have you tell me if you consider the "Rosemary Apron Company" whose address is "Asbury Park, N. J." a reliable firm. I am in need of work which I can do at home, and am a good needlewoman of ordinary kinds of sewing. This is their offer: They agree to furnish materials, patterns, thread, pay postage and all essentials for bungalow aprons which I am to make at home. For this service they agree to pay $6.50 to $8 per dozen when the aprons are sent to them finished. But first I am required to send them $1.50 for which they will send me material for one apron to make up, and send back to them, so they will have a sample of my work. Do you know anything about them, and does it sound "On the square" to you? If their offer were genuine I would be able to do a great deal to help myself the remainder of the winter.

I DO not have very much faith in any of these "work at home schemes" and I wrote of this particular one in this column some time ago, but had no comments on it. My suggestion is that you write this company and ask them to give you the name of a satisfied worker here in Michigan. If they were really anxious to secure your services, they would not ask you to make a remittance in advance. I would not send them any money.

WRITING "MOVIES"

Dear Sir:—I have been a subscriber to your paper for two years now and am coming to you for some advice. We moved down here from our farm at Chief, Michigan, last spring, and just before coming here I wrote to the Palmer Photoplay Corporation for their questionnaire and test to see if I was qualified to write scenarios. They sent me the questionnaire which I filled out and sent back to them, and I am enclosing the letter and rating they sent me, inviting me to enroll for their course of training which would enable me to successfully write photoplays, and they were selling agents for any plays I might write, good enough to sell to some producing company. They want $160 for their course of training and I could pay it on the basis of $10 down, and $10 per month. What I wish to know, is the Palmer Photoplay Corporation a reliable concern and would I be the loser if I enrolled for their course? I would like to take up this kind of work and I know of no other way to obtain the desired information concerning photoplay writing. Could you please inform me

(Continued on Page 31)

"FORTY YEARS OF GRAFTING"

BEGINNING in our March 15th issue we will publish "Forty Years of Grafting" It is the astonishing confessions of a past master in the art of bunco. A man who lived by his wits for forty years of up and downs—flush one month, dead broke the next—relates the history of his wasted life. In a half dozen articles he exposes the methods of professional fakers, swindlers and crooks, whose clever tricks give color to the statement that "a sucker is born every minute." And these articles make SOME story, as you might guess.

Millions of dollars is the annual harvest of these gentry—and a good share of it comes from those who ought to know better, but learned their lesson too late. The young folks, especially, should read these articles. Make sure your own boys and girls are posted so they will be on their guard against the tricks of the slick grafter.

10,000 miles guaranteed and yet you save ⅓

Riverside OVERSIZE CORD Tires

Riverside Oversize Cord Tires are guaranteed for 10,000 miles and in actual performance give up to 18,000 miles. Can any other tire do more?

So why not save one-third and use Riverside Cords? What more will any other tire do? Then why pay more?

And this 10,000 miles service is backed by a guarantee that has stood for fifty-one years. Does any other tire carry a better guarantee?

Quality is built into Riverside Cords

This guaranteed mileage is built into Ward's Riverside Cords. High treads, thicker and stronger, of tough, live rubber.

This exceptional quality of Ward's tires alone has made us the *largest retailers of tires in the country*. The tires themselves have convinced thousands that Riverside Cords are best.

"I have used Riverside Tires for the past four years. I have never had to send a tire back for adjustment.
I have tried several different highly advertised makes alongside of Riversides and have not found a superior."
Walter M. Schworm, Nessen City, Mich.

You Don't Risk One Cent

Before you buy any tires send for Riversides. Inspect them. Compare them with tires selling for $5.00 or $15.00 more.

Send them back if you do not find them the equal of any first-quality oversize cord made. We will refund your money.

These prices buy 10,000 miles of service—and more.

The Experience of a Cletrac Owner

Post, Texas,
January 17, 1924.

Panhandle Sales Company,
Amarillo, Texas.,

Mr. G. L. Kirven.

Dear Sir:

After thoroughly trying out the Cletrac Model W 12-20 Tractor for one year, will state for the benefit of farmers who may be concerned that cost of operation for ten hours is $3.00 at present prices.

I average eight acres per day flat-breaking at a cost of 37½ cents per acre. Planting with three row Lister, 20 acres per ten hour day at cost of 15 cents per acre.

I will prove these figures correct to any farmer who will visit my farm and will say also that my 14-year-old boy cranks and operates my tractor with perfect success, and will further state after using the tractor one year, that I have n't had one minute's trouble, and no additional cost, not even cleaned one plug, and will further state that I had a mechanic to drop the pan and he found bearings in A-1 condition, all tight.

Send any reference to,

THE PERISHING WORLD

A SERMON BY REV. DAVID F. WARNER

TEXT: "And the world passeth away and the lust thereof; but he that doeth the will of God abideth forever." 1 John 2:17.

WORLDLY things pass away to make room for the things that abide. Our childhood days are no more. Father and mother are gone, or are seen to go. We have lost the friends of other times. All our yesterdays are over. Many of these things have been sweet and fragrant, but they have decayed and died.

The whole world is being heaved and changed today, perhaps, as never before. Between the ocean shores and the limits of the poles, everything is in constant flux. Tomorrow, in all the civilized world, nothing will be as it is today. In the last decade, the world has known desolation on sea and land, in the air, and under the earth. Millions of men, large fortunes, cities, homes, and churches, have passed away never to be again in a material world. How emphatically, these events and judgements speak of a transitory existance here! And it seems the apostle means this lesson for all ages: fathers, children, and young men. Cf context. All are in danger of being drawn away with a perishing world.

This transiency has a twofold aspect. "The fashion of the world passeth away." 1 Cor. 7:21. Why? Because, "The whole world lieth in the evil one." 1 John 5:19. Everything visible and material, of course, passeth away. But also, things immaterial: tendencies, notions, and aspirations which are divorced from God. And here is a nice, fine sense, in which your possessions, when connected with the purpose of God, will retain their value for you over there. Because you have used what Jesus called the "mammon of unrighteousness" (wealth) to promote Christian fellowship and good-will on earth, you are accepted into holy habitations which are to abide.

In a tragic sense, the Eternal God has been proclaiming to all peoples and nations thru recent years, that the world is passing away. But this was divinely ordained from the beginning, and the only mournful thing about it is, that men and women choose to perish with it. "Demas has forsaken me, having loved this present world," says Paul. Well, there is a man near you that sacrificed home and loved ones for a moment's gratification in sensual pleasure, and you said, "What a fool!" But the man, who, not momentarily or grossly, but continually and in a more respectable sense, sets his affections on this world and its fleeting gains and pleasures, is the bigger fool. The Bible says so, and I wish it might burn into our hearts.

"And the lust thereof." Here we are reminded that evil desires and propensities, even, are fleeting and ever changing. Human experience proves this. To take it in a worldly sense, those things we once loved are no more pleasing. We are content to let them lie in the past while we go to greater indulgences. The first transgression or sensual indulgence does not satisfy. It is ever so with sharp business deals and all the questionable practices of life.

This is the nature of "the lust of the flesh and the lust of the eyes and the vainglory of life." There is a heart longing to strike up intimacies with the world. Our text condemns not the material world, but the love of it and the lust for it, since it (the world) is to pass away. Worldliness is a lustful state of mind. It does not have reference, primarily, to what you do or where you are, but to your mind attitudes. You may be in the most worldly places and yet be spiritual. The place is revolting to you and you long to get away. You may be in a spiritual atmosphere, listening to Gospel music and message, and yet, inwardly, you do not react to your invironment. You are hostile. As the arrows of truth find their mark, you rebel angrily. This is worldly lust. It is the Phariseeism that gnashed its teeth at Jesus Christ and finally killed him. How noble the sacrifice! And because of it, the lust of the world is condemned.

It ought to be repeated. This lust is a state of the heart. It is setting your affections on things that perish. It is the sensual and temporal attitude of life. The New Testament tells us of a rich young man who left Jesus sorrowfully, because he wanted to keep his riches. His affections were set upon them. Again it tells us of a big farmer who had barns and possessions. The Lord blessed him with big harvests. He tore down barns and built larger to take care of the increase. Now, as far as we know, this man was not vicious, had a good home life, and made his money honorably. But just as soon as he said, "Soul thou hast much goods laid up for many years; take thine ease, eat, drink, and be merry;" that soon the voice of the Eternal said, "Thou foolish one, this night thy soul shall be required of thee." What a big fool and worldling, this farmer was, to believe that he could feed soul and mind on perishing things! His attitude was temporal and selfish. And not a few today, spend the increase of the Lord in taking their ease at winter resorts, the while their neighbor at home or across the seas is in dire need. And I hear the inspired writer saying, "Whoso hath the world's goods, and beholdeth his brother in need, and shutteth up his compassion from him, how doth the love of God adbide in him?" This is 1 John 3:17. Now, compare it with John 3:17. Verily, "the servant is not above his Lord." How persistent and fatal is worldly lust!

You may have position and power today, but not tomorrow. Yesterday Nicholas Romanoff was Czar of Russia, all powerful. Then came dethronement, hatred, and death. And the Kaiser! You may have wealth today, but poverty tomorrow. Tho money can fill the belly, how foolish to live as tho it could fill the heart! How we ought to pack every day with noble aspirations and right decisions!

"He that doeth the will of God abideth forever." We have discovered the folly of the worldly life because it is attached to perishable foundations. But the life that is centered on DOING the will of God is to abide forever. Thruout the epistle the author plays upon the DOER of sin and the DOER of righteousness. Here are two men. One has used his time and though, wholly, on the getting of worldly things. He has a splendid home and no material needs that he cannot supply. Life goes on like a song as he lays up for himself and his children. You would like to be like him. But listen! Quickly one day he sends for a minister, who hurries to his side. He finds him lying in a richly furnished room, with costliest bedding and pillows. Doctors, nurses, wife, and children are bending over him. He is going—and gone. He is dead. And now, what is he? A dead fool. What does it profit to gain the things of a perishing world, while losing your own soul? That is what the minister told him again and again, but he would not listen. But the other man? He lives in a plain humble home. He works hard thru long days. He foregoes sensual pleasures; is busy practicing the gospel of othering; and is faithful to the will of God. One day the pastor is hurriedly called. He finds this man lying on a plain bed in a plain room. He is attended by plain folks. He thanks the pastor for his encouragement to live the non-worldly life, and his soul slips away from earthly ken. He is dead. But is he? No, he went away in visions of a mansion not made with hands, and he has just begun to live in that newer, better, land that stretches out before in ever satisfying vistas.

What are you going to do when you die? But what are you doing now? Are you squeezing this world as you would a great sponge to get out of it all the freshness possible? Are you taking the road that yield's up sensual delights? Or, will you be wise and abide in the will of God? The world is perishing, but he that loves God, and his neighbor as himself, shall abide forever.

DEPARTMENT ISSUES HANDBOOK ON BETTER FEEDING

PRACTICALLY all farmers in every section of the country should be interested in the new publication, A Handbook for Better Feeding of Livestock, just issued by the United States Department of Agriculture, as a part of a recently organized service for better feeding methods. This booklet contains in condensed form practical and up-to-date information on the feeding of cattle, hogs, sheep, horses, and poultry, compiled as a result of a country-wide study of farm feeding problems.

In this handbook all the different classes of animals are considered separately. For instance, there is special information on feeding young animals, dry cows, sires in service, weaning pigs and calves. Consideration is given to the feeding of farm wastes and by-products, the use of mineral feeds, the use of self-feeders, tonics, hogging down crops, commercial feeds, dehorning and castrating, with relation to feeding and management, mixing feeds and making up balanced rations, shelter for animals as it affects their production, water and salt. Sample rations are given for the various kinds of animals under different conditions. The importance of good breeding in obtaining maximum gains is emphasized.

Copies of the handbook, which is known as Miscellaneous Circular 12, may be obtained free, as long as the supply lasts, by addressing the Department of Agriculture, Washington, D. C.

PREPARING WALLS FOR PAINTING

CARE in the preparation of walls for their coatings of paint is highly necessary if the best final results are to be obtained. Every one who has tried to do a good painting job knows this. The preparation of the walls by proper application of elastic wall primer becomes an important operation. The following instruction of why, when and how to use it will be found helpful!

Elastic wall primer is used to seal very porous surfaces—in the language of the painter, to "stop suction;" to facilitate brushing properties of first coat over surfaces which are quite porous; to prevent lime burns.

The ordinary wall will not require any sealing other than that afforded by the undercoat, but walls where the porosity is greater than usual require a product which will seal the wall and reduce the suction. This can be done by applying a coat of the primer straight, or mixing it with the paint to be used on the next coat. The latter is the more desirable method, in that the addition of material used on a subsequent coat tends to offer better conditions of amalgamation between the coats. However, there are instances where a straight priming coat has its advantages, especially on an extremely porous wall, or where the wall is new and additional precautions are taken to prevent lime burns.

For porous walls, it is advisable to add a primer to the first coat so that the liquid portion in the paint is increased, and it is possible to brush the paint more easily and sufficiently without having to penetrate the wall too rapidly. If the paint penetrates too quickly, it cannot be applied evenly and so that it will not show brush marks.

The following suggestions apply to the use of elastic wall primer:

1. For the sealing of fresh walls where protection against lime burning is desirable, use a coat of elastic wall primer straight.

2. For the sealing of walls which are porous, the addition of one or two quarts of elastic wall primer per gallon of undercoater or flat primer per gallon of undercoater or flat wall paint.

3. On wall which are very porous, it may be necessary to use elastic wall primer straight as a sealer coat.

Mistaken Identity

"As I was crossing the bridge the other day," said an Irishman, "I met Pat O'Brien. 'O'Brien,' says I, 'how are you?' 'Pretty well, thank you, Brady,' says he. 'Brady!' says I, 'that's not my name.' 'Faith,' says he, and mine's not O'Brien.'

"With that we again looked at each other, an' sure enough, it was nayther of us."—Shelvin Equalizer.

POSTS
AMERICAN
AMERICAN STEEL & WIRE COMPANY
Chicago
New York
Boston
Dallas
Denver

The farm that is fenced with American Fence has the greatest possible protection, and enjoys the lowest per-year fence cost.

Better construction, better galvanizing, full gauge, full weight and full length rolls—American Fence is the most serviceable and the most economical fence made.

As the life of good fence is increased by the quality of its posts, hang your fence on Arrow Tee Steel Fence Posts. Built on the railroad rail principle with large anchor plate which locks the post firmly in the ground. Frequent notches permit every line wire to be attached, if desired. Your dealer can supply you.

The Children's Hour

DEAR boys and girls: — How many of you know there are two uses for spider webs—besides the purpose for which the spider spins it? I am sure that there are many of you who do not so I am going to tell you what they are used for. The manufacturers of surveyor's telescopes use it to mark the exact center of the object lens in the telescopes. Spider web is the only suitable material yet discovered for this purpose. I recently read an article that stated that in one large English factory where surveying instruments are made, spiders are among the most indispensible workers. They produce during a two-months' spinning season thousands of yards of web which is wound upon metal frames and put away until needed. When these spiders are not spinning they are kept in a large wooden cage under the care of several girls. They are fed and given very good care, but they die in the winter, making it necessary to secure more spiders each year.

Recently a new use for spider web was discovered. It has long been known that the web of the spider was many times finer than the finest filament spun by the silk worm, but the difficulty of obtaining silk from it was very great. Some years ago a Frenchman attempted the making of silk and was successful to a certain extent. He collected 10,000 spiders, kept them in separate cells, and produced wonderful silk. However, it is said that the spiders got together one night and the next morning there were only a few left, and the man was discouraged and quit. As you know it is the nature of one spider to try and destroy another and it was not until recently that a certain species from Brazil was discovered that is not so ferocious. And now this Brazilian spider is helping to make some of the finest silk in the world. How many of you knew that?—UNCLE NED.

BUDDHA AND THE WHALE

THE Buddha of Kamakura, in Japan is very big, so big that a man may sit on his thumb. In the Sea there is a Whale who is also big.

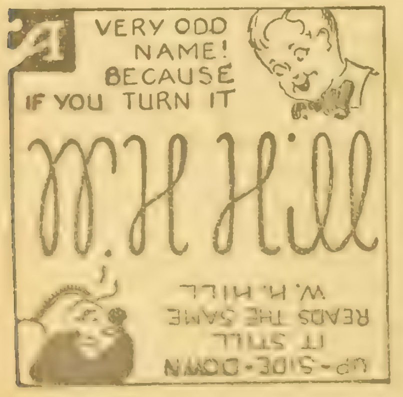
The Crab told the whale of the Buddha, and the Whale ordered the Crab to measure the idol. The messenger found the idol was seventy thousand paces of a Crab. Then the Whale went to visit Buddha and Buddha bade the priest measure both him and the whale with a rosary. The whale was found to be two measures greater than Buddha.

"Then," said Buddha, "hereafter in Japan there shall be two measures, one for hard things like my image, one for soft things like the Whale. And the soft things shall be two measures larger, yet equal."

Greatness can recognize greatness.

OUR BOYS AND GIRLS

Dear Uncle Ned:—My father takes the M. B. F. and we find it very interesting. I am nine years old and am in the fourth grade. Last Sunday we had a swell time sliding down hill. We took the sides out of large card-board boxes. Then we would sit on these at the top of the hill and then let ourselves go. We were lucky if we got to the bottom of the hill without running into snow banks a couple of times on the way down. Have any of you ever tried it? Have you, Uncle Ned? It's loads of fun. Maybe you would be interested in an experience I had once. When I was coming from school I had to pass a hotel where a man was staying with a police dog. The dog saw me and came bounding up. Before I knew it he had knocked me down on the sidewalk, and was on my back with his claws dug into my clothing. But I can't tell why he picked me out of the many people who pass every day. See if you can answer these riddles: When are potatoes like gate-posts? Ans. When they are put in the ground to (propogate). What chasm is there that separate friends? Ans. Sarcasm. Why is an average sermon like asparagus? Ans. Because the end of it is the best part. What three letters are expressive of excessive joy? Ans. X, T, C. Now, won't you boys and girls please write to me and I will answer all your letters; and send some pictures of yourselves when you write if you can. Your friend. —Ruth Weifenbach, Box M, Beulah, Mich.



A VERY ODD NAME! BECAUSE IF YOU TURN IT
W.H. Hill
UP-SIDE-DOWN IT STILL READS THE SAME W.H. HILL

Dear Uncle Ned:—Ever since Daddy has subscribed for the M. B. F. I have been an interested reader of the Children's Hour. During all this time I have not noticed any letters from Caledonia, so decided to let you know we were on the map also. I don't know whether or not it is the rule for each writer to send a description of themselves, but I notice the rest all do it, so I will follow. I am eleven years old, and weigh eighty pounds. I have brown bobbed hair and brown eyes. I am in the sixth grade and like to attend school. I missed about a year and a half because of a double mastoid operation and complications. I am going to try to answer Gladys Carlson's riddles which were in the January 19th issue. The dime looks round. There is one P in pint. And the answer to her third riddle is an icicle. I think the answer to Imogene Hibberd's second riddle in January 19th issue is a watermelon, but I can't guess the first one. We have a Girl Scout organization here and we certainly enjoy the work. It is instructive as well as pleasant. I am first patrol leader now, and I was president last year. With best wishes to you Uncle Ned, and to all the cousins, I am, most cordially yours,—Muriel Frey, Caledonia, Michigan.

Dear Uncle Ned:—As I haven't written for a long time, I thought I would try again and see if my letter would escape the waste basket. My father takes the M. B. F. and we all like it real well. I can hardly wait until it comes, and my father is always anxious to read what Uncle Rube Spinach has to say. I suppose you have forgotten what I said I looked like, so I will tell you again. I am about four feet eleven inches tall, weigh ninety-eight pounds, and have light hair, dark blue eyes, and fair complexion. My birthday is the nineteenth of December, and I am 13 years old. Have I a twin? We have twelve cows, and eleven calves, and four pigs. For pets we have two cats and a rabbit. The rabbit will eat out of our hands (all but when he's mad). Well Uncle Ned, how do you like the weather? It's pretty cold here. How many of the cousins like to slide down hill? I certainly like to. We have a good hill to slide on here, and we have quite a few sliding parties. I live about one-half mile from school. How many like school? I like it when I like my teacher, and I like her this year. Her name is Beulah Preston. I am in the seventh grade at school. I like all of my studies but history. Did you like that Uncle? Helen Cary you are about like me. I like music, but can only play by ear, and not that very good. How many of the cousins like to sing? I do, but I can't very well. I sing alto. Now because I sing alto don't think that I can sing good, because if you heard me you would think it was a rooster crowing. The answer to one of Imogene Hibberd's riddles is a (watermelon), but I don't know the other one. Now couldn't you write to me for answering that one? I will close with a riddle. As I was walking over London bridge I met a London scholar, he took off his hat and drew off his gloves, what was the name of the London scholar? I wish some of the boys and girls would write to me. Your want-to-be-niece,—Beatrice Campbell

Dear Uncle Ned:—I thought I would write you a letter tonight. I wrote once before but I guess the waste basket got it. I hope he doesn't get this one. Well I will describe myself. I am about five feet three and one-half inches tall, and am thirteen years of age. I was thirteen on the 11th day of February. Have I a twin? I have dark brown bobbed hair and blue eyes. I am in the seventh grade at school, and like going to school very much. I think the answers to Gladys Carlson's riddles are: (1) Looks round. (2) One. (3) Icicle. Am I right Gladys? If I am I am waiting for your letter. I will close or Mr. W. B. will sure get this. Your niece,—Mabel Warren, R. 3, Box 81, Sault Ste. Marie, Mich.

Dear Uncle Ned:—I wrote to you before but my letter did not escape the waste basket, but I hope it does this time. I read the Children's Hour every time the paper comes, and I think it is the most interesting part of the paper. I stay with my grandmother and grandfather. My mother and father are both alive, but I always did stay with my grandparents so I live with them now. I have four brothers and three sisters. I just live a mile from them and I go over and see them quite often. I will describe myself. I am fourteen years old, the seventh of April. Have I a twin? I am five feet tall. Have dark eyes and dark hair, bobbed of course. And weigh 90 pounds. I go to the country school and am in the 8th grade. Well I think I had better stop for this time. Some of the girls and boys please write to me. Your loving niece,—Lesa Wilcox, R. 5, Brown City, Michigan.

Dear Uncle Ned:—May I join your merry crowd too? I have joined one and think it is more fun than anything else. Well, I will tell you of my favorite sports. I like horseback riding, do you, too? I bet if you don't know anything about it and get on a horse once you'd think there was nothing like it. Well now I will describe myself. I am 12 years old, and in the 7th and 8th grade. I am 5 feet and 1 inch tall, have blue eyes and light hair. We have been taking the Michigan Business Farmer for a year and I like the Children's Hour very much. Well, I think my letter is getting rather long so I'll ring off.—Miss Dorothy Radloff, Owendale, Michigan, Box 54.

Dear Uncle Ned:—I would like to join your merry crowd. It seems rather strange that of all the names that have been signed to the letters that have been written in this section of the paper during the last year, there hasn't been any from the big city (?) of Parma, or even from any near-by towns. Possibly because some of them are too bashful to write, and maybe it is because they just simply can't find the time to write. I have noticed that personal description has been a part of most of the letters, so, according to custom, I will try to give you a faint idea of myself. I have dark brown hair and dark brown eyes. I am 18 years of age and a senior in high school. I think I have written enough, so I will ring off for this time, promising to write all those who write to me, providing that they write soon. From your nephew,—Lynford Pulling, Parma, Mich.

Dear Uncle Ned:—Here is a new cousin. I have never written before so I hope my letter doesn't reach Mr. Waste Basket. Well I better describe myself. I am a little girl of ten years, have light brown hair (which of course is bobbed), light brown eyes, and pretty pink cheeks. We have on our farm five horses, two cows, two calves, eighteen chickens, five ducks, three cats and two dogs. I have two brothers, and one sister. The sister is fourteen years of age. My oldest brother is twenty-one years of age, my youngest is sixteen. Who ever guesses my first name will receive a letter. Goodnight.—B. Durfee, Alger, Michigan, R1.

Dear Uncle:—As I have a little time I will write you a few lines. We take the M. B. F and we all like it fine. I wrote once before and saw my letter in print so thought I would write again. I hope old Mr. Waste Basket doesn't get this letter. I am a farmer's girl and like the farm very well. I am 13 years old and in the 7th grade at school. I have about a half mile to go to school. My birthday is March 31. Have I a twin? We built a new house this summer and it is sure nice. We have an 80 acre farm We have 8 calves, 5 cows, 2 mules, one horse and 4 pigs. We have one cat and one dog. I am glad when winter comes and there is snow on the ground. We have a lot of fun at school on the hills, and there is two or three hills. Well as my letter is getting a little long I will have to close. Will some of the boys and girls write to me? —Miss Ernestine Frick, R4, Box 46, Coleman, Michigan.

When Spring Comes Dancing Down the Hill

IT was Springtime, the sweetest time in all the year. The time when growing things stirred under the ground, as if to say, "Let me out! Let me out! I love the Spring, too."

The baby buds were coaxing to be freed, and the bluebirds built their tiny nests and sang little wistful notes. The wind was scented with blowing wildflowers.

One of the wildflowers, which gloried in the happy Springtime, was Li'l' Miss Arbutus, who, with her bronze leaves and white and pinkish blossoms all a-glow, called to every bird and flower-friend she saw, "Aren't you happy that Spring is here?"

A month after Li'l' Miss Arbutus had carroled, "Aren't you happy that Spring is here?" a little gipsy camp moved its wagons and tents a mile away from the grassy spot where Li'l' Miss Arbutus played. They were a happy little family who loved the flowers, and the birds, and the trees, and all the wild things under the great sea of skies.

The youngest member of the little gypsy family was a brown-eyed girl whom all the gypsies called little "Princess Gyp."

One day Li'l' Miss Arbutus heard voices, and, lifting one eye above her bronze leaf, she spied a small boy and girl. Strangers they were to her. Fair little strangers; one with bright yellow curls.

"H'm-m! They're not playmates of little Princess Gyp. Wonder where they came from, anyway!" crooned Li'l' Miss Arbutus. "I s'pect they—." But suddenly she stopped speaking. Why, what was that curly-haired little girl saying?

"Come on, Bobby! Let's pull up a whole armful of these woodsy flowers." And she waved one chubby white arm toward poor frightened Li'l' Miss Arbutus, the nodding white and yellow dog-tooth violets, dainty Miss Blue Flag, Jack-in-the-Pulpit, and all the rest of the little flower colony.

Poor Li'l' Miss Arbutus! Her wee, fluttery, flower-heart almost stopped beating. Surely, surely that curly-haired girl wouldn't do that! But yes! She and the boy called Bobbsy were bending low, grabbing Miss Hepatica and pulling poor Jack-in-the-Pulpit up by the roots.

"Oh, dear me! I'll come next! Oh, dear, all my poor flower-friends, and—." But by this time Li'l' Miss Arbutus was crying so hard she could not speak.

And suddenly she heard a voice,

"Oh, you horrid children! Go 'way! Go 'way!" And Li'l' Miss Arbutus' wee, fluttery flower-heart gave a merry flip-flop. It was little Princess Gyp scolding,

"Tearing up those brave little flowers!"

The little boy called Bobbsy and the owner of the yellow curls turned and ran. They were afraid of that firey-eyed little Princess Gyp who stood glaring at the little culprits.

"Oh, to think that next they would have ruined you, Li'l' Miss Arbutus—the sweetest flower that grows." And little Princess Gyp stooped over Li'l' Miss Arbutus as if to gather her in her protecting arms.

Now, my dears, at the time of this little story, Li'l' Miss Arbutus was not called the Trailing Arbutus. She was only Li'l' Miss Arbutus. Just plain Li'l' Miss Arbutus.

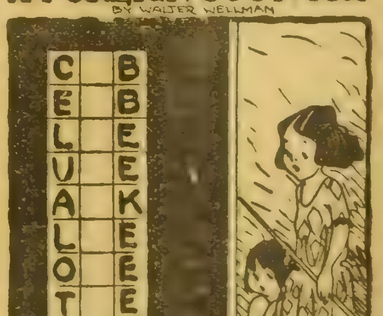
But when she looked up to thank the little Princess Gyp, and found that she had gone as quickly as she had come, she started as fast as she could go, to find dear little Princess Gyp.

She crawled this way and that, searching, searching, searching. But she never found the brown-eyed little gypsy who so understood the heart of little flower-persons.

But every year when growing things are stirring under the ground, and baby buds are coaxing to be freed, bluebirds build their nests and sing little wistful notes, and the wind is scented with blowing wildflowers, and spring comes dancing down the hills, Li'l' Miss Arbutus is always spoken of as the Trailing Arbutus.

A FOREIGN COUNTRY

BY WALTER WELLMAN



We have given you the first and last letters of nine words of three letters each. You are to see if you con print in the middle column, completing the nine words. What is the foreign country?

Answer to last puzzle: CHAIN plus CAKE minus KNIFE minus CRATE plus CANDLE minus LACE =HOUND.

SENDS FOR PARTS

(Continued from Page 13)

set, aerial, etc. It would seem to me that I should have about 50 feet of lead-in wire and also some wire for ground and wire for set. Wouldn't it be necessary to have another porcelean tube to run the ground wires out through? Could the lightning arrester ground and the ground from binding post "G" be the same? Please send complete equipment including lead-in wire, ground wire, wire for wiring set, spaghetti, porcelean tube, etc., if I will need them. If I haven't sent enough money and you'll let me know how much I am short I will send it right away. Thanking you, I am, E. J. Delamarter, Cheboygan County, Mich.

—Yesterday I shipped you by insured parcel post a package containing all the parts for your radio set, with the exception of an A battery which you can buy in Cheboygan for 50c (better use 2 in multiple) and so saved a few cents postage.

I am glad to be able to say that in this assortment of parts I have secured for you more parts than given in the article in The Business Farmer which will help out and make your set more efficient and add to appearance as well.

Additional parts included as extra, ground-clamp, knobs for running ground wire, wire for wiring up set, (you do not need spaghetti), ground wire and a hard rubber panel for the front of your set, and grounding switch.

I am retunring you herewith my personal check for $1.00 which is the balance due you, and from out of which you will need to buy your A battery.

You can use the same wire for ground of your set as you do for the ground of the lightning arrester.

I would suggest that you make a plan of your set on paper and mark each hole carefully, then prick thru to your panel and then drill the panel. In working the panel start all holes thru the side that is to be the front and then the chipped part will be in the rear.

I am enclosing a photo of a set built from parts like yours which will give you an idea.

WANTS BEST RADIO EQUIPMENT ON MARKET

Please advise me where I can buy the best radio equipment on the market. I am going to buy a radio receiving set and I want the best to be got and one that will give good service and a plain and loud speaker.—Clarence Chadwick, Tuscola County, Michigan.

—You ask us as to where you can buy the best radio equipment on the market. This, of course, will depend upon whether you are near a large city and wish to make the trip to town or whether you wish to buy by mail.

There are many dealers in Lansing, Detroit, Jackson, Flint, Bay City and Grand Rapids that handle standard and reliable makes of receiving sets.

Both Montgomery Ward and Sears Roebuck handle sets under their own name and guarantee them to give satisfaction or your money back.

The names of makers, who make sets that you can depend upon, are Westinghouse, Radio Corporation, Clapp-Eastham, C. D. Tuska, Collins-Kennedy, Grebe, Crosley, Atwater-Kent, and Adams-Morgan.

Telephone receivers are Brandies. Federal, Baldwin, Stromberg-Carlson and several others. In buying receivers to go with your set ask for a standard make and do not buy the cheapest as they are seldom as good as those mentioned above.

As you intend to buy the best, I would make a trip to Detroit if possible and go to different stores and have them show you the different makes and see them work and then let your pocket book be the limiting factor on what you buy.

Beware of sets for which remarkable performances are promised, buy any of the sets made by the above mentioned makers and you will not be disappointed.

Let us hear from you when you get your set and the results you have from it. We are interested in having you succeed.

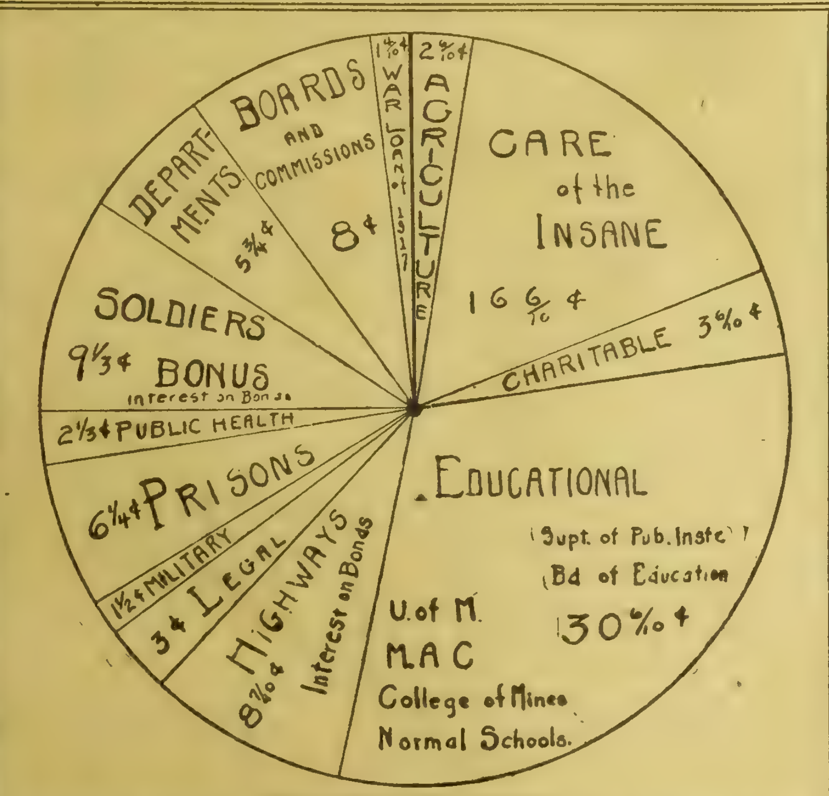
THE TIME IS RIPE FOR TAX REFORM IN MICHIGAN

(Continued from Page 3)

purposes. If this might be done, general property taxation would automatically become entirely a local proposition. Thus the benefits of such a tax reform would be both direct and indirect in that the tax payer would no longer have to pay a general property tax for state purposes and local governmental economy would be promoted.

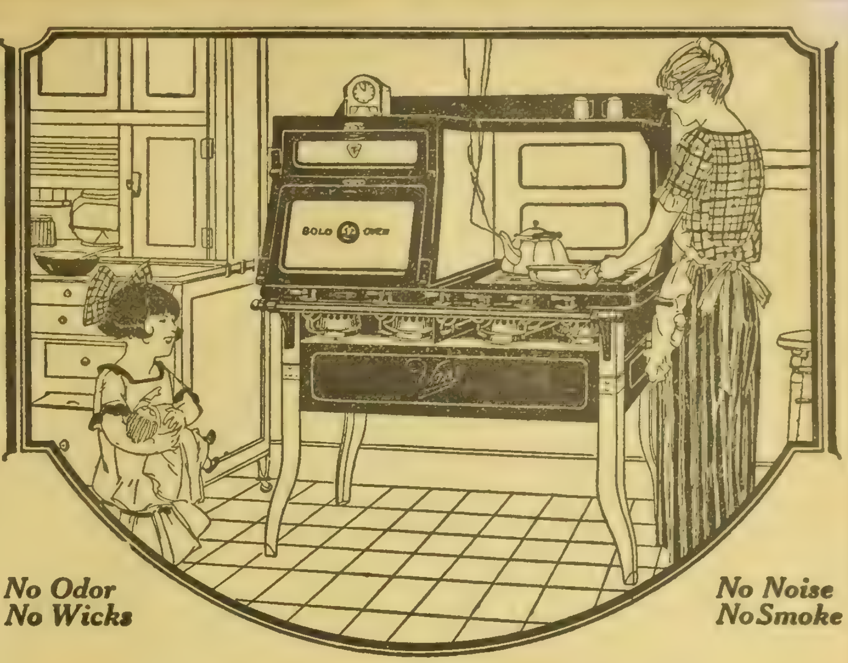
Perhaps, after all, the most logical way to reduce the oppressive tax burden in Michigan today is by placing more of our wealth on the tax rolls. This might be done not only through an income tax, but also through the adoption of a "compulsory listing" law, such as has already been adopted in several other states and has proved effective in uncovering hitherto hidden wealth. The abolition of tax-exempt securieties is also recommended as another step in the right direction.

These and other solutions of our present Michigan taxation dilemma will be discussed in future articles in this series to appear from time to time in The Business Farmer. Perhaps we may have a word to say about one of the most interesting aspects of the whole subject—the two cent gasoline tax.



THE TAXPAYER'S DOLLAR

This chart shows how a taxpayer's dollar is divided between state, county and local governments. Average of 75 agricultural counties is indicated by chart.



No Odor
No Wicks

No Noise
No Smoke

Beautiful Vapo Oil Range looks and acts like a gas range

32-36 hours of smokeless, odorless heat from a gallon of kerosene

Vapo is to the ordinary oil stove what the electric light is to the candle. It solves every cooking problem. You can bake, roast, boil, fry or stew with a Vapo. Everywhere, people proclaim it the cleanest, most convenient, most beautiful oil range ever seen. At state fairs thousands saw it pass tests out of the question for ordinary oil stoves. Any Vapo will duplicate these tests.

Burns gas made from kerosene

Each Vapo burner is a miniature gas plant. It generates hydro-carbon gas from kerosene and burns it with a hot, clean, blue flame ideal for cooking. Good baking and roasting are easy with the Vapo because the flame can be regulated from a low simmering heat to a heat intense enough for quickest cooking needs. Vapo has lever valves like a gas stove and these are provided with automatic safety locks preventing accidental shifting or moving by children.

Wickless, chimneyless and troubleless

Nothing on a Vapo to fuss with. No wicks to trim or adjust. No chimneys to burn out and fall into the burner. If kettle boils over, the liquid can't get into the burner and choke the flame. The Vapo burner is guaranteed for the life of the stove. Vapo heat does not smart the eyes nor soot up utensils.

Bake slow and fast at same time in Bolo oven

Adjustable Bolo plate makes oven big or little as you wish. It concentrates the heat and gives you two ovens in one. Odors from one oven do not permeate the other oven. Perfect ventilation insures light baking and pastry. Vapo is the *only* oil range with the built-in Bolo oven. You can have right or left hand oven. Ask dealer to show you Vapo. Write for booklet.

The Farm Home
A Department for the Women

Edited by MRS. ANNIE TAYLOR

DEAR FOLKS:—March! A month that means a great deal of thinking and planning for the coming spring.

The house has been getting shabby and on our nerves. Why not plan with the spring cleaning to change the looks of those rooms that need freshening up a bit.

Now is the time to make a few of the articles that put the personal touch in every home.

St. Patrick's Day is coming and it gives us a splendid opportunity to have a fun-day or evening. I am making up a list of things to do and have to eat on this day and will be glad to send a copy to any of our readers who are thinking of a St. Patrick's Party.

I want to thank you all for the many splendid letters you sent in these last few weeks. I remember last year receiving so many letters asking about exzema. Do not let this happen this year. Eat lots of vegetables. Some of those wonderful carrots, peas and spinach that you canned last year. Feed the family less meat and rich foods and I feel that a great deal of this evil can be eliminated.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

MY HIRED MAN AND JANE

SHE called him "Bud," he called her "Sis"
And though I never saw 'em kiss
Er hug, I kinda felt he thought
Right well o'her the way he bought
Her sweets and tuk her to the shows—
But she'd a dozen country beaux
And he was backward like and years
Too old fer her and so my fears
Jes drapped away and I opined
The thing was just as he outlined,—
The only child he was, bedad,
My little gal was all I had,
And so they kinder fixed it out
In fun, the while they worked about,
That he would be her brother Kris
And she would be his little "Sis."

So years rolled by, but yesterday
I caught 'em in a serious way.
Says she, "I don't know who to love,
Which one of them to give the glove.
Taz Cook is fine and Jim's got land—
To which one, Kris; shall I give my hand?"
But Kris he'd sorto lost his voice
Er didn't want to say his choice
Too quick, fer there he set a while
A-lookin' down the road a mile
Er two, and then he kinder turned his head,
And took her in his arms and said:
"Why,—neither one—fer I'm the boy
That wants to fill your life with joy,"
"Dear Jane," he sez, and she, "Dear Kris,"
And then I saw 'em hug and kiss.

7. Make a Will.
8. Invest in Safe Securities.
9. Pay Bills Promptly.
10. Share with Others.

A MOTHER TO HER SON

THE message below came to me and I think it one of the finest and sweetest stories I have read in some time. I am giving it to you to use as you see fit. I wish that every Mother reader will find time to read it to her boy:

We have been asking a few men and women who have made good in life to tell us the biggest influence that contributed to the shaping of their characters.

We believe that in such bits of obscure history there lies the consoling proof that every honest effort bears fruit in life, every sincere thought becomes an influence. Prayer is answered.

There is a young man in New York who is making good. He has a keen mind and a strong character. He is becoming an influence for good in his community.

Recently his mother was cleaning out his pockets to help him change his clothes quickly.

"That letter will interest you, Mother," he said, referring to a letter about his work. But it was another paper she opened—a yellow, rumpled sheet—a note she had written him when he was eight years old, the first time he had been separated from her. It breathed the same thoughts and prayers that lie in the hearts of all mothers. She had forgotten she had written it.

The young man was embarrassed for a moment when he saw what she held. Then he said: "That is the most priceless possession I have. I am going to carry it in my pocket as long as I live. I have been tempted to do some rotten things in my life, and just the consciousness that I had that message in my pocket, and that it came out of your heart, has steered me straight most of the time."

Here is that Mother's message which a boy carried in his pocket until he became a man:

Get up when called in the morning.

Wash before dressing.

Wash your teeth. A clean mouth belongs to a clean heart.

Be obedient. Remember the world would be crushed into pieces if it did not obey the law of God. And you must suffer if you do not obey.

Be truthful. Only cowards lie. You are not a coward.

Be kind. It is the greatest gift in the world.

Don't forget that you have promised to do some kind act every day.

Wash your face and hands before going to the table.

Remember that your father is a gentleman. In his absence it is up to you to prove it. A gentleman is kind and truthful and clean and quiet.

Be interested in everything. Have a good time.

Remember that I love you with all my heart.

Say your prayers. Ask God to keep your heart clean and brave and true and your body well for
YOUR MOTHER.

MY IDEAS FOR WINTER EVENINGS

I KNOW of no better way of passing these long winter evenings than in good reading, and as there is so much such material nowadays practically in reach of everyone's pocket-book, that it is not doing justice to ourselves or family to be deprived of it. For it is now conceded by everyone that good reading is not a luxury, but a necessity, both from an educational and entertaining point of view, and we cannot have too much of it in our homes especially where there are children.

We often hear people say. "My children do not like to read" which no doubt is true if they have never gotten in that habit or formed a taste for it, which I think is usually the fault of the parents who themselves do not care for reading, or else have never taken the trouble to read to them or tried in any way to get them interested along that line.

If parents will take the time each day or evening to read a story that will arouse the child's interest and occasionally letting him read a part of it himself he will soon be looking about for something more to read and then is the time for the parents to sacrifice in other ways, if need be, to provide that child with good reading and plenty of it. There are many good books and magazines now for both boys and girls which they should have.

I have heard people say they could not afford to take magazines for their children when at the same time more money was being spent for fancy work material and tobacco in that home than the very best magazines would cost.

Now I do not like to think these people are selfish but rather do not realize the value of good reading to the growing generation.

I have been in homes where my heart really ached for the children there, as they had nothing to do all the long evenings and if they became a little too noisy were sent at once to bed or compelled to sit "quietly" in the corner, which we all know is torture to a healthy, active child. For we know most children want something doing every minute and if no entertainment is furnished in the home like reading or games they will be going outside to get it and then your worries begin.

I think it's nice for some member of the family to read aloud evenings some good story and funny ones the children always enjoy. And there is nothing makes them quite so happy as having their parents enter into their games and it makes the parents feel that much younger as well. There are many educational games that all ages can take part in and enjoy.

Now parents, your children are going from the home in a few short years to take up their various callings and what sort of memory will they carry with them of the winter evenings spent in the old home. Will they be happy memories? We trust through your efforts they will be.—Mrs. Manley Brown, Hillsdale Co.

COLLEGE VISITORS SEE FARM HOT WATER SYSTEM

HOT water in the country home bath room at an installation cost of approximately $75 is made available through a unique system devised by the agricultural engineering department of the Michigan Agricultural College and which was put on display for the first time in the new college library building for inspection by Farmers' Week visitors.

The outfit consists of a pressure pump, pressure tank, a kerosene bath water heater, lavatory, bath tub and all piping and appliances necessary within a modern bathroom, with the exception of a shower spray nozzle.

To display the outfit a model bathroom has been set up in the reading room of the library building by college students with an attendant on duty to demonstrate everything but actual taking of the bath and to answer all questions and explain the proper methods of "setting up" the system.

A great many of us did not see this system and I feel sure that the college will be glad to help you if you will write them in care of the Engineering Department.

Personal Column

Can Any Reader Supply or Suggest a Way for this Talking Machine.—I am a reader of the Business Farmer, and I have an Edison Talking Machine of the old make, in good condition, all but the four minute reproducer. I was wondering if you would put an article in the M. B. F. and see if any of the readers had an old reproducer for this make of machine that they would care to sell. Model C, No. 429017 Edison Standard, as the company has stopped making them, and we tried to repair it and couldn't.—Mrs. Sarah Wright, R1, Middleton, Mich.

From One in Need.—As there are so many helped by using the department for women, I thought I would use it again. I have quite a few handkerchiefs with crocheted lace on, and embroidered guest towels, bath towels, with crocheted lace on, and I can make most any kind of fancy work, and I was wondering if I put an ad in your paper if I couldn't get some help, as I live on a farm and can use lots of clothing or things others can't use. Have three children, 4, 6 and 9 years old. I have now some handkerchiefs with crocheted lace on, some fancy doilies, embroidered guest towels, and bath towels, with crocheted lace on. Will exchange for quilt pieces or anything I can use. Would like to get pattern for refooting stockings for children and myself. Will be very thankful if you will do this, as it will help me out a lot.—A Subscriber, Turner, Michigan.

Directions for Knitting Socks.—I have been a silent reader of M. B. F. for a number of years and enjoy it all, especially the Farm Home Department. In the last paper, I noticed some reader asked for directions for knitting socks, and as I have directions for making them as we did for the Red Cross during the war, I will copy and send them. They are very good shape too.—Mrs. R. E. J.

One hank of yarn (¼ lb). Loosely cast on 56 stitches; knit 2 plain, purl 2 for 4 inches, knit plain 7 inches (11 inches in all.)

Heel—knit plain 28 stitches on to one needle, turn, purl back these 28 stitches, turn, knit plain, repeating these two rows (always slipping the first stitch) for 28 rows, making heel about 3 inches. With the inside of the heel toward you, purl 16 stitches, purl 2 together, purl 1. Turn, knit 6 stitches, slip 1, knit 1, pull slipped stitch over, knit 1, turn, purl 7 stitches, purl 2 together, purl 1. Turn, knit 8 stitches, slip 1, knit 1, pull slipped stitch over, knit one, turn, purl 9 stitches, purl 2 together, purl 1. Turn, knit 10 stitches, slip 1, knit 1, pull slipped stitch over, knit 1, turn, purl 11 stitches, purl 2 together, purl 1. Turn, knit 12 stitches, slip 1, knit 1, pull slipped stitch over, knit 1, turn, purl 13 stitches, purl 2 together, purl 1. Turn, knit 14 stitches, slip 1, knit 1, pull slipped stitch over, knit 1, turn, purl 15 stitches, purl 2 together. Turn, knit 15 stitches, slip 1, knit 1, pull slipped stitch over. Now pick up and knit the 14 stitches down the side of the heel piece. Knit the 28 stitches of the front needle. Pick up and knit 14 stitches at the other side of the heel piece. Divide the heel stitches on the 2 side needles, and knit right around again to the center heel. First needle, knit to within 3 stitches of the front end of the side needle, knit 2 together, knit 1. Knit front needle plain. Third needle, knit 1, slip 1, knit 1, pull slipped stitch over, knit plain to end of needle. This reducing to be done every other row until there are 56 stitches on the needles (front needle 28, side needles 14 each). Knit plain until the foot from the back of the heel measures 8½ inches, or 9 inches, if a longer sock is desired. To narrow for toe.—Begin at the front needle; knit 1, slip 1, knit 1, pull slipped stitch over, knit plain to within 3 stitches of the end of the needle, knit 2 together, knit 1. Second needle.—Knit 1, slip 1, knit 1, pull slipped stitch over, knit plain to end of needle. Third needle.—Knit plain to within 3 stitches of the end, knit 2 together, knit 1. Knit two plain rounds, then narrow as before every other round until you have 20 stitches on three needles, 10 on front needle and 5 on each side needle. Then knit two plain rounds. Slip stitches on side needles all onto one needle, giving you 10 stitches on each of the two remaining needles. Intake of toe.—Having 10 stitches each on front and back needles, break off wool leaving 12 inches with which to finish off sock and thread it into a darning needle. Put darning needle into first stitch of the front knitting needle as if to knit, pull wool through and take off stitch. Put darning needle in next stitch of front needle as if to purl, pull wool through but leave the stitch on. Go to back needle, being particularly careful that the wool is taken under the knitting needle each time and not over. Put the darning needle in first stitch of the back needle as if to purl, pull wool through and take off stitch; put darning needle in next stitch of the back needle as if to knit, pull wool through but leave stitch on. Return to front needle, put wool in first stitch (the one previously purled) and repeat. In finishing off end of yarn, run yarn once down side of toe.

Will Send Poems.—I'm only 11 years old but I read your paper and saw where a girl wanted some songs. Among them were "When You and I Were Young Maggie" and "Just Break the News to Mother." Will you please publish this in the paper and tell her if she'd care to have those two mentioned above. I'll gladly send them. If she would just write me a letter (I like letters very much. My address is Miss Helen Smith, Box 51, R. F. D. No. 1, East Lansing, Michigan.

—if you are well bred!

Where there is a guest of honor, like a wedding, coming out, and so on, every guest should make it a point to meet the guest of honor. It is extremely rude to have been invited to such an affair and then leave without having been introduced to the main attraction.

Menu for March 1

Toad in the Hole
Creamed Potatoes
Jelly
Beet and Lettuce Salad, French Dressing
Baked Apple Whipped Cream
Coffee or Tea

Toad in the Hole.—Two cups flour, one-half teaspoon salt, one pound link sausage, or use fresh sausage meat and make a circle of it. Two eggs, two tablespoons melted fat, and three cups milk. Sift the flour and salt into a basin; beat up eggs well, and after mixing them with the milk and melted fat pour gradually on flour, beating it well with a wooden spoon. When quite smooth pour it into a well greasel fire-proof dish; skin the sausages and lay them in the batter and bake in a moderate oven for three-fourths of an hour. Serve in small squares arranged neatly overlapping each other on a hot dish.

RECIPES

TASTE your food while you eat it and you won't have to taste it afterward," says Horace Fletcher, the philosopher and dietician. Palatability has much to do with digestibility. The food we like usually agrees with us. Moderation is the safest rule. It is probably true that many shrewd farmers know how to feed steers, hogs, sheep, and horses, but do not know how to feed humans.

Pumpkin Cake.—One cup light-brown sugar, one-half cup granulated sugar, one-half cup fat, yolks of two eggs, three-fourths cup sifted pumpkin, one-half cup sour milk, two tablespoons caramel, one-fourth teaspoon soda, four teaspoons baking-powder one-fourth teaspoon salt, two cups flour, two-thirds cup chopped, flouder walnuts.

Cream the sugar and fat and add the other ingredients in the order given. Bake in loaf or layer tins. Frost with a boiled or a marshmallow icing.

Peanut Butter Fudge.—Two cupfuls of sugar, one-half cupful of milk, two heaping teaspoonfuls of peanut butter. Mix all ingredients and let boil hard for five minutes. Test in cool water until it forms a soft ball. Beat, pour in buttered pan, and cut in squares.—Margaret L. Millin, Lake Shore Road, Mt. Clemens.

Eggless Rye Muffins—Two cups of rye flour, four teaspoons baking powder, one-half teaspoon salt, four teaspoons sugar, one cup of milk, one tablespoon melted fat. Mix and sift ingredients, add milk and fat. Mix quickly, do not beat. Bake in greased muffin pans twenty minutes. This makes twelve muffins.—Alma B., Augusta, Michigan,

Filled Cookies—1 cup raisins, one-half cup sugar, one teaspoon flour. Chop the raisins and mix into the other ingredients. cook these together until thick, stirring to prevent scorching. Place plain cooky dough, roll and cut out in buttered pans, and spread one teaspoon of the raisin filling on top of every cooky, cover with another cooky and bake in slow oven.—Miss Alma Becker.

Grandma's Gingersnaps.—One cup of molasses, one teaspoon ginger flour, one-half cup shortening to make a stiff batter, one teaspoon soda. Boil molasses five minutes and add the shortening, soda and ginger. Cool lightly and add flour enough that the dough may be rolled very thin, cut and bake in a hot oven. Don't let it burn.

WOMEN'S EXCHANGE

IF you have something to exchange, we will print it FREE under this heading providing: First—It appeals to women and is a bonifide exchanges, no cash involved. Second—It will go in three lines. Third—You are a paid-up subscriber to The Business Farmer and attach your address label from a recent issue to prove it. Exchange offers will be numbered and inserted in the order received as we have room. —MRS. ANNIE TAYLOR. Editor.

111.—Assorted bulbs of dahlias and gladiolus in exchange for wool and cotton pieces for patchwork.—Mrs. Arthur Palmer, Paris, Michigan.

The Runner's Bible

(Copyright by Houghton Mifflin Co.)

By this shall all me know that ye are my diciples, if ye have love one to another. John 13:35.

Knowledge puffeth up, but love buildeth up. 1 Cor. 8:1.

Hatred stirreth up strifes; but love coveretl all sins. Prov. 10:12.

—If a brother has in penitence cast aside sin you will speed him into happiness by veiling his past from the world, with your own loving silence.

No one deserving the name of Christian ever resurrects another's sinful past to his shame.

Let all bitterness, and wrath, and anger and clamor, and evil speaking, be put away from you, with all malice. Eph. 4:31.

AIDS TO GOOD DRESSING

BE SURE AND SEND IN YOUR SIZE

FASHION BOOK NOTICE

Send 10c in silver or stamps for our UP-TO-DATE SPRING AND SUMMER 1924 BOOK OF FASHIONS, showing color plates, and containing 500 designs of Ladies', Misses' and Children's Patterns, a CONCISE and COMPREHENSIVE ARTICLE ON DRESSMAKING, ALSO SOME POINTS FOR THE NEEDLE (Illustrating 30 of the various, simple stitches) all valuable hints to the home dressmaker.

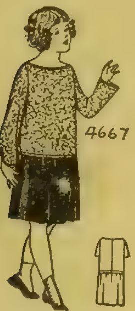
4653. A Stylish Blouse.—Here is Fashion's latest expressian in blouses. It may be finished with square neck outline, or with the little band collar at high neck line. The sleeve is smart in wrist length, and popular and very comfortable in the short length of the small view. This Pattern is cut in 6 Sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A medium size requires 2 ⅞ yards of 40 inch material.

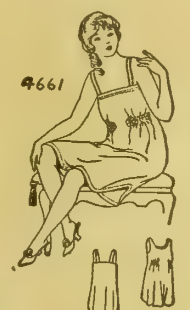
4667. A Good Dress for School.—Figured woolen and serge are here combined. Velvet and crepe or taffeta and velvet are also a good combination for this model. Gingham and linen would combine well, as would also pongee and crepe. The Pattern is cut in 4 Sizes: 6, 8, 10 and 12 years. An 8 year size requires 2 ⅛ yards of one material 40 inches wide. To make as illustrated requires ⅞ yard of plain material and 1 ¼ yard of figured material.

4647. A Stylish Coat Dress.—Here is a very attractive model, than may be finished with or without the flounces. It is a good style for broadcloth, mohair, serge, twill or kasha. The Pattern is cut in 6 Sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. A 38 inch size requires 6 ¼ yards of 40 inch material, if made with flounces. If made without flounces 4 ⅞ yards will be required. The width at the foot is 1 ⅛ yard.

4661. A Comfortble Under-Garment for Girls' and Juniors.—Nainsook, crepe, crepe de chine, or washable satin could be used for this style. The fulness of the front may be disposed of in gathers, pin tucks or tiny plaits. Hemstitching, ribbon binding or embroidery may be used for decoration. The Pattern is cut in 6 Sizes: 6, 8, 10, 12, 14 and 16 years. A 12 year size requires 2 yards 36 inch material.

4656. A Popular Play Suit.—Pongee, linen, wool rep, jersey and gingham would be good for this model. The sleeve may be finished short, or in wrist length. The closing is comfortable and convenient. This Pattern is cut in 4 Sizes: 3, 4, 5 and 6 years. A 4 year size requires 3 ⅛ yards of 27 inch material.





4660. A Practical "Traveling Accessory."—This handy receptacle for comb, brushes, and other toilet articles, will be found very useful on boat or train. It may be worn like an apron or folded up like a pocket or bag. Rubberized cloth, cretonne, ticking, or denim could be used for this model. The pattern is cut in One Size: It requires 1 ½ yard of 27 inch material.

4654. A Smart Suit for the Small Boy.—This is a practical play or school suit. It may be developed in linen, pongee, seersucker or kindergarten cloth as well as in serge, or flannel—Or, one may have the trousers of cloth, and the blouse of wash material. The Pattern is cut in 4 Sizes: 2, 3, 4, and 5 years. A 3 year size requires 2 ⅛ yards of 36 inch material.

4659. A Set of Two Practical Garments for Infants.—A dainty yoke dress and a comfortable "barrie" or petticoat is here depicted. The dress could be of lawn, batiste or fine nainsook. The barrie coat of flannel or cambric. The Pattern includes both designs. It is cut in One Size—and requires 2 yards for the Dress and 1 ⅝ for the barrie coat. To make the waist portions of the "barrie" of cambric will require ¼ yard.

JELL-O

—for neighborhood parties

You can make your tea parties, lunch parties, and supper parties always a sparkling success if you top off your menu with Jell-O. There is a smartly festive look about a Jell-O dish, and it tastes just as nice. It is prepared in a few minutes and set away several hours before your company arrives. You can make all sorts of fancy salads and desserts with Jell-O. Ask for a Jell-O Recipe Book.

RECIPES

Imperial Salad

Drain juice from half a can of pineapple, add one tablespoonful of vinegar and enough water to make a pint. Heat to boiling point and add one package of Lemon Jell-O. Just as Jell-O begins to set, add three slices of canned pineapple, cubed, one-half can Spanish pimentos, shredded, and one medium size cucumber, salted and cut fine. Mould in individual moulds or in one large mould and slice. Serve with cream salad dressing.

New Manhattan Salad

Dissolve a package of Lemon Jell-O in a pint of boiling water and one teaspoonful vinegar. While it is cooling, chop one cup tart apples, one cup English walnuts, one cup of celery. Mix these ingredients, season with salt, and pour over them the Jell-O. Cool in individual moulds. Serve with mayonnaise or French dressing.

CALUMET

The Economy BAKING POWDER

—the next time you bake give it just one honest and fair trial. One test in your own kitchen will prove to you that there is a big difference between Calumet and any other brand, that for uniform and wholesome bakings it has no equal.

If there were a more dependable leavener obtainable, millions of housewives, leading domestic science teachers, cooking experts, great railroads, big hotels and good bakers would not use Calumet in preference to the hundreds of other makes that are on the market.

Avoid the disappointments—the unnecessary expenses that come from using unreliable brands of baking powder. Use Calumet and your pies, cakes, biscuits, muffins, everything you bake will be perfectly raised, easily digested and appetizing.

BEST BY TEST

Sales 2½ times as much as that of any other brand

Every ingredient used officially approved by U.S. food authorities

THE WORLD'S GREATEST BAKING POWDER

Are You Ruptured?

Learn How to Heal It FREE

Ruptured people all over the country are amazed at the almost miraculous results of a simple Home System for rupture that is being sent free to all who write for it. This remarkable invention is one of the greatest blessings ever offered to ruptured persons, and is being pronounced the most successful Method ever discovered. It brings instant and permanent relief and does away with the wearing of trusses forever.

Thousands of persons who formerly suffered the tortures of old-fashioned steel and spring trusses are now rejoicing in their freedom from the danger and discomfort of rupture after a brief use of this remarkable System. There is nothing like it anywhere and hosts of ruptured persons are astounded at the ease with which their ruptures are controlled.

For a limited time only, free trial treatments of this Muscle Strengthening Preparation are being mailed to all who apply. It is an original painless Method. No operation, no danger, no risk, no absence from daily duties or pleasures. Send no money; simply write your name and address plainly and the free treatment with full information will be mailed you in sealed package.

Send now—today. It may save the wearing of a torturing truss for life.

WHEN WRITING TO ADVERTISERS MENTION THE M. B. F.

Cured His Rupture

I was badly ruptured while lifting a trunk several years ago. Doctors said my only hope of cure was an operation. Trusses did me no good. Finally I got hold of something that quickly and completely cured me. Years have passed and the rupture has never returned, although I am doing hard work as a carpenter. There was no operation, no lost time, no trouble. I have nothing to sell, but will give full information about how you may find a complete cure without operation, if you write to me, Eugene M. Pullen, Carpenter, 59-K Marcellus Avenue, Manasquan, N. J. Better cut out this notice and show it to any others who are ruptured—you may save a life or at least stop the misery of rupture and the worry and danger of an operation.
